If the contaminated water is rejected, the Park will not receive its vitally needed supply. The alternatives, therefore, may be either accept the polluted waters and the consequent alteration of the ecosystems, or deny the Park water and, through dehydration, create another form of ecological alteration. If one presumes that the bypassed water will be collected and discharged to the Gulf of Mexico, a deficiency in the Park's water will result which would require that an additional 157,000 acre-feet per year be withdrawn from the flood control project to maintain the present ecosystem unaltered.

It is difficult to state in quantitative terms the magnitude of pollution that will be experienced or the level which can be tolerated. It is apparent that changes will occur. It has already been observed that biological changes occur with the replacement of one type of algae for another as a response to enriched waters. The resulting exchange is at variance with resident ecosystems.

Pesticide levels found in tissue of certain small fish examined from the Park are already alarmingly high. As pesticides are now being found in the Southern Florida air, one can expect the jet fuel fallout will effect an increase in DDT precipitation from the air, resulting in increased water pollution to the Park.

PLANNING REQUIREMENTS

Section 4(f) of the Transportation Act, as amended in 1968, prohibits the Secretary of Transportation from approving any transportation project, such as the proposed Miami Jetport, which requires the use of publicly owned land from parks, recreation areas, or wildlife and waterfowl refuges of National or State significance unless:

(1) there is no feasible alternative, *and*

(2) the project includes all possible planning to minimize harm to the park, recreation area, or wildlife and waterfowl area.

The proposed Miami Jetport necessarily requires navigation easements over Conservation Area No. 3A (which is a State recreation area and refuge), and over Everglades National Park. It is, therefore, subject to the promotions of Section 4(f) of the Transportation Act, easements being—by legal definition—a use in, or over, the lands of another.

Although the jetport sponsors have carried on consultations with park, recreation, and wildlife agencies and interests, the feasibility of alternatives *has never been determined*, and the project *definitely has not included* all possible planning to minimize harm to the Park.

The Department of Transportation, in what is apparently a violation of the Transportation Act, has already approved the construction of the training runway, and has provided a large grant for a study of high-speed ground transportation to operate principally between Miami and the jetport.

The applicability of Section 4(f) to the jetport project has been brought to the attention of the Department of Transportation by the Bureau of Outdoor Recreation, the Department of the Interior's coordinating agency for Section 4(f) matters. To date, however, no satisfactory resolution of the problem has been achieved.

Interior agencies have been working closely on this problem. In addition to the Bureau of Outdoor Recreation and the National Park Service, whose interests are apparent, the Bureau of Sport Fisheries and Wildlife is concerned with the bird and game fish populations. Over 21 rare and endangered species of wildlife use this area as habitat for at least part of the year. The Bureau of Commercial Fisheries has an interest in the shrimp and commercial fisheries whose habitat includes estuaries dependent upon the quality and timely arrival of fresh water inflow from Big Cypress Swamp and Shark River.

In addition to these, agencies within the U.S. Public Health Service have expressed interest. The Central and Southern Florida Flood Control Project is being constructed by the Corps of Engineers and managed by the Central and Southern Florida Flood Control District, a State agency. The Department of Housing and Urban Development, although not immediately involved, could well have an interest if the rapid and massive development, as predicted, occurs.

The Bureau of Indian Affairs has an interest in the welfare of the Miccosukee Tribe, which occupies a strip of land along the Tamiami Trail in the Everglades National Park. The plight of the Miccosukee, as a consequence of the jetport and the access corridor, is especially tragic. They have, for the most part, been living in isolation on their native hammocks, although a number live along the Tamiami Trail in Everglades National Park, and have only recently organized under a Tribal Constitution. They will suffer displacement and drastic attrition of their pursuits. The airport is overrunning their Green Corn Hammock, where the traditional Green Corn ritual has been held for the purification of body and soul. Morally or legally, the rights of the Miccosukee to peaceful tenure are being trampled. The transportation corridor will eliminate the little bit of income they have derived from tourists on the Tamiami Trail. In general, the major developments in the area will disrupt their socio-economic life and may very well obliterate the group as an entity.

Emphatically, we must recognize that, for all the efforts at amelioration or accommodation that might be made, the proposed jetport may very well be incompatible with the preservation of the Everglades National Park or with the preservation of the regional ecological environment which affects the survival of the Park. Feasible alternative sites for the jetport do exist. It follows that developing a jetport at an alternate site may well be the only acceptable solution.

HOW NOT TO PROTECT AMERICA

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. WYMAN. Mr. Speaker, history is proof of the senselessness of relying on treaties with Communist nations. The road that led to war in Korea and Vietnam is littered with broken Communist commitments.

Those who urge that a treaty on the subject of nuclear nonproliferation should take the place of U.S. military power in reserve, are like those who would patch the hull of a battleship with paper and sealing wax. Whether the necessity be MIRV or Safeguard, or whatever tomorrow may present, we must stay on top.

A chain is only as strong as its weakest link. America's defense is as weak as its most vulnerable aspect which for those shortsighted few who would substitute reliance on a nuclear defense treaty with the Soviet Union for the deterrence of retaliatory power, would mortgage the security and even the survival of our people.

Mr. Speaker, we should have treaties, of course, but let us not take them too seriously when they are with Communist nations. Let us always firmly resolve that we will back them up with the necessary military hardware just in case. In this connection, I commend the reading of the following remarks by the distinguished columnist, Henry J. Taylor, appearing in the Manchester, N.H., Union Leader on September 2, 1969:

FOOLISHNESS OF "TREATY-SECURITY"

(By Henry J. Taylor)

Color-blind Senate Foreign Relations Committee Chairman J. William Fullbright, consistently downplaying any Red threats, ties his campaign against the nuclear defense proposal to the need for a treaty with the Soviet Union.

If Senator Fullbright, Sen. Edward M. Kennedy, Sen. George McGovern, et al, were negotiating with the Soviet Union, we'd be lucky to be left with the Statute of Liberty. Moreover, the highly publicized treaty prospect is no more a substitute for our national defense than a tin can is a substitute for the U.S. Air Force.

The nuclear defense problem has three phases: short range, intermediate, and final. The game the Soviet is playing it is playing for keeps.

The Soviet antiballistic missile system, which the Soviet General Staff calls "Galosh," already has 90 known sites that are operative. We are told that the Soviet defense "is not workable," "is no good," etc. Yet, indisputably, the Soviet is far advanced in building 30 more sites. No good? The Kremlin thinks its system is good, and is striving day and night to complete it.

This means 120 Russian nuclear defense sites versus the two now, and 10 later, in the U.S. Plan.

In June, 1965, former Defense Secretary Robert S. McNamara junked 14 missile complexes with 113 Atlas and Titan launching sites in 12 states, declaring obsolete the missiles these were built to accommodate at a building cost of $856.9 million—because of surprising Soviet missile advances. Again, it was another of the surprises the Red world always seems to have in store for us.

Moreover, when the Soviet violated the atomic test-ban understanding so solemnly agreed to with us, Russia became the only nation to have successfully test-fired a nuclear-armed missile at an incoming missile.

Thus the U.S.S.R. leaped demonstratively (not merely on paper) far ahead of us in nuclear defense and may have already cancelled out the U.S. Minuteman missile which is our chief weapon of retaliation in defense of the United States and our most credible deterrent protecting the free world.

Yet, confronted by these realities, we're told to think in terms of a treaty! The Fulbright-Kennedy-McGovern, etc., fallibility opportunism, mindlessness, or worse, on this thesis is as appalling as it is dangerous.

Every dependent nation in the world that has relied on treaties instead of keeping its powder dry has come to disaster.

Treaties could not conceivably mean less than they do to the Soviet Union. If the Fulbright-Kennedy-McGovern cabal does not know that, it knows nothing. But, in any case, the nearly ageless record of treaties are honored more in the breaking than in the observance. Treaties cannot substitute for wisdom or for military power in pursuing national objectives and maintaining the peace.

Our treaty-adherence record is the best of any major power. But every major nation, including the United States, has broken its pledged word when its leaders felt the current national interest required it.

At Yalta, at Russia's behest, both the United States and Great Britain shattered previous treaties like clay pigeons built to be shot down. The Bay of Pigs debacle and backdown shattered our ancient Monroe Doctrine forever—an edict far more formidable than any treaty. Our Vietnam involvement shattered treaties left and right.

While our country may be hoping for a nuclear defense treaty with the U.S.S.R., the antiballistic missile proposal means we are not relying on it. The Fullbright-Kennedy-McGovern cabal could easily learn at least three reasons why:

(1) For years on end the greatest weakness in our foreign policy has been an overreliance on treaties. We should give little or no weight to the expectation of performance under a decisive treaty.

(2) The leaders of the countries will have changed by the time the treaty-reliance may be critical, and all such probabilities increase the longer the treaty remains in effect.

(3) We should never bet our lives and our whole country—the destiny of the United States and all 200 million people who live here—on brains that talk treaty-security to us. Opportunistic politicians who say they believe in things like that end up in the dregs of history—and their country down with them.

JOHN CARDINAL WRIGHT RECEIVES PITTSBURGH ANNUAL LABOR DAY AWARD

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, each year in the city of Pittsburgh the labor unions and the friends of labor gather for a Labor Day Mass to honor the accomplishments of our working people during the past year, as well as the previous years of U.S. history.

This year the Labor Day Mass was celebrated at St. Paul's Cathedral, Pittsburgh, on Monday, September 1, 1969. His Eminence John Cardinal Wright was honored with the St. Joseph's Award as the Man of the Year in western Pennsylvania giving outstanding service and leadership in the cause of labor and the working people.

This award was a unanimous decision and one of the most popular choices that have been made for this significant honor. John Cardinal Wright returned from Rome, where he is serving as prefect of the congregation for the clergy, to receive the silver statue of St. Joseph, the worker, which symbolizes this award.

In attendance, to join in this mass and to honor John Cardinal Wright were the representatives of churches of various faiths in Pittsburgh, the officials and members of the union organizations, and the many local public officials representing the government in the city, county, State, and Nation.

It has been an honor for me to be present as Pittsburgh U.S. Congressman each of the 10 years that the mass has been held to honor our unions, their officers and members, as well as the working men and women of our great Pittsburgh industrial center.

During his service as the bishop of Pittsburgh, John Cardinal Wright was an outstanding churchman and leader for all progressive programs and ecumenical causes. Cardinal Wright worked with our religious and civic communities, and public officials so that there now exists cooperation and joint leadership for united purposes and common civil goals.

I am submitting the excellent sermon delivered by John Cardinal Wright for the RECORD, so that his fine thinking can be made available to the Congress and the American people, in these serious days.

John Cardinal Wright chose as his theme the Biblical quotation:

Justice exalteth a nation; but sin maketh nations miserable. (Proverbs 14:34)

The sermon follows:

SERMON BY JOHN CARDINAL WRIGHT

"Justice exalteth a nation; but sin maketh nations miserable."—Proverbs, 14, 34.

Two thoughts are uppermost in my mind as I return this morning to this beloved pulpit.

The first is one of great gratitude that an award which I instituted ten years ago has this day been presented to me. Those who have preceded me among the recipients of the Saint Joseph the Worker trophy were always quick to point out that they were members of groups, co-workers with others, and that they very properly saw themselves as at most the representatives of these others in accepting the recognition that comes with this honor.

I must do the same, I above all. I could not possibly accept from Bishop Leonard the trophy I have placed on the altar except as the representative of the American bishops and priests in general, and some of them in particular, who during the last century and this have most especially espoused the cause of the working man and identified themselves with the cause of social justice.

The American bishops and priests whom I represent are many. Most of them are unknown, certainly unsung by the present generation. Some of them were buried in publicity, some were buried in obscure assignments. They took their stands in various periods of crisis within the Church on occasion, within the national community more often, within local communities most often of all. There were perhaps never as many as there should have been, but there were certanly more than we priests and bishops of the Hierarchy are usually given credit for. They were, as they still are, in overwhelming majority themselves the sons of working men and of working men's wives, but they were not chaplains, as men like them must never be chaplains, in class warfare or in intergroup hatreds of any kind.

Those of them who persevered in the struggle, whose work, in fact, bore fruit, who held apparent frustration and useless praise or lack of it in equal realistic regard, were primarily the sons of the Church, seeking to apply her teaching and therefore to follow their consciences. They were Americans, by birth or by naturalization, and so America was the immediate field of their efforts at reform or progress. But they were Catholics, with the letter "C" in both lower and upper case, and so their concern was with the human family everywhere, as is that of the Universal Church. The human family, the only race of which they admitted the existence, was not for them an abstraction; it meant every person, any person, each person, all persons, the person, wherever he may be, whatever be his background, whichever his color, his condition, his creed, his calling.

I would be unprepared to label these men of God who have served the cause of social justice, and therefore of working people. I have no idea whether they were liberals or conservatives, pragmatics or classicists. Some of them were pastoral-types; some of them were scholars. I only know for certain that they were Catholic, with a capital "C" and a lower case "c", and that like their counterparts in the tremendous social movements of world Protestantism and age-old Judaism people with truly catholic minds and hearts (I am using here the small "c" on the word catholic) they would reject imprisonment and defy classification within any of these largely meaningless and usually vituperative classifications so beloved by our contem-

porary shorthand journalism or hit and run reporting.

Most of them were men like Cardinal Gibbons and Archbishop Ireland, like Bishop Haas and the Spaldings, like Monsignor John Ryan and Father Ray McGowan, each of these being very cautious, which means, I suppose, "conservative" in what pertains to the Faith and each forward-looking in what pertains to social action and reform—which means, I suppose, "liberal". In fact, in all things they were merely trying to be decent, which means faithful in conscience to the teachings of the Church and faithful in service to the needs of God's people.

While I was here in Pittsburgh I often wondered whether a priest like, say, Pittsburgh's Father Jimmy Cox felt more at home during the march which he led on Washington, D.C., for social justice or during the pilgrimages which he led to Saint Anne de-Beaupre in Canada or to Lourdes in France and to Rome for the rekindling of the ancient Faith of himself and his people! When do you decide to classify him in some subcategory of Catholics, was it when you found him preaching the need for better wages or housing to lead the decent human life? Or was it when you found him reproducing the Holy Stairs and preaching the traditional doctrines of penance, prayer and basic Faith by which even the most human of decent lives is lifted to the level of the Divine?

And if you have this problem in classifying the Catholic clergy and bishops who bore their witness to social justice and human dignity, in season and out, with or without success, ending as they began, fully the servants of the people and yet faithfully bound to the altar, I must remind you that you will have the same problem classifying Protestant Christian or prophetic Hebrews who have used their ministry in behalf of the social gospel or the social witness of the Hebrew prophets—but have never forgotten what are the premises in faith of that witness, what is the secret of the hope that the world can be renewed and the conviction that the world continually needs renewal from outside itself. On this, Jew, Protestant and Catholic have been in agreement from the ten commandments, to the collective pastorals of the various Boards of Bishops or rabbinates, from the encyclicals of the Popes on social and moral questions to the most recent local declaration issued in agreement under ecumenical auspices.

Those secrets are simple. They are set forth in the text that I read to you this morning. The hope that society can be redeemed and renewed is in the word *justice*, of which God is the force and which is one of His attributes. The source of our confusion, our embarrassment, or all our moral and social evil is *sin*, of which Satan is the source and which constitutes his very essence.

And now that I have said to you thank you for including me among those who have tried to keep this message of Sacred Scripture alive in the battle for human progress, let me come to my second, most important and final point. Nothing substantial, permanent or truly positive can be accomplished about any of the problems which so bewilder us—the problems of war, the problems of infidelity (whether within the family unit by double timing, within the nation by treachery, within the Church by apostacy), the problems of maldistribution of the resources and the wealth of the world, the problem of hunger, the problem of unemployment, the problem of genocide, whether by gas chamber or by government programmed contraception, the problem of neglect, whether it reveals itself in illiteracy or delinquency or mere pollution of the air—nothing can be done about any of these problems until we stop using technical jargon and sweet talk—Al Smith used to call it using words to conceal meanings—and put proper labels on things where those labels are called for.

As one speaking in the biblical and religious traditions of the Judeo-Christian world, for example, I suggest that we begin this process with the return to our vocabularies of the word and above all to our convictions of the concept "sin". I suggest at if our nation is miserable, or largely so despite its affluence and its blessings; if our world is, in fact, miserable in the news reports despite its infinite resources and capacity for happiness; if our beloved city, to be quite specific, is miserable this weekend despite all the imaginative forces at work in its "renaissance" and all its financial power to build so ambitiously and so beautifully—if all this is true, and it is, then something essential is missing from among its assets and something vicious is present among its liabilities. The first of these is frequently mentioned, though with what degree of conviction I am never entirely sure. That something is *justice, the justice that exalts a nation, a church, a city, a family, a community*. That justice is clearly missing somewhere along the line, however loudly it may be invoked on every side.

But the vicious thing that is *present* and that *no one ever mentions*—or mentions *only reluctantly* and as if he were crudely introducing a discredited concept into an otherwise intelligent discussion—that something is the word *sin*.

The present miserable condition that surrounds us is visible all over the city, all over the nation, all over the world. Yet no one seems willing to brave the spirit of the times by pronouncing the word which sums it up and explains it. The reason for this reluctancy is that the misery is present within these very walls because it is present within our very hearts, deep in our hearts. It is the more difficult to eradicate precisely because we will not say the word and admit what it means and how alone it can be purged.

Whatever may be the secondary and complicating causes, the plain fact is that the city, the nation, the world, and, if you will, the Church is not made miserable by maladjustment, maldistribution, maladministration, misinformation—but by *sin*.

We must not be simplistic or rabble-rousing in this matter, charged with the emotions and vocabulary of a camp revival meeting. Nor, on the other hand, must we abjectly conform to the spirit of the moment and limit ourselves to its vocabulary and text book jargon. We need not become hermits, in pious flight from positive action; that, all by itself, would be no solution to the social question. Neither must we become religious fanatics, denouncing the values of the world or the wisdom of its programs; that could easily become heresy, another word we would do well to restore to our vocabulary and our convictions.

But we must restore something of the proportion presently so gravely violated when the word "sin" rarely appears in a public pronouncement, and then usually as a figure of speech, and never appears in a purportedly serious analysis of the true causes of our problems. The use of the words "sin" and "repentance" have seemed almost artificial, when used by public authorities at all, since the death of Woodrow Wilson—and increasingly, even pronouncements put out by religious agencies appear more concerned with the positive, creative support of sociological and political programs—a support in fact frequently needed and too often withheld—than with prophetic denunciation of the fact of sin or prophetic calls to effective repentance.

Instead even religious spokesmen offer such specific suggestions, they are such as any common sense group, speaking with the wisdom of the world, should come up with, while the prophetic denunciation of sin, specific and unashamed, together with the call to conversion, specifically to God and by the mercy and grace of God, are either muted, or omitted, or wrapped up in rhetoric seemingly designed to reduce the concept of sin and the nature of conversion to some sort of broad consensus in which God is allowed and His Church accepts only a constitutional voice, certainly when the problem is thought of as secular and political, and even when it is acknowledged to pertain to faith and morals.

The justice that exalts a nation is not the justice of a constitutional deity; it is the justice of the God of the Bible. The sin that makes a nation miserable is the sin denounced by Isaiah and the prophets, by Jesus, by the independent papacy. The sin, or the concept of sin arrived at by consensus, determined in the light of widespread habit, public policy or cultural *mores* at any given moment, may tranquilize a nation, undermine a nation, and, by definition, be acceptable to a nation. *But it may still be the sin that makes a nation miserable.*

Let me be more specific. During the last several years spokesmen for various church and ecumenical groups in America have put out sincere, eloquent and well-intentioned statements on social questions. Some of these have been concerned with peace and war. Some have been concerned with poverty and what to do about it. Some have been linked to intergroup disorders in the cities or starvation in rural areas. Some have been linked to special seasons, to Peace Day for example, or to Labor Day. I have had a hand in the writing of a few of these and so I know the earnestness, the desire to be of service, the careful thought that goes into the preparation of most of them.

Some of them discuss the symptoms of our miserable condition. They lament the violence which is the most obvious and most painful of the symptoms of our miserable condition which they record as would a clinical report. Some of them seek to explore more profound levels of the causes of these symptoms, the roots of our misery. Not a few even suggest specific remedies, particularly in terms of cash, allotment of monies, improved programming, new approaches to tired or discredited political, religious, community or private efforts to relieve the symptoms and to remove the only causes which are mentioned. These causes are invariably economic, political, social, cultural, geographical, or historical—but sin is stamped all over them. Yet *sin* is rarely if ever mentioned, let alone acknowledged.

If only because I am standing in a pulpit—but I would do the same if I were talking in Congress, at a Labor Union Convention, or at a roundtable on social problems—I feel bound to emphasize the fact of *sin*—to declare the presence of *sin* among us; to suggest that it is *sin* which makes a nation, a family, or a city, miserable; that *sin* is at the heart of all the problems to which we give such attention as we give the misery around us; that repentance from *sin* is essential to the correction of those problems; that unless *sin* is acknowledged and repented our social problems are, in fact, insoluble, our misery is indefinite, however much the sin may be buried in our subconscious, put out of our minds, or whatever else is meant by the phrase "swept under the rug".

Our Labor Day statements mention justice; they nowhere mention sin. They underline, in positive and intelligent fashion, the need to face up to the causes of social unrest and the need to confront the causes of poverty; the Church is specifically urged to attack those causes, largely in terms of the indispensable practical strategies admittedly needed to attack the problems which have economical, political or social consequences and complications. But even the enumeration of the causes which the Church is specifically called upon to confront does not mention that radical cause which the Church is primarily and uniquely instituted to con-

front, charged by Its Founder to confront, inspired by its saints to confront, called by Its God to confront: namely, the radical, all-pervading fact of sin that makes a nation miserable.

The Church is an institution that works in the world. As such it must cooperate with all other institutions honestly engaged in fighting whatever problems impede human progress, threaten human life, limit human freedom and pervert happiness here below, while destroying the possibility of these in the life of the world to come. But the supreme business of the Church is the prophetic, moral leadership proclamation that certain of the problems which so curtail life here below and threaten it hereafter are not merely economic, nor political, nor cultural, nor social, nor ill advised labor or education policies—*they are objectively sinful.* In the words of the otherwise often doubtful Dutch Catechism, sin is the refusal to love others or the Other, by which the Dutch Catechism, since it spells the "Other" with a capital "O", presumably means God; therefore, sin is the refusal to love others and to love God.

Christ worded it a little more simply. He declared sin to be the refusal to obey God's Law and He defined God's Law in terms of Love. He said that we are guilty of moral evil, by violating God's Law, if we refuse to love the Lord, our God, with our whole mind, our whole heart, our whole soul. Then He added, in effect: "By the same token, you commit the same sin if you refuse to love your neighbor the way you love yourselves" —if you refuse your neighbor the same opportunity to be, to grow, to be free, to work, to join up in the movements designed to protect basic rights—such as life, liberty and the opportunity for work—that your love for yourself prompts you to establish for yourself and guarantee for yourself."

It is as simple as that. When all the technical jargon, the history courses, the sociology studies, the research projects, the government reports and the convention resolutions have made their suggestions and played their part, it is still the Sacred Scripture that has the final say: *Justice exalts a nation; but sin make nations miserable.*

The Bible uses the word *sin*, on one or another form, about six hundred times: the Kerner Report does not mention it at all, which is probably defensible in a secular state but is no great help in a miserable society. What is even more lamentable, few other statements of the causes of our misery, except perhaps those of extreme fundamentalists who discredit their witness by religious fanaticism and social myopia, include *sin* either when they list the causes of our misery or attempt to program their solutions; there may be comfortable talk about "change of attitude" but little or no call for repentance, change of heart, in the strict biblical and traditional, theological sense.

I need hardly say that, except in terms of sin, the Bible never uses most of the words that are used to describe the processes, priorities, projects, interfaith programming, ecclesiastical and political budgeting which are the commonplaces of our political and even religious declarations on those matters and approaches to their solutions. It talks about *sin* as a *cause* and *love* as a *cure*, the cure that casts out the fears at the heart of our hatred, our basic *sin*.

I suppose that I am not, certainly in any narrow sense of traditional polemic, "a Bible Christian". My Protestant Christian brethren will understand that I would not believe in "Scripture alone" as the source of faith or morals. I believe that the Scriptures call for very careful interpretation and for divinely-inspired powers of discernment of their messages of which I do not feel capable, all by myself. Hence my grateful dependence on the authority of the Church and the word of its apostolic teaching.

Moreover, I have a deep veneration for the power of human intellect, for the ultimate reliability of common sense, for the wisdom of the ages, for all the things of which Dante saw Virgil and natural reason, as well as natural ethnic, to be the symbols. And so I know what the American hierarchy meant when, in connection with another moral problem currently disguised and distorted as merely a political worry, medical difficulty and sociological phenomonem, they dared to call the sin of contraception an "objective evil". I also know that even pagans, even atheists, the present moral mess that surrounds us would be called what it is: the proximate result of poverty, of unemployment and discrimination—but the ultimate result of hatred—which is an "objective evil"—which, again, means *sin*.

The misery we are worrying about all over the world at the moment—in Pittsburgh and elsewhere at home, in Northern Island, in the Middle East, in areas of Africa, in disputed zones of Europe—is given all manner of names and explanations. In fact, it is usually one or another form of *racism*—which means of *sin*—which means of *hatred*—which means of *fear*. Fear is not cast out by knowledge alone and hatred is not diminished by money or power alone—as many wealthy families well know and some powerful organizations. Fear is cast out by love—and that is what the Church is expected to preach and to give before it opens its mouth or its offices for anything else. *The Church exists to confront sin and communicate love.*

Let me linger for a moment on this concept of *sin*, because this is the heart of the matter and on this you will not hear much, I am afraid, in the discussion of our community tensions. On this point the Dutch Catechism, often too obscure and inaccurate on other matters, is remarkably useful. Discussing the failures of Christians and the nature of sin, it says that the great fault of men is not that some social mechanism is out of order, the way Marxists suppose, but that free will is misused in favor of objective evil. It says further that evil does not ultimately mean just imperfection or disorder that we can straighten out with mere human intelligence and human energy, but that it involves turning away from God, which situation cannot be corrected by man alone. It goes on to say that sin is not merely transgression of some abstract, lofty law, but involves a personal offense against love. Finally, and most importantly, it underscores that sin is not just an offense against man, as secularists and humanists are limited to saying, but it is also and supremely an offense against the Creator and Redeemer of the human race. It is a deliberate offense against Divine and human love, which cannot be repaired by human means, or human solutions to human problems.

Sin is harmful to man, but the point is that as a transgression of God's Law it always involves a refusal to love as God wishes us to love both Him and one another.

That refusal may not always be conscious and fully willed; it admits of degrees of guilt, according to cultural conditioning, fear of heart, confusion of mind, degrees of understanding or of ignorance—again as the American Bishops pointed out in discussing the objective evil that is contraception, and in suggesting the degrees of guilt which may be present in an individual caught up in all the pressures and propaganda, slogans and sneers of a contraceptive civilization, political atmosphere or economic cultural. But the corrosive objective evil is there, all the same, and so is objective sinfulness, just as it was present in the days of slavery in the United States when respectable men, still held in great renown, were, in fact, slaveholders, and as men may be acceptable today in social or diplomatic circles even though they represent nations whose whole economy is based on slavery in one or another form.

I do not pretend to say that George Washington, for example, or Thomas Jefferson, were subjectively sinners, but I do say that the situation of slavery to which they were apparently blind was objectively evil; it was, in fact, sinful, though they may have been kindly men and, for one reason or another, diminished in their guilt.

The same thing goes for racism, which is a form of spiritual slavery as there are forms of cultural imperialism long after political and economical imperialisms have ended their exploitation. Such racism is sinful and it calls for change of attitude, a change of heart, a radical conversion in the Scriptural sense. It is not enough to call it a "disorder", or a "lesser evil", or "a stage in the striving toward a greater ideal"—as some Christians say about life-prevention, abortion or the bombardment of non-combattant villages, or as other Christians say about the discriminations, segregations, exclusions and inequalities at the bottom of our present misery. *It is a sin.* That is *all* it is and it is *no less* than that.

The guilt of some involved in it, like that of some of those involved in other sins we have mentioned or could mention, may be understandable because of cultural conditioning; may be pardonable because of invincible ignorance; may be diminished because of panic, fear, confusion or instability—but the situation remains *objectively sinful.* The very first business of the Church, Catholic or Protestant, and of the Synagogue, is to put that fact in clear focus and unmistakable clarity when it is facing the causes of poverty and confronting the causes of our misery.

This is the mandate that God Almighty gave the Church and the Synagogues—to preach the fact and the nature of sin as the cause of our misery, the need and the nature of repentance as the beginning of the cure of our problems. To be sure, neither God, nor the prophets, nor Christ left it as that. God Almighty has also given the Church an agenda as to what it is to do about social problems beyond what is the obligation of the State, primary custodian of public order and the temporal common good. He has done this through His Sacred Scriptures, which tell us that a brother helped by a brother makes a strong city; that every field is to be plowed by its owner with a view to what he can make available to the needy; that not those who say "Lord, Lord" but those who keep the Law of God, which is a law of charity, are worthy of the Kingdom; and that the final judgment concerning whether we go to heaven or to hell will depend on what we did for those in prison, who need clothing, food, housing or the plain comfort of our company and moral support. This mandate the Church received from God Almighty before it received volunteer mandates or rebukes from Concerned Citizens, Action Groups or Political Commentators. But this mandate follows upon and depends upon the primary mandate God gave His Church to preach love not hate: to remind men and governments that it is justice which makes a nation powerful and it is sin which makes a nation—or a city—miserable.

The lesson for Labor Day 1969, especially to the Labor Unions whom we have tried to honor and encourage each year, is too obvious to need explicit declaration. So, let me sum up all I have tried to say by three brief quotes:

(1) Of the many sayings attributed to the late President John F. Kennedy one is particularly facile sounding and particularly false. It went to the general effect that there are no human problems which do not admit of human solutions. If this means our present social problems of poverty, violence, war and racism it is flat nonsense, however cheerful. Our only problems worth mentioning are due to sin, particularly hatred, though the sin may be the kind the Old Testament child of God prayed he might be for-

given: from my *unconscious* sins, O Lord, deliver me—from the sins against life, against the dignity of my neighbor, against the common good of which I am not even aware, but which nonetheless objectively ruin Thy divine order! Deliver me, as I beg you to do, from the sins which I admit and which I consciously confess—but do even this by Thy mercy and Thy grace, because I cannot do it alone.

(2) In fact, it is these objective evils, these objective sins of which so many of us are sometimes unconscious, because the world tells us that they are not so sinful after all, it is *these* which cause our misery. Pope Pius XII once said: "Perhaps the greatest sin in the world today is that men have begun to lose the sense of sin". This would take another sermon in terms of a few situations within the Church itself. I limit myself to the problems in our general community. We have more sense of what is bad politics, bad diplomacy, bad military tactics, bad medicine, bad technology, bad business procedures, bad union interests or bad public relations than we have the sense of what is objectively sinful. We would almost rather have a rogue in charge of our affairs, if he kept trouble away from the door, than a saint if he called us sinners to our faces and told us that we must have a change of heart before we can change the mess around us.

(3) My final quotation is from a perhaps surprising source. But it has to do both with the nature of sin and with the contemporary rejection of the whole idea of sin as the cause of our misery, as well as with its opposite as the only ground for our hope. I had never thought that I would quote James Joyce's novel *Ulysses* from this or any other pulpit. But here goes. Its principle character, a Dublin Jew, is quoted by Joyce as saying to the typical characters in his Dublin hangout: "It's no use", he says, "force, hatred, that's not a life for men and women; insult and hatred is no way of life; everybody knows that it is the very opposite of that, that is really life." "What is?", says Alf, one of the citizens. "It is love," says Bloom, "I mean the opposite of hatred." And they all laughed at him.

Please do not anyone laugh at which I have tried to say to you, a little obliquely but with great feeling, this Labor Day. I love you dearly, every last one of you. I know that many, that probably most, I sometimes think with a terrible sense of unworthiness, that *all* of you love me.

I beg you love one another and all God's children. Let us purge our hearts of hatred, which is sin, and thus purge our city of all the misery which hatred begets. Let us not merely love one another *sentimentally;* let us do the *works of love,* the first of which is justice. For it is: *Justice that exalts a nation; but sin that makes nations miserable.*

SALUTE TO MALAYSIA

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. POWELL. Mr. Speaker, I wish to call the attention of Congress to the 12th anniversary of independence of the Federation of Malaysia on last August 31. We wish Malaysia well out of admiration for her accomplishments in her first dozen years of self-government and out of a sympathetic recognition of similar problems faced by both our governments. Like the United States, she has had to balance the rights of far-flung states within a stronger federation; like the United States, she has been challenged to weld a diverse population of many national backgrounds into a united people; like the United States, she has not always succeeded in persuading racial harmony to prevail; like the United States in Korea and Vietnam, Malaysia suffered long years of armed conflict from the Communist threat within her borders.

But Malaysia has forthrightly faced her problems and is making progress. She has dealt firmly and successfully with Communists who attempt to exploit the social antagonisms of her people. Her educational policy permits instruction in any of several officially recognized national languages. Her rural development and industrialization programs have helped to bring the outlying states more fully into national participation and to be less vulnerable to threats of subversion. She has sought a better life for all her citizens by broadening the economic base as well as reestablishing a sense of national purpose and unity with progress. As Deputy Prime Minister Tun Abdul Razak has said:

> This prosperity must be widely shared and spread throughout the nation. This prosperity is for all.

Malaysia's recent past justifies her faith in economic growth as a means of endowing her people with a sense of hopefulness and accord. The wealth and wisdom of her past development has already made her an economic leader of Southeast Asia. She produces nearly one-half of the world's rubber, and her palm oil output has increased annually. Her rich tin mines provide employment for many of her people. Her successful rural development plan serves as a model for the rest of Asia. Her people have the third highest per capita income in Asia, and her GNP grew regularly at 6 percent during the first decade of freedom. Her Government has formulated plans for the promotion of cottage industries and for industrial expansion into production of bicycles, textiles, and tools. Plans are afoot to increase agricultural output. Experimental use of new strains of rice has been initiated to increase rice production sufficiently to feed the nation. The Government, World Bank, and private enterprise are cooperating in a program to open new lands to be given to farming families.

I wish Malaysia success in her attempts to lift her people beyond the traditional divisions of culture, nationality, and religion, while suppressing those who would divert them from these worthwhile goals. It is a noble goal for the future to view Malays, Chinese, Indians, and other national groups as more than ethnic units, but rather as united Malaysians.

KNOXVILLE NEWS-SENTINEL UNDERLINES DANGER OF TVA POWER INCREASES

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. EVINS of Tennessee. Mr. Speaker, the Knoxville News-Sentinel in a recent editorial deplored the recent announcement by the Tennessee Valley Authority that it is increasing power rates for the third time in 2 years.

This announcement has caused concern among TVA's strong supporters throughout the Tennessee Valley and the Nation and in this connection I place in the RECORD herewith a copy of the editorial, a news article by Mr. Powell Lindsay, Washington correspondent for the newspaper, and a letter from Mr. Dan Laws, city attorney of Elizabethton, Tenn., deploring the fact that the city of Elizabethton must continue to increase its consumer power rates because of TVA action in this regard.

The articles from the News-Sentinel and the letter from Mr. Laws follow:

EVINS CRITICIZES TVA RATE HIKE

(By Powell Lindsay)

WASHINGTON, Aug. 8.—A key Tennessee congressman has scolded TVA for upping its electric power rates.

Instead, said Rep. Joe L. Evins, Smithville Democrat, TVA ought to, "if at all possible, reduce rates rather than increase them."

Evins, ranking member of the House subcommittee which recommends funds for TVA, said it was difficult to understand why TVA couldn't make "some internal adjustment" to meet mounting costs and avoid a rate increase.

"The fact is that TVA is changing its image from one of economical power to one of escalating power costs," Evins said.

TVA, citing rising fuel and labor costs and high interest rates, recently announced its third rate increase within two years.

"As a longtime friend and supporter of TVA, this development disturbs me," Evins said. "I want TVA to maintain its image as the yardstick of economic public power.

"TVA would do well to review this entire matter and its decision to increase rates and, if at all possible, reduce rates rather than increase them," said the congressman.

TVA IMAGE IN PERIL

It's an interesting criticism that Rep. Joe L. Evins of Tennessee makes when he says that the Tennessee Valley Authority is "changing its image from one of economical power to one of escalating power costs." Evins, whose record and voice show long friendship with TVA and support of its programs, was referring to a recently announced third rate increase made by the authority in two years.

Internal adjustments should be made, Evins says, so that TVA can "maintain its image as the yardstick of economic public power." He would like the decision to raise rates reviewed with a purpose of reducing rather than increasing the charges.

We hope Evins is successful.

ELIZABETHTON, TENN.,
August 16, 1969.

Congressman JOE L. EVINS,
House of Representatives Office Building, Washington, D.C.

DEAR CONGRESSMAN EVINS: As the City Attorney of Elizabethton, Tennessee, and more particularly as an individual citizen, I was pleased to read the enclosed news item recently published in the *Knoxville News Sentinel.*

Our situation here in Elizabethton, Tennessee, a City of approximately 13,000 population, is one where the electric system has approximately $2,000,000.00 in deposits and are restricted by the T.V.A. Act from using these funds except in two instances, one for capital improvement and the other for rate reduction. Yet, our local rate continues to increase although we do have one of the lowest in the Country.

Thanking you for your kind attention to this matter and awaiting your advice in the premises, I am

Sincerely,

DAN M. LAWS, Jr.,
City Attorney.

RIVERSIDE PAYS TRIBUTE TO ITS FAMOUS LANDSCAPE ARCHITECT

HON. HAROLD R. COLLIER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. COLLIER. Mr. Speaker, one of the most interesting cities in the United States is Riverside, Ill., the first planned model community in the Nation, which is located in my district.

Next Sunday, September 7, will be Olmsted Day in Riverside, in commemoration of the centennial of the Riverside plan that was drawn up by Frederick Law Olmsted. Olmsted was not only one of America's greatest landscape architects—he was the first to use the term "landscape architect," having coined it in 1858, when he and Calvert Vaux designed Central Park in New York City.

The Chicago Daily News of July 30 contained a very interesting and well-written article about Riverside and Mr. Olmsted, by M. W. Newman, which I am including in the RECORD as a part of my remarks:

RIVERSIDE: A MONUMENT IN GREEN: UNIQUE 100-YEAR-OLD SUBURB HONORING PLANNER OLMSTED, WHO GAVE IT VISTAS, TREES, AND CURVED STREETS

(By M. W. Newman)

Robert W. Heidrich, a Chicago lawyer, first saw suburban Riverside a dozen years ago. The gently curving streets surprised him. So did handsome Long Common in the middle of the village, the century-old elms and oaks, the gas lamps and the mellow, time-defying unity of the place.

"That is for us," Heidrich told his blond wife Lynn.

They bought a house along the winding Des Plaines River, where fox and pheasants ran. "But would you believe it," Heidrich now says, still a little surprised, "I never had heard of Frederick Law Olmsted at the time. And I'm not sure how many other people in Riverside knew or cared about him."

Now, surely, most of them must know—thanks to Heidrich and other earnest members of the Frederick Law Olmsted Society. For Riverside is celebrating its centennial this year, and Olmsted is the pioneer city planner and all-around man who laid out its 1,600 acres as America's first model suburb, just nine miles west of downtown Chicago. The Olmsted Society has been reminding Riverside about all this, in case anyone had forgotten.

Olmsted had the greenest thumb of his time. He designed great urban parks and communities from coast to coast—from Central Park in New York to Golden Gate Park in San Francisco.

A noted writer, a scientific farmer, a battler against slavery and corrupt politicians, he was a sort of American Renaissance man.

And he had a great deal to do with Chicago, even if history is only now catching up with him. Chicago owes its design for Jackson and Washington parks and Midway Plaisance to his genius. His landscaping for Chicago's great World's Fair, the 1893 Columbian Exposition, was a major factor in its success.

When the Riverside Improvement Co. brought Olmsted here to develop an ideal commuter suburb, the time was only four years after the Civil War. Chicago was a ramshackle, swollen tinderbox, still two years away from its devastating fire of 1871.

This still was the frontier. It was willing to try new ideas, and Olmsted had them. He was so far ahead of his time that Riverside to this day, gas lamps and all, still seems to be the most modern planned community. The reason is that it has not deviated from Olmsted's 1869 plan, which blended housing and greenery while lovingly respecting the natural terrain.

Living in Riverside, say the Heidrichs, is like living in a park—which is precisely what Olmsted had in mind. Those curving streets (there are only about three straight roads in the entire village of 9,750 persons) related beautifully to the river and the land. Rich foliage seems to be almost everywhere. Road levels are subtly depressed to emphasize Riverside's natural setting.

The contrast with today's raw new suburban developments is painful. Their unplanned jamup of ticky tacky on narrow lots, with skimpy landscaping, grubby shopping districts and dangerous highways, is exactly what Olmsted set out to avoid.

Almost anyone who lives in Riverside can look out of his front window, for example, and see great trees. They didn't just happen to grow there; Olmsted wisely insisted that their residents plant at least two trees in their front yards.

MONOTONY CHALLENGED

The Heidrichs, who now live at 165 Longcommon in Riverside, have a good many more than two trees. The pair they owe to Olmsted's foresight, they believe, are the chestnuts that flank their front walkway.

It was in Riverside that the handsomely bearded Olmsted decided to challenge the grid pattern of streets that makes most American cities so monotonous. The formula already had been fixed in New York, Chicago, San Francisco, and it never has changed in them.

We seem to be stuck with it interminably, even though it makes our cities look as though they emerged from one giant stamping mill, designed without regard for differences in terrain, grading, drainage, taste or convenience. The main reason for the grid was to simplify real estate descriptions and sales. So when Olmsted single-handed set out to change that system, he at the same time laid the foundations for humane and sensible city planning.

To this day, many model suburban and housing developments around the country owe their design to Olmsted's Riverside plan.

But only a few have such amenities as Long Common, Riverside's "Midway"—one of several commons artfully dispersed through the village. And when Bob Heidrich looked out of his window one day in 1966 and saw Long Common dotted with tot lot equipment abruptly installed by village officials, it started an uncommon adventure.

CHANGE BRINGS BATTLE

As far as Heidrich was concerned, this invasion of seesaws and toy animals was a misuse of the site and a cluttering of Olmsted's unified and sensitive setting of homes and greenery.

The fight over Long Common became a cause celebre in Riverside and was taken to court, where it still awaits a ruling. It also helped to get Heidrich insterested in Olmsted, in a way he never had anticipated.

"I already had become alarmed over the introduction of ugly electric lighting in downtown Riverside and things like that," he says. His civic dander was up, so when the fight over Long Common broke out, Heidrich started looking around for the original plan of the community.

The search for Riverside's heritage took him to the Library of Congress in Washington, where he was overwhelmed to find 30,000 Olmsted documents on file. And there, he recalls, he studied Olmsted's "beautiful plan" for Riverside. It was the second draft; the first, Heidrich learned, had been destroyed in the Chicago Fire of 1871.

Riverside was a woody tract along the Des Plaines River, an old portage site and Indian trailway, when Olmsted and his partner, Calvert Vaux, were called to design the village. They already were established as the designers of Central Park in New York, America's first great urban park, where Olmsted first showed how to separate foot and vehicular traffic.

Olmsted conceived of Riverside as essentially middle-class, but with homes for people of modest means and the newly married as well as for the settled affluent.

WRITER AND FIGHTER

Born in 1822, Olmsted came out of Hartford, Conn., to ramble the world in carriage and forecastle as a youth. He first made his name with documentary reporting in the 1850s on the slavery system in the Deep South.

This versatile man was a founder of the American Red Cross and the Nation magazine. But he achieved his historic role in life when he was employed as superintendent of New York's Central Park. Not only did he design the famous park as we know it today, but he fought the Boss Tweed political gang to preserve it from political interference.

He had to resign five times in that urban war, and his health was affected. It was a prophetic prolog to the plight of the nature-minded urbanist, seeking to make our cities natural and livable, with open landscaped spaces suited for the simple joys of breathing deeply and stretching one's legs.

Olmsted created Chicago's beautiful Jackson Park out of barrens and marshes and dunes. Jensen's masterworks include Columbus Park and Humboldt Park. Probably neither man would have been surprised to learn that City Hall today is sponsoring controversial plans to put schools and perhaps even housing in their parks. And Jackson Park, of course, has been the scene of angry citizen protests against tree-cutting and highway-widening.

It is all part of the fight over open land in the cities. Olmsted lived long enough (until 1903) to point out wryly that there would not be any Central Park left if all the buildings and sideshows proposed for it had been accepted.

Even Olmsted's Riverside, preserved as it is out of the city's turmoil, cannot ignore change. It is about filled up, and feeling population pressures. The proposed 1st Av. expressway and present 39th St. throughway are traffic problems.

Riverside already has lost one of its two greatest architectural treasures, the Babson House designed by Louis H. Sullivan. The village turned it down when it was offered as a gift, and a new subdivision now stands on the old Babson estate.

Its other world-renowned building, the palatial Coonley House designed by Frank Lloyd Wright, has been walled in two. Half of it is said to be up for sale.

And though the Riverside was designed by a man who exposed the evils of slavery, the files of the Leadership Council for Metropolitan Open Communities do not indicate the presence of any black householders in Riverside. "There was a rumor one family had moved in," a resident said, "but it wasn't true."

Sept. 7 has been designated as Olmsted Day in Riverside by the Olmsted Society, which is headed by Heidrich. It was organized last September by about a dozen couples, and 10 times that number now are members. A high point of Olmsted Day will be a house walk that will include the Coonley House.

The Olmsted Society now is seeking to

have Riverside designated as a national historic landmark. Olmsted, to be sure, really doesn't need monuments, for he created his own—the grounds of the Capitol in Washington, Niagara Falls park, the Stanford University campus in Palo Alto, Calif., flanked by a green belt.

All we really have to do, say his present-day admirers, is to hold on to what he gave us—and to build in the same spirit.

SOUTH HOLLAND, ILL.

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. DERWINSKI. Mr. Speaker, my home community of South Holland, Ill., celebrated its 75th anniversary with ceremonies concluding on Labor Day. This old, but thriving, community has one of the most unique backgrounds of any municipality in Illinois.

For that reason I was especially pleased to note an editorial in the South Holland Tribune, Sunday, August 31, which eloquently touched upon the history of our unique village of South Holland.

The editorial follows:

IT'S A GLORIOUS DAY IN SOUTH HOLLAND HISTORY

The Tribune is both proud and happy today to present to the people of South Holland a special section of this newspaper commemorating the 75th anniversary of the founding of the community. We have hopes that it will inform the younger element of the glorious past and remind the older residents of events in their lives that may have been long forgotten.

Much effort by many people have gone into compiling this historical document but we think special recognition is due to Mrs. Cynthia Jacobs who eagerly agreed to represent the Tribune in compiling the photographs and information needed to make this once-in-a-lifetime project a success. Her assistance was invaluable and we owe her a debt of gratitude, as well as those who provided her with the material.

Then there is our own Penny Bradshaw who took the raw material and, with the assistance of the Tribune's women's editor, Verneeta Gowens, wove it into a document that we believe, and we think you will agree, earns a place in the archives of the community.

Not to be forgotten are those who helped underwrite the cost of this most expensive product. Without the financial assistance of the advertisers, both in South Holland and its neighboring communities, the scope of the project would of necessity been more limited. It is important that they too, as business organizations, go down in the village history along with its pioneer citizens for they have played an equally important role in its growth. Without representation in the document their contributions, even their presence, might well be forgotten by posterity.

The South Holland of today is a far cry from the community of yesteryear which served as a haven for a few Dutch families who broke ground for their farms almost a century ago. Yet, the South Holland of today is stark evidence of the steadfastness and forsight of those founding families. A modern community judged by the most critical standards, South Holland remains, nevertheless, one of homes and churches with a springling of light industry that enhances rather than detracts from its physiognomy.

From a community purely Dutch in character, South Holland has grown into one more cosmopolitan in nature. Within its limits architecturally splendid churches representing almost all faiths are to be found. Founded as it was on religous principles it was natural that the community was to set Sunday as a day of rest and worship and it is a tribute to the founding generation that even those who have since adopted the community are happy to subscribe to this principle—with some minor alterations effected several years ago which included the privilege of selling medicines and drugs. Throughout all these 75 years not one drop of alcoholic liquors has been sold within the confines of the community and the residents, both old and new, appear not only satisfied but happy with that arrangement. South Holland is and perhaps always will be a "dry" town.

Growth and stability have not just happened. South Holland has had the advantage of fine government guided by capable and devoted leaders. Our memory travels back over three administrations—those of James Gouwens, Henry Van Der Giessen and the current president, Harold Gouwens—and we believe it can be said without fear of contradiction, that it was the efforts of these three individuals who, more than any other, that guided the village over the rough spots and formed a solid foundation for the almost meteoric but orderly growth that has been experienced. It is a well-planned community apparently safe for all times from heterogeneous expansion such as is experienced in many other communities with leadership of less foresight and dedication.

South Holland has an ample water supply, fine fire and police protection and refuse collection, a good sewage system and excellent streets, all of which combine to substantiate the excellence of its management. That South Hollanders are happy people is due in no small measure to the environment which has been created for them.

We would be derelict if we failed here to take note of the efforts of the Jubilee committee, headed by Tom Miller, which has spent so many hours planning the official observance and social phase of the community's Diamond Jubilee over this weekend. Beginning with an open house at the municipal center (which started yesterday) the holiday weekend will be replete with entertainment and action, details of which will be found elsewhere in this publication. We would urge all townsmen to participate for here is an opportunity to meet with their neighbors in an atmosphere of joviality and friendliness. Here is an opportunity to become acquainted with those public officials in whose hands the destiny of the community has been placed. Here is the chance to see the home town at play.

Finally, the entire Williams Press organization joins the Tribune in extending to the people of South Holland their most sincere congratulations on having achieved this milestone in history. It is our hope that we can relive some of the nostalgic events of today 25 years hence when the community observes its centennial. Meanwhile, we shall seek to keep its citizens informed in our columns of those events which will combine to provide the material from which the history of tomorrow will be written.

COMMUNIST WAR CRIMES IN VIETNAM

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. RARICK. Mr. Speaker, the recent announcement by the Embassy of Vietnam that since 1962 more than 120,000 noncombatant men, women, and children have been murdered by the Communist Vietcong staggers the imagination of free men.

To think that as many people as now living in Pasadena, Calif., or Hammond, Ind., or Columbus, Ga., have been viciously murdered by the Vietcong is repugnant to civilized man.

We do not—and we must never—condone the activities of such terrorists. More important, we Americans must realize that we are at war, facing a merciless, godless threat in Vietnam—an enemy that is but a front for its international master and which will stop at nothing to impose its ideology of fear upon all unwitting human beings.

Tragically, there are malcontents within our own country who still refuse to acknowledge these atrocities by the Communists. Especially has this been the case with many so-called reformists and peaceniks including some of the news media.

In order to help set the record straight, I include a recent report from the Embassy of Vietnam, "Communists Kill, Kidnap 120,308 Civilians," following my remarks:

COMMUNISTS KILL, KIDNAP 120,308 CIVILIANS

SAIGON, July 24.—Since 1962, the Communist terrorists have killed and kidnaped 120,308 innocent civilians, an official report said today.

The highest toll was reported in 1968 during the Communist Mau Than Lunar New Year and June offensives, with 41,952 persons slain or captured.

Since early this year, the Communist terrorist activities have increased, causing 10,160 people killed or captured, 14,267 others wounded and 2,451 houses destroyed.

Besides, religious facilities such as churches and pagodas in Vinh Hoi, Quang Ngai, Ba Xuyen, Quang Tin, Long An and Ben Luc and social welfare facilities such as hospitals and schools were also damaged by the Communists, the report said.

NEARLY 200 YOUTHS ABDUCTED BY COMMUNISTS

SAIGON, July 25.—The Communists have captured nearly 200 South Vietnamese youths to send to the North, spokesmen at the National Press center said:

The victims included 138 youths from the I Corps Tactical Zone and 57 others from the III Corps Tactical Zone.

ANOTHER MASS GRAVE OF RED VICTIMS FOUND IN HUE

HUE, July 23.—During a search operation on July 20 the Nam Hoa sub-sector command found a mass grave of 40 victims who were killed by the Communists during their Nau Than (1968) New Year offensive. The grave was uncovered at Dinh Mon hamlet, Thuong Hoa village.

The remains of the victims were transported to the hamlet school so as to help possible identifications prior to the organization of a mass funeral by the local administration, it was reported.

SALUTE TO INDIA

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. POWELL. Mr. Speaker, on this 22d anniversary year of India's independence, we are proud to commemorate

that historic event and to pay tribute to her manifold achievements during the last two decades. We salute the people of India and their courageous leaders who have brought India to its present position of world eminence. Indeed, India's recent achievements in democratic government, social reform, and technological advance make that progressive nation a model for all newly independent countries to follow.

In the tradition of its great leaders, Gandhi and Nehru, India's Government has been unified and strengthened under the strong and progressive leadership of Mrs. Indira Gandhi. The truly representative form of government provided for in India's Constitution has resulted in ever-increasing national unity and in important legislative initiatives toward solving problems in both rural and urban India.

Although agriculture continues to be the predominant component of the Indian economy, comprising about half of the national income, the contribution of other fields to the economy has increased steadily since independence. The annual industrial expansion has averaged 10 percent, aggregating 150 percent during the period 1951 to 1965. Large modern steel mills, fertilizer plants, heavy machinery plants, oil refineries, and locomotive works have been constructed at an amazingly rapid rate. New plants are turning out a wide variety of consumer and producer goods, many never before manufactured in India.

India is steadily improving those aspects which hindered economic growth in the first decade after independence: the lack of development capital, low level of consumer income, inadequate transport facilities, limited power supplies, and the lack of both skilled technicians and experienced management. With time, all of these limitations are being surmounted as the entire economy matures and continues to grow at a rate that is envied by developed and underdeveloped nations alike.

Although India has made important beginnings in economic growth and social progress, it still faces many large, but not insurmountable, problems in its continuing advance toward modernization. The standard of living in India is still one of the lowest in the world. Poverty, illiteracy, overcrowding, and frequent famines still loom as compelling challenges to the ingenuity and stamina of the Indian people and particularly to their leaders. Overpopulation, that paramount obstacle to progress in nearly all of the developing areas of the world, is India's chief enemy and accounts for its most difficult political and social dilemmas.

India's outstanding record in the short time since independence, however, is an encouraging indication that such problems will eventually be surmounted. Given the forward-looking determination to better their way of life that the independent people of India have thus far demonstrated, that strong nation's future looks bright indeed. We congratulate India on the remarkable progress she has made in recent years, and we express our confidence that she will continue to grow in her role as leader of Asia and exemplifier of democracy at work in the developing regions of the world.

COL. GEORGE A. KRIM DIES

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. GUBSER. Mr. Speaker, one of the Army's experts on armored warfare, Col. George A. Krim, has passed away after an extended illness.

Colonel Krim contributed so much to the military service which was his life that I believe the newspaper articles marking his passing and also an article which appeared in Time magazine in 1943 should be placed in the CONGRESSIONAL RECORD as a permanent tribute to his memory and all that he contributed to the U.S. Army.

The two articles follow:

[From Time magazine, Aug. 2, 1943]

THE RISE OF SERGEANT KRIM

The old army noncoms who still wear chevrons in the vastly expanded U.S. Army of 1943 have something to brag about. One of them has set some kind of a record for promotion.

In April of last year, tall, serious George Krim was a master sergeant. He had 26 years of service behind him, and the respect that officers give to oldtimers who know all the answers. Today George Krim is a lieutenant colonel.

After returning from France in 1919, George Krim, with a new set of sergeant's chevrons on his sleeve, became a regular soldier and a tankman. Over two decades he built up a quiet reputation as an engine expert, an intrepid tester of tanks. When the Armored Forces was organized in 1941, Sergeant Krim was one of the few men who knew much about a branch in which the money-shy U.S. Army had long been weak. He became an instructor. After many months somebody discovered that George Krim deserved more from the Army. Result: forthright promotion to a captaincy, with more rank on the way. Colonel Krim's present assignment: secret tests of tanks.

[From the San Jose Mercury, July 14, 1969]

EARLY U.S. TANK EXPERT COL. GEORGE KRIM DIES

Col. George A. Krim, an Army tank expert when there were only a handful of such men in the service, died yesterday in a Palo Alto hospital after an extended illness. He was 74.

Colonel Krim, who may have held a record for promotion in the Army, rose from sergeant to lieutenant colonel from 1941 to 1943 because of his tank expertise.

A resident of 7150 Rainbow Dr., he had been a county resident since retiring from the Army on Feb. 28, 1953.

He entered the service on June 21, 1916 and served overseas with the Infantry in World War I.

He returned to the United States with a sergeant's rank. In the two decades following World War I's end, Krim assiduously studied engines and armored equipment.

Time Magazine on August 1943 took notice of his rapid Army promotion and wrote about Krim:

". . . Over two decades he built up a quiet reputation as an engine expert and intricate tester of tanks. When the armored section was organized in 1941 Sgt. Krim was one of the few men who knew much about the branch in which the money-shy United States Army had long been weak.

"He became an instructor and after many months somebody discovered George Krim deserved more from the Army. Result: forthright promotion to a captaincy, with more rank on the way. Thirteen months later he was a lieutenant colonel."

Krim was instrumental in the organization and administration of the engine division, tank department of the Armed Forces school at Fort Knox, Ky., in 1941.

During the second World War he was put in charge of a special secret tank training group which later went to England on a hush hush mission whose role was never made public.

Krim was the husband of Josie M. Krim of San Jose; father of Lucille A. Scarr of Texas and Maj. James B. Krim of Kentucky; brother of Lucille O. Krim, Cora Meyers, both of Kentucky, and grandfather of six.

Funeral services will be held at 2 p.m. Monday at the Willow Glen Chapel. Interment will be in the Veterans' plot at Oak Hill Cemetery.

BACK TO FEDERALISM

HON. MARTIN B. McKNEALLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. McKNEALLY. Mr. Speaker, I am pleased to include in the RECORD the following excellent editorial which appeared in a recent edition of the New York Daily News and is entitled "Back to Federalism":

BACK TO FEDERALISM

President Richard M. Nixon passed along to Congress last week the revenue-sharing proposal that will be the cornerstone of what he has dubbed the New Federalism.

The measure would funnel no-strings-attached federal money to the states, beginning with a modest $500 million during the next fiscal year and working up to $5 billion by the 1975 fiscal year.

Mr. Nixon hopes thereby to restore some substance to the federal system, now but a shadow of what the Founding Fathers established.

The President is bucking a tide that began with President Franklin D. Roosevelt's New Deal attack on the crisis conditions of the Great Depression.

What started as an emergency salvage operation has become, over the years, an end in itself as liberals saddled the country with their Big-Brother-knows-best ideas.

Now there are so many Washington-packaged aid, grant and loan schemes that even the self-anointed experts have lost track of their number. In the process, the machinery for administering these projects has become crusted with layers of bureaucratic barnacles.

The cost—in waste, duplication, red tape and buck-passing—is enormous.

As it clamped its fist on an ever-expanding range of activities, the federal government found it necessary to soak up more and more of the nation's wealth. Increasingly, states and cities have been strapped for revenue.

And because many programs were set up on a matching basis, localities anxious to grab a chunk of "free" federal money were lured into programs they could ill afford—and in some cases did not even need.

The whole business of centralizing authority was a mistake from the beginning. The U.S. is simply too vast, too complex and too diverse a nation to fit snugly into a strait jacket tailored by dreamy theorizers.

Revenue-sharing would be a giant step in the direction of dismantling the cumbersome apparatus that has grown up in Washington. It can't happen too soon to suit us.

CONGRESSMAN JOHN BRADEMAS AWARDED HONORARY DOCTORATE OF LAWS BY NOTRE DAME

HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. O'HARA. Mr. Speaker, I quote:

He has been trusted by all those, on both sides of thirty, who want most to put intelligence and integrity to work in the service of the nation and of mankind.

That is the concluding sentence in the citation which was read when our distinguished and able colleague, the gentleman from Indiana, Mr. BRADEMAS, was awarded the honorary degree of Doctor of Laws by the University of Notre Dame on June 1 of this year.

On the same occasion, this great American university awarded honorary doctorates of law to such prominent government figures as Daniel P. Moynihan of the White House staff, Secretary of Labor Schultz, Senator EDMUND MUSKIE and former Ambassador Sol Linowitz. I insert the full list of honorary degrees conferred, and the text of the citation for the degree awarded our colleague from Indiana at this point in the RECORD:

DEGREES CONFERRED

The University of Notre Dame announces the conferring of *The Degree of Doctor of Laws, honoris causa, on:*

His Eminence George B. Cardinal Flahiff, Winnipeg, Manitoba, Canada.

Dr. Daniel P. Moynihan, Washington, D.C.

Honorable John Brademas, Washington, D.C.

Dr. Thomas P. Carney, Chicago, Illinois.

Monsignor Luc P. Gillon, Kinshasa XI, Republic of Congo.

Honorable Sol W. Linowitz, Washington, D.C.

Honorable Edmund S. Muskie, Washington, D.C.

Dr. Nathan M. Newark, Urbana, Illinois.

Honorable Stephen O'Connell, Gainesville, Florida.

Honorable George P. Shultz, Washington, D.C.

Judge Luther M. Swygert, Chicago, Illinois.

The Degree of Doctor of Science, honoris causa, on:

Dr. Henry Eyring, Salt Lake City, Utah.

UNIVERSITY OF NOTRE DAME

At The 124th Commencement the June Exercises The University of Notre Dame confers the degree of Doctor of Laws, *honoris causa* on a man who in 1958 was elected, at the age of thirty-one, to represent Indiana's Third Congressional District, the district in which the University of Notre Dame is located, in the United States House of Representatives. He has continued to serve in that capacity brilliantly since that time.

What manner of man is he? Plato suggests the type in speaking of the education and selection of Rulers in the *Republic,* "They must have the right sort of intelligence and ability; and also they must look upon the commonwealth as their special concern—the sort of concern that is felt for something so closely bound up with oneself that its interest and fortunes, or good or ill, are held to be identical with one's own".

What is his social philosophy? Whitehead, in his essay on "Universities and Their Functions", gives us a suitable statement of it: "In the modern complex organism, the adventure of life cannot be disjoined from intellectual adventure. It is a libel upon human nature to conceive that zest for life is the product of pedestrian purposes directed toward the narrow routine of material comforts. Mankind by its pioneering instinct, and in a hundred other ways, proclaims the falsehood of that lie".

What has he achieved? Much of the major federal educational legislation of recent years is attributable to is genius and his hard work. He has always been acutely aware of the fact that man's reach, his spirit, and his vision are by no means limited to his material needs and comforts. He has shown that the role of the leader is not only to reflect the will of the people, but also to inform and to form that will. He has been trusted by all those, on both sides of thirty, who want most to put intelligence and integrity to work in the service of the nation and of mankind. On The Honorable John Brademas, Washington, D.C.

IS DDT WORTH THE RISK?

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. PUCINSKI. Mr. Speaker, the Chicago Sun Times recently ran an editorial on DDT, and raised a very valid question as to whether further use of this chemical is worth the risk it provides for mankind.

The Sun Times editorial is a classic and I believe it deserves strong consideration for the Pulitizer Prize.

In simple and succinct terms, this editorial dramatizes better than anything else that has been written on this subject the dangers that lie ahead for civilization as it continues to disturb the chain of life.

Mr. Speaker, I do not know who wrote this editorial, but it would be my hope that this excellent piece of writing would be included in every textbook as an outstanding example of journalism at its very best.

The author has managed to grasp, with a few poignant strokes, the full range of dangers that lie ahead as man tinkers with his environment.

The Sun Times editorial follows:

IS DDT WORTH THE RISK?

A principal argument of opponents of the use of DDT is that the toxic substance interferes with the chain of life.

For those who doubt that such a danger is real, there is evidence in a recent issue of Natural History Magazine. In an article on grants for ecological studies, a Ford Foundation official related this tale:

DDT was used in a Borneo mosquito abatement project. The mosquitos died, as predicted. So, however, did a large number of predatory wasps, which had kept the caterpillar population under control. Thus freed of a natural enemy, the caterpillars thrived, dining with abandon on the roofs of native houses. The result: The roofs began to collapse.

Meanwhile, the DDT also was used to control houseflies. The flies died as predicted. So, too, did a small lizard that ate houseflies, and so, too, did cats who ate the dead lizards.

As a result, the rat population zoomed upward—and in order to control the danger of plague, fresh cats were parachuted in.

The moral: When man intervenes with nature, armed with a spray gun, he had best remember that he, as well as mosquitos, flies, lizards, caterpillars, cats and rats, is part of the chain of life.

And, the cat airlift notwithstanding, it may not always be possible to keep the chain intact with parachuted replacement parts.

OPPOSING THE VIETNAM WAR IS NOT ISOLATIONISM

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. FRASER. Mr. Speaker, an excellent article has been written by Barbara Stuhler, associate director of the Minnesota World Affairs Center. Miss Stuhler examines the charge of isolationism being leveled at congressional critics of the Vietnam war and other military excesses. Her analysis is very perceptive and constructive. I am sure all of my colleagues will find the following article of value:

THE AMERICAN SENATE AND NEO-ISOLATIONISM

(By Barbara Stuhler)

We hear a good deal of talk today about neo-isolationism in the United States. Many Americans, weary of international responsibility and worried about domestic tranquillity, are facing inward with their backs to the world. It is not surprising that this public sentiment finds expression in the United States Senate but the identity of neo-isolationist senators merits careful examination, not careless accusation. The charge of new isolationism in the American Senate was launched largely by columnists of conservative persuasion. Listen to Roscoe Drummond:

Is another wishful, head-in-the-sand group of Senators going to take the nation into new isolationism by pretending that the lesson of Vietnam is that little in the world concerns us or in supposing that (by) throwing off more of our responsibilities as a great power, we can live safely and cozily in our own little corner of the planet?

And William S. White echoes the same theme when he comments:

The new isolationists of the Senate are attacking more than the anti-ballistic-missile system and more even than the whole philosophy of adequate military preparation in a world where danger still manifestly lives.

They are challenging the very realities of the present in a headlong retreat to a past which even after all this time they still cannot understand. They are in fact turning the clock back by three decades to the late Thirties, when the old isolationists were all but disarming this country while Hitlerism was visibly rising in Europe.

Drummond and White point their fingers at the Fulbrights, Kennedys, McGoverns, Mansfields, and McCarthys as neo-isolationist spokesmen and advocates. To many Americans who equate isolationism with Republicanism, this has been a jarring accusation. After all, Henry Cabot Lodge and his cohorts, whom Woodrow Wilson labeled "a little band of willful men," prevented our joining the League of Nations. During the 1930's, the retreat to isolationism was sealed by the conclusion of Republican Senator Nye's well publicized investigating committee that we had been sucked into World War I by the machinations of the "merchants of death." (Today, we give these same alleged conspirators a more academic designation—we call

them the "military-industrial complex.") When World War II began in Europe, Republican Senators were among those most vocal and vehement in the protest against the abandonment of neutrality as the cardinal rule of foreign policy. Mindful of its rejection of the League of Nations after the first world war, America was determined not to be blamed after the second for the retreat from responsibility. We took the lead in organizing the United Nations and that charter was enthusiastically endorsed by the United States Senate with only two Senators voting against it and they were both Republicans—William Langer of North Dakota and Henrik Shipstead of Minnesota.

The historic isolationism of Republicans was partly partisan—when Europe heated up in the 'Teens and in the Thirties, Democrats occupied the White House. In large part, however, their isolationism was representative of the radical agrarian tradition that permeated middle and western America. The liberal Republicans and their third party offshoots who articulated this tradition first set forth the proposition before World War I that international affairs were an unworthy intrusion upon domestic priorities. In the minds of these men, we should have bent our energies to the task of building a more perfect society which could serve as an example to the world in peace and freedom and with an economic system that afforded fair play for all. The exploitation of the worker and the uncertain security of the farmer were eloquent signs of a sick society. We were, these isolationists argued, being diverted from domestic improvement by unnecessary involvement in the contagious corruption of Europe and its national struggles for power, prestige and profit. Furthermore, we were susceptible to these same ills if we let the munitions makers, the bankers and Wall Street have their way. They were manipulating America away from her original goodness into acquired sin, from her prime obligation of domestic reform into international meddling.

The rhetoric of the Sixties may not be quite so flamboyant but it has a striking similarity to that of the Thirties. The poverty of millions of Americans living in the world's most affluent society has shamed us and moved us to action. The injustice of discrimination in a nation which presumed to be the foremost spokesman for equal opportunity has led us to question nearly 200 years of hypocrisy. The frustrating war in Vietnam has angered Americans and, in their reaction, they have challenged the basic assumption of post-World War II foreign policy that we should police the world in order to prevent aggression, contain conflict and preserve the peace. They are alarmed at the momentum of the military-industrial complex which appears hard, if not impossible, to stop and they protest that the state of the economy is based on "guns not butter." And political leaders of today, like their antecedents, assert that peace can best be served by making America an example for the world.

But the similarities between these two eras do not stop with rhetoric. The United States is decreasing the amount of economic assistance to the poor nations of the world to the point where the interest payments we receive on our loans often exceeds the aid we give. In the 1930's, the big economic issue was the failure of the hard-pressed nations of Europe to pay their debts owed us for war and reconstruction. We were penny-pinchers then and it might be argued that we are penny-pinchers now. In the 1930's, tariffs went higher and higher as we struggled to protect American industry from foreign competition. In the 1960's, quotas and other new protective devices are being hailed as the way to halt the increasing number of imports coming into the United States. We had to learn from the experience of the Thirties that had we cancelled the war debts and lowered tariffs, the world economy would have had a chance at recovery. As it turned out, we intensified the depression by insisting that the war debts be paid and by escalating tariffs to an historic high. We made no effort to help build an international community; instead, we attempted to shut ourselves off from conflict by passing a series of neutrality acts. Today, many Americans argue that there shall be no more Vietnams, no more interventions, and the concept of collective security becomes rusty with the distrust of certain of our military alliances and with the disuse of the United Nations.

It is not surprising that the charge of neo-isolationism is leveled against men whose rhetoric parallels that of the Thirties in their assertion that we should take a lesser role in world affairs and expand our energies on our problems at home. Nor is it surprising that this rhetoric stems from political figures to whom one might legitimately ascribe the liberal label. As we have already noted, American radicals have been in the forefront of the isolationist tradition. The list of the foremost Senate isolationists of the 1930's looks like an honor roll of those who fought domestic injustice: Lundeen of Minnesota, LaFollette of Wisconsin, Wheeler of Montana, Johnson of California, Borah of Idaho, and Norris of Nebraska. In terms of their concerns for domestic affairs, it should be expected that Kennedy and McGovern and the rest would be the natural inheritors of this cause.

But the comparison fails in a number of crucial respects. Not all these men who emphasize domestic reform today and urge a greater restraint in world affairs wish to raise barriers to trade nor decrease aid nor ignore the United Nations nor disarm unilaterally. Indeed, among them, you will find the strongest advocates of American responsibility in world affairs but they do not equate that responsibility with support of American policy in Vietnam or the installation of an anti-ballistic-missile system or an unquestioning support of the defense establishment. This is not to say that they are right or wrong but only to suggest that the isolationist tag does not fit with great precision. A new isolationism *is* abroad in the land—it is quite clear that some Americans would be quite content to disassociate the United States from the headaches of world affairs. The question before us is who are the Senate isolationists? Are they the Kennedys who suggest that we open up lines of communication with the mainland of China? Are they the Fulbrights who protest that we do not make adequate use of international instruments to channel aid? Are they the Mike Mansfields who have devoted their careers to Asian Affairs? Are they the McGoverns who spent their energies in the executive and legislative branches to assuage hunger at home and abroad? Are they the McCarthys who call for more enlightened trade policies with Latin America? Let us turn from them for a moment and look at the Senators who have supported our actions in Vietnam, who have endorsed the Safeguard system and who have championed large military appropriations. Here we find, for the most part, conservative Republicans and southern Democrats. These are the Senators who have also most vigorously opposed freer trade and larger aid, and have been indifferent to the formation of an international community. There are exceptions, of course, but the fact remains that their main thrust has been national strength, self-sufficiency and unilateral action.

Part of the difficulty in sorting out the Senate isolationist lies in the differing interpretations of isolationism. To some it means a weakening of our capability to oppose aggression from whatever source. A corollary of this is that initiatives to moderate tensions between the communist nations and ourselves may prove to be the appeasement that invites aggression. Those who hold to this definition do so out of the experiences before the second World War when efforts to appease Hitler's appetite only nurtured his appetite for more. After the war, this conviction was reinforced when efforts to "get along" with the USSR resulted in Soviet territorial imperialism. To others, isolationism represents a lack of generosity to less fortunate nations, a lack of commitment to regional and international organization, a reluctance to initiate policies that may lead to the resolution or containment of conflict. Are those who advocate withdrawal from Vietnam appeasers? Are those who opposed the ABM weakening America's ability to counter aggression? Are those who assert that the military has grown too big and too powerful diminishing our national security? There is room for honest disagreement on these difficult issues but to conclude that men who hold these views are necessarily neo-isolationists does not fit their voices or their votes if you subscribe to the position that there is another dimension to internationalism which also requires commercial, cultural and organizational association with other nations.

Just as there are conservative and liberal Republicans, and conservative and liberal Democrats, so, too the case can be made for varying strains of isolationism and internationalism. One kind of isolationists is the "fortress America" variety. Enough said of this petrified man. Another is the kind who will insist on the primacy of domestic policy over foreign policy and who will ignore the hard realities of interdependence, of the fact that a great nation's domestic happiness will turn on the question of its security on the world scene. The internationalists run along a continuum, from those who would so structure the world that the only military force was in the possession of the United Nations to those who would continue to respect the need for a national military component while advocating a greater internationalism of other aspects of American foreign policy.

At the moment, it appears that the so-called neo-isolationism of the left is a reaction against the overzealous interpretation of great power responsibility, against an overheated response to aggression or revolution, and against an overeager sense of democracy's missionary spirit. Because liberal Senators urge restraint in foreign policy, it does not necessarily follow that they mean abdication. As yet, there is insufficient evidence to mark their protest as isolationism. What is evident is that they are trying to restore the balance between the Upper House and the Presidency in foreign policy decision-making. The prospect remains, of course, that some among these same Senators may overreact by rejecting future administration efforts to strengthen the instruments of American foreign policy. Then the charge of neo-isolationism which cannot now be validated may come true.

In one generation the United States has taken a giant step from an isolationist posture to an international one. In the process, we may have gone from one extreme to another and what we now may be searching for is a balance and perspective worthy of national maturity and wisdom. Isolationist impulses should not be condoned, but it can be a misleading condemnation to apply the label of neo-isolationism to certain Senators because they take positions opposing an arguable case of intervention (Vietnam) and a defense issue of debatable virtue (ABM), and because they become increasingly assertive in civilian review of military requests. It may be that out of the current Senate discussions, American foreign policy will find a greater strength and sensitivity befitting a democratic and nuclear nation. It may be that a harder look at foreign policy will increase our options and enable us to choose

more wisely in the fundamental task of building world order. Instead of castigating, we should be cheering those Senators who insist that there may be a better way of fulfilling our obligations to ourselves and to the world.

FREEDOM BECOMES ILLEGAL: A CROSSROADS IN EDUCATION

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. RARICK. Mr. Speaker, I have, many times, voiced my protest to the unprecedented denial of freedom of choice to our schoolchildren and warned of the inevitable destruction of the public school system as a result.

The public schools have now attempted to reopen for the 1969–70 term, but are faced with the anticipated chaos. Parents who have already paid for one set of school buildings are digging into their pockets to finance independent school systems. Other parents are organizing to raise funds to file lawsuits to protect their neighborhood schools—others are boycotting the entire system and there is an ever-mounting atmosphere of tension—potentially violent—which, if triggered, could set off an irreversible domino reaction beyond control. And further polarize the white and black communities.

While the social mechanics attempt to justify denial of freedom as necessary to achieve some nebulous racial balance, the scorecard shows that in many areas the schools have become more segregated by race as a result of denial of freedom than they were before. For example, in one school in Tangipahoa Parish the classrooms are running 25 Negro to 1 white. In another high school, the classes are running 32 Negro to 5 white.

Rather than providing quality education the new "Federal academies" are generating a new cause of school dropouts. And if our national leadership allows its "agencies of force" to continue to press the condition which engenders school dropouts there will be more and more individuals academically unprepared to accept the technological positions required in an advanced society. Simultaneously an ever-increasing reservoir of hard-core unemployed will develop—many having intellectual capabilities but embittered by the realization that they were denied their freedom to develop their potential as they wished.

Mothers and dads, as free agents, have become desperate to do what they feel is best for the safety and welfare of their children.

And there is no guilt in the actions of mothers and dads or the children. Their reaction is but an effect which has been provoked by the pressure applied by our Government agencies. There is no solution in name calling or further punishing the people. The problem was created in Washington—it is ours to recognize and solve.

It is simple enough to undo the wrongs inflicted in the name of governmental authority. We need only repeal the supposed authority. We dare not fail in our duty—lest we force our people to respond to tyranny as people have done throughout history.

Mr. Speaker, I insert several news clippings from the Baton Rouge Morning Advocate, this date, following my remarks:

OFFICIALS PROBING ANTIMIXING SUITS

NEW ORLEANS.—Justice Department officials were here Tuesday looking into state court suits seeking to block school boards from proceeding with desegregation commitments in various area parishes.

A department spokesman said a motion will be filed by Wednesday to seek removal of a Pointe Coupee Parish suit to federal court.

Similar motions for removal of cases in Ascension, Evangeline and Avoyelles parishes were granted last week.

In the cases, white parents said boards went beyond the law and adopted plans requiring racial balance and busing of pupils to achieve it.

The civil rights officials were also checking state suits in Iberia and Iberville parishes that might slow down desegregation.

In Iberville, a Negro parent brought suit to protest alleged sex discrimination in that school board's plan.

A white group also sued to block the board's plan of requiring racial balance.

The Iberville board last week delayed the opening of schools until Monday after trouble erupted in the first attempt to open schools early. The board decided on the delay to give the board's legal counsel more time to ask federal court for permission to use freedom of choice as an alternate to the plan ordered by the court.

Among the officials in Louisiana looking into the school cases were Asst. Atty. Gen. Jerris Leonard, head of the department's civil rights division; Frank Dunbaugh, Southern section chief; and two other division lawyers.

The Louisiana activity came after a request for action against nine school districts in Georgia Robert H. Finch, Secretary of Health, Education, and Welfare, asked Justice Department action against the districts. Finch accused the Georgia school districts of reneging on voluntary desegregation plans.

The department dispatched a team of civil rights division lawyers to Georgia to take court action against the districts, a department spokesman said Tuesday.

MANY START SCHOOL

Darkest picture on the school scene in the area where some schools have yet to open was Ascension Parish—whites threatened whites to keep the boycott so tight that enrollment on opening day Tuesday was almost zero.

However, on the lower reaches of the Acadian country, Evangeline Parish started classes Tuesday morning with about 25 per cent enrollment but by evening, schools were recessed until further notice after over 1,500 citizens descended upon the school board to demand the stop action. There were no pickets during the day and some buses made their rounds without picking up a pupil.

HALF AND HALF

In St. Mary Parish, it was good and bad. Schools in the Franklin area in the western part of the parish were about scuttled with a 90 per cent boycott in effect but in the Morgan City area in the eastern end attendance was reported at nearly 100 per cent.

Some schools will be opening Wednesday in some areas and others will open later. West Baton Rouge schools open Wednesday. Iberville Parish, which had troubles when it sought to open last week, will not resume classes until Sept. 8.

Public schools opened Tuesday in Lafayette Parish under full integration without incident.

The city of Lafayette where the schools contain the majority of Negro pupils will not be integrated until next fall.

City and parish-wide in Lafayette, 28,000 youngsters returned to classes. The enrollment total was an increase of 1,000 over last year. Nat Gisclair, assistant school superintendent, said the enrollment increase was smaller because a number of former public school pupils enrolled in the parochial system.

On the heels of school opening, a group called Freedom Inc. has called a meeting for Wednesday to discuss ways of establishing private schools.

WESTLAKE CLOSED

In Calcasieu Parish as schools went into their second week, trouble developed at Westlake High School Tuesday and the school board decided to close it for two days to restore discipline.

A three-member delegation including Principal John Letard told the board that the situation is ready to explode at any moment and asked for a transfer of 50 Negro pupils to Sulphur High and iron-clad discipline. The delegation charged that unruly Negro students, who formerly attended Mossville High, have completely demoralized discipline. Letard said 147 Negroes attend the formerly all-white school with a student body of 600.

Board President John Denison said the board has adequate policy to take care of the problem.

In East Baton Rouge Parish where freedom of choice prevails in the school system's desegregation route, more than 62,000 young people returned to classes Tuesday without any educational disruption. The enrollment includes more than 40,000 white pupils and more than 21,000 Negro students.

SCHOOLS PADLOCKED

In Ascension Parish where several schools were apparently padlocked during the night preceding the scheduled opening Tuesday, sentiment was strong against opening the schools under the court-ordered plan of speeded up integration.

Pickets were reported at all schools in Ascension where locks were found on the gates at Dutchtown and Galvez schools. W. C. Brunson, school superintendent, said some locks were found to have been jammed by keys inserted in them and twisted off and other locks could not be operated by the janitor's keys, indicating the possibility that these locks had been secured by persons not on the school staff.

Some teachers called in sick, others were reported nervous and frightened. "They have all been threatened," said Henry Glaze, assistant superintendent.

Bus drivers have refused to drive because they have been threatened too, the school official reported. "They have been getting calls at all hours of the night, threats to burn their houses down and put bombs on their buses."

Attendance at the St. Amant school was zero; Dutchtown Junior High, 6; East Ascension Junior High, 20; Galvez school, zero; Gonzales Elementary, 164 out of 1,740 enrolled; and East Ascension Senior High, 123 out of 1,350.

THREATENED

Maintenance workers, lunch-room personnel and parents who want to send their children to school have been threatened, officials said.

A curfew is still in effect in Gonzales. It was imposed last week after tension between whites and blacks swelled. Ascension Parish Sheriff Hickley M. Waguespack said the tension developed as a result of the new integration orders and threats circulated by boycotting whites.

St. Landry Parish, where the Negro population is heavy and where racial tension has been heightened by the new court-ordered plan, starts registration Wednesday.

Federal marshals are in Washington

Parish and in St. John the Baptist Parish. Marshals were called into St. John because of threats of violence. In Washington Parish, the marshals were ordered to watch over Negro teachers entering the formerly all-white Thomas High School which had to be closed a few days to let tempers cool. All the schools were back in operation Tuesday in Washington Parish.

Iberia Parish, which had racial troubles last week when schools opened, resumed operation Tuesday peacefully. George Crowson, principal of New Iberia Senior High, said 10 Negro pupils were suspended indefinitely as a result of the disruption when a group of Negroes beat up white pupils.

In other area parishes, Tansipahoa reported some white boycotts, and pupils at Woodland Elementary in Hammond were let out after a bomb was reported to have been planted in the school but it turned out to be a hoax; Pointe Coupee Parish reported some schools picketed and nearly a total white boycott in effect; West Feliciana resumed its second week of classes without any apparent trouble; Rapides reported a small number of pupils not attending classes—these are white pupils assigned to formerly all-Negro schools; and Avoyelles Parish reported there have not been any boycotts nor any racial disturbances although in some cases, the Negro students outnumber the white ones in classes.

Elsewhere in the state, Caddo Parish reported scattered picketing at four schools; Grant Parish postponed its school opening with the date for starting classes to set later this week; and Natchitoches Parish delayed its opening until Sept. 3.

In Richland Parish, 75 per cent of the pupils at the all-Negro school in Rayville stayed home in protest of the appointment of a white principal to the school.

EBR School Registration Increases

(By Bill McMahon)

The East Baton Rouge Parish school system enrolled 62,152 students the first full day of school Tuesday, 1,835 above the first-day figures of last year.

The totals reflect only those in grades 1–12 and not those in kindergarten and special education classes, Asst. Supt. Lorin Smiley said Tuesday.

Enrollment is expected to move toward the 65,000 mark as late registering, kindergarten and special education students are added to the first day totals, Smiley said.

The total recorded Tuesday is 165 below the increase of 2,000 projected, Smiley said.

Indicated by the figures gathered late Tuesday were 32,871 elementary students (20,776 whites and 12,095 Negroes) and 29,281 junior and senior high students (19,409 whites and 9,872 Negroes).

TRANSFERS DO NOT SHOW UP

Although possibilities of a large increase in the number of students was speculated upon because of tougher desegregation policies in surrounding parishes, the first day's enrollment did not indicate such happened.

School administrators had indicated that as many as 600 additional students might enroll in East Baton Rouge Parish public schools because area parishes had been ordered to dispense with freedom of choice as a method of desegregation, and in many cases go to a pairing and zoning method of integration.

East Baton Rouge Parish was not one of the parishes so ordered, and has maintained a freedom of choice method.

The local system also had no unusual problems resulting from school beginning.

The freedom of choice method used in the parish schools resulted in no substantial increase of integration, a comparison of this year's enrollment with last years shows.

SECONDARY RATIO HIGHER

Eleven of 80 schools with elementary classes had at least five per cent Negroes in majority white schools. The percentage was higher in the secondary schools, with 9 of 29 showing at least five per cent of blacks in majority white schools.

Two elementary schools with majority white enrollment last year became majority black since the first day of school last year. They were Banks (formerly 373 whites and 132 Negroes, and now with 198 whites and 310 Negroes) and Fairfields (formerly with 139 whites and 59 Negroes, and now 26 whites and 185 Negroes).

Eight elementary and six secondary white majority schools showed at least a 50 per cent increase in the number of Negro students.

The elementary schools, with last year's Negro enrollment listed first, followed by this year's Negro enrollment: Bakerfield 68, 134; Baker Heights 15, 37; Bernard Terrace 21, 59; Melrose 23, 36; Park Ridge 4, 10; Westdale 57, 87; Wyandotte 35, 53; Zachary Elementary, ? * * *.

Secondary schools with at least 50 per cent increase in the number of Negro students: Baker Junior, 16, 48; Baton Rouge High, 52, 106; Glen Oaks Junior 74, 121; Glen Oaks Senior 41, 63; Istrouma Junior 41, 90, and Lee Junior-Senior, 62, 139.

Iberville Board Hit By More Charges

PLAQUEMINE.—A group of white parents Tuesday accused the Iberville Parish School Board of meeting in secret at night and not telling the truth about integration.

The small group asked the board what John R. Ward, special counsel to board, meant when he said he would go back before U.S. dist. Judge E. Gordon Dest and ask for "supplementary relief."

Ward said he would seek the relief during a special meeting of the board last week when opening of schools was delayed until Sept. 8.

Registration in Iberville was marked by demonstrations by both whites and Negroes, a temporary classroom was destroyed by fire and police used teargas to quell a Negro demonstration after rocks were thrown at police.

Board member T. J. Sanchez, Ward 1, said Ward would ask for a plan based on freedom-of-choice since the board had experienced great difficulty in instituting the court-ordered integration plan approved by Judge West.

Carlyle Marix, Ward 2, siding with those in the audience, said that was not the way he understood the matter and did not want the people to be misled.

There were shouts of: "We want the truth."

Factions Ask Ascension Unit Backing

DONALDSONVILLE.—Opposing factions of parents from East Ascension faced the Ascension Parish School Board Tuesday night with requests for support.

And, in the session which ran on and on into the night, neither side was given assurance by the board.

Loy McCrory, a spokesman for the pickets and boycott supporters who were present at the meeting in large numbers, said the issue in East Ascension is not a racial one. "We had colored students at Dutchtown," he said, "and last year we had colored teachers and you didn't see any picket lines."

He claimed the pickets are peaceful, want no violence and are only seeking to have freedom of choice restored.

McCrory also asked minutes be read of the meeting at which the board accepted the plan of the Department of Health, Education and Welfare. "And we want to know," he added, "why one side of the parish has freedom of choice and one has the HEW plan."

The plan accepted by the federal court preserves freedom of choice in Donaldsonville for the current school session.

James Leche, who identified himself as one of those picketing schools, said if the schools function normally, the board can't go to court seeking relief from the HEW plan. Several board members agreed the fact that the schools are not able to operate normally may give them a point to argue in court.

WANTS SCHOOLS OPEN

Mrs. Bill Kivett, Gonzales, said she is one of many parents on the east side who are anxious to send their children to school. "Every one has the right to picket," Mrs. Kivett said, "but limit the number. I can't tell my child he can't go to school. Children are being deprived of their right to an education."

Of the six schools in East Ascension, only Gonzales Elementary and East Ascension Senior High School conducted classes on Tuesday. Gates were chained and padlocked at St. Amant and Galvez and low attendance closed the other schools.

No buses operated on the east side of the river and bus drivers claimed to have received threats.

Asked by those parents anxious to send their children to school whether buses would run and all schools be open, the board gave no reply.

McCrory told the board he and about 35 others represented a very large group of boycotting parents and had agreed to take "some answers" to them at a meeting Thursday night. It was unclear that any answers had been given to satisfy the group.

RAPS SECRET MEETINGS

Leche blamed the board's penchant for executive session caused much of the current trouble. He said he had been attending board meetings for years and everytime the subject of integration came up, "I was politely asked to leave."

"You are charged with providing an education for our children," Leche told the board, "then you should never go into a secret session."

"You haven't had any confidence in us, how can you expect for us to have confidence in you," he added. "If you'd been more honest with people you'd be in less hot water now."

C. T. Hodges, among those seeking to send their children to school, said he had a petition with 174 signatures asking schools be reopened immediately. The petition noted the group is in favor of freedom of choice but is also in favor of education and opposed to threats, picketing and harassments.

SHERIFF CITES THREATS

Asked for his opinion, Sheriff Hickley Waguespack said he believed a secret poll would show most parents in East Ascension would like to send their children to school. He said it is threats, fear of threats or violence that are keeping most children out of school, not integration. He said he had come to this conclusion after talking to large numbers of persons.

Alva John Wall asked the board to pass a resolution stating any teacher who discriminated against boycotting students on their return to school would be dismissed.

A lengthy discussion on what comprised discrimination brought out the fact boycotting parents want their children to be allowed to play football, participate in the band and not receive failing grades for the classes they've missed.

Board member Lawrence Noel said he would not want to sign a resolution which might give the appearance of school board support for the boycott. No action was taken on the request.

Schools Closed in Evangeline Parish

VILLE PLATTE.—The Evangeline Parish School Board, overwhelmed when more than 1,500 white citizens showed up for its meeting, voted to keep schools closed until further notice and joined the audience as co-plaintiffs in two suits.

The board moved from its office to Ville Platte High School's gymnasium to accommodate the crowd of citizens protesting federal court-ordered desegregation.

The group argued heatedly for adoption of

the four-point program drawn by an 18-man committee. It was finally adopted by the board.

The first of the four points called for the indefinite recess in schools.

The second point called for the board to join as co-plaintiffs in a suit against the Department of Health, Education and Welfare now in U.S. District Judge Richard Putnam's court at Shreveport seeking to restrain HEW from imposing its desegregation plan on the parish.

The third point called for the board to join as co-plaintiffs in a motion to have the suit filed by Paul Manuel et al against the board and HEW moved back to 13th Judicial District Court in Ville Platte.

The fourth asked that a speedy hearing be given in both cases.

After a long debate between members of the committee and the school board and its legal representative, John R. Ward, the board huddled and agreed to adopt the program.

There was only a sprinkling of white attendance as schools opened Tuesday morning. About 25 per cent of the expected enrollment, white and black, reported for classes. Some stayed only a short while and left.

Many school buses arrived empty after making their rounds in the parish. Five empty buses in a row showed up at Ville Platte Elementary.

There were no pickets at schools, but booths set up by the Concerned Citizens of Evangeline Parish were set up in each community of the parish to survey feasibility of a large central private school. The group reported "a tremendous turnout."

RAPIDES SCHOOL BOARD HALTS ENROLLMENTS ZONE CROSSINGS

ALEXANDRIA.—The Rapides Parish School Board moved Tuesday to crack down on students enrolled in schools outside their residential zone.

Board members reported there were numerous instances of students enrolled outside their regular zones and warned they would be notified by the principal they could not continue at the schools.

Allen Nichols, school superintendent, said: "I feel we've reached the point where we must have people obey the court order" or have mass shifts and further disruptions.

The problem is compounded by low registration in the schools this fall. Travis Funderburk, assistant superintendent, said first day enrollment was 1,300 fewer than anticipated and 700 fewer than registered last year.

He said the normal five percent growth apparently did not occur although there was considerable late registration and many students were enrolling this week.

He said the board still has a number of teachers unassigned and a number of vacancies.

DISPLACED TEACHERS

Most of the displaced teachers are black.

Funderburk warned that it seemed likely 22 teachers would be left after assignments. Their pay represents about $120,000 a year, he said.

He said the state allocations would not cover those salaries, which would then have to come out of the board's general fund.

A request from the Alexandria Academy for the board to furnish bus transportation from Alexandria to a private school in Pineville was approved. The private school occupies a public school building which was closed this year because of zoning changes under the court order.

Lafargue School, which was also closed this year for the same reason, was rented to the Office of Economic Opportunity for Head Start program headquarters.

Ward 1 members had asked that it be loaned to the OEO without charge but rural members balked and insisted that rents be collected.

An increase in the price of milk for children who get extra help was approved. The cost to the parish has gone up from .0718 to .074, board members were told and children who have been paying three cents now must pay four cents for a half-pint carton.

WHO'S RUNNING HEW?

The conflict between moderating statements from some high members of the Nixon administration and the relentless drive by the Department of Health, Education and Welfare for total control of the nation's schools and institutions furnishes an interesting study in governmental operations. From just whom is HEW taking its cues, anyway?

If HEW's actions and the available evidence mean anything, the agency is not yet fully under control of the Nixon administration. It's ideologues are acting on their own and on the basis of advice from civil rights doctrinaries, not with guidance from the courts, from Congress, or from any elected official in Washington. They are taking advantage of this situation.

The new administration has been reluctant to make a clean sweep of more fanatical members of HEW and of the civil rights compliance sections that exist in other agencies and take their guidance from HEW. To do so might be interpreted as an effort to turn back the clock, and might provoke from civil rights enthusiasts and from many liberals an even stronger attack than already has been launched by them against President Nixon. Keeping these people happy probably would be a hopeless task for any president, but President Nixon does not want to stir up any storms unnecessarily or lose any votes that can be saved. The HEW people feel safe in their jobs for the time being.

Agency control can be changed gradually as key posts become vacant and are filled with new men. But if those presently in control move swiftly enough, they may hope to present the administration and the nation with a fait accompli in the form of drastic changes that cannot be undone without the danger of making things even worse.

Some might wonder whether the administration itself may be playing a game with the public by walking softly while tipping HEW off to keep swinging the big stick. But the circumstances do not support this theory as well as they support the one we already have stated. The situation is becoming too embarrassing to the administration.

FORT BELVOIR SERVICES HONOR GENERAL WALKER

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. EDMONDSON. Mr. Speaker, services are being held today at Fort Belvoir for one of Oklahoma's finest soldiers, Maj. Gen. George H. Walker.

The Nation has lost one of its ablest engineers and officers in the tragic illness and death of this great and good American.

General Walker and his lovely wife Jo grew up together in Muskogee, Okla., where a sister and brother of the general still live. As a fellow townsman, I have followed General Walker's splendid career through the years with keen interest and growing pride.

The general served throughout his career in the Army Corps of Engineers, a career which ended with his retirement as commanding general of the U.S. Army Engineer Center at Fort Belvoir, Va.

He worked long and hard as a builder, and was one of the finest architects of watershed development this country has produced. His contributions in this area while serving as district engineer for the South Atlantic Division earned him the Distinguished Service Medal. His influence in watershed development also was strongly felt while he served as executive officer for civil works in the Office of the Chief of Engineers here in Washington.

I want to extend my deepest sympathy to the family of this great American. My wife and I sincerely share their grief in their great loss.

OUR MAGNIFICENT SCIENTIFIC PROJECTS

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. FRASER. Mr. Speaker, in previous remarks on the recent space achievements, I expressed the hope that we would apply the same devotion and organizational know-how evident in the space program to the complex social problems facing this Nation.

Recently I received a letter from a constituent expressing similar views. The distinguished author of the letter, Dr. Frederic J. Kottke, professor and head, department of physical medicine and rehabilitation, University of Minnesota, asks whether Federal expenditures for magnificent scientific projects such as the moon shot and the supersonic transport (SST) can be justified in face of poverty, untreated disease, hunger, urban deterioration, and significant social unrest?

Dr. Kottke points out that Minnesota's pro rata share of the cost of these scientific projects would be substantial. If these funds could be diverted, or if comparable amounts were available, necessary educational and health programs could be adequately funded.

Dr. Kottke's final paragraph tersely summarizes the feelings of many Americans who recognize the importance of the SST and space programs, but who feel that other projects cry out for equal or higher priority in the list of tasks urgently requiring Federal moneys:

All of this adds up to the issue of relative value for activities of the federal government. I thrill to magnificent scientific efforts. There is no question but that with proper support scientists can do marvelous things. However, I think that the government's first obligation is to consider the relative value of the activities which are supported. Luxuries should not take precedence over necessities. The health and welfare of the people of the United States should be the first concern of government and should take first priority. It appears that we are not maintaining this perspective in the programs supported by the government.

COMMUNISM—STILL THE ANTITHESIS OF FREEDOM

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. WYMAN. Mr. Speaker, communism is still the mortal enemy of freedom everywhere. By definition, motivation, philosophy, strategy, and objective, communism strangles individual freedom as surely as cancer kills and replaces living cells within the human body.

It is the height of error to admit Communists to any form of coalition government, for they will work to destroy and replace that government with a Communist government. No Communist can be a genuine Communist and obey any oath or any religious tenet that might conflict with the Communist goal of world domination.

In this case, a recent editorial by the distinguished editorialist and publisher of U.S. News & World Report, the Honorable David Lawrence, is significant.

The editorial follows:

A DEFINITION OF COMMUNISM OFFERED

(By David Lawrence)

Almost every week people read in the news dispatches something about "communism" and its relationship to activities in the United States. But rarely has a comprehensive definition of the word been given based upon an official inquiry authorized by Congress.

Such investigations have been occurring for many years. Most of the witnesses testifying voluntarily and represent all walks of life—priests, ministers, college professors, schoolteachers, state and city officials, industrialists, farmers, officials of big labor unions, representatives of various industries, and patriotic societies and other organizations, including the American Civil Liberties Union and the American Legion.

It is not generally realized that one of the practices of the Communists is secretly to advise and inform the members of different types of organizations how to plan for demonstrations on public issues.

Year after year, as the House Committee on Internal Security and the Senate Internal Security subcommittee have carried on their investigations, evidence relating to Communist activities has been revealed.

One of the earliest explanations of what is meant by communism was issued by a House committee in an official report, and is worded just as if it were written today. It says;

"The following is a definition of communism, a worldwide political organization advocating:

"(1) Hatred of God and all forms of religion;

"(2) Destruction of private property and inheritance;

"(3) Absolute social and racial equality; promotion of class hatred;

"(4) Revolutionary propaganda through the Communist International, stirring up Communist activities in foreign countries in order to cause strikes, riots, sabotage, bloodshed, and civil war;

"(5) Destruction of all forms of representative or democratic governments, including civil liberties, such as freedom of speech, of the press, or assembly, and trial by jury;

"(6) The ultimate and final objective is by means of world revolution to establish the dictatorship of the so-called proletariat into one world Union of Soviet Socialist Republics with the capital at Moscow.

"Communism has also been defined as an organized effort to overthrow organized governments which operate contrary to the Communist plan now in effect in Russia. It aims at the socialization of government, private property, industry, labor, the home, education, and religion. Its objectives are the abolition of other governments, private ownership of property, inheritance, religion, and family relations."

The customary method of carrying on Communist activities is through infiltration of large organizations by a relatively few persons. They have available manuals of guidance and instruction which they give privately to influential leaders to help them organize demonstrations. Communism, of course, is never mentioned. The FBI has discovered many instances of this kind, including donations of funds by some wealthy Americans who are sympathetic to socialistic ideas.

The same techniques are apparent in Latin American countries. When an occasion like the visit of Gov. Nelson Rockefeller to South America arises, the Communist agents get busy and help to organize the demonstrations which will get publicity and arouse antagonism to the United States. Many of the agents are working for Red China or Cuba and are individuals of Spanish background or Europeans who speak Spanish.

In the United States, also, the conspirators are often not foreigners but Americans who are trained abroad or students in this country who have been converted to communism by agents of the Soviet or other Communist governments.

The general assumption has been that such plotters cannot be prosecuted unless it can be proved that they are being financed by a foreign government. The Constitution, however, does provide Congress with power to punish treason or efforts to overthrow the government of the United States by force.

When the average American reads about "communism," he still does not learn much about the techniques of treason and espionage that are being used to damage the American system of government and the established institutions of the country—including colleges, churches, labor organizations and other groups which play a conspicuous part in domestic controversies.

THE AMERICAN LAG IN SOLVING THE LANGUAGE PROBLEM

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. PUCINSKI. Mr. Speaker, for a long time I had been deeply concerned with the fact that the United States has done very little to encourage the rest of the world toward developing a common language for international business, cultural, educational, and diplomatic relations.

In many countries of the world there is a serious effort being made to establish Esperanto as a common language.

I have asked the Esperantic Studies Foundation, which has its headquarters at 6451 Barnaby Street NW., here in Washington, D.C., to prepare for me a report on this entire subject and I should like to call that report to the attention of my colleagues today.

I believe Esperanto does offer an exciting alternative.

I would like to recommend the following report prepared by the Esperantic Society for such discussion. There may be other ways of meeting the problem. One encouraging sign is the growth in the use of the English language throughout the world. There are now few places, if any, throughout the world where English is not being taught as a secondary language.

But it occurs to me that even with widespread use of English, we ought to consider greater emphasis on Esperanto to help bridge the gap with languages other than English and which are not having as wide an appeal as some of the English courses around the world.

This report documents the extent to which the United States has fallen behind most other countries, especially behind the Communist states, in the search for a common international language.

Research is needed on the language problem because of its complexity, and because of the potential benefits of an internationally agreed-on common second language. Yet this report shows that:

Almost no interlinguistics research is being done in the United States, while much work is going on in the Soviet Union;

The United States has many linguists, but only a handful of experts on planned international languages;

The Library of Congress and other American libraries have failed to collect the books and documents necessary to do research on this problem; and

Thousands of people are studying a planned international language in the schools and universities of the Communist bloc, while American students are almost never taught such a language, in spite of its probable educational benefits. Office of Education policy makes it difficult to correct this imbalance.

The report goes on to show how the Communist governments are testing, developing, and promoting one planned international language, through international meetings, broadcasts, and publications, while the United States does nearly nothing to test the feasibility of this language or to present American views to its speakers around the world.

The report concludes that the United States can and should give higher priority to solving the language problem, and suggests three concrete steps to help put America in the forefront of the search for an international language.

The Esperantic Study Foundation research report follows:

THE AMERICAN LAG IN SOLVING THE LANGUAGE PROBLEM

The language problem

The absence of a common language for international communication is by now a well recognized problem. Its effects range from the deception of tourists in foreign bazaars to fatal crashes in international passenger aviation.[1] An article published simultaneously in the July 29, 1969, issue of *Look* magazine and the July 26, 1969, issue of *Saturday Review*[2] blames translation errors in an official communication between Hanoi and Washington for a misunderstanding which delayed peace negotiations. Even among diplomats, and at the United Nations, the language problem is severe and costly, perhaps increasingly so, as recent articles have pointed out.[3] International agreement

Footnotes at end of article.

on a common second language, to be taught in all schools, would make the citizens of each nation better equipped to benefit from today's technology of supersonic transit and worldwide satellite communication.

The Communist lead in research

The United States lags behind the rest of the world, especially the Communist countries, in the search for a solution to the language problem. A combing of the index to *Dissertation Abstracts* for the years 1963–1968 reveals not a single doctoral dissertation in the United States in the field of interlinguistics, or international or universal languages, during that six-year period.

In contrast, the Soviet Union is actively researching this problem. The U.S.S.R. Academy of Sciences Institute of Linguistics in Moscow has an interlinguistics section. Dr. E. A. Bokarev, assistant director of the Institute, is currently engaged in a research project entitled "The Problem of an International Language". (The U.S.S.R. Academy of Sciences Council for Cybernetics also has a sub-section on Esperanto.) "Similar work is done at the Academies of Sciences in the Union-Republics", and "Soviet scientists are active in the council for language problems of socialist countries and in other international organizations", according to an official Soviet source.[4]

CHART A.—*Books in and about Esperanto in major library collections*

United States of America (1.4 percent)	1,000
Communist countries (28 percent)	21,000
Rest of world (70 percent)	52,000

The need for research

Is the language problem so simple that America can afford to let it "solve itself"? Many experts, including State Department officials, do not think so. In Appendix I, Pierre R. Graham, acting director of the Office of International Economic and Social Affairs, Department of State, writes that "the problems of world-wide communication admit of no simple, easy solution, but rather are matters of the utmost complexity."

While some experts believe that English is on its way to becoming the world language, others disagree. Dr. Richard Noss, scientific linguist with the School of Languages and Area Studies of the Foreign Service Institute of the Department of State, writes:

"If English is indeed the principal language of international communication, it is only the latest in a series of languages to hold this position. . . . If anything is clear from the history of international communication, it is that once a language has established itself as predominant in the world it will eventually fall from that perch. There is no reason to suppose, moreover, that this will not happen to English as well.

". . . If anything, increased reliance on the spoken language at the expense of printing and reproduction of written materials seems to be indicated by the most recent developments; this works in favor of all languages equally, including those with no present literature to speak of."[5]

The American lag in manpower

One reason for the research gap is the *shortage of trained experts on planned international languages in the United States.* According to Charles A. Zisa, assistant director for manpower of the Linguistic Documentation Program of the Center for Applied Linguistics, in Washington, *only four or five persons out of the five thousand linguists* in the Center's national file *indicate any degree of competence in any constructed language,* and only one of them claims fluency in Esperanto, the most widespread language of this type.

Footnotes at end of article.

CHART B.—*Size of largest public library collection in and about Esperanto*

United States of America: 400 (Library of Congress, Washington).

Communist countries: 11,500 (Bulgarian National Library, Sofia).

Rest of world: 14,000 (Austrian National Library, Vienna).

The two basic approaches to an international language are (1) the adoption of an ethnic ("natural") language for world use, and (2) the utilization of a planned (constructed, "artificial") international language. In any thorough search for a solution to the language problem, both of these approaches must be examined. Some experts, for example Prof. Mario Pei of Columbia University, believe that both approaches together offer a viable solution.[6] But American expertise is confined almost solely to one of these kinds of languages: ethnic ones. The Esperantic Studies Foundation is acting as a clearinghouse for students of constructed international languages, but the shortage of such scholars in the U.S. is critical.

The American lag in information resources

We have seen that few if any Americans are experts on the international language problem. One reason is simply that *our libraries do not collect the books we need to study this problem.* As is shown in Chart A, the U.S. has only about 1000 volumes in its (two) major library collections of books in and about Esperanto. Chart B shows that *our largest public collection, in the Library of Congress, has only one-thirtieth as many volumes as the largest public collection in the Communist bloc* or the largest one in the world.

(Most of the literature on the international language problem deals with Esperanto: 60% of the volumes in the international language collection (PM8000–8999) of the Library of Congress are in or about Esperanto. Thus Chart B is relevant to information on the language problem as a whole.)

The Library of Congress collection, in addition to being inadequate in size, *is also poorly selected.* A great emphasis has been placed on textbooks and dictionaries, almost to the exclusion of current scientific and literary works. Only seven volumes of fiction published in Esperanto since 1930 have found their way to the shelf of the Library of Congress, out of perhaps a thousand such works in existence. When it is considered that the acquisition policies of the Library of Congress influence the acquisitions of almost every library in the country, it becomes clear that *few Americans can have access to the documents necessary to study the evolution and development of Esperanto* from a simple project into a full-fledged international literary language. Yet this study is crucial to any understanding of the factors working for and against the adoption of any planned international language.

CHART C.—*Number of persons studying Esperanto in schools and colleges*

United States (3.0 percent)	550
Communist countries (50 percent)	8,000
Rest of world (47 percent)	7,500

TABLE 1.—*Some universities in Communist countries at which Esperanto has been taught between 1965 and 1969*

Bulgaria: Plovdiv Institute of Technology; Ruse Institute of Mechanization; Sofia, Kliment Ohridski State University, School of Philology; Svishtov Institute of Finance and Economics; Varna, Dimiter Blagoev Institute of Economics.

China (Continental): Hiamen University, Peking University.

Czechoslovakia: Bratislava, Komensky University, School of Philosophy.

Hungary: Budapest University, School of Law; Budapest Technical University; Budapest University of Science, School of Philosophy; Esztergom University; Pecs University; Szeged University.

Poland: Gdansk Academy of Medicine; Krakow, Jagiellonian University; Krakow School of Education; Torun, Copernicus University.

U.S.S.R.: Moscow, Lomonosov University.

Vietnam (North): Hanoi, Vietnamese School of Education.

Yugoslavia: Zagreb University.

The Communist lead in education

Another major explanation for our shortage of experts on planned language problems is that American schools and colleges rarely teach constructed international languages. Chart C shows how many persons are studying Esperanto; the only planned language now taught in any significant number of schools. It is clear from the Chart that *the United States falls far behind the rest of the world, especially the Communist countries, in the teaching of Esperanto.* With 6% of the world's population and an even greater portion of the world's students, the United States has only about 550 people studying a planned international language, 3.4% of the world's total.

One of the *possible beneficial educational by-products of teaching a constructed language* in the schools is suggested by the recent decree in which the government of Communist Lithuania adopted Esperanto as an elective foreign language in the seventh through eleventh grades. The decree called Esperanto "the easiest language in the world to learn" and said that the study of this kind of language is an excellent foundation for the future study of other foreign languages.[7] American schools where an international language has been tried have also commented on its benefits. See Appendixes IV and V.[8]

The United States Government, however, *has largely ignored the possible advantages of, and even discourages research on, international language programs* in school curricula. Inquiry at the Office of Education has produced replies to the effect that constructed international languages are probably considered outside the definition of "modern foreign language" as used in Title III and Title VI of the National Defense Education Act, or that a constructed language would be given low priority even if included in the definition. Thus our manpower shortage and our education lag reinforce each other in a vicious circle, and *current interpretation of the National Defense Education Act perpetuates the problem.*

CHART D.—*International youth meetings using Esperanto as official language, 1969*

United States of America, percent	9	(0)
Communist countries, percent	17	(65)
Rest of world, percent	9	(35)

During the 1968–1969 academic year, *only about 40 persons studied Esperanto at the college level in the United States,* and most of these did so in non-credit courses. In contrast with the American situation, Table 1 lists some of the universities and other institutions of higher education in the Communist countries at which Esperanto courses have been recently reported. If a similar number of American universities were to decide to introduce Esperanto courses in the next Academic year, they would find this decision difficult to implement, because of our shortage of experts who can teach the language.

In fact, the demand for college-level international language courses may be growing here. Several teachers of Esperanto in California schools went to Massachusetts during the 1969 summer session for a teacher training course in that language when no college

in their own state offered such a course. And *reports have been received from four American colleges* (Tufts University, the University of Arkansas, the University of Southern Florida, and North Adams [Mass.] State College) *stating that each of these institutions wishes to teach Esperanto in 1969–1970* if a qualified instructor can be found.

The American lag in policy

The United States Government has no official policy on the language problem. This fact is clear from Appendix I, in which Mr. Graham writes that the United States has not favored the promotion internationally of any particular language, natural or artificial. The thought has been that the educational systems of the various countries are so diverse, the problems of promoting any one language are so vast, and the need to overcome illiteracy even in national languages within a given country's borders is so urgent that the United States has not chosen to support any universal language program. Even the value of an international language is, quite legitimately, questioned: "Whether the use of a single word language, be it natural or artificial, would overcome the destruction of smaller cultures is a question worthy of study."

Like the United States Government, the Communist governments have not adopted an official policy on the solution of the international language problem. They have vascillated between advocating Russian and promoting a constructed language, and are now taking the view that more study is necessary. *But unlike the United States, the Communists are hedging their bets.* While the United States in practice puts all its eggs in the ethnic-language basket, the Communist governments in a variety of ways are active in the use, development, and encouragement of the major constructed international language, Esperanto. The following Charts give some examples.

Most international youth meetings in which Esperanto is the official language are hosted by Communist countries: see Chart D. In almost every Communist country there are strong and active organizations of Esperanto speakers who enjoy official aid in holding such meetings: see Chart E.

Most radio broadcasting in Esperanto is done from stations in Communist countries: Warsaw, Sofia, Zagreb, and Peking at present. See Chart F. In 1968 Radio Warsaw tripled its foreign broadcast hours in Esperanto. The Voice of America currently does no broadcasting in this language.

Although neither the United States nor the Communist countries produce an overwhelming share of the world's Esperanto magazines (see Chart G), *the Communists actively use Esperanto to advertize their way of life to Esperanto speakers* around the the world. Of the seven nationally sponsored foreign-information periodicals currently published in Esperanto, six come from Communist countries (see Chart H and Table 2).

Charts I and J show that as with international meetings, radio broadcasts, and periodical publications, *the United States also produces less than its share of books in and about Esperanto,* and *the Communist countries hold a sizable lead in the translation and publication of their literatures in this language.* The U.S. while publishing 6% of the world's translated books,[8] published none in Esperanto from 1964 through 1968.

In contrast with the diversified utilization of Esperanto by the Communist governments, *the United States Government currently uses Esperanto for only one minor purpose.* The U.S. Navy prints finders' instructions in Esperanto, together with seven other languages, on its bottle papers, which are thrown overboard by ship captains to trace ocean currents (see Appendix VI).

Footnotes at end of article.

CHART E.—*Membership in national Esperanto organizations*

CHART G.—*Publication of periodicals in and about Esperanto*

United States of America (3 percent)	3
Communist countries (18 percent)	21
Rest of world (79 percent)	91

CONCLUSION

In almost every aspect the Communist countries have taken the initiative and the United States has lagged behind in the search for a common international language. Progress in this area not only would contribute to world understanding, but might well have important spill-over effects on education, information retrieval, the mass media, the publishing industry, international organizations, and other arenas. This area of communications research and planning is so new that *there is no reason why the United States can not take a leading position* and soon begin to make a major contribution to what ought to be a joint East-West effort. Rather than a large investment of resources, *what is needed is mainly a recognition that the language problem is critical, and that any widely used planned international language is a critical language* in the search for a solution.

This report would suggest that *the following immediate steps would help rectify the existing American lag and be in the national interest:*

A. Correction by the Library of Congress of its insufficient and unrepresentative acquisition practice in the international language field.

B. Review by the Office of Education of its apparent position that constructed international languages are not "modern foreign languages" or are low in priority for funding.

C. Reconsideration by the United States Information Agency of its policy of doing no broadcasting or publishing whatsoever in any widely used constructed international language.

Beyond these stopgap measures, much could be done to make the search for a common language an official national priority. The Esperantic Studies Foundation will be ready at any time to assist all interested governmental and private agencies in the development of plans to this end.

CHART H.—*National information periodicals in Esperanto published for foreign consumption*

APPENDIX

Statement of purpose

The rapid acceleration of international contacts through both travel and telecommunication gives new salience to the fields of language planning and "languages of wider communication." Esperanto, the only planned international language in global use in a wide range of contexts, has escaped the attention of most American researchers in linguistics, international relations, and education. While its relevance is recognized by scholars abroad (e.g. Rotterdam, London, Paris, Vienna, Stockholm, Moscow, Budapest, Peking and Rio de Janeiro), we believe that the field of Esperantic studies is under-researched in the U.S., considering the high level of American scholarship in related fields.

To help remedy this imbalance, an Esperantic Studies Foundation (ESF) has been established. ESF will function as a center for the stimulation and support of teaching and research on the language, literature, culture, history, psychology, and social and political relations of the Esperanto-speaking community. The term "Esperantic studies" was coined to describe this area, in analogy with Hispanic, Icelandic, Arabic, etc. studies. ESF will also be concerned with applications of the Esperanto experience over the past eighty years to both scholarship and policy in such fields as science, technology, commerce, mass media, diplomacy, and citizen interactions.

ESF regards Esperanto as a topic worthy of serious research, but does not otherwise take a position on its merits. The Board of Directors will consist of representatives of diverse disciplines and views who are interested in the objective, empirical, and experimental study of international language problems and of language planning and development in a broad perspective.

ESF is incorporated under the laws of the District of Columbia, and Federal tax-exempt status has been granted. Further communication on ESF should be directed to Dr. E. James Lieberman, 6451 Barnaby Street, N.W., Washington, D.C. 20015. List of research topics and bibliography are available.

Selected topics for research in Esperantic studies

1. Proposed studies of the linguistic characteristics of Esperanto (descriptive and analytical problems):

a. Grammar (oral and written varieties, algorithmic, computer-oriented, instruction-oriented, contrastive, etc.; lexical and semantic problems).

b. Phonology and script.

c. Linguistic stability and change in planned vs. unplanned languages.

d. Uniformity, diversity, standardization, and dialect formation in Esperanto.

2. Proposed social-behavioral studies (socio- and psycholinguistic problems):

a. Problems of language planning, choice, change, and standardization on the international vs. national level.

b. Linguistic problems of international language planning: contact, interference, etc.

c. Attitudinal problems of international language planning: attitudes toward international communication, world language, Esperanto, language innovation and planning, etc.

d. Cultural and attitudinal correlates of

international language use: effects on nationalism, group/ethnic consciousness and identity; linguistic competencies, limitations, habits, predilections, and taboos in international language vs. national-language communication; psychological and semantic aspects of communication in conferences and small groups; literary development in Esperanto vs. national and ethnic languages; cultural identity as expressed through Esperanto literature, and its implications.

e. The politics of international language planning: effects of domestic language situation, education policy, political regime, ideology, etc. on international language policy; policies of authoritarian regimes, small nations, etc. toward various means of international communication.

f. Social and political correlates of international language use or non-use: effects on integration, mobility, stratification, allocation, international relations, diplomacy, and communication patterns; effects of external linguistic pressures on small cultures and language groups.

g. Costs and benefits of international language use or non-use: effects of alternative international language planning strategies on technology, trade, development, scholarship, etc.

3. Proposed studies of the educational aspects of Esperanto:

a. Learnability of Esperanto vs. national languages, controlling for learners' nationality, age linguistic and cultural background, etc.

b. Dynamics of learnability: proficiency attainment curves in Esperanto vs. other languages.

c. Affective components of learnability of Esperanto vs. national languages as second tongue: motivation, confidence, identity, and sense of possession.

d. Esperanto as a propaedeutic: effects of studying Esperanto on performance in other foreign languages, English, etc., and on interests and attitudes.

BIOGRAPHICAL NOTES ON FOUNDERS

E. James Lieberman, born in Milwaukee in 1934, received B.A. and M.D. degrees from the University of California and trained in psychiatry and public health at Harvard. At present he is Chief of the Center for Child and Family Mental Health, National Institute of Mental Health. He has published articles on preventive psychiatry, family planning, sex education, nonviolence, and Esperanto. Having studied Latin and German in school, he first encountered Esperanto while hosteling through Europe in 1954, and studied the language on the ship home. He attended the 1957 Universal Esperanto Congress in Marseilles, and subsequently served as member and chairman of the Executive Board, Esperanto League for North America. His Esperantic publications include "L. L. Zamenhof—Dr. Esperanto", *New Eng. J. Med.* 261:963–65, 1959; "Esperanto, Interlingua, and the Emperor's New Clothes", *Intl. Lang. Rev.* 28, 1962; "Enkonduko" to *La Profeto*, by Kahlil Gibran (tr. R. Orloff Stone), 1962; "Do We Want a Monolingual World?", *N. Am. Esp. Rev.* 1965, No. 2.

Humphrey Tonkin, born in Truro, England, in 1939, was an undergraduate at Cambridge University and received his Ph.D. at Harvard as a Frank Knox Fellow in 1966. Now Assistant Professor of English at the University of Pennsylvania, he specializes in English Renaissance literature. Since learning Esperanto in 1955, he has lectured widely in and on the language, and contributed frequently to Esperanto periodicals. He is a former editor of the youth magazine *Kontakto*, is currently a contributing editor for the new edition of *Enciklopedio de Esperanto*, and is serving as General Secretary of the Tutmonda Esperantista Junulara Organizo. In the field of Esperantic studies, his publications in English include "Language Problems in International Relations: A Select Bibliography", *Intl. Lang. Rev.* 44–45, 1965–66; *A Research Bibliography on Esperanto and International Language Problems* (New York: JEN, 1967); "Code or Culture: The Case of Esperanto", *Era* 4, 1968; "Esperanto Literature Since the War", *PEN Bul. of Sel. Bks.* 19, 1968.

Jonathan Pool, born in Chicago in 1942, received his B.A. at Harvard and an M.A. at the University of Chicago, where he is a doctoral student in political science. After learning Esperanto in 1961, he helped found the Harvard-Radcliffe Esperanto Club, the Esperanto Education Center, and the University of Chicago International Language Society. He has spent a year in Norway, a summer in Ghana with Operation Crossroads Africa, and two years with the Peace Corps in Turkey, where he wrote a Turkish primer of Esperanto, *Esperanto Ögrenelim*. His language background also includes Latin and Russian. He is now a member of the Executive Committee of the Esperanto League for North America and Secretary of the Executive Board of the Organization of Esperanto-Speaking Young Americans, whose correspondence course he directs and whose newsletter he edits.

BETTER PASSPORT SERVICE

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. GIAIMO. Mr. Speaker, on July 28, my colleague, the gentleman from Connecticut (Mr. WEICKER), and I introduced legislation designed "to provide more efficient and convenient passport service." I am highly pleased to report that this drive to provide such service for millions of American travelers has gained strong bipartisan support in the House.

The fact that 35 Representatives of both parties and of all areas of the country have either cosponsored this measure or introduced identical bills shows conclusively the seriousness and national scope of the passport problem.

I am also gratified by the highly favorable response to our bill outside of Congress. The many citizens who have suffered through interminable delays and other inconveniences in order to obtain passports are now urging immediate congressional action to remedy this disgraceful situation and to assure them the

prompt and efficient service which they pay for and have every right to expect.

Some critics of our proposal would have you believe that these delays and inconveniences are seasonal and that they occur a few weeks a year. This contention is not just untrue; it is irrelevant. The fact is that the American people are entitled to prompt and efficient passport service every day of the year. My colleagues and I are attempting to insure this.

For those in this body and elsewhere who refuse to admit that the passport situation in this country has reached crisis proportions, I am including at this point in the RECORD the text of the lead editorial in the September 3 edition of the Federal Times. This editorial describes clearly the problem as it exists and the means by which we can solve it. Action is obviously needed; it is up to us to act.

The editorial reads as follows:

PASSPORTS

American travelers finally may get a break if a bill introduced by two Connecticut congressmen becomes law.

Reps. Robert N. Giaimo, a Democrat; and Lowell P. Weicker Jr., a Republican; propose beefing-up the passport office by adding more offices and more staff.

At present there are passport offices in Washington and in 10 other major United States cities. Both the State Department and Congress must approve any new facilities or the addition of personnel.

The proposed legislation would allow the Passport Office to use some of the revenues it collects to improve the service it provides—admittedly a novel approach.

Expansion of the facilities would eliminate the need for extensive travel and inconvenience to complete a passport application. The congressmen point out it takes longer to get a passport than it does to fly to Europe.

Here is another instance of a federal agency lagging behind the times in meeting the needs of the people it was designed to serve.

The Passport Office should be so organized and so located that it would facilitate travel for those who want to go abroad for business or pleasure. As now operated, it frequently produces the opposite effect.

The Congressmen say: "Millions of Americans are paying for passport service and they have every right to expect such service to be prompt and efficient."

Makes sense to us!

THE 30TH ANNIVERSARY OF HITLER'S ATTACK ON POLAND

HON. HENRY HELSTOSKI

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. HELSTOSKI. Mr. Speaker, it is said that human memory is short. I therefore believe it fitting and proper to remind ourselves and our Nation that we are marking the 30th anniversary of a dark day in the annals of world history.

In 1933, Poland's neighbor, Germany, came under the domination of the brutal Adolf Hitler. From that date the armed might of Germany began to take shape, and on September 1, 1939, the world was shocked by Hitler's brutal and completely unjustified attack on Poland, an innocent and peace-loving republic.

Hitler and his Nazi hordes unleashed their power against Poland and invaded her fertile lands. Though a small nation, greatly outnumbered in men and fighting equipment, Poland earned the admiration of the entire world by her gallant stand against the most powerful military machine ever assembled up to that time, and fighting back as no other people have fought before, they gave ground slowly.

While the Polish Army, with its back to the wall, was striking back blow for blow against the vast Nazi military might, it was administered its death blow when the Russians invaded Poland, on September 17, 1939, from the rear and stabbed Poland in the back.

In spite of these two crushing forces, hitting from the front and rear, Polish patriots continued to fight back. The heroic and stubborn defense of Poland's capital city, Warsaw, will never be forgotten by the freedom-loving people of the world. But with the Nazi armies in front and the Russians in back, the collapse of the Polish defenders was a foregone conclusion.

With the fall of Warsaw, Poland again was partitioned by Russia and Germany. With the fall of Hitler and the Nazi armies, the millions of Poles and the Polish territory came under the domination of Russia, which is continued to this day.

We all know, for history shows it, that Poland was not giving up easily to the Russians. They fought where they could and as hard as they could. Those who escaped the dreaded Communist hordes joined up with the armies of other nations to fight for the liberation of their beloved country. The enemy knows that as long as there was an able Pole alive, he would fight on. The extermination of thousands of Polish soldiers at Katyn Forest showed the fear that the Russians had of the Polish soldier. Even to this day the spirit of these dead hovers over all of Poland and its patriotic people. The fact that so many were massacred at Katyn illustrated the great love that the Pole has for his country, and would not give in. There were no quislings in Poland. The country was not delivered to the enemy freely, but resisted the oncoming hordes of an insane military might.

The evidence of the fervor of a Pole for freedom was well seen in the escape of Lt. Franciszek Jarecki and Lt. Zdzislaw Jazwinski, who were trained for the Communist air force. Many of us well remember their escape in Russian MIG's to Denmark from behind the iron curtain. They finally were able to come to America and are—to my best knowledge—engaged in business ventures in this country.

These are but two examples of what the Poles would do if given the opportunity. What numbers escaped but are unknown to us?

At the time, the world little realized what would be the tragic effects of that attack. There are some who thought it was of no concern to us and could not affect us, seemingly safe and secure, thousands of miles from attack.

The attack on Poland brought about and directly caused World War II, the bloodiest holocaust ever recorded in human history, bringing tragedy and suffering on all the freedom-loving world, including the United States.

It would also be worthwhile to remember that without a promise of support from Stalin, Hitler would not have dared to launch his attack on Poland, that Hitler's nazism was the associate and accomplice of Stalin's communism.

At the very first opportunity, Stalin joined Hitler in dividing Poland between them and in the barbaric plot to torture and exterminate its people. Let us not forget the Nazi gas chambers, their inhuman incinerators and their dastardly inhuman plot to completely extinguish the Polish nation.

The end of World War II brought no liberation to Poland. Its people today, although given a limited amount of freedom, have not accepted total defeat and enslavement. The hope for total freedom is still in the hearts of the Polish people and this hope continues stronger than ever.

Let us on this day of September 1969, rededicate ourselves to vigilance and preparedness and pledge ourselves never to relax until the international conspiracy, hatched out simultaneously in Berlin and Moscow, has been completely wiped off the face of God's earth.

There can be no peace in the world without a free Poland, free and independent in company with other nations of east-central Europe.

Freedom is indivisible. It is not possible to enjoy freedom when basic human rights are violated in one country while its neighbors are free. There can be no freedom in the world when one nation rules over another. World peace depends upon international cooperation and on the voluntary commitments of all nations.

Thus, the people of Poland reject the role of a satellite of Russian communism and demand to be restored to their well-earned place among the people of the free world.

Justice and our own national security require that we do everything possible to wipe out the dark spot on the history of the world which appears under date of September 1, 1939.

TRIBUTE TO THE HONORABLE DANIEL RONAN

HON. MARIO BIAGGI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. BIAGGI. Mr. Speaker, I wish at this time to pay tribute to our late colleague, the Honorable Daniel Ronan of Illinois.

Congressman Ronan was a dedicated public servant and an able worker, a loyal patriot, and a generous friend to all who knew him. His life was a testimony

to the faith which Americans have traditionally placed in the merits of the democratic process.

A native of Illinois, Congressman Ronan did graduate work at Loyola University, before serving with the Air Force in the Second World War.

Elected to the position of Illinois State Representative in 1948, and reelected to that office in 1950, he was elected as Chicago alderman in 1951, serving in that office until his election to the U.S. Congress in 1964.

Having majored in economics and political history in his undergraduate program at Loyola, Congressman Ronan's training and interests were admirably suited to his work in the House of Representatives, where he was highly regarded for his work on the Subcommittee on Transportation and Aeronautics, of the House Committee on Interstate and Foreign Commerce.

He was the kind of man who gave himself unsparingly to his work and yet always had an equal amount of devotion for his friends and colleagues. He not only represented his constituents conscientiously, but gave to all who knew and worked with him a sense of his humane and generous nature.

We are deprived by his death not only of his intellectual acuity, his thorough knowledge, and his confident ability, but also of his diligence, his patience, his warmhearted integrity.

He earned the affection and admiration of all of us; we mourn him and shall miss him.

THE DRUG CRISIS

HON. J. HERBERT BURKE

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. BURKE of Florida. Mr. Speaker, the sinister threat that the increasing use of drugs poses to the well-being of our youth and our Nation is becoming increasingly apparent. The problem of dope addiction in our country is not new, but the problem of ever increasing dope users is new and today we are in the midst of a serious narcotics problem which is rapidly piercing the soul of our society.

During the last campaign, I suggested that the problem of the use of drugs had extended far beyond it being a strictly local problem, and for this reason I suggested there be greater Federal participation in an all-out war to stop the flow of narcotics into our country and into the hands of our youth.

At that time I suggested that the Federal Government increase the amount of custom agents and our border patrol as step 1 in this fight. As step 2 I suggested that International Commissions be formed to aid in the fight to eliminate the flow of drugs at the point of origin.

Statistics show that between 1960 and 1967 juvenile arrests involving the use of drugs rose by almost 800 percent and half of those now being arrested for misusing narcotics are under 21 years of age.

New York City alone has records of some 40,000 heroin addicts and the numbers are rising by 7,000 to 10,000 annually.

In early 1968 a Gallup Poll taken at 426 college campuses revealed that 6 percent of the students polled had used marihuana on one or more occasions and that 1 percent has used LSD.

Dr. Stanley Yolles, Director of the National Institute of Mental Health, testified before a House committee last Congress that 20 percent of the college youths polled in his survey admitted experience with marihuana.

How many actual drug addicts exist in our society cannot be accurately calculated, but President Nixon in a recent message to Congress indicated the number is in the hundreds of thousands.

There is no doubt that as the number of narcotic addicts increase, there will be more problems for our society in the areas of health, both mentally and physically; social mores; and most especially crime.

The cost of drugs comes high.

A person hooked on dope may require anywhere from $15 on up to hundreds of dollars per day depending on his sickness to purchase the narcotics needed for their systems.

In New York City alone where local and Federal officials have tried to curb the problem of drug abuse, the Food and Drug Administration estimates that the city's addicts must raise from $500,000 to $700,000 daily to support their habit.

The saddest part of all this is the fact that an entire generation of teenagers and college-age youths seemingly are finding it harder and harder to resist the temptation of drugs.

Statistics bear out that more and more young people, after once becoming addicted to dope, start a life of crime and become involved in first petty crimes and then crimes such as robbery, prostitution, and even murder in order to find money to buy dope and support their habit.

A Department of Health, Education, and Welfare study shows that several million American college students have at least experimented with marihuana, hashish, LSD, amphetamines, or barbiturates prompting President Nixon to say this week:

> It is doubtful that an American parent can send a son or daughter to college today without exposing the young man or woman to drug abuse.

Local and Federal officials have strived hard to combat the increasing tide of drug abuse, but have been understaffed and underfinanced in their flight. There are laws on the books which prohibit the importation, selling, and use of such drugs, but today we are living in an age where we are experiencing drug abuse which is becoming almost epidemic. Throughout the country, new programs and new action is needed if we are to overcome this scourge.

Even though vast amounts of raw dope may be discovered, and thousands of users arrested for selling or using narcotics, there are many more being led daily into the dark alleys and shadows where they purchase addictive drugs and eventually become slaves to it.

Last year I had recommended the creation of international commissions so that our neighboring countries and others could work directly with the United States to halt the flow of narcotics into our country.

I believe this would be an effective weapon in fighting the drug problem since it would point out that many syndicated crime lords are responsible for keeping the narcotics peddlers well supplied, and would also pinpoint the source as well as the distribution patterns of narcotics.

As an example, marihuana, one of the most popular drugs used by addicts, comes from the Cannabis Sativa plant. It is primarily grown in mild climates throughout the world, with the majority grown, however, in Mexico, Africa, India, and the Middle East.

According to the Federal Bureau of Narcotics and Dangerous Drugs, most of the dangerous drugs are grown in foreign countries, and are usually converted into a powder base in clandestine laboratories close to the growing area. The drug is refined, and once it is ready for use, it is then smuggled via various ingenious methods into the United States through neighboring borders or ports.

Since the vast amount of illicit narcotics are smuggled into our country, it is easy to see why international restraints are needed to halt its movement at the point of origin.

Since my return to Congress last January, I have had several discussions concerning these matters with a number of people in the executive branch, and was indeed happy therefore to note that President Nixon in his recent message to Congress endorsed the idea of creating international commissions.

The President has suggested legislation recently for a renewed attack on drug peddlers and users by proposing fines for the sale of hard core drugs of $25,000 for the first offense and $50,000 for the second. I strongly concur.

He would also make the use of LSD, which can and is easily manufactured at laboratories in our country, a crime calling for maximum penalties as in the case of other hard core drugs.

One of the worst type of criminals is the dope pusher and seller. I was happy with the President's proposal that sellers of these illegal drugs should face penalties of 20 years imprisonment, and that those who are convicted of having drugs in their possession to face prison terms from 2 to 10 years for first offenders and up to 20 years for second offenders.

As a further step in this war, I have advocated the bolstering of manpower for our border patrols, customs agents, the Justice Department, the Bureau of Dangerous Drugs and Narcotics, and State and local police forces. President Nixon supports more funding for this.

Several weeks ago I was happy to be able to announce that the administration had authorized $100,096 to the State of Florida and the Caribbean and South and Central American countries in an

effort to keep current on the actions of syndicated crime members and their efforts to move narcotics into our country.

A further grant of $174,176 was given to the State of Massachusetts to initiate a computerized communications program on syndicated criminals and their activities among the five largest States in the country, including Florida. This maneuver would give local police in the States readily available information on these criminal elements, and most especially, pinpoint the flow of drugs.

Notwithstanding the above, I still feel that more effort must be made to make the public fully aware of the dangers of drugs and to also increase programs to rehabilitate those who are unfortunately already chained to the habit of drug abuse.

As for rehabilitation, the President has proposed additional funding for suggested new ideas and concepts in the field of reforming addicts, and he also has recommended increasing existing funds for treatment centers to be established at the local and Federal levels.

Most of these suggested recommendations are matters which require prompt congressional action and the problem gets bigger as each day passes. This is but one of the many wars on the home front, which we Americans must face, and which we must conquer.

The wanton and illegal use of narcotics, especially by so many of our youth, is changing the face of America. Thus, we as a people must roll up our sleeves and say, "We have just begun the fight," and will not quit until the war is won.

For the above reasons and as a start, I am happy today to join with those of my colleagues who have previously introduced the Drug Abuse Education Act of 1969 by adding my name in support of this legislation, which would authorize the U.S. Commissioner of Education to make grants to elementary and secondary schools and other educational institutions for the conduct of special educational programs and activities concerning the use of drugs and for other related educational purposes.

It is essential that we stimulate every means possible to fully inform students, teachers and others involved in education at this level as to bring about the full awareness of the sinister implications and ramifications the growing use of and reliance on drugs poses to the United States.

The Drug Abuse Education Act of 1969 and other drug legislation must be strongly supported by all Members of the Congress, if we are to eliminate the drug problem which faces our Nation today.

BARRATT O'HARA

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. CELLER. Mr. Speaker, it is with great sadness that I note the passing of my friend and colleague, former Representative Barratt O'Hara. He served in the House for almost two decades with humanity and compassion. Not many know that Barratt was the last congressional veteran of the Spanish-American War.

His was a career ranging from soldier to editor to lawyer and statesman. His eagerness to take to the floor of the House, his love of debate, his willingness to test each new idea revealed the depth of his character and the color of his personality.

He will not be readily forgotten.

FEDERAL GRANTS SET FOR MISSISSIPPI GULF COAST DISASTER AREA UNDER NATIONAL DISASTER ACT

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. EVINS of Tennessee. Mr. Speaker, we are all concerned and distressed because of the devastating disaster left in the wake of Hurricane Camille on the gulf coast of Mississippi.

The loss of life and property were shocking and all of us are indeed sympathetic to the needs of the devastated areas.

However, it is my understanding that bills are being introduced to establish a national disaster policy to provide assistance in such situations. I would remind my colleagues that we have had a national disaster policy since September 30, 1950, when Congress passed the Disaster Relief Act, providing for assistance to States and local governments to cope with disasters. Subsequent acts provided for additional assistance.

Under the basic and subsequent acts the Government through the Office of Emergency Preparedness is authorized and directed to provide assistance for "natural disasters" and "acts of God."

Certainly, the gulf coast disaster falls within this category and grants are being made by the President through the OEP to these areas.

In the recent independent offices and Department of Housing and Urban Development appropriations bill, $45 million was added to available funds for Federal disaster grants. This bill has passed the House and is pending in the Senate.

When this bill is passed and signed by the President, these new funds will become available. I recently was called by Gov. John Bell Williams of Mississippi and I advised him of the status of this appropriation for national disaster relief.

I told Governor Williams further that should the Office of Emergency Planning request supplemental funds to meet additional needs, the committee will give consideration to the need and request.

In other words, Congress has assumed the responsibility for assisting areas devastated by natural disasters—Congress has declared this policy and intent—and further legislation in this regard is not needed to provide the disaster assistance being sought in the gulf coast area.

REGIONAL MEDICAL PROGRAMS—REPORT ON A PROJECT

HON. JAMES C. CORMAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. CORMAN. Mr. Speaker, one of the most promising pieces of legislation to emerge from the 89th Congress was the regional medical programs. The basic objective, as you will recall, is to assure that the American people, wherever they may be, will benefit from the advances of medical science against the threats of heart disease, cancer and stroke and related diseases. In order to achieve this goal, each region is to develop a regional cooperative effort involving all of its health resources—manpower, institutions and organizations. These regional cooperative arrangements are concerned not only with the development and maintenance of high quality health care, but also with the wider availability of that quality of care to people in need.

In my own district, a regional medical program was established about 18 months ago. Even while it was being organized, it was evident that more knowledge about the availability of health care facilities in the northeast part of the San Fernando Valley was going to be necessary if the program was to be an effective and meaningful one. Thus, under the California regional medical programs, administered by the University of California at Los Angeles, and funded by the Department of Health, Education, and Welfare, the northeast San Fernando Valley project was developed. Its objective was to learn what health care resources are available, how they can be used more effectively, and what must be done to bring the best health care to the people of this particular part of my district.

Funds were awarded in October 1968, and in this short space of time, the project is well on its way to achieving its objectives. It has been, I am happy to say, refunded for the second year. And, I have no doubt that when its objectives have been reached, the findings will contribute greatly to the success of the total San Fernando regional medical program.

The report of the project's activities was recently given to me. I believe it may be of interest to the Members of the House and I herewith submit it for inclusion in the RECORD:

THE NORTHEAST SAN FERNANDO VALLEY PROJECT

Several communities in the northeast section of the San Fernando Valley comprise what is considered to be a "health ghetto." A federal grant of $120,000 has been awarded by the Regional Medical Programs to investigate what health resources are available; how they might be used more efficiently, and what must be added to bring the quality of health care delivery in the area to the level of that of a medical center community.

The six communities of the Northeast Valley include Pacoima, San Fernando, Sunland, Sun Valley, Sylmar and Tujunga. The grant is under Area IV of the California Regional Medical Programs, administered by UCLA and funded by the Division of Regional Medical Programs, HEW.

The population of the Northeast Valley is 250,000 or 20 percent of the total San Fernando Valley. Of all the Blacks who live in the San Fernando Valley, 93 percent live in the Northeast portions; 37 percent of the Valley's poorly educated live in these six communities and 25 percent of the unemployed are there. About 26 percent of the San Fernando Valley families with an annual income of $3,000 or less are in the northeast section.

The medical resources are six hospitals. They include San Fernando Veterans and Olive View which are Chronic Disease hospitals. There are 21 hospitals in the remaining portions of the San Fernando Valley. There are 41/100,000 physicians in the "health ghetto" as compared to 98/100,000 in the more prosperous sectors.

This data has been collected since the inception, eighteen months ago, of the Regional Medical Programs (RMP) in the San Fernando Valley; but even as the San Fernando RMP District Committee was being organized, its members realized that the northeast section of the Valley would require their first and immediate attention.

The lack of medical facilities became most apparent when directors of a newly created mental health clinic attempted to refer their patients (who had medical needs other than mental health) to appropriate community health facilities and found them non-existent.

The Director of the community mental health clinic, and at that time, Coordinator of the San Fernando Valley RMP District, catalyzed the District Committee to begin preparing an operational grant proposal to develop the health care resources of the Northeast Valley.

The funds for this were awarded in October 1968. Since then, a staff has been trained and an office organized to begin planning for a better system of health care delivery for the six communities. The first step will be to accurately assess the presently available resources. The administrators of each of the principal health facilities located in this section were contacted and appointments were made for staff visits to the facilities. On the basis of these visits and a health facility questionnaire, the facilities will be assessed.

A second step already begun, is the collection of "soft data" which is on-going. Members of the community were surveyed to determine health needs and utilization of available health facilities. The groups surveyed were selected on the basis of their being representative of the community; groups according to age, sex, ethnic and socioeconomic characteristics.

The preliminary results indicated that many residents of the Northeast Valley use health facilities only in extreme emergencies. The nearest general medicine services for indigent patients are at the USC, Los Angeles County Medical Center, located 22 miles away; a one hour drive by car, or a two hour bus ride costing $2.00. Some of these surveyed complained of having to wait long hours for medical care in hospitals. They said some hospital facilities often were unclean and there appeared to be an inadequate number of staff members; too often, they were required to pay fees at private hospitals before receiving services—fees which, in their opinion were too high.

The purpose of the survey was to trace the route the people take in seeking medical help, to identify the ecological systems of the communities, and to obtain ideas and information from those living in the community concerning health needs, and the effectiveness of existing health resources.

From the data collected from these surveys, those working in the Northeast Valley RMP project hope to form a basis for sound health planning, involving the members of the community in the planning of their own resources and facilities.

As stated by Philip Lee, M.D., Chancellor of the University of California Medical Center in San Francisco, even though health services are available in cities throughout the United States, many people who could use them—and pay for them—will not do so because they are unable to cope with the health care system.

This is precisely the problem that those involved in the Northeast San Fernando Valley project are trying to avoid by involving the people who will use the health care resources in the planning and implementation of their own system.

GHETTO FRAUD ON THE INSTALLMENT PLAN

HON. SEYMOUR HALPERN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. HALPERN. Mr. Speaker, the exploitation of consumers is not often understood clearly, even though the organized consumer movement has grown more visible in recent years. I fear that Congress does not appreciate the gravity of the abuses involved and therefore, has not acted vigorously to eliminate them. Frankly, I am shocked by many of them.

I harbor the suspicion that the superficial terminology of consumer frauds engenders an inappropriate image of a latter-day medicine man and his "magic mineral water to cure all ills." What is not understood is that this comic image is relevant to contemporary selling frauds only in the similarity of the charlatan's pitch. The important difference, however, is in the size and consequence of the transactions involved.

Today's deceived purchaser does not merely get a $5 bottle of useless chemicals, but often several hundred dollars of furniture or major appliances. Moreover, he may find he loses not simply some loose change as in the days of old, but his means of making a livelihood.

Even more shocking, we find today charlatans, rather than being fearful of the local sheriff, are actually aided by our court system and society's law enforcement machinery. Unscrupulous merchants rely heavily on default judgments, improper service of process, repossession of property by marshals, and the threat of garnisheed salary by court order to compel a frightened consumer to pay for unwanted merchandise.

In the end, a poor consumer inveigled into debts far beyond his means, threatened with loss of job, unable to afford a lawyer and unaided by the courts or any Government agencies, can be driven to anger and frustration. The Kerner Report made his point very explicitly in describing some of the motivation for civil disturbances.

With these grave consequences in mind, I feel the problem of ghetto fraud takes on elements of urgency which cannot be ignored. It is imperative that we dispel the inaccurate image of the fraudulent medicine man by viewing modern abuses as they actually are. In the May 26 and June 2 issues of New York Magazine, a two-part series of articles appeared which thoroughly describe the range and depth of fraudulent sales practices in our poor neighborhoods. I strongly recommend that any of my colleagues who wish to understand the true nature of consumer fraud and an underlying element in our urban unrest, read these articles fully:

GHETTO FRAUD ON THE INSTALLMENT PLAN

(By Craig Karpel)

Warren, a grown man who lives with his mother, walked into the Harlem Consumer Education Council's basement office a few months ago. Director Florence Rice gave him a leaky ball-point pen and he wrote:

"Bought TV from door to door salesman—Philco 19'' lot of trouble with T.V. back cracked notify company to come have fix. Company claimed misplace T.V. sent repossed T.V. 1949 had to stick in hanger to get reception—two weeks after that broke down. Called to fix that removed T.V. still pay bill by garnishment—left job on account of garnishment which effect my marital relation as the garnishee took away from our expenditures food clothing and rent. Which for which my wife was forced to except welfare and I left to establish myself again T.V. paid $500 never received T.V."

Louis-Ferdinand Céline coined the conceit that life was nothing but death on the installment plan. For poor people in New York City, this comes close to being literally true.

Six years ago sociologist David Caplovitz of Columbia's Bureau of Applied Social Research published a book called *The Poor Pay More.* The book is a landmark in the literature of consumer problems, right out there with *The Jungle* and *Unsafe At Any Speed.* As a result, Caplovitz has become witness-in-residence at a host of committees and subcommittees where he talks about the lack of "scope" which keeps poor people from leaving their neighborhoods in search of better prices and terms, about the "deviant sub-economy" which springs up like weeds through the cracks in the cement of tenement courtyards, where nothing flourishes that isn't rank.

The Great White Way of the deviant subeconomy is the L-shaped strip of 54 furniture and appliance stores running from 116th Street and Third Avenue to 125th Street and Lexington. The strip is the home of literal *shlock.* Not figurative *shlock,* as in "that agency has nothing but *shlock* accounts." Literal *shlock:* doll furniture, one good long cut below "borax." "Borax" is junk, but it's better-quality junk. Birch? maple? dowels? glue? fabrics? veneers? Forget it—*shlock* is made of gumwood and flakeboard, knocked together with a few screws, upholstered in plastic "brocade" and varnished like a cheap coffin. The prices, however, are strictly W. & J. Sloane. *Shlock* stores do not talk about percentages of markup, like 50 per cent markup or 75 per cent markup—they talk about how many "numbers" they jack the price up over wholesale, and a "number" is 100 per cent. All *shlock* is marked up at least one number, and on a credit sale the markup can be three or four numbers.

So why buy *shlock?* Because the *shlock* emporia will give terms: "Easy credit." "Easy credit" means that as long as you are working and have wages that can be attached in the likely event that you miss one payment, you're okay. "Easy credit" means that if, as Shyleur Barrack, head of the Harlem civil branch of the Legal Aid Society once did, you go into a store and give a reference who say you now have two garnishees against your salary, the salesman will come back from the phone smiling and try to hustle you into $1,114.80 worth of furniture and appliances. "Easy credit" means that there is a store on 125th Street called Future Furniture

that has to have a sign in its window: "WE ACCEPT CASH."

But all the places on the strip offer "easy credit," and a store can't generate much traffic by telling poor people it's going to take them to the cleaners, so it runs an ad in the *Daily News* in which two credit managers (black and white, take your pick) offer: Economy apartment, $198. Sleeper, matching chair, 2 walnut finish step-tables plus decor, lamps, walnut finish bachelor chest, matching mirror, full size bed, with 1pc. Firestone comb. mattress, 16 pcs. dishware, 16 pcs. cutlery, 8 towels, 11 pc. salad set, 29 table access.

But once they've spent the money to get you into the store, they can't let you out with only a miserable $198 worth of *shlock*. That is only the bait end of bait-and-switch advertising. By the time the customer leaves, he should have put his Juan Hancock on the dotted line for at least $1,000. To cause this takes more than just an old-fashioned bait-and-switch. It requires nothing less than that balletic extravaganza of salesmanship known to the trade as the "turnover" or "tossover," code name "T.O." The salesman starts by showing the customer a pile of junk for $198. One store keeps its bait furniture piled in a dark corner, lit by a naked lightbulb. It is painted battleship gray, every stick of it, down to what used to be the chrome legs on the dinette table. If you wanted to give a salesman a heart attack, all you'd have to do is say, "Okay, I'll take it." "You don't want this stuff," he says. It'll fall apart in a couple of months. Besides, a person like you can afford something better. Let me show you something a little bit better." The salesman then takes the stiff upstairs in an elevator, but not before shaking him down for a $50 deposit for the privilege of "seeing the warehouse." The elevator gets "stuck" after the first trip up and doesn't get unstuck until the stiff has been signed up for a bill of goods. The idea of the T.O. is to show the stiff successively more expensive suites of furniture without letting him get discouraged about the price.

When he begins to look green around the gills for the first time around, the salesman turns him over to another salesman who is introduced as the "assistant manager." The A.M. immediately "sandbags"—knocks 50 per cent off—whatever the first salesman quoted. The stiff is so taken aback that he lets the A.M. build him up again. Just before he begins to feel weak again, the A.M. turns him over to the "manager," who slashes the A.M.'s prices "as a special favor for you." The manager will try to build him up to, say, $800 or $1,000. If the stiff says he "wants to think about it" and tries to leave, he finds that the elevator is on the fritz. The "owner" now appears, knocks off a hundred bucks or two, and this usually convinces the stiff to sign. At which point the elevator suddenly clicks back into action.

Now the fraud starts in earnest. When the furniture arrives, it's almost invariably damaged—delivery men routinely saw off legs on couches to get them in elevators and fit them back together with a special double-ended screw. The furniture turns out to be a junkier variety of *shlock* than what was ordered. The colors bear no relation to what was displayed in the "warehouse." The stereo doesn't work. The television looks used. Two chairs are missing. You were supposed to get a 9-by-12 rug with your order; the "rug" turns out to be a piece of linoleum. When the payment book arrives, the installments listed add up to much more than the amount that was agreed on.

Try to do something about it.

Say, for example, that the glass coffee table is cracked. You bring it back and the salesman tells you he'll be happy to give you your money back. He shows you that the contract simply says "three rooms furniture" for $943.17. It doesn't list the price of the table separately, and now he tells you the price was a dollar. "Would you like your dollar back?" he asks slyly. Or tell him the dinette table keeps collapsing and he says he'll send a man up, but nobody comes. Or say you want to send everything back because it isn't anything like what you ordered. If you're very lucky the salesman agrees and the store picks up your furniture, but when you go back to pick up your $50 deposit, he says the store is keeping it as a "service charge." And you let him bulldoze you because you don't know what else to do.

Some stores rise to printworthy extremes of doublethink when it comes to not returning deposits. Dorothy Mason, a counselor with the MEND consumer education project in East Harlem, tells about a guy who came to her recently because he couldn't get his deposit back:

"He had put down $150 at Eldorado Furniture and Appliances on Third Avenue. A salesman had convinced him to buy a washing machine and a 19-inch portable television for only $649. Two things happened to bring him to my office. First, the washing machine was delivered with a broken timer. He could not get any satisfaction from the store. Second, he found out that he could buy the same washer for $199 instead of the $299 he had paid.

"I went over to Eldorado with this man to discuss the matter with Samuelson, the boss. Samuelson said, 'Your man could have had it for $199 cash.' 'Then why did you ask $299? I asked him. Because the man is a bad risk,' he said, 'How bad a risk could he be,' I asked, 'if you've got 150 of his dollars?' Well, I thought of him charging this man on welfare $649 for merchandise on credit that he could have purchased for $360 with cash, and I smiled, because this was almost a daily experience on Third Avenue with complaints of poor consumers. Samuelson became very upset and threw me out for smiling."

"You wouldn't believe some of these places," says Steve Press, whose New York Institute for Consumer Education is setting up a cooperative furniture store in East Harlem. "They'll stamp NO DEPOSIT RETURNED on the contract. That would never stand up in court, but poor people are impressed and don't even bother asking for their money back."

There is a certain type of used-car dealer in New York that is especially anxious to deal with poor people. Tune in to WWRL:

"Friends, have you tried to buy a car lately? Have you been turned down? Well, call Headquarters at 538–4300 . . . You have a garnishee or a judgment against you, and no one will let you forget them? Well, call Headquarters at 538–4300 . . . Your desire to pay plus a small down payment is all you need."

"Used-car dealers really do a job on poor people," says former Commissioner of Consumer Affairs Gerard M. Weisberg, recently appointed a Criminal Court judge. "Some of those lots out on Bruckner Boulevard and Queens Boulevard—they don't deliver the car that was agreed on, they inflate prices to a point you wouldn't believe, they charge a fortune for so-called 'credit investigations.' And they refuse to refund deposits if the customer's credit doesn't check out, though they lure him out there with promises that nobody's refused. Recently we revoked the license of Motorama Wholesalers on Queens Boulevard. Motorama was taking people's money and refusing to deliver the cars. The deposits ranged up to $580.

"The Department is constantly going over these dealers' books, but it's tough to police them. You put one corporation out of business, the next thing you know there's another corporation employing the same salesmen, using the same shady tactics on the same lot."

The Consumer Fraud Unit set up by US Attorney Robert Morgenthau under the direction of Richard A. Givens has been looking into the used-car racket.

"Our investigations have disclosed a pattern of sales of certain used cars at many times their original cost," explains Givens, "followed by a cycle of repossession, repurchase of the car at a low price at auction and further resale at many times that price to new customers, who in turn are frequently sued by finance agencies and often claim to have received no notice of suit. The inquiry indicated that in certain cases some used-car dealers know in *advance* that there will be a complaint regarding *each and every* automobile sold and that many customers will give up the car and default because they feel it can't be made to work. We're looking into possible violations of federal law by these people."

You don't have to leave the comfort of your home to be bilked. Peddlers making the rounds of slums and projects run the oldest-established permanent floating crap game in town. Encyclopedia salesmen tell welfare mothers they are officials of the Board of Education, that the books they are pushing are required reading for their children. They sell people encyclopedias who already *have* encyclopedias. They sell $379.60 worth of books in English to people who only speak Spanish, to people who can't read at all, to people who are destitute. A peddler tells a woman she can have a set of pots and pans in her home for 10 days; if she doesn't like them, she can return them. When the utensils arrive, she signs a receipt for them. She decides to call the company and tell them to take the stuff back because it's junk. Then she realizes she has no idea what the company's name is or where it's located. The "receipt" she signed was actually a retail installment contract for $83.75. Soon she gets a payment book in the mail with a note saying she'll be sued if she misses one payment.

Richard A. Givens prosecuted a character named Rubin Sterngass recently for running a "chain referral" swindle, a mode of fleecing that is popular in the slums. A salesman would come to the house and offer quartz broilers and color television sets for nothing if the customer would refer acquaintances to Sterngass' company. The customer would sign up for a color TV at a credit price of $1,400; commissions were supposed to be paid to him for each "successful" referral—$50 for the first, $200 for the fourth, $400 for the eighth and $1,200 on the twelfth. Givens demonstrated the scheme had its faults by presenting a table of how many new customers would be necessary at each step if the merchandise were to be paid off by referral commissions:

Step	*New customers necessary*
1	8
2	64
3	512
4	4,096
5	32,768
6	264,144
7	2,113,152
8	16,905,216
9	135,241,728
10	1,071,933,824

Givens argued successfully that since every last human being on earth, plus everybody who had ever lived, plus a few generations yet unborn, would have to buy quartz broilers and color TVs on the eleventh go-around for the scheme to work, Sterngass ought to go to jail and think about other ways of doing business for a few years. The judge agreed.

At any given moment there is one super-fraud that sets the tone for all the other ghetto frauds in the city. Until last year the super-fraud was the "family food plan." Ray Narral, head of a legal services office of Mobilization for Youth, describes how the plan worked.

"Mr. and Mrs. Hernandez have two infant children and live in a New York City housing

project. A salesman knocked on their door and said he was offering a very good food and freezer program. 'If you join,' he told them, 'you will be able to save a great deal of money feeding your children.' All of the sales literature indicated that for $12.50 a week, the family would receive a complete order of food—prime meats, fresh vegetables, everything. The freezer, the salesman announced, was theirs to store the food in, completely free of charge. The sales pitch was so inviting that the couple signed up immediately. They later discovered that the papers they signed were a retail installment contract for the food in the amount of $375.00 and a contract for a freezer for $1,020.76. Payments on the food were $93.75 a month for four months and 35 installments of $28.35 for the freezer."

Two years ago, a Nassau County District Court was asked to void one of these freezer contracts. It handed down a decision that, under the "unconscionability" provisions of the Uniform Commercial Code, "the sale of the appliance at the price and terms indicated in this contract is shocking to the conscience." Attorney General Lefkowitz' Bureau of Consumer Frauds and Protection went to court against the "family food plan" operators, seeking orders restraining Serve Best Food Plan, Thrift Pak, and People's Food from "carrying on . . . their business in a persistently fraudulent manner." In 1968, the Bureau curbed the biggest food plan operator of all, Martin Schwartz of Ozone Park, whose five companies were raking in a very neat $10 million a year.

The current super-fraud is a "sweepstakes" craze that started somewhere in the Southwest and recently arrived in New York. It offers sewing machines and stereos "free" to holders of "winning numbers." Regardless of where in the U.S. the shuck is being operated, the "contest" materials are the same. A chain with seven stores in New York is now being investigated by the city's Department of Consumer Affairs. The swindle starts with this letter:

"Here is your opportunity to participate in our 'Stereo Sweepstakes'. It's fun! It's easy! Just remove the gold seal to find your serial number, and compare it with the enclosed list of lucky numbers. If you have a lucky number, it means extra savings to you! For example! If you have a number which appears in Group 3 (Grand Prize) you pay nothing for a beautiful 1969 General Electric Stereo Console."

The number under the seal on this letter is 67487. 67487 is listed on the enclosed list of lucky numbers, not once, but twice, so you won't miss it and be the only person who receives such a letter who doesn't "win." A Consumer Affairs investigator visited one of the stores with this letter. He was shown a G.E. stereo model C121. The salesman explained that the investigator had won this record player, worth $150, but that it couldn't be removed unless he signed an installment contract to buy a record a week for 39 weeks at $5 each. The investigator called the Dealer Equipment Section of G.E. and found that the C121 carries a list price of $99.95. The records which must be purchased under the plan are displayed around the store. They are the sort of off-brand, off-band cha-cha albums that one ordinarily finds remaindered for $1.19.

There is cash-and-carry cheating in poor neighborhoods, but most ghetto fraud hinges on the "easy credit" retail installment contract. It invariably has some features designed to protect the consumer, which seldom work, and others designed to nail him, which always work. Under the law there has to be a "Notice to Buyer." The first point must say: "Do not sign this agreement before you read it or if it contains any blank space." In fact, nobody ever reads one of these agreements. They ordinarily run to about 2,300 words in phrases like "time is of the essence hereof." (The Everything Card chit is a retail installment contract—ever read it?) The space for a descripition of the merchandise is hardly ever filled in completely at the time of the sale—usually only a few words are written in at the top, like "3 Rooms Furniture" or "one 23" Color TV." What harm in that? Just a second—point number two is: "You are entitled to a completely filled in copy of this agreement," and right above where you sign, it says: "Buyer acknowledges receipt of an executed copy of this Retail Installment Contract." But the moment your pen leaves the paper the salesman whips the contract away—including your copy—and the next time you see it, if you ever do, it says "Damaged Furniture—Accepted As Is" or "Used Television Set—Customer Will Repair" right in the blank space you were warned against. This is all assuming you read the "Notice to Buyer," of course. One reason you might not have read it is that you only read Spanish. The stores have *"muebleria"* and *"credito"* and *"se habla español"* plastered all over the outside, but there is no such thing as a contract printed in Spanish. The finance company's linguists are apparently too busy composing dunning letters to the *campesinos*.

The fine print on the back socks it to the buyer in terms only a lawyer can savor. The kicker is contained in the following hocuspocus: "The Buyer agrees not to assert against an assignee a claim or defense arising out of the sale under this contract provided that the assignee acquires this contract in good faith and for value and has no written notice of the facts giving rise to the claim or defense within 10 days after such assignee mails to the Buyer at his address shown above notice of the assignment of this contract." What this means in practice is described by Philip G. Schrag, attorney in charge of consumer litigation for the NAACP Legal Defense Fund.

"If Greedy Merchant gets Ernest Black to sign such a contract for a 'new color television' and the set turns out to be an old, battered black-and-white instrument, or *even if Merchant never delivers any set at all*, Merchant can sell Black's contract to Ghetto Finance, Inc., for a lump sum, and Black is out of luck. Ghetto has a right to payment in full from Black, and Black has no right to tell a court that he's been robbed."

The common-law justification for this is that Ghetto Finance supposedly knows nothing about Greedy Merchant's business practices, that it is a "holder in due course" of the installment paper. In practice, finance companies often work hand-in-glove with merchants to soak the poor.

Martin Schwartz' five food freezer companies at 105–32 Cross Bay Boulevard, Ozone Park, were selling their paper to Food Financiers, Inc., Associated Budgeting Corp., and National Budgeting Systems, Inc.—each of 105–32 Cross Bay Boulevard, Ozone Park. Attorney General Lefkowitz' injunction forbids Schwartz' salesmen from stating that Schwartz' finance companies are "unassociated" with Schwartz' freezer companies. Still, the finance companies are "holders in due course" of the freezer companies' contracts and are continuing to collect on hundreds of thousands of dollars' worth of paper they "acquired" before the injunction.

Tremont-Webster Furniture Corp. is at 412 East Tremont Avenue in the Bronx. When I visited this *shlock* shop, it was locked. There was a sign on the door that said "GO NEXT DOOR." Next door, 410 East Tremont Avenue, behind a more fiduciary storefront than Tremont-Webster's, is Argent Industrial Corp. It turns out that Argent buys Tremont-Webster's paper. No doubt it is a convenience for a holder in due course to have the store about whose affairs it knows nothing right next door. This kind of hanky-panky extends from rinky-dink outfits like Argent right up to the heavyweights. Credit Department Inc. ("That's right, Madam, no finance companies are involved in this transaction—you just sign a contract with the credit department . . .") has the distinction of suing more people in New York County Civil Court than any other finance company. Erase any image you may have of ghetto shylocks cowering behind boarded windows on burned-out, glass-littered streets. Credit Department is located in the heart of Dry Dock Country at 60th Street and Third Avenue. Credit Department does not know anything about the business practices of the operations it finances. Take Associated Home Foods of 41–01 Bell Boulevard, Bayside, which used to sell freezer plans to poor people at prices equal to those which the courts have found to be unconscionable. That's none of Credit Department's business—they bought Associated's paper, are holders in due course and are suing people for not paying. Besides, Credit Department isn't buying freezer contracts any more—they know it's "garbage paper" and they don't want to get their hands dirty. Credit Department lists a few of its clients on its door—not that it knows anything about their operations, you understand—and one of them is Vigilante Protective Systems. Vigilante is in the business of selling burglar alarm systems door-to-door and is located at—you guessed it—41–01 Bell Boulevard, Bayside.

Lately, the holder-in-due-course ploy has come under attack from consumer forces. Three states have outlawed it. A bill to end it, sponsored by Attorney General Lefkowitz, was killed in the legislature in 1968 but will be re-introduced this year. Witnesses at FTC hearings last November called for federal legislation to do away with the principle that allows finance companies to remain aloof from the dirty business practices of the companies whose paper they buy. The New York State Bar Association Committee on Federal Legislation is considering a report that would recommend that holder in due course be abolished. Richard Givens has a mail fraud indictment pending against a finance company and its officers for claiming that it was a holder in due course when in fact it had an interest in the sale of the merchandise.

Coburn Credit Company first made waves in the ghetto a decade ago when it began to carve out a commanding position in the market for furniture-and-appliance installment paper in the New York area. It rapidly gained a reputation among stores as the outfit that was willing to pay top dollar for "garbage" paper—trade can't for inflated installment contracts for purchases of low-grade goods by poor credit risks.

Today the company is listed on the American Stock Exchange as "Coburn Corporation of America." In addition to its $50 million New York metropolitan area sales finance operation, it now has small loan offices throughout the South, a mortgage operation in Louisiana and a division that runs revolving credit plans for department stores. Coburn has made skillful use of the holder-in-due-course principle to protect itself against possible charges that the merchants it finances engage in fraudulent or unconscionable practices. Under the law, for example, a finance company can't be held liable for fraud in the contract if the customer doesn't complain within 10 days after he receives notice that the contract has been sold. When Coburn buys a contract, it sends three sheets of paper to the customer. One is headed "Certificate of Life Insurance Protection" another, "American Fidelity Fire Insurance Company Insureds Memorandum of Insurance." These two are of little importance to the consumer. The third sheet, half the size of the others, has no heading. Three-quarters of the way down the page are three sentences. The first of these is 125 words long. It contains an urgent warning that if the consumer does not act quickly, he will forfeit all his rights. The second and third are seven and ten words long respec-

tively. They read, "Enclosed you will find your payment book. Payments are to be made as directed in this book."

Coburn has had brushes with the Bureau of Consumer Frauds, but according to Assistant Attorney General Barnett Levy, it has "cooperated" in giving money back to customers who claimed irregularities in the original contract.

I visited Coburn to discuss the sales finance business with President Irving L. Bernstein. His offices are in the Coburn Building, the largest structure in Rockville Centre, Long Island. One walks toward Bernstein's office past no end of teak, brass, marble, quarry title, bronze, royal purple couches, van der Rohe chairs and recessed lighting.

The finance company's substantial physical presence would come as a shock to its thousands of poor customers, many of whom tend to personalize institutions they never see: "I got a contract with the Coburn Company, and Mr. Coburn won't wait no longer to get paid."

I tried to get Bernstein to talk about the holder-in-due-course provision. How, I asked, did Coburn make sure that the outfits whose paper it was buying were on the up-and-up? Bernstein told me that these were technical matters that I, who was "not an expert in finance," would have difficulty understanding. He preferred to tell what a bunch of deadbeats people were who lived in certain neighborhoods. I asked whether fraudulent and deceptive practices on the part of merchants might not make poor people less than willing to pay their debts.

"Listen," said Bernstein, "I have a social conscience about these things. I grew up in one of these neighborhoods—Brownsville. These people are not exactly truthful when they give credit information. And there are entirely too many of them who have no intention of paying. It was different in my day. My mother used to steal deposit bottles rather than miss weekly payments."

I suppose Bernstein saw me wince because he asked, "Do you have a social conscience?" He talked about a social conscience as if it were painful, like an ulcer. Bernstein said we ought to cut the interview short, since an important announcement was forthcoming from Coburn and he would be in a better position to discuss the sales finance business the following week. On the way out I picked up a copy of the Coburn house organ.

"Early in December," it explained, "Coburn initiated its annual 'Adopt Needy Families' program . . . five of the neediest families were selected. To each of the families chosen, Coburn employees in Rockville Centre have contributed specified sums of money to make an otherwise bleak and destitute Christmas into a happy and hopeful one." Gelusil for the social conscience.

The next day Coburn released the news that it would "discontinue its $50 million retail installment finance business." Coburn had protected its sales finance investment with a dunning staff of 250 who engaged in what are charitably referred to in "easy credit" circles as "hard collection practices"; the staff was being let go, so $5.1 million in contracts was being written off as uncollectible. But at the end of the story it turned out that "about $30 million will be allowed to run off and the borrowers asked to convert their contracts to direct personal loans." "The company will continue to carry about $20 million in installment receivables, but will buy such contracts only on the condition that they be converted to loans.

In the trade, the procedure of converting sales finance contracts into direct personal loans is called "flipping." It is done by offering to lend the customer more than enough cash to pay off his contract. The trick is that the maximum interest for sales finance is about 18 per cent, while the legal rate for direct cash loans is 36 per cent. The other advantage of "flipping" was best expressed by Bernstein when I spoke to him later:

"When you have an installment finance operation, you're going to be concerned with the dealers; this way, you only worry about the willingness and the ability of the individual to pay."

If holder in due course is abolished in New York, finance companies will be liable for fraud in the original contract. Even now, if there is fraud "on the face of the contract"—if, for example, the interest rate charged is in excess of the legal rate, or the merchandise being purchased is not described—the finance company is liable. But from now on, Coburn will be lending people cash to *pay off* the original contract, so it won't be liable for anything. If other sales finance companies go Coburn's route, they will have found a way of getting around policing the dealers whose contracts they buy. Until this writing, Coburn didn't know, for example, that at least one link in the chain of stores that the Department of Consumer Affairs is investigating displays a sticker that reads, "COBURN AUTHORIZED DEALER." Now Coburn knows, but with the new policy, it won't have to care.

So whether or not holder in due course bites the dust, the customer is supposed to keep on paying. But what if the couch falls apart in three months, and the store you bought it from has gone out of business and the bills continue to come? What if the color TV explodes and the repairman tells you it was a used set to begin with and the store won't exchange it? You just can't see mailing in that money order for $26.96 every month for the next 34 months? What happens if you just *ignore* the bills?

Nothing happens until one day, a year or so after you've forgotten about the whole painful affairs, your boss asks you to come into his office. He looks annoyed and shows you a paper and says he's supposed to take $7 out of your paycheck each week and send it to the city marshal and it's a damned lot of paperwork and he'd just as soon fire you if it weren't illegal. Then he hands you the paper and says you'd better take care of it or he'll find some other reason to get rid of you. So you go to the address on the paper and the marshal tells you to pay him $10 every week or he'll send the paper back to your boss. You do it because you don't want to lose your job. The furniture, the television, were long since put out on the street as junk, but you have a wife and four children. The only problem is, you only make $70 a week and you've got to pay the marshal $10 out of that. The hopeless cycle of consumer abuses goes around and around.

GHETTO FRAUD ON THE INSTALLMENT PLAN—PART II

(By Craig Karpel)

"Easy credit" installment buying means high-pressure sales tactics, junk merchandise and a sales contract with blanks that are filled in by the store after the customer signs. Often unordered goods are delivered, appear on the bill and are not accepted for return. Used merchandise is sent instead of the new stipulated in the contract; if the customer returns the goods, his deposit is not refunded; and when the bills start coming in they are for more than the amount agreed upon in the contract.

The long arm of the law is not long enough to protect the customer; in fact, it extends to help the stores. Collection agencies, for example, are not held liable for the frauds in the original contracts they buy up from the stores. And long after the junk furniture falls apart, legal devices continue to work against the consumer: "Sewer service," improper venue, default judgment and garnishment are how poor people are made to pay even when, in fact, equity and law, they do not owe.

To sue on a piece of garbage paper, a summons and a copy of your complaint has to be served on the customer. In a study he is conducting for the Office of Economic Opportunity, sociologist David Caplovitz has found that only 53 per cent of all defendants in New York County Civil Court suits say they received a summons. The phrase "sewer service" suggests one possible final destination of the remaining 47 per cent.

Caplovitz says, "The reason sewer service flourishes in New York is that this is the only state in which service of process isn't handled by some court agency. Here anybody who is over 21 can serve papers."

The Civil Court allows $2.50 in costs for serving a summons. For proof that service has been accomplished, it accepts an affidavit from the process server. So a process server has a choice of walking around hostile neighborhoods, climbing rickety stairs, standing in fetid hallways and facing contentious poor people, on the one hand, and sitting in his office, filling out perjured affidavits of service on the other. Either 47 per cent of all process servers choose the latter, or all process servers choose the latter 47 percent of the time, or somewhere in between. Of the 53 per cent who are warned they're being sued, most of them are done in by improper venue. Under New York's rules of civil practice, any county civil court has jurisdiction on a case that arose anywhere in the state. So merchants and finance companies often sue, not in the county where they reside or in the county where the defendant resides, but in some other county which is likely to be inconvenient for ghetto consumers to get to. Under the rules, the consumer can have venue changed to the county where he resides. If he is being sued in a court that is inconvenient for him to get to, all he has to do is *go to the court that is inconvenient for him to get to* and ask for a change of venue. He would also be well advised to bring his lawyer with him, because getting a venue shifted is a rather tricky procedural maneuver.

Brand Jewelers is prominent among the plaintiffs of New York County Civil Court. It is a matter of some curiosity that a larger number of the lawsuits it brings ask for relief in the amount of $112.64. In checking through the files of summonses kept by the clerk of the court, it appears that this $112.64 represents the full cost of the watches it sells—$69.95 plus various service charges. Why do so many Brand customers fail to make even a single payment? Coincidentally, Caplovitz has interviewed a number of Brand's $112.64 debtors.

"They all tell the same story," he says. "A salesman comes to where they work—on payday, naturally—and signs them up for watches. But they never get Brand's address, and never receive a payment book. The first they hear from Brand is when their wages are garnished."

Brand's offices are at 44 Court Street, near Borough Hall, Brooklyn. It sells all over the city, yet it sues in Manhattan. I called Sol H. Erstein, Brand's lawyer, who lists his address (on summonses printed with Brand's name) as 44 Court Street, and whose name is written large on the door to Brand Jewelers. I was told that Erstein "was on vacation" and was referred to a lawyer named Sidelle, his partner. I asked Sidelle why Erstein, whose office is in Brooklyn, sues Brooklyn residents in Manhattan, although Brand is in Brooklyn. Sidelle explained that this was because Erstein has an office at 15 Park Row, convenient to the Manhattan courts. I observed that his office, 44 Court Street, was no less convenient to the Brooklyn courts.

"Look," said Sidelle, "anyone who wants to change the venue to where he lives can do it, but people hardly ever do."

The poor defendant gets either no summons, or one telling him he must report to another county. The result is almost invariably the same in either case: He doesn't show up. So a "judgment in default" is entered against him by the clerk of the court.

At this point, the defendant still can get his "day in court"—a phrase which, when a lawyer says it, comes out as an ancient common-law formula, not a cliché. If he knows enough to go to Legal Aid, the judgment can be opened on grounds of failure of service or improper venue. But in order to do this he has to know not only where to go, but that a judgment has in fact been entered against him. Until recently, all he had to do to find this out was go through the minute books of the civil courts of the five counties in the city. He could start with the Manhattan books, which listed 195,011 cases in 1968. But since September 1, 1968, the law requires that the lawyer for the plaintiff send a notice by certified mail to the defendant that a judgment is pending against him.

Even if you read English, you've got to be a lawyer to understand the gibberish and to know that it isn't inevitable for the judgment to be entered, that you can still do something about it. The plaintiff's lawyers aren't obliged to take great pains to inform the defendant of his rights. What's more, most of those certified-mail letters never reach the defendant because the addresses are from the original contract and are therefore two or three years old. If the merchant or finance company has a more recent address on file—the one from the last payment, say—it doesn't have to tell the clerk of the court. So the certified letter is returned to sender, who gives the judgment to a city marshal.

The marshal hits the debtor with an "income execution," otherwise known as a garnishment, which is an order to somebody's employer to take money out of his wages and send it to a marshal. This involves the employer in a great deal of paperwork on payday, and in the past most employers were disposed to fire an employee rather than go through the rigamarole. If they kept the man on, all of his salary could go to satisfy the judgment. Now New York has a garnishment law that is, compared with other states, a model of humaneness. Thirty dollars a week is exempted, and the maximum weekly takeout is 10 per cent of wages. An employer is not allowed to fire a man for having only one garnishment, but despite the law, employers often find a pretext to dismiss men whose wages have been garnished. If a man has been retained, his second garnishment is quickly translated into a pink slip. Although the law prohibits firing a man because of one garnishment, it doesn't say anything about *not hiring* a man because of *one* garnishment. Many so-called "hard-core unemployables" in New York are unemployable primarily because of a history of garnishment. So in order to stay on the good side of employers, poor workers go directly to the marshal and promise to give, each week, more than he could legally take.

Of course, when the poor consumer hears that his wages are being attached he can still, in theory, go to court. All he needs is a lawyer to represent him, but a lawyer has to have a powerful sense of noblesse oblige or a weak head to go to bat for a poor person, however blatantly defrauded, in New York's courts.

Ghetto merchants and finance companies have the complicated process of suing in Civil Court down to a science. Samuel Kroland, house collection attorney for Coburn Corporation, one of the largest finance companies in the New York area, has its IBM System/360 computer at his disposal. Furniture stores on 125th Street go to the redoubtable Sidney Katz, Esq., of 60 Wall Street. All of Katz' furniture cases are identical—all he has to do is remember which store's rubber stamp to use on the paper. Attorney Milton Kostroff has an office 60 by 66 feet from which he is reputed to process one-fourth of the garnishments in Brooklyn, and is supposed to boast of a 100 per cent default judgment rate. These lawyers use complaint and judgment forms with all the relevant information *printed* on them—all they've got to do is fill in the amounts and send them over to the court clerk to have them filed. From that point the lawyers' service bureaus they retain (there is one that dares call itself Gett-O Claims Investigating Service at 524 East 149th Street in the Bronx) take over. The most prominent of these is American Clerical Service of 5 Beekman Street. American employs women who work full time at long tables in the civil court clerk's offices, checking the minute books for summonses that have gone unanswered, stapling "notices of proposed judgment" to the summonses and complaints, pulling copies of "judgment in default" forms to be stamped "ENTERED" by the clerk. Then the "income execution" forms go to the marshal and the poor start paying more. It should be noted that some of the characteristic features of courts as we ordinarily think of them never become involved in this assembly line: most notably, judges. Judges don't like to have anything to do with this process. It's too . . . *mechanical*. Besides, judges are for making decisions, and all the decisions in these courts have already been made. All that's needed to administer justice in the clerk's office is a strong right arm and a rubber stamp.

"Whoever dreamed," asks Caplovitz, "that the courts of this city would be perverted into becoming a collection agency for unscrupulous merchants and finance companies that prey on the poor?"

A lawyer who tries to defend a poor client against a ghetto merchant or finance company benefits from none of the economies of scale that suing thousands of people generates. Each case is entirely different, procedurally and on the merits. Personal trips to court are necessary to copy the papers. The circumstances of each fraudulent or unconscionable sale must be pieced together through investigation. Poor defendants cooperate by ignorance and default. The exploiters never cooperate. Why should they? You say your client didn't get a copy of the contract in question? You want to take a look at it? Go before a judge and make a motion for pre-trial discovery. That should keep you busy.

The Civil Rights Committee of the Association of the Bar of the City of New York has recently demanded three reforms. The first is that service of process be a function of a public agency. The second is that suits be allowed only where the consumer lives, used to live or made the purchase. The third is that right to counsel for the poor be guaranteed in civil actions as it is in criminal cases. These proposals would require action by the legislature. But a venue bill such as the Bar Association proposes, sponsored by the Attorney General last year, never got anywhere. The legislature has shown no great concern for protecting the rights of poor consumers in the past, and there is no reason to believe that, without a welling-up of public concern, it will do anything to help in the near future. If there is going to be a change in the courts in the meantime, it is going to have to come from the courts themselves.

There is now only one attorney in New York who is bringing test cases to court designed to bring down the legal and procedural house of cards which shelters companies that cheat poor people. Phil Schrag is assistant counsel at the National Office for the Rights of the Indigent, which is part of Jack Greenberg's NAACP Legal Defense Fund.

"Lawsuits to secure the rights of consumers are phenomenally expensive," Schrag explains. "To win the landmark District of Columbia case in which two furniture contracts were voided because the prices were unconscionable, Legal Aid lawyers had to spend 210 man-hours. In one of our cases, we had to spend 72 man-hours just to defeat the finance company's motion to dismiss on the ground of improper service of process! A rich man would have to be nuts to pursue a case like that; a poor person simply can't pursue it at all.

"There are two ways to make it practical for poor consumers to go to court to secure their rights. One is by awarding punitive damages for fraud and unconscionability. Punitive damages are now available in New York where the seller engages in willful fraud as the very basis of his business. The problem is that many of the corporations which engage in consumer fraud are deliberately run on shoestring budgets while their owners reap large salaries. Hit the seller for punitive damages and you find the corporation has no assets. The courts have got to make it clear that punitive damages lie against the officers of a corporation, not just the corporate shell.

"We're bringing a case now which asks for punitive damages for inducing a poor couple to enter into a contract to buy a freezer for a total of $1,163.11—a price which a New York court has found to be unconscionable. If courts would award substantial punitive damages in this kind of situation and make them stick, lawyers would find it profitable to represent poor consumers on a contingent-fee basis, like accident cases.

"Our other case is a test of the availability of consumers' class actions in New York. Until recently, Coburn Corporation used contract forms that the plantiffs alleged had portions printed in smaller than 8-point type, contrary to Section 402 of the Personal Property Law. The plaintiffs had signed such a contract for wall-to-wall carpet in the amount of $756.92. This contract was sold to Coburn. The rug started coming apart, and when they tried to get the carpet company to service it they found it had gone out of business. So they refused to pay the balance of $266.11 and sued on behalf of themselves and every other consumer that has signed such a contract during the past three years for return of the credit service charges paid to Coburn. The court held that persons who signed these contracts do not constitute a 'class'; each had to sue separately to get relief. We're appealing the ruling.

"With class actions, one knowledgeable consumer could sue on behalf of thousands who are ignorant of their rights. If the courts won't allow class actions, how is the average poor person supposed to know his rights, let alone afford to defend them?"

Schrag may be successful in the end, but so far the lower courts have been notably inhospitable to his case. Felice K. Shea, staff attorney with the Legal Aid Society's Harlem civil branch, is not surprised.

"The lower courts," Mrs. Shea sighs, "have a small-business mentality. As far as they are concerned, the sanctity of contracts must be upheld at any cost in human suffering. The lower-court judges simply have a different way of thinking about the problems of poor consumers than the average well-meaning lay person would think they have."

"If there's one thing that stands between poor consumers and a real solution to their problems," Caplovitz says, prowling his office, furious, "it's the illusion that the consumer has a place to go."

This illusion has survived *The Poor Pay More*, whose surveys found that 64 per cent of poor people had no idea where to go with a consumer problem. Caplovitz found that the largest number who did have an idea where to go cited the Better Business Bureau.

The following exchange of letters gives a sense of how the Bureau operates.

On January 31, 1969, Sister Mary Kenny, Dean of Students at Sacred Heart Academy in Hempstead, sent a copy of a letter she had written to Attorney General Louis Lefkowitz to the Better Business Bureau. It complained that her students had been defrauded by New York. It offered a lengthy bill of particulars.

On February 17, 1969, Ward R. Williamson, Manager of the Service Department of the Bureau, sent Sister Kenny the following letter:

"This will acknowledge the receipt of your recent letter expressing dissatisfaction with your organization's dealings with ———.

"We appreciate your bringing this matter to our attention. Your letter will be made a matter of record in our files.

"This Bureau cannot intervene on your behalf as you request inasmuch as your letter indicates that you are sending copies of your letter to various governmental agencies."

On March 25, 1969, a letter was sent to the Bureau, as follows:

"I would appreciate it if you would let me know if you have any information or complaints on ———."

On April 18, 1969, Ward R. Williamson replied with a form letter:

"In response to your recent communication about the above ———:

"We have not received sufficient inquiries about this concern to justify preparation of a formal report. The company has been known to the Bureau since 12–17–60.

"The Bureau file shows no complaints.

"On behalf of the responsible business companies whose voluntary membership in the Bureau makes its services possible to the public without charge, we appreciate the opportunity to be of service to you."

On May 13, 1968, the Better Business Bureau of Metropolitan New York opened an office in Harlem. On November 18, 1968, the Better Business Bureau of Harlem opened its permanent offices in what used to be Fidel Castro's favorite New York hotel, the Theresa, at Seventh Avenue and 125th Street. I went there to speak with Miss Larrie O'Farrell, the public relations director.

"Everybody in Harlem is controlled," stage-whispered Miss O'Farrell. "The furniture stores are no exception."

"Who controls everybody in Harlem?" I asked expectantly, pen in hand.

"Who controls everybody in Harlem? I think we both know the answer."

"Oh, *them*," I said.

Miss O'Farrell went on to suggest that the reason the Better Business Bureau had not pursued the matter of *them* had something to do with not wanting bombs lobbed through its windows. In fact, Miss O'Farrell suggested that if I went too deeply into the matter of furniture stores, *they* might have me dodging bombs. I swallowed the lump in my throat and pressed on. I told Miss O'Farrell that, bombs or no, I was interested in seeing her files on some of the worst offenders. Miss O'Farrell buzzed for two files; both were fat with letters of complaint and memoranda of action taken. It was clear that the Bureau was fairly successful in settling complaints against both stores of damaged and defective merchandise, misleading advertising, and so on. Yet it seemed that neither store had actually changed its business practices as a result of Bureau action, but rather had seen fit to accommodate only purchasers who knew enough to complain, and where.

Enter at this point Woodrow Wirsig, president of the Better Business Bureau of Metropolitan New York. Miss O'Farrell told him I was interested in the problem of poor consumers being cheated by unscrupulous merchants.

"This is a very complex problem," explained Mr. Wirsig. "It is not just the businessman's fault; it is the consumer's fault, too." Wirsig flashed a glance at Larrie O'Farrell, scanning for corroboration. Finding none he continued:

"These people have to learn to moderate their wants. They are entirely too eager to believe they can afford things that they do not really need; they are entirely too . . ."

"Trusting?" offered Miss O'Farrell. A histrionic mood gelled in the room.

"Ye-e-s," said Woodrow Wirsig, raising an eyebrow, fixing a stare on Miss O'Farrell. "Too trusting."

There are other agencies where poor consumers who know enough to complain can go, but none really makes it.

The New York State attorney general runs a Bureau of Consumer Frauds and Protection in the City, but director Barnett Levy is budgeted only 10 lawyers to handle nearly 70 complaints a day. The lawyers can "mediate" by picking up the phone and trying to convince merchants not to defraud the people who complain, but they can only act against companies when there is a "pattern" of complaints against them. Then they can only seek an injunction forbidding the merchants from engaging in practices which are illegal in the first place. Levy was able to throttle 70 fraudulent operators in the city last year using this tactic, but if you're being used *this* year by one of these operators, all his lawyers can do is commiserate. The bureau has no power to put anybody in jail for fraud.

There are a number of "consumer education" storefronts in the city, funded by the Office of Economic Opportunity, to which poor people are invited to come for help. Most of the people who come are having trouble getting deposits returned or exchanging damaged and defective furniture and appliances. The storefront counselors have had some success, using the threat of a small claims court suit against recalcitrant merchants, but lately the stores have stiffened and refused to settle. They go to court and lose, on the theory that they can win by attrition: poor consumers don't actually want to sit around small claims court waiting for their cases to be called. The result is that not much use is being made of the counselors' services. One consumer education project I visited had rather meager files of recent clients. A counselor there confessed that only two, maybe three, cases come in a week. It's doubtful whether the counselor was getting as much money back for her clients as she herself was being paid out of public funds.

You can go to the Legal Aid Society or an OEO-funded "neighborhood law office" if you're being sued. There you sit in two-tone green enamel waiting rooms, part of the "caseload." The lawyers do not have the budget to open judgments and defend defrauded clients, so they call the store or the finance company and ask it to settle for, say, $50 more. It's often the store that owes money to the client, of course, but Legal Aid doesn't have the funds or manpower to bring suits on behalf of its clients. A "neighborhood lawyer," if he is able to crawl out from under the caseload avalanche, can consider suing a store or finance company, but the day after the summons goes out, the defendant's lawyer is invariably on the phone, suggesting that the poor client take a $50 settlement and forget about his suit. In the four years that Ray Narral was with Mobilization for Youth, he never had a client who could resist the temptation to settle with his persecutors.

The city's Department of Consumer Affairs was created in September, 1968 as little more than a fancy title for two old agencies, Markets and Licenses. The one addition was its Consumer Advisory Council, of which Phil Schrag is chairman. Schrag's council, the department staff and the city Corporation Counsel recently presented Bess Myerson Grant, the energetic new commissioner, with a bill that would give the department a unique and potent weapon against systematic fraudulent schemes. The Consumer Protection Act of 1969, now before the City Council, a number of whose most influential members, notably Majority Leader Thomas Cuite, Edward Sadowsky and Mario Merola, are regarded by the department as sensitive to consumer needs. It would give the department the power to bring lawsuits against fraudulent operators on behalf of all the victims who live in the city. If a company defrauded 10,000 New Yorkers of $20 each, the city could collect $200,000 from it and distribute it to the victims. If the City Council passes it, New York will be the most expensive place in the country to commit fraud, instead of one of the cheapest.

NIXON MOVING TO COUNTER CHALLENGE OF NEW ISOLATIONISTS

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. BROOMFIELD. Mr. Speaker, we all recall how the influence of isolationists in the late 1930's and early 1940's very nearly led this Nation down the road to disaster, disaster brought on by unpreparedness in a world that was already at war.

Now a new group of isolationists would lead us along a similar perilous course, at a time when the world tensions are as threatening as at any time in our Nation's history.

Columnist William S. White comments on this situation in an article carried in the Washington Post, Saturday, August 23, 1969. I insert that column in the RECORD:

NIXON IS MOVING TO COUNTER CHALLENGE OF NEW ISOLATIONISTS

(By William S. White)

The Nixon administration is at last mounting a carefully concerted defense system against the ever-rising challenge of liberal new isolationists in the Senate to the constitutional and traditional powers of the presidency in foreign and military high policy.

Not a moment too soon, the administration is bestirring itself to protect presidential right and prerogatives which are now under an attack, from left-wing forces in both the Democratic and Republican parties, of a severity not seen since Franklin D. Roosevelt's prewar era. This current state of affairs would be serious enough in any circumstances. It is profoundly and even desperately dangerous now, for it befalls while euphoria pervades a loud section of opinion among politicians and within public and press precisely at a time when this country's vital interests abroad are actually in rarely exceeded peril.

As to Vietnam, the simple if unpopular truth is that the war is going badly and the peace negotiations in Paris have reached a point just short of the farcical.

On and off the battlefield the Communists are reacting in increasingly hard-nosed arrogance, and the President's policy of gradual troop withdrawal has become a visible embarrassment and may indeed have to be suspended or even reversed in the long run.

As to the Middle East, the Soviet Union, far from assisting in American efforts to dampen the chronic Israeli-Arab crisis is in fact well along in a thrust of naked expansionism in Asia which already clearly threatens the anti-Communist position all over the basins of the Mediterranean and the Indian Ocean. That this is the way things are is widely recognized in both the Near and Far East, and it is an astonishing paradox that the American public, along with the neo-pacifist senators, seems hardly to have heard of it at all.

Yet it is a fact of life so ominous that it is discussed here with an ironic concurrence of view for once between spokesmen for Is-

rael on the one side and the more moderate of the Arab nations on the other. These two sets of ancient antagonists recognize that immense changes in the power balance in Asia are looming into plain sight—and also that whatever their own intramural enmities, Israel and the non-Communist Arab world have a world in common here to try to defend from Soviet encroachment.

A form of so-called "criticism" of the Pentagon and the military that has long since become outright vilification from the Senate new left has struck the most-wounding blow to military morale of this century.

Morale in all the intelligence agencies has concurrently been deeply shaken by the Green Beret affair, which is seen by some men who have ably served this country to suggest that soldiers doing their plain duty in "black" intelligence work can be indicted as murderers in order to please pacifist opinion here at home.

To combat all this, the administration is evolving a mosaic of rebuttal, tactful on the outside but fully resolute on the inside, whose seemingly unrelated pieces all bear one purpose in the end. The visible centerpiece here is the firm public refusal of Secretary of State William P. Rogers, speaking on the President's authority, to promise Senate critics that the White House will in any and every circumstance seek the prior consent of Congress for military measures necessary to the safety of the United States or to its honorable commitments. Rogers has promised all sorts of "consultation"—but with a vitally important qualification. It will be given only in "appropriate" circumstances.

A part of the mosaic, too, is the President's deliberately spotlighted efforts to draw closer to the man who was his Democratic predecessor, Lyndon B. Johnson. Mr. Nixon's invitation to the Johnsons to visit the California White House on Aug. 27—Mr. Johnson's birthday—is far more than a small comradely gesture. President Nixon, it may be stated authoritatively, intends to have a most-basic discussion of world issues with Mr. Johnson, with White House Assistant Henry Kissinger providing briefings in depth.

This is intended to read a lesson to the country that, while politics is politics and fun is fun, the transcendental problems before the nation are neither Republican nor Democratic and cannot be approached with small partisan and ideological motives without inadmissible peril to the whole body.

THE 30TH ANNIVERSARY OF THE NAZI INVASION OF POLAND

HON. JOSEPH E. KARTH

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. KARTH. Mr. Speaker, 30 years ago on September 1, 1939, the Nazi war machine invaded Poland, an act that culminated in World War II. This sombre date, therefore, ranks in significance to Poles worldwide as does December 7, 1941, to Americans.

I wish on this occasion to salute the valiant Polish people who responded so vigorously and courageously when their homeland was suddenly invaded. I wish also to salute the millions of Americans of Polish descent for the very significant role they play in the processes of democracy in America. While they have joined the so-called mainstream of American life, they have never lost their own unique heritage. Suffice to say that their love for freedom is seldom equalled and never exceeded.

Finally, I join with free Polish people everywhere in the solemn pledge to see at last a free Poland, unshackled from tyranny, and symbol of a just and open land.

DANGER SIGNS POINTING TO NATIONAL ENERGY CRISIS

HON. TOM STEED

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. STEED. Mr. Speaker, it has been a popular indoor sport here of late to make the American domestic oil industry a whipping boy for tax reformers. Recent action of the House in cutting the oil-depletion allowance is only a part of the overall attack that has added problems on an industry already hard pressed to fill its mission of providing the American people with an adequate domestic supply of petroleum energy, and at the same time maintaining the domestic reserves that can mean life and death to our Nation in time of emergency.

With all its supposed tax advantages, the cold truth is that our domestic oil reserve picture has been worsening for the last 15 years and no improvement is in sight. Instead, with the political punishment currently being meted out, the situation is bound to become alarmingly much worse.

Mr. Clyde La Motte is perhaps the most informed and authoritative writer on the subject of petroleum in America today. His most recent summary of the energy situation is so thoroughly informative I am having it reprinted here in the hope many of those who have been so misled by ill-informed and ill-guided propaganda may acquire a new grasp of the seriousness of our petroleum supply problem. The article, printed in the Daily Oklahoman, Oklahoma City, on Sunday, August 31, follows:

DANGER SIGNS POINTING TO NATIONAL ENERGY CRISIS

(By Clyde La Motte)

WASHINGTON.—The United States is facing an energy crisis, including possible shortages of electric power, natural gas and other sources of energy upon which millions of consumers depend.

The crisis is not the result of some sudden calamity or unforeseen development. Rather, it stems from energy demands for normal uses exceeding immediately available supplies.

Here are some of the danger signs:

There is a serious question as to whether there is enough electric power to go around. Brownouts have developed in New York City, in Washington, D.C., Miami, Fla., and elsewhere, indicating the fact that power supplies are being strained to the breaking point. (In Washington a recent brownout was not due to any explosion or mechanical failure but simply the fact that it was a hot day and the use of air conditioners created a dangerous drain on supply.)

All segments of the natural gas industry have been warning the Federal Power Commission that an extremely tight supply situation exists, with definite prospects of shortages as early as the approaching winter. This has prompted talk of rationing gas by restricting its use as a boiler fuel or for other "inferior" purposes. But such an approach raises questions as to where those restricted users would turn for a source of energy.

The spot market for coal has virtually disappeared, meaning that it is difficult to obtain coal without a long term contract. And even some contract users reportedly are in short supply, including the Tennessee Valley Authority which is said to have only a 10-day supply on hand with which to operate its electric power generators.

Rising costs and equipment shortages have delayed many atomic-powered generating plants planned by electric utility companies, thus adding to the problem of keeping up with the rapidly increasing demand for electric power.

Petroleum remains in ample supply, but even here there are problems affecting the continued development of adequate domestic supplies. Spare crude oil producing capacity has disappeared in all states except Louisiana and Texas and even there some question exists. Alaska North Slope oil may prove a godsend but delays are cropping up there which could delay the movement of substantial quantities of that oil to markets.

The irony of the looming energy crisis is that this nation has an enormous wealth of energy resources. Experts say there is plenty of natural gas to be found and that the North Slope and U.S. offshore areas as well as many inland regions contain vast deposits of untapped oil. The supply of coal is virtually inexhaustible and there is technology at hand to produce oil and gas from coal. Oil shale has a tremendous potential, and in the nuclear field progress is being made toward development of fast "breeders" which create more fuel than they consume, thus promising a cheap source of power for generating electricity.

Why, then, is there currently a supply problem, a problem which may well get much more severe in the near future?

One big factor is the nation's concern over environment and beautification.

People expect adequate energy supplies, but they also want clean air, unpolluted rivers and coastal zones, landscapes unmarred by huge electric power transmission lines, or view of the ocean uncluttered by offshore drilling rigs.

Charles F. Luce, chairman of the board of New York's Consolidated Edison Corp., spoke of this problem recently when he told a congressional committee that citizens complain whenever and wherever Con Ed seeks to build new generating plants.

"It doesn't seem to matter where the plant is located or what kind of fuel is used, there are objections," Luce said. This has resulted in delays in constructing badly needed facilities, he pointed out.

Many communities have objected to planned construction of nuclear power plants in their areas, while others have sought to block the building of coal-fired plants because of pollution problems.

Concern over environment may also delay by a year the construction of a big-inch crude oil pipeline across the peninsula of Alaska to move North Slope oil to market. The Interior Department has held off issuing a permit for the line until it completes a study of the possible impact this would have on the permafrost of the far north, on the migration of caribou, and on other aspects of the environment.

The Santa Barbara accident earlier this year, in which oil from an offshore well blowout damaged the beaches and killed some birds, created such a furor it has caused interior to delay offshore leasing generally and to propose new restrictive measures on offshore oil development and tanker operations.

Still another factor adding to the energy supply problem has been government's extreme sensitivity to prices and profits in the energy industries, especially petroleum.

For example, the Federal Power Commission has held a tight lid on prices paid to natural gas producers and rates of returns permitted gas transmission companies, apparently fearful of being charged with failure to protect the consumer. This policy has continued in spite of the increasing evidence that a gas shortage looms.

And Congress is now in the process of reducing the percentage depletion for oil and other extractive industries at the very time the domestic producing industry is losing ground. Other oil-related tax changes are also in the works, each of which will discourage rather than encourage additional oil development.

Some state regulatory commissions have also continued to emphasize price over supply. For instance, the Public Service Commission of New York is quick to intervene in almost every price or rate hike application filed with the Federal Power Commission, but has been silent on the question of supply even though New York and New England would be hardest hit in an energy crisis.

Similarly, the New York and New England congressional delegations have played a leading role in attacks made on the petroleum industry, especially in an effort to increase oil imports.

An increase in oil imports undoubtedly would increase the nation's oil supply but it would also weaken the domestic oil industry and have adverse effects on the supplies of natural gas and coal as well as on the development of synthetic fuels such as oil and gas from coal or from shale.

It may be that a growing awareness of the danger of the pending energy crisis may cause the pendulum to swing so that further development of the nation's vast resources will be encouraged, not discouraged. That, however, is not the outlook at the moment.

THE NEW FEDERALISM

HON. EARL B. RUTH

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. RUTH. Mr. Speaker, to an ever-increasing extent over the past several years, this Nation has seen an expansion of Federal powers which has deprived our States and localities of much authority and effectiveness in dealing with their own problems.

President Nixon's New Federalism is an important reversal of this trend and a major breakthrough in giving power and initiative back to State and local governments.

An editorial in the Birmingham News of Sunday, August 17, 1969, expresses confidence in this new policy, and hopes for its expansion in the future. I insert that editorial in the RECORD:

THE "NEW FEDERALISM"

Richard Nixon, as President, faces a bevy of issues as numerous, perilous and stinging as the serpents comprising Medusa's locks. And all the iss 's beg for presidential priority.

Contrary to the opinion of those who would assail the President for not changing the nation after seven months of office, he is facing issues, and by a process of cautious selectivity, moving to deal with them, as his last week's welfare message clearly revealed.

The President opened that message by telling Americans that one of his first priorities is that of repairing the "machinery of the government," putting it into shape for the '70s.

Certainly the technicalities of welfare reform are needed for this "repairing of the machinery." But underlying the President's message was a radical shift of philosophy, one that is urgently needed, and one that hopefully will underlie other reform measures. The President called it the "new federalism."

The founders of this nation constructed a highly flexible system. They anticipated sweeping shifts in the cultural fabric of the nation. But now the United States is a multicultured society whose states are not linked in the uniform pioneer psychology of the original 13. We are as diverse as Nebraska from New York, as Alabama from Maine. With increasing population, the '70s will see a continuation of this diversity.

President Nixon, in building his welfare program around the concept of the diversity of the states, is leading a quiet but real revolution against the bureaucratic hypothesis that every state functions and feels precisely as Washington thinks it functions and feels. The problem with the old welfare system was that it never realized this.

The new federalism, as presented in the welfare message, would transfer to states and localities what now are federal powers. And with the transfer of power would come federal money in the form of fiscal relief and revenue sharing.

State and local governments will thus be able to model such programs as job training—a major aspect of the Nixon welfare package—on the basis of immediate local need, rather than be governed by the impersonal, nationally uniform systems previously used.

President Nixon hopes the new federalism will accomplish a better sharing of responsibilities between federal government and state and local units, more effective rendering of services, and a system whereby choices can be made representing the varying needs of a diverse nation.

When revenue sharing would begin in the middle of 1971, the states would receive $500 million for that half-year. Five years later, the President hopes the amount going to the states would be $5 billion.

Closer to home, Alabama would receive a total of $28 million in the first full year, $16.1 million in revenue sharing, and $11.9 in welfare fiscal relief.

The new federalism, we hope, will be used as a basic philosophy in every area of federal-state relationships. It is indeed time to move to a healthy partnership of government in this nation, rather than a quarrelsome, absurdly sharp dichotomy.

TOBACCO IN THE NATIONAL ECONOMY

HON. WALTER B. JONES

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. JONES of North Carolina. Mr. Speaker, for some time now there has been a great deal of talk concerning tobacco programs which have generated much more heat than knowledge. It is, therefore, necessary to place in proper perspective this important program and its relation to our national economy and to a great number of our farm families. The Members who have received mail on this subject will find the following statement helpful, I believe, in answering their constituencies and in better understanding the tobacco program and the impact of the tobacco trade on our national economy:

TOBACCO IN THE NATIONAL ECONOMY

Tobacco is a major agricultural commodity upon which hundreds of thousands of growers depend for most or a significant part of their livelihood. About 2 billion pounds of tobacco are produced annually on about one million acres on about 525,000 farms in the United States. Many of these farms have more than one family depending on the income from the sale of the tobacco produced on the farm. About 625,000 farm families share in the proceeds from the sale of tobacco. Thus, tobacco is one of the few crops still profitable for cultivation on small farms and represents the strongest bastion of the diminishing family farm. Approximately 450 man hours are required in the production and marketing of an acre of tobacco. Although tobacco requires only a relatively small percentage of the Nation's cropland, it is usually the fourth or fifth ranking crop in value, accounting for about 7½ percent of cash receipts from all crops grown in the United States. Farmers receive annually about $1.3 billion from the sale of tobacco.

The United States not only leads the world in tobacco production but in its exportation. Tobacco usually ranks fourth among our agricultural commodities exported. During the 1968 calendar year, 732 million pounds (farm-sales weight) of U.S. tobacco were exported—about nine-tenths in leaf form and one-tenth in manufactured products. The value of our tobacco exports in 1968 was $686 million. About 95 percent of U.S. tobacco exports are for dollar sales. Tobacco exports make a sizable contribution to our balance-of-payments position.

An export payment program designed to regain and expand foreign markets for U.S. tobacco was initiated during the second half of 1966. The expenditure for this program during the 1968 fiscal year approximated $28 million.

The U.S. also imports large quantities of tobacco. In 1968, our imports of leaf and manufactured tobacco totaled 277 million pounds (declared weight) with a value (not including duty) of $152 million. These imports are used for blending with U.S. leaf in the manufacture of cigarettes and cigars. The supplying countries are principally Turkey, Greece and Yugoslavia, for cigarette leaf, and the Philippine Republic, Dominican Republic, Colombia, Brazil and Paraguay for cigar leaf.

During 1968, the manufacturing industry in the U.S. produced 580 billion cigarettes, 8.2 billion cigars and cigarillos, 523 million small cigars, 66 million pounds of smoking tobacco, 65 million pounds of chewing tobacco and 27 million pounds of snuff. U.S. consumers spent an estimated $9.94 billion on tobacco products in 1968—of which about $4.4 billion were received by Federal, State and local Governments as excise tax revenue. Thus, taxes represent about 44 percent of consumer expenditures for tobacco products, and are three times the amount U.S. farmers receive from the tobacco they produce.

The demand for tobacco by many millions of people will continue even though confronted with health issues and other repressive influences. The tobacco industry will obviously strive to satisfy this demand and will obtain its requirements of tobacco either from domestic producers or from suppliers of foreign grown leaf.

For many years, the Department of Agriculture has administered programs to stabilize tobacco production and assure fair prices for growers. Marketing quotas are in effect for most types of tobacco grown in the U.S.

In most referendums, more than 90 percent of the growers voting have favored marketing quotas. It is generally agreed that because of the production control program, less tobacco is produced in the United States than would likely be the case if there were no Government programs.

When growers of a kind of tobacco have approved marketing quotas, price supports are mandatory under existing legislation. Under the price support program for tobacco, Commodity Credit Corporation loans are made available through producer associations. Tobacco handled and stored by producer associations represents collateral for the loans. Most loans are repaid with interest. The realized cost of the tobacco price support program during the 1968 fiscal year was $1.8 million, which represented about one-tenth of one percent of the cost of price support for all commodities. The costs, which the Government has sustained in the operation of the price support program for tobacco from 1933 to date, have been about one-fourth of one percent of the cost for all farm commodity price support and related operations.

The Department of Agriculture conducts major research on tobacco in cooperation with the Land Grant Colleges and other agencies. In fiscal year 1969, $5.6 million were programmed for tobacco research. Following the issuance of the Surgeon General's Report on "Smoking and Health" in 1964, the Department expanded and redirected its research in an effort to ascertain what, if any, element in tobacco or its smoke, may be injurious to health.

The following table shows the cash receipts from tobacco, percentages of all crops and all farm commodities, the number of tobacco farms and the number of farm families producing tobacco in the 16 leading tobacco producing States in 1967:

State	Cash receipts from tobacco, 1967 (million dollars)	Tobacco cash receipts as proportion of those from— All crops (percent)	Crops, livestock, and livestock products (percent)	Number of tobacco farms	Number of families associated with tobacco farms
North Carolina	535	65	42	132,200	186,000
Kentucky	343	78	42	150,500	169,000
South Carolina	107	38	25	23,600	33,000
Tennessee	83	34	14	96,800	97,000
Virginia	83	35	16	45,400	51,000
Georgia	101	22	10	25,700	31,000
Florida	32	4	3	7,100	8,500
Maryland	17	16	5	5,800	8,000
Connecticut	30	45	19	600	2,000
Pennsylvania	10	4	1	4,000	5,000
Ohio	16	3	1	11,800	12,000
Indiana	12	2	1	9,400	9,400
Massachusetts	11	16	7	300	800
Wisconsin	5	2	(1)	5,400	5,600
Missouri	3	1	(1)	1,500	1,700
West Virginia	3	14	3	4,400	4,400

[1] Less than half of 1 percent.

NOW IS THE TIME TO CUT ARMS FUNDS

HON. RICHARD L. ROUDEBUSH

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. ROUDEBUSH. Mr. Speaker, the dangers of military unpreparedness, in a world torn by tensions, seem to have been ignored or forgotten by many Americans today.

A realistic examination of conditions throughout the world, however, shows that threats to peace come from many sides, any one of which if we are unprepared could result in a "second Pearl Harbor," infinitely more threatening in this atomic age.

Columnist David Lawrence presented a warning which we cannot afford to ignore, in a recent column in the Washington Evening Star. I insert this column in the RECORD.

NOW IS NO TIME TO CUT OUT ARMS FUNDS

Anyone who watched Congress prior to World War II, when dangerous situations were arising and the United States failed to increase its defense forces, can only be deeply concerned over what is happening today.

Congressional pressure has forced the secretary of defense, Melvin Laird, to announce a reduction in the armed forces as well as in military expenditures. He frankly declared in a news conference yesterday that "it is clear our defense readiness will be weakened."

What has happened, of course, is that Congress has told the Defense Department that its appropriations will be diminished, and the big question is where and how the cuts shall be made. Laird expressed regrets that the curtailment which he reluctantly plans to make "will reduce our capability to meet current commitments."

This comes at a time, Laird stated, when Soviet military strength is increasing, and "it is important that the American public be informed about stepped-up Soviet activities in strategic offensive and defensive fields."

So much emphasis has been placed on the Vietnam war that many citizens forget that the defense apparatus of the United States is designed to protect this country against attack from any side, and that conflicts can arise in Asia or Europe or the Middle East which might involve us. North Korea, as the "Pueblo" incident recently emphasized, can be a source of trouble, and it is to be noted that more than 50,000 American troops are still stationed in South Korea.

Just about 28 years ago, when World War II had been raging in Europe for two years, the Congress was asked to extend the draft law which had been enacted in 1940. The struggle was close, and it was by a margin of only one vote in the House in August 1941 that the Selective Service System was maintained and the draft was continued in effect. Within the next four months, the Nazi regime had influenced the militaristic government in Japan to attack Pearl Harbor on Dec. 7, 1941.

This illustrates how suddenly the United States can be plunged into war and what preparedness can really mean.

Several areas of potential involvement of the United States exist today, and there is need not only for a large Army and Air Force but also for an adequate Navy. Yet the budget is forcing more than 100 naval vessels to be put out of commission, including the battleship New Jersey, recommissioned last year after a costly renovation. Moreover, the Air Force is to be required to limit its training program.

All this, it is admitted, involves risks. Attention has been focused mostly on Vietnam, and the recent announcement that American troops would be gradually withdrawn has given the impression that the United States can sharply cut down its defense forces. But Sen. John Stennis, D-Miss., chairman of the Armed Services Committee, does not see any "apparent end" to the conflict. He says that, while he favors a gradual troop withdrawal as a signal to the enemy that the United States is sincere in its desire to end the war, he is doubtful about the outcome. He adds:

"I am not too encouraged that a quick end is in sight, nor am I persuaded that we should rush out of Vietnam unilaterally in such a way to give the impression of defeat. Such an action will certainly invite trouble elsewhere in the world for us."

Meanwhile, the Russians are building up their armed services and seemingly are preparing for a large war. They are, to be sure, concerned about the hostile attitude of the Red Chinese and have deployed some rocket and nuclear forces on the border between the two countries. If the Russians and Red Chinese get into a war, this will affect Japan and the smaller countries of Asia.

There are signs of increasing trouble in the Middle East, too, and the Soviet navy in the Mediterranean has recently been substantially enlarged.

In the face of such danger signals, it is surprising that Congress is reducing the military budget just as if peace were in sight. Unfortunately, however, the situation around the world contains many threats of war, and it is hardly a time to cut America's military appropriations in any way that would, as officially stated, "impair our defense readiness."

ROAD TAX RELIEF PROPOSED

HON. AL ULLMAN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. ULLMAN. Mr. Speaker, the following column, "Road Tax Relief Proposal," by one of my constituents, Mrs. Jo Hindman, involves a subject of great interest. I insert it in the RECORD at this point:

ROAD TAX RELIEF PROPOSED

(By Jo Hindman)

Now you have the chance to get better city and county roads at no extra cost. In fact, you can get new roads and improve the old ones with possibly your taxes reduced.

There is no catch. The program merely amounts to plugging a chronic leak which diverts about $2 billion dollars each year, preventing the tax sum from reaching the federal Highway Trust Fund.

The HTF is composed of the excise taxes you pay when buying motor vehicles, tires, tubes, gasoline, diesel fuel, lubricating oil and automotive accessories. The money is collected and sent from the states to Washington, D.C., but the leak diverts a part, $2 billion annually, into the General Fund for spending on everything but roads and highways.

Federal legislation is pending which provides that all the automotive tax money shall be channeled into the HTF to be spent on roads only, the purpose for which the tax was levied and collected.

Under the new law, if enacted: Motorists will get the roads they are paying for, but are not getting; workers will benefit from hundreds of thousands of job openings in road construction, in the building trades and allied industries; property owners will benefit from enhanced real estate values from improved streets and roads; the present state and local road tax burden could be eased and future road taxes forestalled.

Check the arithmetic: At present, the states tax their citizens to collect funds to match (buy back) the federal HTF money, quaintly called "federal aid highway assistance." The proposed law will do away with that buy-back-your-own-money gimmick.

Next, Section 215 of the pending legislation would salvage the $2 billion annual leak, return it to the givers to spend on state and local highways and roads, fifty-fifty. Beauty of the arrangement, according to an interested county commissioner, is that local government can construct its roads according to its own standards, unhampered by red tape spun by absentee bureaucrats.

The local payments would be made April 1 and Oct. 1 of each year. No state would receive less than $25 million annually and some would receive eight times that amount. A table showing the salvaged $2 billion, divided among the states and local governments is available upon request from 300 Ruskin Dr., Altoona, Pa. 16602, address of the citizen organization, Pennsylvania Home Rule Assn., long-time sponsor of the subject national home rule road program.

Not an appeal for federal aid; rather, a long overdue correction, program is embodied in two pending identical bills in Congress, HR 10697 and HR 11880. Introduced by Congressmen Irving Whalley (R) and John H. Dent (D), the bills insure support from both Democrats and Republicans.

Tax payers are insisting on tax relief. Also, the motorists among them are becoming aware that they are paying, in state and federal taxes, more than enough now to take care of all highway costs. The real culprit is the unfair distribution system, the malappropriation of funds earmarked for road spending only. The proposed legislation will remedy that.

When all of the true information reaches members of the Congress, by mail, wire, or through their friends back home, the national road program should have a good chance of being enacted. Let your elected representative in Congress hear from you.

WHEN YOU RIDE TOMORROW'S AIRPLANES, YOU WILL THANK DICK WHITCOMB

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. DOWNING. Mr. Speaker, the August 31, 1969, issue of Potomac, the Sunday magazine of the Washington Post, had a cover photograph of one of our Nation's leading aeronautical scientists, accompanied by a cut line which read, "When You Ride Tomorrow's Airplanes, You Will Say Thanks to Richard Whitcomb."

The magazine featured a splended article on Dr. Richard Whitcomb of Hampton, Va.

Regionally, we who reside in the First Congressional District of Virginia, and nationally, all of us who are concerned with man's quest as he attempts to find practical solutions to the many problems of flight, take significant pride in the accomplishments of Dick Whitcomb. We, therefore, feel greatly honored to see such a fine publication do him this honor.

Since most of us in the Congress were away from the Capital when the article appeared, I include it herewith in order that more of us might have an opportunity to get to know Dr. Whitcomb a little better and thereby gain a greater appreciation for what he has done and is continuing to do for all mankind.

The article follows:

WHEN YOU RIDE TOMMORROW'S AIRPLANES, YOU'LL THANK DICK WHITCOMB

(By Barbara Rowes)

Dick Whitcomb drives up from Hampton, Va. to Washington maybe once a month ("I stay at the Hamilton, 'cause it's nice and cheap' "), in his 7-year-old red Volvo, to do business with his bosses at the National Aeronautics and Space Administration headquarters.

Sometimes he comes to see a lawyer, because Dick Whitcomb is in the middle of a 10-year span of patent litigation with giant General Dynamics over the alleged use of his "inverted canoe" design in the Convair 990 transport fuselages (the case is presently before a federal district judge in Norfolk).

But the trips are rare because at age 48 Richard Travis Whitcomb is too busy doing what most every youngster who disappears for hours on end into the family basement to build model airplanes dreams of doing someday—changing the shapes and looks of American aviation to his own private design dreams.

Dick Whitcomb has been singularly successful at this singular vocation. He has made two aeronautical design discoveries which have helped push the American airframe industry towards supersonic superiority for generations to come.

He is one of those fortunate enthusiasts who has to be chased away from weeks on end of 16-hour days in his $8 million transonic wind tunnel at the NASA Langley Research Center, where he is in charge of 50 employes. He is one of the few U.S. aeronautical scientists who has nearly carte blanche on letting his design ideas take him where they want to go. ("We have to turn off the electricity to get him out of there," says one friend).

Although his friends think of him as a New Englander, Dick Whitcomb is a native of Evanston, Ill. He was influenced early by a grandfather who left farming to become a manufacturer of vending machines.

Whitcomb admired the old man's independence and drive—plus the fact he was acquainted with Thomas A. Edison. "I used to sit around," Dick Whitcomb recalls, "and hear stories about Edison. He sort of developed into my idol. But the days of independent inventors are just about past. With wind tunnels costing $8 million to build it's impossible to do anything completely on your own."

"I decided early in life, that I didn't want to work on someone else's problems. I could do that now and make twice my salary in industry. But here at NASA they pretty much consider me a creative person. So they leave me alone to create."

In 1943, on graduation with honors in mechanical engineering from Worcester (Mass.) Polytechnical Institute, Dick Whitcomb was intrigued by a *Fortune* magazine article extolling the research facilities at Langley Field. He soon found himself working on design of the B–29 bomber and other wartime planes at Langley. He has been there ever since.

He is a handsome man who enjoys that kind of intellectual solitude that outsiders sometimes mistake for loneliness.

In recent years, his increasing fame and the industry-wide respect he has gained for his intuitive genius in transonic studies have tended to draw him out socially, though he cheerfully admits he'll never be mistaken for a Rotary or Kiwanis enthusiast.

In 1954, according to his longtime friend and boss, Laurence Loftin (assistant director of the Center), Whitcomb, on intuition alone, applied a mathematical curiosity called "the area rule" in wind tunnel tests he was conducting—without ever having heard of the area rule.

As a result, he devised a fuselage configuration that enabled high-speed planes to pass through Mach 1 with a considerable increase of power. The design has become know as the "coke bottle" fuselage and is in use on all supersonic planes today.

"I had the idea," recalls Whitcomb, "as early as 1951. It was like a bulb lighting up but it wasn't out of the blue. I put the fundamental transonic theories of Adolph Buesman (one of the German scientists who came to America after World War II) to work and experimented by testing my streamlined models in the transonic wind tunnel at Langley. It was like "Archimedes shouting Eureka when Buesman said 'This is it!' But it was really only the beginning. In most cases I had to convince top management that my discovery was worth changes involving billions of dollars in aircraft design. For example, before the F–105 was approved, a vice president of Republic Aircraft came down to examine all available data. We spent the whole day together discussing the area rule concept's application. It's rough getting management to change anything that involves so much money. But this is all part of my job as a modern day inventor."

That discovery won him the 1954 Collier Trophy, the highest industry award. Over the years the Collier has gone to people like Glenn H. Curtiss and Orville Wright and Elmer Sperry and Glenn L. Martin and Howard Hughes and William P. Lear and astronaut teams.

This year, 15 years later, Whitcomb devised the "supercritical wing," a design which would enable present sub-sonic jets to reach nearly Mach 1, instead of the 85 per cent efficiency they now operate on. This means cutting nearly an hour out of the present 5-hour transcontinental flights should commercial liners adopt the new wing (unlikely until new models are born, his NASA co-workers say).

In most years, this second major discovery would put him in line for a nomination for a unique second Collier trophy. But this is the year man walked on the moon and few in the industry think it will happen—though many are sure Dick Whitcomb will receive one of the 50 or so annual nominations from his peers in the airframe industry.

Recalls Whitcomb: "The Collier Committee met me at the airport in Washington and set me up in the finest room—all expenses paid. The aviation industry's banquet, involving about two thousand people, was held at the Sheraton-Park Hotel, and I was a guest of honor along with ambassadors and ministers from foreign countries. It was the highest point in my life, except that I had forgotten my suspenders at home so I had to pin my shirt to my pants—and that's how I faced Vice President Nixon as he introduced me to the world."

Whitcomb also received the Exceptional Service award from the Air Force (its highest civilian award); a Distinguished Service Medal from the National Advisory Committee for Aeronautics (NACA was NASA's pre-Sputnik predecessor); some lines in Who's Who; and an honorary degree from Worces-

ter Tech which permits Dick Whitcomb to call himself "Doctor" at those interminable industry conventions where people who invent coke bottle fuselages find themselves. "It depends on who you're talking to," he says. "I don't use it with my friends."

He also remembers wryly that he received an increase in dinner invitations "from neighbors I had never even met and have never seen again."

Says Loftin: "Dick is not a mathematical theoretician in the accepted sense. He is much more intuitive, which is very unusual in scientists. And it has paid off handsomely. He has a new idea every day. I'd say he's one of the most fertile innovators in the business."

Adds Ed Cortright, the research center director: "One of the great differences about Dick is that he not only gets a bright idea but pursues it with a great persistence. In our business most publish an idea and let it disappear. Dick's working in transonics, which is an area where theories just break down. So you have to think of him as something of an artist. He injects some of the elements of art." (Loftin remembers that in the supercritical wing work, Whitcomb often spent days with a file and other instruments working on the wing edges along with the model makers.)

Sometimes, to an outsider, it seems that one of America's leading aeronautical scientists has paid considerable dues for his astounding success by defining his life in terms of his work.

"People are always saying that I ought to have 'more fun'." says Dick Whitcomb. "What they don't understand is that I am having fun. My work is my fun. Can't they understand that?"

He rises at 7 a.m. five mornings a week and reads the local newspaper as he traditionally breakfasts on orange juice and toast.

"I have sugar and cream in my coffee in the morning because I need the energy," he explains. "Later in the day I'll have two more cups of coffee black because I need it as a pick-me-up."

He has never, he says, missed a day of work because of illness or the unforeseen.

Dick Whitcomb does most of his work right in his office, which resembles a metallic wasteland. His desk is crowded with manufacturers' models of the F–105, F–111, F–4. He doesn't believe in decorating: "It's strictly for work."

"When I came to NACA, (fresh out of Worcester) I started proposing new ideas right off. My boss was very understanding; he listened. But he never found the time to get my ideas tested. Now I'm the head and the difference is that my ideas get tested."

There's also a difference in the amount of his paperwork, the number of his meetings and the bureaucratic tape which accompanies new ideas.

"My desk is filled with stuff that's accumulated over the last week. The most current stuff is on top, the rest I throw into drawers," he says.

His days vary according to the progress of his tests. When he has a model in the Langley wind tunnel, he stays with it for a 16-hour stretch, getting his hands dirty with the mechanics who often play sly practical jokes on him. (An example: a dead bird placed on his desk by a mechanic to depict a supercritical wing that didn't work).

After winning the Collier Trophy in 1954, he became deeply involved in a national effort to build a supersonic transport airplane which would travel 1,500 miles an hour. He also had a private research laboratory in which he worked nights and weekends, after putting in 8 to 10 hours in his office, in order to invent something outside of aerospace. But he was unable to sell the automobile industry a more efficient exhaust system for their engines. He would like to see application of aerodynamic principles used in the problem of car air-pollution—and Dick Whitcomb intends to get busy on this idea any day now.

He did develop a means of making sailboats go faster, though he's sold his own 20-foot "Battery Park" model boat.

Finally, this year, Whitcomb directed a committee of 13 scientists who developed the supercritical wing (in which the cross-sectional shape of the wing has been redesigned for smoother air flow and faster speeds).

"I modified the shape of the wing myself as we tested it," he says. "It's just plain easier this way. In fact my reputation for filing the wing's shape has become so notorious that the people at North American (which will build a test plane next year for it) have threatened to provide me with a 10-foot file to work on the real airplane also."

But the most astonishing reaction to the new invention came from a group of fourth graders who had read about Whitcomb in their *Weekly Reader*. They wrote so many letters that the NASA office finally had to compose a form letter which answered all their questions about the wing. One of the children even phoned Whitcomb directly.

Right now he's very busy wrapping up the business end of his wing. He spends hours in staff meetings preparing to face management with proof of the invention's worth. "There's a lot of detail work and persistence required to get these inventions on the planes. That's the business. No one meets me at the airports in Los Angeles or Washington. I have to regulate my schedules to commercial flights and management's convenience. There's nothing glamorous about the selling end of this business. But it's necessary to wrap things up."

In the last few months he's been very busy wrapping up the supercritical wing by proving that it affects every aspect of in-flight performance. But he was not too busy to interrupt the meetings and detail plans to throw his secretary Annie a 21st birthday party in the Officer's Club.

"He'd always promised me a champagne party, if I weren't married by the time I was 21. Well, I'm not married, and he didn't forget," she says.

Otherwise, his work comes first. "When I find a problem, I need the solution," says Dick Whitcomb, "I sense it's there and I have to get at it. Although I'll have other things to worry about, I always have this uneasy, irritating feeling. It's a nagging sense that I've got to solve the problem—no matter what."

He sits with his feet up on the desk and continually thinks of work asking "Why? Why?" Insights don't simply spring into his mind. He has to feed it first.

He can't quit work at 4:30 p.m. and relax by watching television or sailing. He is somewhat bitter that other people can put in eight hours and walk away from an office free of concern. He simply cannot turn off his mind through a clock.

"There's been a continual drive in me ever since I was a teenager to find a better way to do everything. A lot of very intelligent people are willing to adapt, but only to a certain extent. If a human mind can figure out a better way to do something, let's do it. I can't just sit around. I have to think."

Dr. Whitcomb dresses for his own comfort in sports jackets, gray pants and colored shirts. He is ignorant of current fashion because he says he wants to be. Appearance doesn't really interest him much.

He doesn't cook for himself anymore. He just got tired of cleaning up. He eats all of his meals out, or at the invitation of friends. At home he just stocks his refrigerator full of snacks.

As a bachelor in the upper reaches of the government pay scale (about $25,000 yearly as a GS–16) he would seem to have both the money and the five-week vacation benefits to travel. He has done so only 3 times: twice to Europe and once to Bermuda. In plain fact, says Dick Whitcomb, the long drawn-out patent suit has cut considerably into his take-home pay.

The first time he went to Europe, he took the conventional Cook's Tour and was appalled by the high tension lines and steel structures throughout Switzerland. The next time he returned to England and France to visit a girl studying over there, and spent much of his vacation touring the aeronautical research centers and examining the scientist Cavendish's laboratory in Cambridge.

"I take very few structured vacations," says Dick Whitcomb. "Actually I prefer weekend trips to Washington and New York, and I'm out on the West Coast a lot for business. I also try to visit my sister with her seven daughters at least once a year in Brockton, Mass. It's not that I don't do anything but work. It's just that I don't take the conventional vacation very much—although I am dying to visit India where the culture is different. I want to see something different. Europe has too many American signs."

Dick Whitcomb has become so busy, in fact, that he has had to lessen his community involvements in the local Peninsula Community Theater association for which he was vice president for business affairs, and the Peninsula Civic Opera Assn. where he was drafted onto the board. His friends are by and large, artists, musicians and from among top NASA management.

He also occasionally wonders why he didn't follow a long ago impulse to enter the field of rocketry in the footsteps of onetime Worcester Tech instructor Robert Goddard.

"Of course," he says, "it would be very romantic to abandon aviation and begin a doctorate in another field. But that's not terribly pragmatic. I can probably do more good by applying my knowledge right where I am."

Says Dr. Whitcomb: "I guess I think differently from most people because I live differently.

"My mind's always racing ahead with another project, searching for the new. Sometimes I get mad that I'm made this way. But most of the time my work is just really fun."

AMERICA: THE LAND OF THE SALESMAN

HON. JAMES KEE

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. KEE. Mr. Speaker, I rise to share with the Members of the House, and to include in the CONGRESSIONAL RECORD for all to see, the most interesting, informative, and timely message that I have ever heard delivered during my entire career in public life.

I attended an executive institute class at Madison, Wis., during the week of August 18–22, which was conducted by Mr. Zig Ziglar, Vice President, Sales Training for Automotive Performance, Inc., of Dallas, Tex. The class was conducted primarily for the benefit of a large number of independent businessmen who are associated with Automotive Performance.

Mr. Speaker, Automotive Performance, Inc., is one of the fastest growing industries in the United States and I have every confidence that within a period of 5 years, Automotive Performance, Inc., will be one of the giants of American industry.

Mr. Ziglar, in addition to his duties as Vice President in charge of training for Automotive Performance, is also founder of The Zigmanship Institute, a nationally recognized sales training organization.

During this fascinating period of American history, with all of the grave problems which we are facing, it was most refreshing to hear the outstanding address, "America: The Land of the Salesman." In essence, Mr. Ziglar calls to our attention a message that should be read in every school—high school, college, or university—and to all citizens of the land we love who are interested in the future of America. The simple fact is that each and everyone—man or woman—regardless of race, creed, or color, has an opportunity from within to achieve a richly rewarding contribution to all others who are interested enough and have the initiative to work.

Mr. Speaker, Mr. Ziglar reveals the true and relatively unknown stature of the profession of salesmanship.

His unsurpassed speech records the contribution that the salesman has made, and continues to do more than his part to "make us the greatest land of them all." I fully agree with him when he states, "I am persuaded beyond any reasonable doubt that we are the greatest" land ever conceived by the mind of man "because we are the land of the salesman." In his remarks, Mr. Ziglar stresses the fact that Christopher Columbus, the man who discovered our land, was a salesman in the truest sense of the word. Because his remarks are so timely and so vital to the future of America, I include his address at this point in the RECORD.

AMERICA: THE LAND OF THE SALESMAN

America was discovered by a Salesman. Not by any stretch of imagination could you accuse Christopher Columbus of being a navigator. He was looking for India when he "discovered" America, thus making the most profitable "mistake" since the beginning of recorded history. But was he really a Salesman? The answer, by any standards of evaluation, has got to be an emphatic—Yes. First he toured the Courts of Europe making "call" after "call" telling his story to any "prospect" who would listen. He demonstrated many of the traits of the successful salesman when he kept "selling" after the prospect had said no. When he missed on one call he went to another prospect and told his story again. He got a lot of no's but he finally got the right answer and started on his trip ostensibly to India. Even then he still had his toughest "sales" job ahead of him. He had to sell for his "life" because the mutinous sailors wanted to throw him overboard. Finally the glad cry came: "land ho"—and the most profitable sales call in history was over.

America was colonized because of a Salesman. Sir Walter Raleigh toured the pubs of London "selling" this vast new uncharted wilderness. He "sold" fearful men—hope—and persuaded them to leave the relative security of England and go to the savage new undeveloped land.

Thomas Paine continued the "sales" job. He "sold" liberty—freedom—the dignity of man and the idea that man should be free.

George Washington was a Salesman. He sold those frontier farmers, and sophisticated plantation owners the idea of leaving their farms and loved ones to do battle with the British. He sold the idea that we could be a great nation—and he did it in the face of unbelievable odds. Consider what he had to do. He had to persuade those patriots that they should leave their homes—bring their own weapons and supplies with them so they could face the best trained—best equipped army in the world—supplied by the greatest Navy the world had ever seen. He could promise nothing—not even decent quarters or a tattered blanket to face the bitter cold. And he had to honestly admit that there would probably be no pay whether we won or lost. He also had to tell them that if we lost they would be hung as traitors. In addition to this the Colonies were anything but united, with many families divided as to which course to take. Yes sir, George Washington was a tremendous salesman with all of the virtues of the truly professional salesman of today. He was honest, dedicated, enthusiastic, sincere, knowledgeable and persistent because of his great belief in the product he was selling. Once the initial sales job was over Washington proved to be a master at the all important task of "post selling". He sold the American people the idea that they had within them the makings of a truly great nation. He also proved the Norwegian definition of the word "sell" which is "selge" or "to serve".

Horace Greeley was a Salesman. When things had started to slow down a bit and part of our great Western areas were under attack both from within and from the outside, he took pen in hand and did a "sales" job. Who can forget his ringing admonition to "go West young man"? And go West they did in ever increasing numbers until we had literally covered this great continent and discouraged our enemies from within as well as a couple of jealous powers who were casting covetous eyes in our direction.

We are the greatest land because we are a land of salesmen. You certainly can't say we're the greatest because of our size because until we added Alaska there were Brazil, China, Canada and Russia who were all bigger. We are not the greatest because of our population because India, Russia and China all have considerably more people than we have. Nor can you lay it on our superiority in natural resources because we have known for a long time of the extreme natural wealth of Brazil and just recently there have been discoveries of incalculable value in the frozen north of Canada. Even China and Soviet Russia surpass us in some natural areas in this department. You can't say we're the greatest because of our technological superiority because in many departments the Japanese are our masters, in others the Russians surpass us, in others the Germans best us and in still others the Swiss and the English are our masters. I'm persuaded beyond any reasonable doubt that we're the greatest because we're the land of the salesman.

So let's take a look at some heretofore unknown facts about this much maligned creature who has made us the greatest land of them all. To begin with, we will need to establish a few ground rules and identifications. Just because a man answers an ad in the paper and is hired and given a "brief" case he is not a "salesman". If he were then you could just as easily give a man a stethoscope and he would be a "Doctor", or give another a slide rule and he would be an "engineer", etc. Yet the average man on the streets persists in his belief that a "salesman" is "born", and that all you have to do to be a salesman is to dress neatly, smile, learn a couple of "smooth" lines and bang—you're a salesman. My answer here is pretty simple—I've traveled all over this continent and read newspapers in literally hundreds of cities. I've seen where women have given birth to boys—I've seen where they gave birth to girls—but I've never seen where one gave birth to a "salesman". Now I have seen where salesmen have died, so if they are not "born" but they do "die" then obviously they became Salesmen in the same manner one becomes a Doctor or a Lawyer or any other professional man. In this discussion I'm not talking about the "reject" from the other professions who drifted into selling because it was so "easy" (all you have to do is talk—and I'm a good talker). I'm talking about the guy or gal who chose to sell as a profession and then set about learning how to sell in the professional manner.

How does this Profession stack up with the other professions? Quite well—thank you. For instance, the average salesman has a life span of productive work that is nearly ten years longer than *any other* profession. Perhaps even more amazing is the fact that those last ten years could well be the most productive of them all and in many cases they are definitely the most profitable per hour worked. As the salesman gets older he gets more knowledgeable—and he has built his clients so that he now is truly in a "service" profession. Income-wise he stands at the top of the list. Slightly less than 3% of our population hit the $20,000.00 per year bracket. Of these 3% almost 80% of the 3% are directly or indirectly connected with sales. Again, I'm not talking about the job jumper who just picked up a brief case or the clerk at the dime store. I'm talking about the "trained" professional who stays in "training" all of his life as a Salesman.

Perhaps the most surprising statistic of them all is the fact that the professional salesman has one of the lowest—if not the lowest—divorce rate of any of the professions. Now this could be because we are "salesmen" and can "sell" the good wife on sticking around. But this doesn't alter the "fact", now does it? The professional salesman has one of the lowest rates of nervous breakdown and mental disturbances of any of the professions. Psychologists maintain that job satisfaction is one of the most important facts as far as mental health is concerned and here the salesman is truly the happiest guy around.

Nearly 75% of the owners of businesses and Presidents of Corporations in America today got their start as salesmen. One of the most interesting facts of life in America today is that the average professional salesman is directly or indirectly responsible for 27 people being gainfully employed.

And yet—A recent survey of 122 leading colleges and universities revealed that only about 2% of the graduating seniors were interested in going into the field of selling. Many claimed that it was either too "prostituting" or too "frustrating". Obviously we have not done a very good job of selling the profession of selling. We've sold goods and services but we've failed to sell what might well be the last frontier here in America. The result is clear. Many people in America today still think in terms of the old "Yankee Peddler". They think that selling is either "making people want something they don't really need" or "making them buy something they don't really want". They think of the salesman as being a "hail fellow, well met"—an extrovert with a large assortment of "off color" stories. Nothing could be further from the truth. Any major corporation in America today will quickly tell you that in a sales contest—with all other things being equal—that a group of 100 introverts will outsell a group of 100 extroverts 100 times out of 100. And the reason is two-fold. First, the extrovert—as a group—will rely on personality and charm to get the job done. Second, he is not as likely to be as interested in the "other" person. The first rule of selling is that people buy for "their" reasons and not "yours". They buy for what the product will do for them—not for what the product is. In these areas the introvert excels. He relies on training and knowledge and not personality. He is more likely to be "other people" centered. In short, he has

"empathy" and selling is really a transference of feelings. If the salesman can make you feel about his product—like he feels about his product—then you will want to own his product. The introvert is more likely to be better organized and a harder worker and less likely to rely on "charm" and "personality". The successful salesman is in reality an "assistant buyer". He sits on the prospect's side of the table and acts in the prospect's interest. He knows that anybody with a smooth line can "get" a customer, but that it takes more than a smooth line to keep him. And the successful salesman knows that to be successful he must "keep" his customers. He does this through service, by going the extra mile and helping his clients successfully buy.

So what's the problem? Well, the problem is *not* the profession. The problem is twofold. First, the salesman of yesteryear who was short on ethics and long on promises. Even this man was blown out of all proportions and depicted as a stumbling, bumbling ne'er do well in that absurd monstrosity, "Death Of A Salesman". The second problem is the fact that the profession of selling has not sold—the "Profession" of selling.

For an example, our country for the first 250 years of our existence as a Nation, we sold ourselves to the world and in the process, became the most respected Nation on earth. Since 1945, we quit selling as a Nation and started trying to buy friends around the world. You know what happened.

Fortunately we are on the way in the latter department—and in a big way. Through education and training. Through the numerous organizations around the country and through a more careful selection of personnel which keeps the obviously unsuited out of the profession we are upgrading our profession.

We've come a long way and most important, we are headed in the right direction. In the meantime—the next time you meet a professional salesman be nice to him—after all—he might be the one responsible for *you* having *your* job.

DEFENSE OF AMERICA'S MALIGNED MIDDLE CLASS

HON. RICHARD BOLLING

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. BOLLING. Mr. Speaker, during the last year or two, examinations of our domestic difficulties have inevitably focused upon the purported malfeasance of middle-class Americans. No one is without fault but a more balanced assessment is needed. I have found such a reassessment in an article by Martin L. Gross which appeared in the August 27, 1969, edition of the Worcester, Mass., Gazette. Mr. Gross' article is captioned "Defense of America's Maligned Middle Class."

It follows:

DEFENSE OF AMERICA'S MALIGNED MIDDLE CLASS

(By Martin L. Gross)

The middle class has borne the brunt of massive criticism for generations.

In the twenties, they were pilloried in Sinclair Lewis' "Main Street." In the following decades, the kid-next-door Andy Hardy movies and the family TV frolics of "Father Knows Best" became—among anti-middle class enthusiasts—classic examples of self-incrimination illustrating the "shallowness" of the bourgeoisie. In the 1950's, "The Man in the Grey Flannel Suit" and "The Organization Man" delineated the middle class's nonvirtue in the confines of the business world.

The attacks on the middle class are age-old, always entertaining and sometimes accurate, especially when the middle class caricature themselves through excess. I am reminded of my own disquieting suburban memories, including the chilling comment from an otherwise normal neighbor, who once boasted: "I am devoting my life to my lawn."

The excesses of some middle class citizens have been grist for authors in every tongue, providing raw material for satire through their rigidity, conformity and provincialism. Traditionally, the fashionably rich, the "creative" (and would-be creative) class and the revolutionaries have entered into an alliance against the middle class, seeking to undermine its strength. Critics should rightly expose any excess, but in America today that alliance has been so vigorous and successful in its game of "Down With The Middle Class" that the American ethic it defends may well be in danger.

WAR CRY

The new target is generally defined as "middle class values," and the anti-middle class war cry is the nebulous but ringing euphemism: "the quality of life." The inference is clear: "life quality" is destroyed by these "middle class values."

According to these detractors, America's middle class values encourage bigotry; enslave the female in the home; over-ennoble work; promote excessive nationalism; stimulate nerve-wracking competition; weaken the arts. They blame middle class values for the failure of the urban poor, for the generation gap. When pressed, critics even blame middle class values for such diverse ills as air pollution and ulcers.

The attack had been subtle for some time, but now that it is staunchly supported by segments of the mass media, it is making rapid headway among the vulnerable. Increasingly, America's giant middle class have become defensive about their way of life, including their homes, their families, the way they speak, earn their living and raise their families.

That insecurity had best be checked if our democratic culture is to survive. For every successful creative exception to the "middle class values," there are thousands of citizens who maintain family and democracy with it. The astronauts returning from the moon symbolized in their person and accomplishment, the power of the American middle class ethic.

The taxes of the hard-pressed middle class support both the rich and the poor, one through taxation loopholes, the other through taxation. The middle class maintains the central core of the American Protestant ethic, which freed man as an individual for the first time in history.

They sustain democracy, for the rich and the poor are historically prone to totalitarianism, one out of privilege and style, the other out of fear. To maintain their freedom, the American middle class ennoble egalitarianism, offering those below a chance to join them by absorbing their values of work, study and family. That upward mobility, which creates the ever-growing world middle class, is the key to democratic power.

WHAT ALTERNATIVE?

Those who would condemn the middle class as declasse, have not offered a viable alternative life style. Men of genius do not need the middle class ethic, but most people are not geniuses and deviate badly. The "quality" of life that some romantically seek as an alternative has thus far been a false dream expressed mainly in negative terms. If American middle class democratic life is drab and old-fashioned, what is modern? Is nihilism, despondency, drug addiction, poverty, disorder and jetset wealth the antidote of "quality" for the ostensible boredom of middle-class civilization?

"Middle class" is a socio-economic term and should not conjure up images of conformity. Within the freedom of democracy and sufficient money to survive, there is option to escape the rigidity of "Main Street" and "The Organization Man," the excesses of "Goodbye Columbus," or the nihilism of the false "quality" offered by detractors.

QUESTION OF GUILT

Increasingly one hears sensitive people deprecate themselves as "ordinary middle-class Americans," confessing the guilt placed there by sophists. Are they guilty of having defeated poverty for millions, maintained stability in a chaotic world; for having absorbed scores of ethnic groups into their collective midst, for having encouraged science and technology, for having educated themselves and their children, for having saved the world from totalitarianism?

The Soviet strains to emulate our middle class. The world blinks before its vast achievements, yet we increasingly snipe at it as if it were some psychologically infectious disease that can be cured by an injection of a mythical "quality." True quality is a classless term, and thus far, the stodgy Howard Johnson-Holiday Inn variety of middle-class America has shown that he understands more of its ingredients than do the detractors of the middle class.

AS PROMISED

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. BUSH. Mr. Speaker, last fall, when he was campaigning for the Presidency, Richard Nixon made it clear to the American people that, as President, he would appoint to the Supreme Court men who felt it was their duty to interpret the Constitution, not to rewrite it.

Such an attitude is inconceivable to some who find that the Constitution gets in the way of what they think is best. Now that the President is carrying out his commitment they are making clear their unhappiness with him.

However, the Dallas Morning News in the attached editorial recently put the matter into perspective:

[From the Dallas (Tex.) Morning News, Aug. 20, 1969]

AS PROMISED

The Nation's pundits, commentators and columnists have had a high old time the past six months using each statement or action by Richard Nixon as evidence that he is turning liberal. One day they say he's zigging to the left; the next day, they declare he's taking a sharp zag to the right.

But long after most of the Nixon speeches and minor appointments are forgotten, the effects of his two appointments to the Supreme Court will be affecting the life of this country. Indeed, his choices may change the course of the nation more than any other he makes during his administration.

In recent years the high court has often seemed to be more inclined to make new law of its own than to interpret existing law. Not only has it moved to usurp Congress' constitutional responsibility for making the laws that govern society, but its liberal members have praised this trend as "creative."

But to most Americans, the high court's legislating activities are not so much creative as unconstitutional, a flagrant attempt

to undermine the separation of powers between the branches of government.

A major principle of democratic government holds that the people are ruled by laws formulated by their elected representatives. The justices of the high court, appointed for life, are neither elected by the people nor responsive to the wishes of the majority.

That is why Richard Nixon found in 1968 that the public agreed with him when he said, "The question is whether a judge in the Supreme Court should consider it his function to interpret the law or to make the law . . . I believe we need a court which looks upon its function as being that of interpretation rather than of breaking through into new areas that are really the prerogative of the Congress."

Nixon promised the voters that, if elected, he would make appointments designed to lead the court back from the wilderness of ideological improvisation to its fundamental role of interpreting the law. In addition to choosing men qualified to act as judges, he said, he would consider two main factors in each appointment.

"First, since I believe in a strict interpretation of the Supreme Court's role, I would appoint a man of similar philosophical persuasion. Second, recent court decisions have tended to weaken the peace forces, as against the criminal forces, in this country. I would therefore want to select a man who was thoroughly experienced and versed in criminal law and its problems."

President Nixon has, in the two high court appointments, done exactly as he said he would do. He has chosen experienced federal judges, not ideologues or political cronies. On their records, both must be judged to be much closer to the strict-interpretation view than the anything-goes philosophy of the past court.

It is true that past records are not always a good indication of the course a justice will take, once he is on the court. President Roosevelt appointed the liberal Felix Frankfurter, who eventually became the leader of the conservatives on the bench, President Eisenhower named Earl Warren, chief of the creativity crowd.

Lacking a crystal ball, we cannot say that the new appointees will hew to the conservative philosophy throughout their terms on the Supreme Court.

But there can be no doubt that at this point, their records indicate that the President has kept his promise to the voters and the results should benefit both the court and the country.

SMALL BUSINESS COMMITTEE NEVER TOO BUSY TO HELP

HON. JOHN C. KLUCZYNSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. KLUCZYNSKI. Mr. Speaker, it has been said that the committees of Congress are the working arms of our National Legislature. I am sure that all of us would agree with this characterization. Each of us in working as a member of individual committees each day learns much, acquires both broader interest and knowledge in depth in our individual areas of specialized interest.

I was highly pleased when you, Mr. Speaker, appointed me several Congresses ago as a member of the Select Committee on Small Business in addition to the assignment I had already received as a member of the Committee on Public Works. Since that time, my pride in being a member of the Small Business Committee has continued to grow. I have admired the vigorous and enlightened leadership of our chairman, JOE L. EVINS, and the interest and dedication of my colleagues on the committee. I have been particularly impressed by the willingness of the chairman, members, and the staff of the committee who always somehow find the time to deal with individual small businessmen's problems from throughout the Nation.

Recently, the National Association of Wholesalers bestowed a special award upon the committee recognizing this aspect of its work.

The Biddle survey, a prominent wholesalers' publication, on August 26 published an editorial aptly entitled "Never Too Busy," an excellent description of our distinguished chairman, the gentleman from Tennessee, Representative EVINS.

At the conclusion of these remarks I place the full text of this editorial in the RECORD:

NEVER TOO BUSY

(NOTE.—A committee of the House gets a tribute from distribution trades leaders.)

Writing in his journal, around the middle of the 19th century, Henry Thoreau, the American naturalist, once observed that nobody ever erects a statue to a committee. He was a strong advocate of individuality, of action by personal initiative rather than by conference. Yet in our complex society, with its intricate political structures, businessmen have been pretty well forced to put increasing dependence on group action.

One active business group, the National Association of Wholesalers, has recently tossed a bouquet into the lap of a committee: The Select Committee on Small Business of the House of Representatives. This committee is headed by Rep. Joe L. Evins of Tennessee.

The association gave it a Certificate of Appreciation for "distinguished service to the wholesale distribution industry." It cited the fact that the records of hearngs held by this Committee on Small Business "are often used by the Executive Departments and regulatory agencies as the starting point for *corrective or remedial* action." The NAW added that without such a forum as the House committee, there would have developed no remedy.

The wholesalers said that despite the committee's heavy schedule, it was "never too busy to give us its valuable attention." Congress and many of its committees are frequently in the line of flying brickbats; it is reassuring to learn of this recognition of group action for business which fulfills its purpose.

HOW VULNERABLE IS THE U.S.S.R.?

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. DERWINSKI. Mr. Speaker, recognizing the continued debate over foreign policy goals and actions of the Russian Communist dictators, I was pleased to note a review reproduced in the Ukrainian Bulletin, August 1969, of a book review of the Reverend Denis Dirscherl, S.J. of "The Vulnerable Russians," written by Dr. Lev. E. Dobriansky of Georgetown University.

In view of the timeliness of the book and the review, I insert the review into the RECORD at this point.

HOW VULNERABLE IS THE U.S.S.R.? (REVIEW OF "FLAWS IN RED RUSSIA'S ARMOR," BY REV. DENIS DIRSCHERL, S.J.[1])

It's time to zero in on the weakness of the Russian bear. That's the theme of *The Vulnerable Russians,* by Professor Lev Dobriansky, of Georgetown University. In an age of computerized analysis and mass-research facilities, books which do not make the headlines at once or do not have the backing of a publicity bonanza are often relegated to the dusty shelves of the publisher and the libraries.

The Vulnerable Russians warrants some special considerations. The volume merits attention not because it has any startling facts or new appraisals of the Russian scene but because of the peculiar concepts that the author develops in presenting his account of the Soviet grip on the political and economic fate of the various peoples and nationalities officially living under the banner of the hammer and sickle.

The notion of the "captive nations" provides the superstructure of this volume. The substance of the book is explained by way of this concept.

Professor Dobriansky originated the idea of Captive Nations Week in the late '50s and, each year in July, this week is commemorated in the United States as a result of an Act of Congress in 1959.

The response of the Soviets to this annual event is particularly enlightening and informative of the ideological makeup of the Soviet camp. In July, 1965, for instance, Michael Suslov, chief Party theoretician, commented on the observance of Captive Nations Week:

"Especially disgusting is the villainous demagogy of the imperialistic chieftains of the United States. Each year they organize the so-called Captive Nations Week, hypocritically pretending to be defenders of nations that have escaped from their yoke. These international gendarmes, stranglers of freedom and independence, would like again to enslave the free nations of Lithuania, Latvia and Estonia. But this will never happen."

This response, a typical Soviet approach, means to accuse others of what the Communists either are perpetrating themselves or planning to put into practice.

One of the major emphasis of the Captive Nations concept is to bring out into bold relief the gun barrel philosophy of the Soviet and its allied powers.

Unquestionably much of the Communist success in the past has been achieved because of this old philosophy. As Mao Tse-tung once said, "Every communist must grasp the truth that political power grows out of the barrel of a gun . . . in fact we can say that the whole world can be remolded only with the gun."

The bulk of Soviet and other Communist acquisitions and annexations have resulted from a three-pronged attack: by force through overwhelming military superiority, internal infiltration, and political blackmail.

Soviet imperialism started in the early 20's with the Outer Mongolia area. Poland was partitioned in 1939; Estonia, Latvia, Lithuania, and a portion of Finland followed in 1940; Bulgaria and Albania in 1944; Hungary, Yugoslavia, Sakhalin, and the Kurile Islands in 1945; Rumania in 1947; Czechoslovakia in 1948; East Germany in 1949, followed by North Korea, North Vietnam, and Cuba in the 50's.

Paradoxically, it is interesting to note that though the Soviets base their world outlook on Marx's philosophy, Marx himself held Rus-

[1] Father Denis Dirscherl, S.J., has an M.A. in Russian studies and is a veteran of the U.S. Air Force security service, where he began his study of the Russian language. He has written for a variety of local and national publications, both religious and secular.

sia in low esteem, chiefly in military and diplomatic matters. According to Marx, the only way to deal with Russia was the fearless way.

Writing for the *New York Tribune*, April 19, 1853, Marx says: "What had to happen? The ignorance, the laziness, the pusilanimity, the perpetual fickelness and the credulousness of Western Governments enabled Russia to achieve successively every one of her aims."

According to Marx, Russia's coveteous power-policies have a long tradition. "In the first place the policy of Russia is changeless, according to the admission of its official historian, the Muscovite Karamzin.

"Its methods, its tactics, its maneuvers may change, but the polar star of its policy—world domination—is a fixed star."

Marx called Russia "decidedly a conquering nation." Marx summarized Russia's spirit of aggrandizement under the categories of Imperialism, Pan-Slavism, and Oriental Despotism.

The nationality question also has a major function in the Captive Nations concept. Here it is important to recall that the words "Russia" and "Russian" have been bandied about in the past with little care for necessary distinctions and explanations. The Soviet Empire is made up of many different nationalities. These other nationalities play an important factor in the character of the Soviet Empire.

Professor Dobriansky elaborates on this fact. He says, "I repeat, Russia itself would be only a second or third-rate power. Economic parasitism and exploitation enable it to bluff diplomatically a great power status, and most amazing is the degree to which Free World powers have fallen for this."

Dobriansky then highlights the advantages which Soviet power has reaped from these countries that have been swept forcefully into the Soviet orbit and used as buffer zones to the West and as objects of exploitation.

Other crucial notions suggested or brought out in "The Vulnerable Russians" include the role of wordsmanship and propaganda, Russification, the emasculation of Marx and Marxism, and the general cold war apparatus that the Soviets have built since the Bolshevik take-over.

In his book, except for excessive repetition, Professor Dobriansky has done well in attacking the weakness of the Soviet power machine.

From time to time we need to recall that the opposition is not an almighty force in spite of the facade that the Soviets have often erected. All the concrete walls, war zones, barbed wire fences, guard towers, trenches, empty wastes, and no man's lands betray the rapacious nature of the Soviet Empire.

OWNERSHIP OF HANDGUNS

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. FINDLEY. Mr. Speaker, Prof. James W. Vining, of Western Illinois University, has recently written me regarding proposals to restrict or prohibit the ownership of handguns and other weapons. Drawing upon his own personal experience while living in a South American country which did not permit its citizens to possess weapons, Professor Vining tells of the potentially grave situation which awaits the nation which attempts to curb the symptoms of crime rather than its causes.

I include Professor Vinings' letter in the RECORD so that others may read and ponder his grim warning:

AUGUST 2, 1969.

Hon. PAUL FINDLEY,
U.S. House Office Building,
Washington, D.C.

DEAR REPRESENTATIVE FINDLEY: Like most, I too seldom take advantage of the opportunity to express my opinion on crucial issues to my elected government officials. Recent news, however, prompts me to this action.

Dr. Milton S. Eisenhower, chairman of the National Committee on the Causes and Prevention of Violence, has reported to the President, as you know, that "ownership of handguns by individual citizens is so dangerous that is must be national policy to eliminate them." The suggestion of such a policy understandably causes alarm to millions of Americans who keep hand guns in their homes for protection of family and property. My wife, alone much of the time, feels a certain sense of security knowing that there is a gun in the house with which she could defend herself against would-be robbers or rapists.

Home defense, however, does not necessitate hand guns, as I am sure Dr. Eisenhower is quick to point out. Shotguns and rifles would suffice almost equally as well. What frightens me, however, is the possibility, no, probability, that the elimination of hand guns would be only the first step in the disarmament of the population. Does not the Constitution grant all citizens the right to bear arms? Though the Supreme Court might uphold the constitutionality of the elimination of hand guns, such elimination would obviously be a violation of constitutional intent.

I have had recent research experience in a South American country with a disarmed population: Guyana. Crime is rampant; honest people stand by defenseless and watch the criminals, who are armed, of course, steal their crops and cattle. Because I thought my personal safety would be in jeopardy, I violated Guyanese law by carrying a concealed weapon. It was lucky for me that I did, for with it I foiled a plot to rob (and possibly murder) me.

So when self-preservation is at stake, you see, the honest citizen may become a lawbreaker. Outlaw hand guns—and tens of thousands, perhaps hundreds of thousands, of honest citizens will become lawbreakers as they retain and secret their guns.

If there should be anything you can do to prevent such a development, I urge you to do so.

Sincerely yours,

JAMES W. VINING,
Professor, Western Illinois University.

DO NOT LET THEM BE FORGOTTEN

HON. JOHN N. HAPPY CAMP

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. CAMP. Mr. Speaker, I welcome this opportunity to awaken the interest of my colleagues to the plight of our servicemen who have either been captured by the North Vietnamese, and are now prisoners of war, or are simply listed as missing in action.

Human decency demands that something be done in behalf of these men and their families. This is not a partisan cause. This is not a subject that divides us into hawks or doves. Regardless of your beliefs regarding our involvement in Vietnam, no matter what your views on how to best terminate this conflict, we must all stand united in the support of these men and their families.

The parents, children, sweethearts, and friends of these brave men listed as either POW's or missing in action are enduring a veritable Gethsemane. Many of them have loved ones who have been missing for over 3 years, and their anxious hearts wait daily for some news—good or bad—but some news. This is the cruelest sort of punishment, and we must never cease in our efforts to relieve them of this heavy and wearisome burden.

Hanoi stubbornly refuses to even so much as publish a list of our men held as prisoners of war. Thus we are unable to determine with any degree of accuracy the exact number or the names of the prisoners being held. Also, our peace negotiators have been unable to learn anything concerning their physical or mental well-being. We do not know, but more important, the families and loved ones of these men do not know, which of those men listed as missing in action are now prisoners of war, or were killed in action. And, of course, no one knows the present condition of those who are prisoners. The ordeals of the *Pueblo* crew, however, raises the worst of fears in our minds.

I have in my office, as I am sure all of you have in yours, a picture of a handsome little boy, 2½ years old. He has never seen his daddy, who was shot down over North Vietnam. He does not know if he is a POW or if he was killed in action. This terrible doubt must be put to rest. The anxious vigil must be mercifully ended for those many thousands if all hope is truly gone. This oppressive fear of the unknown must be speedily removed in order for thousands of anxious hearts to beat afresh if hope still remains.

Words alone avail nothing. We must act. I propose that we, as Representatives of all the people of this Nation, embark on a massive communication to the Hanoi delegation in Paris, expressing our dissatisfaction and urgent concern on this matter. Hanoi has capitalized on the division of American public opinion on this war, stalling and delaying peace talks in the hope of winning at the peace table what she has failed to take by military action. It is clearly manifest, therefore, that Hanoi is very much responsive to American public opinion. We can utilize this to the advantage of the men now being held captive.

I urge each of you to immediately send a telegram or letter to the Hanoi delegation at Paris. Let the North Vietnamese know, let all the world know, that we are over 200 millions of people, as one voice, demanding humanitarian treatment of our servicemen captured in battle. We must also emphatically demand that the list of prisoners be published. Public opinion of all mankind the world over will sustain us. We ask only for what millions of people of all nations throughout history have agreed is a basic and fundamental right of all men. Let us make all the world see that if Hanoi sincerely believes that she is fighting for a cause that is just and right, she must prove it by waging that war in a manner that is just and right.

We have summoned these fine young men to battle; they responded willingly and marched bravely to the conflict pre-

pared to lay down their lives for this Nation, for you and me. If a merciful God has spared them, we must sustain them. We can do no other.

MAY WE CONTINUE TO LAND?

HON. THOMAS S. KLEPPE

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. KLEPPE. Mr. Speaker, I invite the attention of my colleagues to these thoughtful and inspirational remarks by President Clair T. Blikre of the North Dakota School of Science, Wahpeton, N. Dak., at the International War Veterans' Alliance Banquet in Fargo, August 2, 1969:

Officers, Directors, Other Platform Guests, Fellow Veterans, Ladies and Gentlemen: It is indeed a real privilege to visit with you wonderful people tonight, for without question you are the *kind* of people who have proved your willingness to pay the *supreme sacrifice*. In addition, as exemplified by this Alliance and your Annual Meetings, you readily understand that "As a man thinketh in his heart, so he is, and that a common bondage perpetuates good-will and friendship!"

It is most obvious these days that "man's relationship to man" is the greatest problem facing man. Thus, this Annual Meeting, between the Veterans of two great countries, stands as a *symbol* of what can be achieved where there is a *will!*

As I visit you tonight, I am mindful that a few short months ago one of the greatest *military* men of all time passed from the scene, and while his military record will always stand as a symbol of greatness, his personal attributes will forever remain as a symbol of that for which America stands! Here was a man who exemplified, throughout his entire life, by his every act, that "As we aspire, so must we help to achieve."

On that day in which the newscasters recalled the heroic deeds of this General, my mind also focused on the great progress that has been made throughout the world and in particular in the U.S. (and Canada) between this man's early days at Abilene and until his final return!

On that day I also reflected about this country, and could have included Canada, too:

What a glorious country;

What an opportunity for man if he wills it;

How blessed we are;

Will man get hold of himself before it is too late and really understand that life is to be used, for good, not only for ourselves but for others; not only in a materialistic way, but in a truly SOCIAL, MORAL, and SPIRITUAL manner; and

Will we, finally, use the great scientific and technological advancement for a "better way of life" for all—or will we continue to misconstrue the "good life" with material wants only?

While we have witnessed much in our day, climaxed by Apollo 11 successfully landing on the moon from the Planet Earth, the future will:

Become ever—increasingly scientific, technical—It will be:

Characterized by speed—*computer* will play ever important role;

Crowded with people, who must have a *skill or trade* to secure a job;

Considerable *free* time.

Thus, the implications are clear: We must prepare ourselves for the world of work, but equally as important—"to do unto others as we would have them do unto us."

Well, what do we see today? We see a land of "unlimited potential" that: literally rebuilt Europe; installed mechanical hearts, and circled the moon; then landed.

A land SOME SAY, that sets its priorities on the military, on science and technology, but at the expense of human and social needs!

As we study the pages of history, we are mindful that most great civilizations of the past have succumbed to deterioration from within rather than to attack from without! The problems of the ghettoes, crime, and domestic unrest are so critical that they justify "going to war," not in the literal sense, but to direct our skill, resources, and energy, to mobilize and generate a "new will,"

To affirm in minds of all men the *equality* of races;

To provide for equality of opportunity;

To provide for educational opportunity; and,

To ultimately end poverty by providing: relevant education, applicable jobs, livable homes, individual respect—(worth, dignity as human beings), and care for those who cannot care for themselves.

Is this possible? Yes, have we not proved in this country that we can achieve about anything?

1. We must rise above the purely personal, local self-interests and be as equally concerned and involved with the problems of State and Nation.

2. We must be helpful partners, not barriers to reform.

3. The Nation must use its power for *creative* rather than destructive ends; however, it must also maintain its military strength so that it can continue to negotiate from *strength—not fear!*

4. The Nation must use its *material* wealth to ease the material needs of others.

5. We must re-new among the young and old, a real understanding and appreciation of the American way of life.

We become so enmeshed in our own lives, in our times of tribulation and struggle, that we are prone to forget the Price that has been paid to bring our country(ies) to its present state.

We are prone to forget that each generation has either had to resolve anew the abiding issue of our free society, or has had to reaffirm with *blood* and *national treasure* the depth of our commitment to the ideals we profess.

We have all inherited so much from those who went before us, but as we travel through the fortunes of life, we tend to take all this for granted. It is well for us to be aware of the price that was paid and to emphasize to each new generation the fundamentals upon which our country(ies) is founded.

Daniel Webster expressed it well when he said, "That past is at least secure."

But, is the past secure in the minds and hearts of all our people? To the extent that the memory of a great and glorious heritage becomes dim, so are our efforts to secure the blessings of freedom for our children crippled.

Our nation does, in fact, grant so much freedom to the individual and leaves so much to his own individual judgment and self-discipline that it depends more than other governments upon the willing allegiance of its citizens.

If our people ever lose their implicit faith in our country, its ideals and its goals, we shall no longer be able to act as a Nation; we shall have broken faith with the tens of thousands of Americans who have died to preserve our freedoms; and we shall know that the American people have lost their conviction in their great destiny. Thus, we must *understand* and *remember* the fundamentals and uphold this practice against all comers so that we do not betray our past or sacrifice the present!

You might ask—"Well, what are the elements of this "great and glorious heritage?" What is it that all should understand so *all* are truly protectors of the faith and defenders of the freedom, so that those who are here today or who come tomorrow will have that *solid foundation* to withstand the winds of strife?

In our Nation's history, there are tales of great men who surmounted great odds; of awesome battles won with terrific sacrifice. And, there are certain documents that tell the real story, that constitute the undisputed creed of our country; that should make us all proud, and commit our lives, as so many have also done before us—to defend, to uphold, and to help develop for those who follow. I am sure that Canada has a corollary for each document discussed.

Let us look at selected documents that we should all understand, and that we should use as our *inspiration*; namely:

1. *Mayflower Compact:*

A. Here was a unanimous and personal assent by all the individuals of the community to the Association by which they became a Nation;

B. The colonists pledged to enact *just* and equal laws and to obey these laws with all due submission and obedience;

C. Planted the first permanent independent settlement in the New World (Pilgrims):

D. Pointed way to equal rights and common duties.

2. *Declaration of Independence:* (drafted by Tom Jefferson at 33).

A. It marked our people's escape from a repressive power which would not allow us to govern ourselves;

B. It united colonists as they had never been united;

C. It knocked the fence-walkers off their fences and inspired average men to face uncommon dangers and hardships for the cause of liberty;

D. It remains single most influential document in the world for it signaled the concept that governments derive their powers from the consent of the governed, and that supposedly, the government is the servant of the people.

3. *Bill of Rights:* (Counterpart, the Ten Commandments)

A. Commanded that the government shall not infringe certain rights which belong to the people.

B. Laid down the rules on a vast range of matters of highest important and complexity.

C. *Laid down four basic Principles:*

(1) Representative government—people rule themselves by choosing their representatives.

(2) Dual form of government—*U.S. Citizen* and of a *state*—states make laws in harmony with Constitution.

(3) Guarantee liberty through limitations on powers of government.

(4) Independent judiciary closely linked to doctrines of limitations on and separation of governmental powers.

(5) Implied: "God governs in the affairs of men."

4. *Farewell Address of George Washington:*

A. Warned against all influences toward disunion.

B. Counseled to respect legitimate authority of the Union and for laws enacted.

C. Signaled need for *respect* for authority, *compliance* with laws, *acquiescence* for measures of Constitution.

D. Felt that nothing was secure if people failed to be sincerely *religious*. He believed that *God* ruled in affairs of men, and that prayer, joined with determined effort, is answered.

5. *Star-Spangled Banner:* (official National Anthem—Mar. 3, 1931).

A. Words inspired by valiant defense of our own shores.

B. Exalted flag which represents in plainest form those freedoms we deem God-given, the heritage of our people, the foundations of our institutions, and the motivations of our government.

C. Has no other character than we give it from generation to generation.

D. Signifies the spirit of a people set on defending their homes, their loved ones, and their freedom from the tyrant's hand.

6. *Abraham Lincoln's Second Inaugural Address:*

A. Gospel of true Americanism, given during last weeks of tragic Civil War.

B. Asked God for strength and courage for right to prevail, to finish work we are in, to bind up Nation's wounds, and secure a just and lasting peace.

C. Here was a man, who in the worst times which have ever afflicted this land, beset by *hate* and fear, bigotry and intolerance, terror and death, kept his head, a man who returned to the fundamentals, who turned to God:—so

Think of Lincoln, and take heart!

7. *Woodrow Wilson's document—"The Road Away from Revolution":*

A. Warned against selfishness and materialism.

B. Challenged our churches, political organizations, and men in all walks to cultivate a *spirit of service* and to *cooperate in understanding* and *meeting* the *needs of the people.*

C. "Our civilization cannot survive *materially* unless it is redeemed *spiritually.*"

8. *General MacArthur's address to his countrymen on occasion of Japanese surrender in Tokyo Bay, Sept. 2, 1945:*

A. "Today guns are silent; a great tragedy has ended, a great victory has been won—the Holy Mission has been completed."

B. He said, "We have had our last chance to achieve a lasting peace—we must *improve human character that will synchronize with our matchless advances in science, art, literature and all material and cultural developments.*—It must be the *spirit* if we are to save the flesh, for military alliances, balance of power, even League of Nations has failed."

The central thread prevailing throughout is that our "Republic and democracy does not constitute merely a mechanism of government, but rather the *Concept* 'that it is man's nature to be *free* and it is the purpose of government, which is organized only because of society's needs, to serve man's freedom!' "

"Keep the faith, and God willing, we shall not lose the future; but let us ever bear in mind that 'our government will endure only as long as the ideas of the men who founded it continue dominant.' "

But, has not each generation questioned the older? Thus, we who are pegged as the older generation must hear out our youth if we expect them to hear us! We must talk with them as well as to them. We need to *demonstrate* to our young *men* and *women* a steadfastness to those enduring and persisting ideals that have made our country great!

1. We need courage to say "No" and the fortitude to make it stick.

2. We must set by example and word that we do not have rights that supersede duties; that we must defend our country, not destroy it; and that we cannot, outside the framework of our government, be ourselves the arbiters of our laws; that ours is a government of *consent*, not *dissent*. Our young tend not so much to defy as to emulate their elders!

3. We need to understand that: "Men are men before they are lawyers or physicians or manufacturers; and if you make them capable and sensible men they will make themselves capable and sensible lawyers and physicians." (John Stuart Mill)

It is right to ask then, "What kind of citizens do we need to continue to build our great country(ies)?"

We must develop citizens who:

1. Understand and can live, cope with world of change;

2. Sense the emerging environment;

3. Understand, respect, and appreciate self and others;

4. Be a Great Citizen—with proper appearance, attitude, attendance, and application.

I am fully aware that each of you is a *concerned* and *involved citizen* of our respective countries! However, we must proceed as involved leaders, because an increasing number of quality leadership must prevail. These kinds of qualities will determine not only the destiny of man but the destiny of our great countries.

Surely, if man can reach the moon, he can conquer the material problems on planet Earth. Surely, man who can do all this can learn to live with man! It is merely a question of priorities! However, we must understand that it will be a difficult task, for man can control machines—they are cold, unemotional, and predictable for they do as they are prepared to do! Whereas man is emotional, has feelings, and is sometimes unpredictable!

And, so I commend you—the membership of the International War Veterans' Alliance, who fully understands that while we are not immune from strife and turmoil, we can assure our position by *alliance,* by partnership, by co-existence.

As I look out among this wonderful audience, I see in you, and in the vast majority in our countries like you, the kind of people so necessary in our day!

Thus, I see a day when we will walk out of the tunnels of tyranny into the bright lights of freedom for all—a day when all men will be judged on their ability and desire, when men will realize that it is time to re-kindle the allegiance and commitment of our people and a day when most men will fully realize that without people we can do nothing, but with people we can do everything!

The International War Veteran's Alliance is an outstanding example of what can be achieved! May we continue to set that kind of an example for all to follow, so that all understand that we build from a solid foundation, and that by hard work, service, and fellowship we can build for a better tomorrow—but, we *must* all understand that:

"It's not what you do when you are old,
Tomorrow, next week, or next year;
But it's what you accomplish or finish
Before night's shadows draw near.
"For nothing is gained on the morrow,
For work then no one draws pay;
So we should accomplish or finish
All that we can do every day."

A REAPPRAISAL OF THE MOST CONTROVERSIAL EDUCATIONAL DOCUMENT OF OUR TIME

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. RHODES. Mr. Speaker, the House of Representatives recently voted 293 to 120 to add $1.1 billion to the education budget requested by President Nixon. This action was taken on the grounds that the quality of our educational system is directly proportional to the amount of money we spend on it.

This assumption, which seems reasonable enough on the surface, has been the subject of a considerable body of scholarly criticism. It was first challenged in a study under the auspices of the Department of Health, Education, and Welfare, headed by James S. Coleman, a distinguished member of the faculty of Johns Hopkins University.

The Coleman report of 1966 concluded that there is little correlation between the imput of money and manpower into the schools and the output in terms of educational achievement. Needless to say, this novel conclusion has been extensively debated in academic circles since that time.

Christopher Jencks, of the Harvard Graduate School of Education faculty, has reassessed the soundness of the Coleman report in light of the developments and discussions of the last 3 years. He concluded in a recent issue of the New York Times Magazine:

Variations in schools' fiscal and human resources have very little effect on student achievement—probably even *less* than the Coleman report originally implied.

Mr. Jencks also states that his conclusions, and those of the Coleman report "deny that the achievement levels of large numbers of disadvantaged children can be appreciably enhanced by spending more money, hiring better teachers, buying new textbooks or making any of the other changes that reformers normally advocate."

This is a startling conclusion. While I am not in complete agreement with the points raised in the 737-page Coleman report or, for that matter, Mr. Jencks' article, I think that Congress cannot continue to appropriate virtually unlimited funds for education without at least an awareness of what a responsible body of educators have to say about the cause and effect relationship between money and educational quality. I commend Mr. Jencks' article to those interested in learning of some rather surprising yet responsible observations concerning our educational system, as follows:

A REAPPRAISAL OF THE MOST CONTROVERSIAL EDUCATIONAL DOCUMENT OF OUR TIME

(By Christopher Jencks)

Three years have passed since James Coleman and his colleagues issued their now famous report on "Equality of Educational Opportunity." Virtually unnoticed at the time of its publication, this 737-page monograph has since become the best-known and most controversial piece of educational research of our time.

Like a veritable Bible, the "Coleman Report" is cited today on almost every side of every major educational controversy, usually by people who have not read it and almost always by people who have not understood what the authors meant when they wrote it. It has been used to support arguments for increasing integration in the schools—and to buttress the position of those who would accept segregated schools with community control. It has been cited as evidence that what black children need is good teachers—and as proof that such increases in per pupil expenditure will not close the educational gap between black and white.

The report has also inspired a growing body of scholarly exegesis, interpretation and criticism, so that anyone who wants to know what the report "really" proves must now plow through not only the baffling charts and tables of the original document but dozens of subsequent critiques and reanalyses, most of which are available only in mimeographed

form to the cognoscenti. The time has clearly come for a reappraisal.

The Coleman Report was a political football from its very inception. Like much American social science, it was initiated in order to avoid confronting a difficult political problem. In the summer of 1964 Congress had decided to pass a civil-rights law which was expected to end *de jure* school segregation in the South by cutting off Federal funds from segregated systems. The question inevitably arose: what about *de facto* segregation in the North? The expedient answer was that the Commissioner of Education should investigate the problem and report back in two years.

After nearly a year of bureaucratic squabbling and indecision in the U.S. Office of Education, Commissioner Frank Keppel decided to conduct an "Equality of Educational Opportunity" survey. The survey, theoretically covering nearly a million pupils in 6,000 different schools across the nation, was carried out in the fall of 1965. Prime responsibility for planning and analyzing it fell on James Coleman, a distinguished sociologist from Johns Hopkins University with a long record of interest in both education and survey research.

Coleman expected the survey to demonstrate three rather conventional propositions:

1. Nonwhite pupils, North and South, usually attend different schools from white pupils.

2. Nonwhite schools usually have less adequate facilities, inferior curriculums and worse teachers, as well as less affluent and academically adept student bodies.

3. Because they attend those inferior schools, nonwhite pupils learn less than white pupils.

The survey confirmed the first proposition. Black and white pupils are seldom in the same schools, even in the North. Not only that, but the black pupils do learn much less than the white pupils, at least judging by standardized tests of verbal and nonverbal skill, reading comprehension, arithmetic skill and general information. The typical black first grader scores below about 85 per cent of white first graders. This relative disparity persists throughout elementary and secondary school, and thus the absolute difference between black and white children grows wider as they grow older. A 6-year-old who scores below 85 per cent of his classmates is about one year behind, while a 16-year-old is more than two years behind.

The survey did not support the second proposition, that black schools spend significantly less money per pupil than white ones, have substantially larger classes, get worse trained and less experienced teachers, operate in more antiquated and crowded facilities, rely on less adequate textbooks and equipment and so forth. On the contrary, the survey uncovered only one major measurable difference in these items between black and white schools: the black schools had more black teachers. This means that the black children's teachers also come from poorer homes and do worse on tests of academic ability. Black schools in the urban North also tended to have somewhat older buildings and smaller play areas. In other respects, however, black and white schools proved surprisingly similar. Later analyses, while largely confined to Northern urban elementary schools, have shown that schools which serve rich and poor children also have quite similar facilities, curriculums and teachers.

How could the conventional wisdom have been so wrong? The apparent answer is that claims of discrimination have usually been based on the obvious contrast between Northern ghetto schools and white schools in a few affluent nearby suburbs or in the city itself. In most (but not all) cities, the black schools get short-changed. What all such comparisons evidently ignore, however, is the fact that most white Americans live in smaller (and poorer) cities and towns, where the school facilities, curriculum and teachers evidently leave almost as much to be desired as they do in the big-city ghettos, where most blacks live.

More important, even, was the report's conclusion on the third proposition, the expected cause-and-effect relationship between inadequate school resources and low student achievement. In fact, neither black nor white children of a given family background did significantly better in schools with high expenditures, large libraries, accelerated curriculums and so forth. Coleman and his colleagues believed that pupils did slightly better in schools with experienced and articulate teachers, but even this difference was surprisingly small—and the evidence supporting their belief has subsequently proved to be rather shaky.

The report suggests—though it does not state in so many words—that black children clearly get less satisfactory schooling than white children in only one major respect. If a child happens to have a black skin, the odds are very strong that he or she will end up with classmates from impoverished homes and a plethora of learning and behavior problems. A child who attends such a school may be short-changed even if it has first-rate facilities and teachers. Most black sixth-graders, for example, attend schools in which the majority of their classmates are reading at the fourth- or fifth-grade level. This means that even if a black child has the ability to read at sixth-grade level, he will probably not be pushed to do so. The instruction in his classroom will be aimed not at him but at the laggard majority. Furthermore, there is reason to believe that children learn more from one another than from their teachers. If black children attend schools where this "informal curriculum" is based on a vocabulary half as large and on concepts far less abstract than in a white school, their chance of developing academic skills is reduced.

Coleman and his colleagues were extremely anxious to determine whether individual achievement was dependent on a school's social composition. After analyzing their data, they concluded that it was, but that a child was influenced by his classmates' social class background and aspirations rather than by their race. This implied that a poor black child would *not* benefit from attending school with poor white children, but that he *would* benefit from attending with middle-class children, black or white. Coleman and his colleagues also tentatively concluded that black children were more sensitive to peer influences than white children. This implied that a black child would benefit substantially from integration, while a white child would suffer very little. The apparent effects of integration were always small, however, relative to over-all differences in achievement between races, socio-economic groups and individuals.

If differences between schools do not account for most of the observed differences in achievement, what does? By far the most important factor measured in the survey was the ethnic and socio-economic background of the individual child. In addition, there is a strong association between children's achievement levels and their attitudes. Among black children in particular, there is a marked relationship between their achievement and their personal sense of control over their own destinies. Yet even when family background and attitudes are taken into account, more than half the variations in individual achievement remain completely unexplained. Whether this reflects unmeasured genetic differences in aptitude or unmeasured differences in environmental influence is a matter for speculation. One thing it did not seem to represent, however, was unmeasured effects of differences between school environments. The survey showed that the differences between the best and the worst pupils in the same school are invariably far larger than the differences between the best and the worst schools. Indeed, eliminating all school-to-school differences would only reduce the total variation in achievement by about 20 per cent. This does not definitely prove that schools have no role in generating inequality, since there could theoretically be systematic discrimination against certain kinds of pupils within most schools. Still, it is hard to believe that within-school differences play a large role in inequality when between-school differences play such a small role. Coleman and his colleagues therefore concluded that the major reasons for unequal academic achievement must lie outside the school.

This brief summary of the Coleman Report's major findings hardly does justice to the voluminous text, but it does suggest why the report became a major focus of political debate. The report was published at a time when America was vacillating between two different strategies for helping the disadvantaged. Some people advocated racial and socio-economic integration of the schools—and of the larger society. Others argued that integration was unattainable, undesirable or both; the only realistic strategy was to accept segregation and make black schools as good as white ones. The Coleman Report implied—though it did not say explicitly—that *neither* strategy would help achievement much. But insofar as anything was likely to work, the report seemed to indicate that integration was a better bet than what had come to be called "compensatory" education. Yet at the same time the finding that parental interest and pupil attitudes were strongly associated with achievement seemed to give oblique support to those who believed that parental participation and/or control over all-black schools might make a critical difference to student achievement.

The report's conclusions were inevitably subjected to stringent and sometimes extravagant criticism. The report had been prepared in great haste to meet the Congressional deadline, and the authors had had no time to examine many obvious objections to their tentative conclusions. Skeptics have been able to offer a variety of speculative reasons why the report's conclusions might be wrong, and those who have political reasons for wanting to discredit or ignore the report have naturally found such speculations very persuasive. For the past two years I have been part of a group of Harvard social scientists trying to determine whether any of the hypothetical objections to the report's conclusions are actually correct. My judgment is that the report's broad conclusions were sound, even though many of its specific methods and findings were wrong.

One common criticism of the survey has been that more than 10 per cent of the school districts in the original sample refused to cooperate, including such major cities as Chicago and Los Angeles. Some districts evidently feared that the Federal Government would use the survey to prove they were discriminating against minority groups. Other districts—especially those being sued for *de facto* segregation—feared that minority groups would get hold of the survey results and use them in court or in the press. Some districts also feared that simply asking questions about sensitive racial issues might stir up trouble in the schools. In addition, many schools in nominally cooperative districts failed to return data because it was too much bother or perhaps—a more serious matter—because they had something to hide. As a result, complete returns were

received from only about 60 per cent of the schools in the original sample.

There were clearly some small differences between participating and nonparticipating schools, and selective participation may well have led to a slight underestimate of the qualitative differences between black and white schools. But there is no reason to suppose that nonparticipation led to an underestimate of the relationship between school quality and student achievement. It hardly seems likely, for example, that the dynamics of education in Chicago and Los Angeles, which refused to participate, differ significantly from Detroit and San Francisco, which agreed to do so. On the contrary, the dynamics of education are probably much the same in one big city as in another. The problem of nonparticipation is therefore probably a nonproblem.

A second criticism of the survey has been that the information provided by the superintendents, principals, teachers and pupils in the sample schools may not have been accurate. This criticism arose largely because of doubt that black children's teachers and facilities could really be the equal of those given white children. Since the Office of Education made no site visits to check up on the accuracy of replies given by principals and teachers, no definite answer to this charge is possible. Data supplied by state departments of education suggest, however, that the principals' replies about facilities were probably fairly accurate. Direct interviewing of parents in two communities likewise showed that most (though not all) of the pupils' responses were reasonably accurate. And the replies of principals, teachers and students to similar questions show a fairly high level of internal consistency for most "objective" items. On the other hand, questions which involved subjective judgment of any kind did *not* elicit internally consistent answers. The results of such subjective "attitude" questions must therefore be treated with great caution.

A third criticism of the report has been that the authors should not have concentrated on the determinants of verbal ability to the exclusion of reading, mathematics and general information. Those who believe that black people are peculiarly "nonverbal" have even argued that the decision to stress verbal ability was fundamentally racist. Unfortunately, black children did as badly on the tests of other abilities as on the verbal tests. Furthermore, while some individual children did well on one test and badly on another, schools as a whole either did well on them all or badly on them all. A Northern urban elementary school's mean verbal score, for example, correlated almost perfectly with its mean reading and math scores. Under these circumstances it hardly matters which test we use to measure overall school achievement.

A fourth line of attack on the report has been more technical. The authors of the report employed a number of dubious statistical techniques and made a variety of mechanical errors in handling and labeling their data. But they also recognized that such errors were likely, given the extreme haste with which they worked, and they were generous in helping others reanalyze the data more meticulously. These analyses have shown that while the report's broadest conclusions were correct, many important details were wrong. In particular, and contrary to what some critics have argued, the net effect of the report's various errors was to *under*-estimate the importance of family background and *over*-estimate the importance of school in determining achievement.

A fifth criticism of the report has been that the authors made unwarranted causal inferences from their one-shot survey, which by its very nature could reveal only patterns of association rather than prove causation. Two examples illustrate the problem.

The report uncovered a strong association between teacher verbal ability and student achievement in secondary schools. Though they listed a number of qualifications, the authors concluded that able high school teachers probably boosted student achievement. Yet the report's data could equally well lead to the conclusion that school systems were assigning able students to schools with able teachers, or that they were assigning able teachers to schools with able pupils. Since we know from experience that both practices are widespread at the secondary level, it seems rash to assume that there need be any direct causal link between teacher ability and student achievement to explain the observed association between the two.

Fortunately, these problems are far less serious at the elementary level. Students are allocated to elementary schools largely on the basis of residence, race and social status, all of which were measured in the survey. With luck and ingenuity the effects of such allocation can be discounted and the effects of various school characteristics can then be estimated. Since there is little evidence that student transfers at the elementary school level are based on ability (as distinct from family background), the mean achievement of first graders entering a given elementary school can also be used to estimate the mean initial ability of sixth graders in the same school. With these precautions, causal inferences are considerably safer than at the secondary level; and when these precautions are taken, it turns out that facilities, curriculum and teacher characteristics are even less important than Coleman and his colleagues supposed. A student's peers may, however, have a modest effect on his achievement.

Another instance of ambiguous causation was the association between attitudes and achievement. The survey showed, for example, that students who did well on achievement tests were more likely to say that their parents expected them to go to college. The authors concluded that parental expectations probably had an important influence on children's achievement. Yet it would be equally reasonable to conclude that children's achievement had an important influence on their parents' expectations. Most parents know that if their child cannot read competently, he is unlikely to attend college, and the child is likely to be aware of this attitude and report it when asked. This same difficulty arises with all the report's inferences about the effects of attitudes on achievement.

What, then, is the present consensus about the policy implications of Coleman's survey? The answer is that no consensus exists, even among experts. My own judgments are as follows:

(1) The resources—both fiscal and human—devoted to black and white children's schooling are not dramatically different, except perhaps in certain parts of the South. Nor do we devote substantially greater resources to educating middle-class children than to educating lower-class children.

(2) Variations in schools' fiscal and human resources have very little effect on student achievement—probably even less than the Coleman Report originally implied.

(3) The report's assertion that peers have a consistent effect on achievement may or may not be correct. My guess, based on available data, is that peers do have an effect, but that it is relatively small.

None of this denies that unusually dedicated and talented individuals can create schools in which initially disadvantaged children learn a remarkable amount. But it does deny that the achievement levels of large numbers of disadvantaged children can be appreciably enhanced by spending more money, hiring better teachers, buying new textbooks or making any of the other changes that reformers normally advocate.

If improved student achievement is our goal, the Coleman Report's implication is obvious: we must alter the whole social system rather than just tinker with the schools. There is plenty of evidence that major changes in a child's social and cultural environment will affect his intellectual development, often dramatically. Bruno Bettelheim and others have chronicled the impact of the Israeli kibbutz on hitherto deprived North African and Yemenite Jews. Here in America we know that children raised on Long Island do far better, even in first grade, than those raised in Appalachia. Similarly, children raised in Jewish homes do better than those raised in Christian homes, even in the same city. And the World War II draftees who grew up in the America of 1917–1941 did far better on standard tests than the World War I draftees who grew up in the America of 1900–1917. Intellectual skills are, therefore, not just a function of genetic differences. But neither are they a function of school differences. If the Coleman survey convinces us of that basic truth, it will have served its purpose.

Does this mean that we should simply let inferior schools rot? I think not. Good schools can make a difference—if we know what kind of a difference we want them to make.

Underlying the comments of most people who discuss the Coleman Report is the assumption that academic achievement is the most important objective of schooling, and that if school reform does not affect achievement, it is worthless. Yet despite much popular rhetoric, there is little evidence that academic competence is critically important to adults in most walks of life.

If you ask employers why they won't hire dropouts, for example, or why they promote certain kinds of people and not others, they seldom complain that dropouts can't read. Instead, they complain that dropouts don't get to work on time, can't be counted on to do a careful job, don't get along with others in the plant or office, can't be trusted to keep their hands out of the till and so on. Nor do the available survey data suggest that the adult success of people from disadvantaged backgrounds depends primarily on their intellectual skills. If you compare black men who do well on the Armed Forces Qualifications Test to those who do badly, for example, you find that a black man who scores as high as the average white still earns only about two-thirds what the average white earns. Not only that, he hardly earns more than the average black. Even for whites, the mental abilities measured by the A.F.Q.T. account for less than a tenth of the variation in earnings.

With these observations in mind, go visit a slum school and ask yourself what the school is actually doing. You will usually find that it seems to share the employers' priorities. It devotes very little time to academic skills. Instead, the teachers spend their days in a vain effort to teach the children to behave in what they (and probably most employers) regard as the proper way. The teachers' ideas about proper behavior are silly in some respects. Nonetheless, they are probably right in feeling that what their children need first and foremost is not academic skill but such "middle-class" virtues as self-discipline and self-respect. It is the school's failure to develop these personal characteristics, not its failure to teach history or physics or verbal skill, that lies behind the present upheavals in the schools. And it is this failure to which reformers should be addressing themselves.

From this perspective the best index of a school's success or failure may not be reading scores but the number of rocks thrown through its windows in an average month.

The Coleman survey does not speak to this question.

CUBAN-AMERICAN SOLIDARITY

HON. CLAUDE PEPPER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. PEPPER. Mr. Speaker, the spirit of liberty which actuates our Independence Day ceremonies each year is shared by many nations and peoples of the world. An example of this common desire for freedom and national independence was evidenced in the splendid address by Dr. Jose Ramon Gutierrez on the recent Independence Day ceremonies of the Cuban-American Solidarity group in Miami.

Dr. Gutierrez is an outstanding Cuban-American and has a message which I think will be of interest to our colleagues. I insert his eloquent Fourth of July address in the RECORD, as follows:

ADDRESS BY DR. JOSE RAMON GUTIERREZ

Ladies and Gentlemen: In the course of civilization there are dates so outstanding and historically symbolic that they move us to recall them with deep emotion and reverence, even when not all belong directly to our own country's heritage.

The first of all, the greatest of all for those of us who follow Our Lord, Jesus Christ, is the Fest of the Nativity, which for us marks the beginning of our Christian civilization.

In the course of time, specially for us of the Americas, there are two other great dates: October 12th 1492 marks the discovery of our lands by Christopher Columbus, an event which gave our Western Christian civilization the glory of this New Continent; and the 4th of July, 1776, when this civilization began to evolve the American fruits of independence and liberty, offering examples of a new political life and the prodigy of this great nation.

Solidaridad Cubano-Americana and all who have been so kind as to join us for this great occasion—to honor this Fourth of July, 1776 and its valuable reminders for—as we all know—the most deeply venerated date in the history of the United States of America is "Independence Day" by which the Nation each year pays homage to the Declaration of Independence adopted by the Congress of the thirteen English colonies established in this country, which thus freed themselves from Great Britain and became the United States of America.

The Declaration of Independence is not only an inspiring political document drawn up by that great young lawyer Thomas Jefferson, only 33 years old, and unanimously approved by said Congress, but also the vigorous expression of the yearning for liberty felt by men most representative of the ideals and convictions of the said Colonies. And as Jefferson himself declared with sincere modesty "I did not consider it as any part of my charge to invent new ideas altogether, and to offer sentiments which had never been expressed before."

There is no doubt that the ideological seeds of the Declaration of Independence are to be found in the natural rights and social contract which were launched by European philosophers, but we must recognize also that it was men preponderantly born in America, who created and established, by their own initiatives a definitive political philosophy and marked the principles which led thirteen English colonies to constitute a union of states as a Federal Republic.

For this they began to gather at the Continental Congress and worked towards their objective determined to succeed. At the same time they had a great feeling of responsibility in the eyes of History and before all nations of the world.

The 2nd of July, 1776, they approved a resolution establishing that:

". . . The United Colonies are, and of right ought to be, free and independent states . . . and that all political connection between them and the State of Great Britain is, and ought to be totally dissolved."

This resolution entailed, of itself, a definite Declaration of Independence; its transcendency demanded an explanation fully justifying it to the world.

They were going to face the most powerful nation in the world, which exercised its power at that time by the force of its Army and its Fleet. Hence the document stating such a daring decision had to be equal to its enormous responsibility.

In a meeting such as ours, tonight, destined to honor the decision expressed by such a Declaration, on its anniversary day, allow us to quote from its initial words and some of their outstanding pronouncements, in a deserved homage to those who created and approved it:

"When, in the course of human events, it becomes necessary for a people to dissolve the political bonds which have connected them with another, and to assume, among the powers of the earth, the separate and equal station . . . a decent respect to the opinions of mankind requires that they should declare the causes which impel them to the separation."

"We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain inalienable rights, that among these are life, liberty and the pursuit of happiness. That to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed. That whenever any form of government becomes destructive of these ends, it is the right of the people to alter or to abolish it, and to institute new government, laying its foundation on such principles and organizing its powers in such form as to them shall seem most likely to effect their safety and happiness . . . when a long train of abuses and usurpations pursuing invariably the same object evinces a design to reduce them under absolute despotism, it is their right, it is their duty, to throw off such governments, and provide new guards for their future security."

After a long and detailed account of the abuses and usurpations by Great Britain, the North American patriots ended their famous document with an Invocation to the Supreme Judge of all Beings and stated:

"That these United Colonies are, and of right ought to be free and independent states . . . absolved from all allegiance to the British crown, and all political connection between them and the state of Great Britain . . . And for the support of this Declaration, with firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes and our sacred honor."

Thus—193 years ago—the political creed which created this great nation, a creed which spread as a noble affirmation of political relief to countries of the Old World as well as the American Continent, was made known;

In England, as expected, the Declaration was severely criticized, but Thomas Paine ardently defended it in London, as he had done in the United States of America. In France De Condorcet praised it saying that it was a brief and sublime exposition of rights "as sacred as they are forgotten"; while Lafayette placed a copy in a prominent place in his home, leaving beside it an empty space to be filled with a similar declaration of rights to be pronounced in his own country.

The Declaration of the Rights of Man which Emmanuel Sieyés drew up and which figured in the preamble to the French Constitution in 1791 gathered together the principles of the North American Declaration of Independence which, fifteen years before, had been recognized and pronounced "urbi et orbi" on the sovereignty of the people, the equality of men and their inalienable right to the enjoyment of liberty.

The great Simón Bolívar, inspired by those documents, launched his great work as Liberator; Antonio Nariño, the great Columbian patriot, thought the best service he could contribute for the liberation of his country was to translate and distribute in Bogotá in 1795 the Declaration of the Rights of Man, which as we all know found one of its sources of inspiration in the American Declaration of Independence.

Our Cuban Apostle of Liberation, our own great José Martí, more than a century after the date we are today commemorating, in an article published in 1884 in "La Nación" the Buenos Aires, Argentina daily, proclaimed: "The Declaration of Independence was the genuine expression of the great spirit which animates the heroes and the spokesmen of Freedom".

For us Cubans—and, of course, for Cuban American Solidarity (Solidaridad Cubano-Americana) the Declaration of Independence is a document much venerated, the stone upon which the Liberty of our America was built; the initial thrust to make it, and may it always be, the Continent of Freedom.

It has been well known to Cuban patriots who since the beginning of the last century nurtured the same ideals of Independence.

It suffices to go back to the Cuban Act of Independence signed by sixteen patriots headed by Carlos Manuel de Cespedes on October 6th 1868 at the "El Rosario" estate, Manzanillo, Oriente Province, in which their agreement is made manifest starting the first Cuban war against Spain—coinciding with the ideology and the form of expression of the American Declaration of Independence, as you may well judge from the following brief and definitive statements:

"In open revolt against the tyranny of Spain we wish to inform the world of the reasons which determine our resolution . . . Spain rules us with blood and iron . . . So we have no other recourse save to take up arms in defence of our rights and to save our honor . . . We appeal to God, who guides our conscience and to the verdicts of all civilized nations. We aim at national sovereignty and universal suffrage. We want to enjoy that freedom for whose enjoyment God made man . . . We want to abolish slavery . . . We desire freedom of assembly, freedom of the press and freedom of conscience . . . respect for the inalienable rights of man . . . shaking off forever the yoke of Spanish rule and constituting ourselves a free and independent nation".

Patriotic documents of similar design follow the initial Cuban Act of Independence and are: the Manifiesto signed by Carlos Manuel de Céspedes as head of the revolutionary action which began on October 10th 1868, the Montecristi Manifiesto signed by José Martí and Máximo Gómez on March 25th 1895, explaining the causes and purposes guiding Cubans in both 1868 and 1895 in military action and exponents of the same

prime mover, the same ideals as the Declaration of Independence of the United States of America.

Such was not a chance coincidence nor due entirely to the geographical proximity of Cuba and the United States. It was the result of political thinking by the best men of both countries. In the course of time their histories made them peoples united by a common bond in yearning for liberty.

What is now transitionally taking place in our country, today enslaved by Russian imperialism and—already evident in America—does not refute our statement: for Cuba is not, nor can she ever be represented by this treacherous, noxious and ignorant mob rule in power today. Cuba besides the well-beloved land of our birth is tradition, religious faith and the patriotic zeal of a noble people now living in subjection but—whether in Cuba or in exile—a people undefeated and awaiting the propitious moment to deliver to our homeland new courage and our own lives, in a holocaust for the freedom and the reconstruction of our Nation.

In an annual act of homage to an event of such great historical importance Cuban-American Solidarity renews our recognition of the people and the authorities of the United States of America, their humanitarian and generous assistance shown all Cubans obliged to flee our distressed country; the reaffirming of our hope for the liberation of Cuba, stimulating Cuban faith in it and thus revitalizing devotion to work for our return; the proclamation of our indestructible ties binding peoples who have marched side by side a long time in their search for the establishment of common ideals, the attainment and enjoyment of liberty, a democratic system of government and respect for the full dignity of man, declaring that Divine Providence is creating in the pages of history circumstances in the lives of men and peoples confirming "the just laws of destiny."

In consequence with these postulates, we are heartened by the fact that Cubans and Americans alike once suffered and shook off the barbarous rigors of colonialism; that on the 11th of April, 1898, the U.S. House of Representatives and the Senate, in support of our War of Independence declared in full solemnity that "Cuba is and by right shall be free and independent"; that on October 3rd 1962 the Congress of this great Country, by a Joint Resolution, proclaimed the decision of the United States "to work for the organization of the American States and Cubans who love freedom in support of the aspirations and self-determination of the Cuban people"; and the now President of the United States, Mr. Richard M. Nixon, has already declared that Cuba is today a conglomerate of poverty, a police state which denies the people their basic rights with Castro converting one of the most prosperous nations of the Hemisphere into a center of economic destruction, having practically delivered his country entirely to foreign communism and made it the focus for outside aggressions, exporting revolution to the Hemisphere. President Nixon has declared that the United States will not accept as permanent the existence of Cuba as a Caribbean colony of Soviet imperialism.

Such renewed statements, recognizing Cuba's basic right of self-determination, are not vain words but firm conviction rooted in the consciences of free men, free people who are determining the future of mankind and they should be an adequate postulate with which to confirm our optimism.

The case of Cuba, urgently in need of a transcendent solution, is a procession which follows its most recent steps towards favorable and prompt decisions.

Following the men of the American Declaration of Independence and the Cuban Act of Independence, we trust in Divine Providence, in that Supreme Being who guides our conscience and sets the course for our lives . . . To those doubting our optimism, to those who deny our Faith or oppose the resurgence of liberty in our Country, we must always answer with the closing words of the National Anthem of the United States of America: Then conquer we must, when our cause it is just and this be our motto "In God Is Our Trust".

WATER POLLUTION ENFORCEMENT MOVE EMPHASIZES NEED FOR SUPPLEMENTARY FINANCING OF SEWAGE TREATMENT WORKS CALLED FOR IN MY BILL

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. CRAMER. Mr. Speaker, the Secretary of Interior has announced vigorous action against large-scale alleged polluters of interstate waters in Kansas, Oklahoma, Ohio, and the Lake Erie Basin.

I believe that this emphasizes once again the need for Congress to take vigorous action to provide supplementary methods of financing the construction of treatment works as set forth in my bills H.R. 12913, H.R. 13358, H.R. 13374, and H.R. 13562, which would make additional funds available if the appropriation for treatment work construction grants does not equal the full authorization and would further encourage the States to contribute to the construction of treatment works. For fiscal year 1970 my bill would make available the difference between appropriation for grants and $1 billion to be used as an additional contract authority for the construction of treatment works. This would make the full $1 billion available for the combined contract and grant program. The enactment of this financing provision into law would certainly help to alleviate some of the conditions leading to the type of pollution against which the Secretary of Interior is acting. The following is the text of Secretary Hickel's communication:

INTERIOR SECRETARY HICKEL MOVES AGAINST SPECIFIC VIOLATORS OF WATER QUALITY STANDARDS

Secretary of the Interior Walter J. Hickel today declared the Government intends to "prosecute those who pollute," as he ordered hearings on charges against a municipality, four steel companies and a mining firm accused of polluting inter-state waters in Kansas, Oklahoma, Ohio and the Lake Erie Basin.

"The people of America have made it abundantly clear that they will no longer tolerate pollution of their environment," the Secretary said.

"This administration believes this is a reasonable demand, and we have a mandate to satisfy it quickly and thoroughly. We will do this through court action if necessary, and through tough, new legislation which we will seek from Congress."

Secretary Hickel directed the Federal Water Pollution Control Administration to schedule hearings September 23 in Joplin, Mo., October 7–8 in Cleveland, Ohio, and October 9 in Toledo, Ohio, to consider evidence gathered by Department of the Interior's Task Force on Pollution Enforcement, which was created by the Secretary in July.

The Joplin hearing will review charges against Eagle-Picher Industries, Inc., a Baxter Springs, Kansas, mining firm that it is violating water quality standards for the Spring River in Kansas and Oklahoma.

The Cleveland and Toledo hearings will review charges of violations by the City of Toledo and Interlake Steel Company, on the Maumee River, and Republic Steel Corp., United States Steel Corp., and Jones and Laughlin Steel Company on the Cuyahoga River.

Both the Maumee and Cuyahoga are tributaries of Lake Erie, "one of the nation's most important bodies of water," Secretary Hickel said, "but one doomed to become a 'dead sea' if immediate and massive steps are not taken to clean it up."

"These will be the first in a series of actions to be taken against firms and municipalities charged with violating applicable water quality standards," the Secretary added.

"This is just a beginning. We intend to continue the identification of polluters all over the nation, followed by the enforcement of schedules for prompt cleanup and pollution elimination."

"Particular attention will be paid in the immediate future," Secretary Hickel said, "to identifying other sources of pollution around the perimeter of Lake Erie."

The Secretary noted that the upcoming hearings will be conducted on an informal, voluntary basis. However, if those found violating water quality standards have not taken steps within 180 days after the hearings to eliminate pollution, the Secretary is empowered to go directly to the Attorney General for the filing of court actions by the U.S. Justice Department.

In a report to Secretary Hickel, Carl L. Klein, Interior's Assistant Secretary for Water Quality and Research, and David D. Dominick, Commissioner of the Federal Water Pollution Control Administration, produced monitoring data from the Spring River and a tributary Willow Creek, indicating that interstate pollution is occurring as the result of the discharge of excessive concentrations of zinc and iron from Eagle-Picher's Paxson and Swalley mines.

"These pollutants pose a serious threat to the continued domestic uses and the aquatic life of both the river and creek," the Secretary said.

In Cleveland, investigations by the Interior task force indicate excessive discharges of pollutants into the Cuyahoga River by Republic Steel Corp., United States Steel Corp., and Jones and Laughlin Steel Company, with these discharges constituting a violation of the water quality standards for Lake Erie.

The task force also found that inadequately treated wastes discharged by the city of Toledo and Interlake Steel in the Maumee River contribute to Lake Erie pollution.

The September 23 Kansas-Oklahoma hearing will begin at 9:30 a.m. at the Holiday Inn, 2600 Range Line, Joplin. It will be conducted by the FWPCA's chief enforcement officer, Assistant Commissioner Murray Stein.

The Cleveland hearings will be held at the Sheraton-Cleveland Hotel, with Republic Steel officials to testify at 9:30 a.m., October 7; United States Steel at 1:30 p.m. the same day, and Jones-Laughlin at 9:30 a.m., October 8.

Stein will meet with officials of the city of Toledo at 9:30 a.m., October 9, and at 1:30 p.m. with Interlake Steel representatives, with both of those hearings scheduled at Toledo's Commodore Perry Motor Inn, 505 Jefferson Avenue.

CHARLES PALMER, A QUIET LEADER

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. BROWN of California. Mr. Speaker, because I know young people like Charlie Palmer, I have great faith in the future of our country.

Last week, Charles Palmer was elected the new president of the National Students Association, a position he will hold at the same time as he enters the Yale Law School. Lawrence Freinberg of the Washington Post was present at the El Paso NSA convention, and I insert his profile of Charlie into the RECORD at this point:

NEW NSA CHIEF SEEN AS FACTIONAL BROKER

(By Lawrence Freinberg)

EL PASO, TEX., August 31.—"I couldn't personally commit violence against any person," said Charles Palmer, the newly elected 22-year-old president of the National Student Association.

"But I will not come out with a blanket statement on what kind of tactics are acceptable for students to use and what are not."

"Actually, for white students," he continued, "I think the tactics that are going to work out best are those which do not alienate people but that does not mean that we'll lie down and play dead. Frankly, even if the leaders advocated lying down, I think students wouldn't allow it."

With these somewhat ambiguous statements and a call for moderates to stay united with the student left, Palmer was swept into NSA's presidency at the group's tempestuous 22d annual convention last week.

Palmer was surprised by his victory. But in retrospect it seemed to be the only logical outcome of the decisions the convention made.

For the NSA meeting, like many of the universities which its delegates attend, was disrupted by a small militant minority—about 30 black students who seized the platform to stop the presidential election.

ARE ACCOMMODATED

NSA responded by accommodation, voting the blacks $50,000 to set up a new student organization of their own. And Palmer, essentially, was a candidate of the accommodation. Neither a left wing militant nor black himself, he "worked well" with both groups.

One friend who knew Palmer well at the University of California at Berkeley, explained, "He was a pragmatist in a radical environment—sort of a broker between the activist and the rest of us."

As student body president at Berkeley, Palmer was not at first involved with the controversial People's Park or in the protest against the withdrawal of academic credit from a course taught by Eldridge Cleaver. But when the causes were beginning to pick up wide backing Palmer stepped into support them.

"Students felt strongly about these issues," he explained. "I felt that if student government was to mean anything, it had to take a leadership role."

Since 1967, when it repudiated its ties with the Central Intelligence Agency, the NSA has been in somewhat the same position. Composed of student government organizations, it has led in none of the movements—anti-militarism, student power, drugs and black power—which have changed the nation's campuses in the past few years.

But the organization, which now has 420 member colleges, has been a crucial means of spreading change. As one of its leaders noted last week, "we've been sort of a transmission belt, carrying things from universities where things happen to places where they haven't yet."

At last week's convention most of the 11,000 delegates, alternates and student observers sounded conservative or at least nonviolently liberal before the disruption by the black militants.

Most of the 200 colleges they represented are small schools or middle-rank state universities. And few have been centers of major protest.

In fact, the only school sending delegates which had been at the center of campus ferment was the University of Wisconsin.

CAME BY HIMSELF

Palmer came by himself, without a delegation from Berkeley. There were no delegates from Harvard, which dropped out of NSA in the spring. Others missing from the convention were Cornell, Howard, San Francisco State, and City College of New York.

On Monday night before the disruption delegates seemed set to choose as NSA president Clinton E. Deveaux, a liberal Negro from New York City who is a conscientious objector to the draft but an articulate opponent of campus violence.

But after the disruption, along with fear and uncertainty, there was also considerable rethinking, and Palmer won the election by a wide margin.

"What happened Monday was an educational experience for many students," Palmer said afterward. "A lot of them were forced to stop and think. I don't believe we were operating under coercion. That's Ronald Reagan's logic. We couldn't react like the university presidents did."

Palmer also takes a tolerant attitude toward the Students For A Democratic Society. Although he is critical of their Marxism and their belief in violence, he said he would "refuse to denounce them."

"They might take a position that is right, and I might support them," Palmer explained.

"Some of my best friends are in SDS," he said, but then he quickly added, "I have friends in fraternities, too."

I have been acquainted with the Palmer family for many years; until they moved a few years ago, Charlie's parents, John and Selma Palmer, were outstanding residents of the El Sereno area of the 29th Congressional District, and I worked closely with them on numerous occasions.

Two summers ago, Charlie was a congressional intern in my Washington office, and I came to know him as a warm, extraordinarily talented, and dedicated young man.

Charlie Palmer is a quiet leader. As student body president at the University of California this past year, Charlie was faced with an almost incredible series of entanglements. Yet, not only was he able to bring a calming influence into the turmoil, but, in addition, Charlie was a major factor in uniting and coalescing the divers factions at the Berkeley campus in a force moving for positive change.

Now, as Charlie Palmer moves on to law school at Yale, and as he assumes the NSA leadership, I would like to offer my good wishes and congratulations to this outstanding young leader. It is because of young men such as Charlie Palmer that I retain optimism for our future.

BARRATT O'HARA, A COURAGEOUS LEADER

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. MURPHY of New York. Mr. Speaker, my former colleague, Barratt O'Hara, was a brave and brilliant man. In his earlier career—as a writer, soldier, lawyer, film executive and radio commentator—Barratt O'Hara displayed the same courage and intelligence that he later brought to Capitol Hill. I had the privilege to know him and to serve with him. Under the leave to extend my remarks in the RECORD. I can think of no eulogy more fitting than this glowing tribute to Barratt O'Hara which recently appeared in the Washington Post:

EX-CONGRESSMAN O'HARA DIES AT 87

Former Rep. Barratt O'Hara (D-Ill.), dean of the House of Representatives until he lost his bid in June, 1968, died yesterday at Georgetown University Hospital.

Mr. O'Hara, first elected to Congress at the age of 66 in 1948, was turned down last year by Illinois Democratic slatemakers despite his plea for "just one more term." Instead, the party backed Rep. Abner J. Mikva in the Second Congressional District primary. Mr. O'Hara, who had beaten Rep. Mikva in 1966 for the nomination, lost the primary by 13,000 votes.

He was a champion of liberal causes and the emergence of new African nations. He was chairman of the House Foreign Affairs subcommittee on Africa at the time of his defeat.

A small man with a full mane of white hair, he padded quietly around the Capitol grounds to the nearby Congressional Hotel, where he lived alone, until he was admitted to Georgetown Hospital on July 13 suffering from congestive heart failure. The immediate cause of death has not yet been determined.

He was the last congressional veteran of the Spanish-American War and he always spoke of it on the anniversary of the sinking of the *Maine* that set off the war.

In 1895, at 13, Mr. O'Hara went to Nicaragua with his father and accompanied an expedition marking the route of a proposed canal. A Panama route was chosen later.

At 15 he ran away from home to enlist in the 33d Michigan Brigade, which followed Teddy Roosevelt's Rough Riders as the second American force into Cuba. He became chief scout for the brigade and was awarded the Order of Military Merit by Cuba.

He attended the University of Missouri, became sports editor of the St. Louis Chronicle at 20, then moved to Chicago where he was sports editor of the American and later Sunday editor of the Examiner.

He went to law school, edited and published "Chicago Magazine", wrote a history of boxing "From Figg to Johnson" and at 30 became the youngest lieutenant governor in Illinois history. In this job he attracted attention with his investigation of substandard wages being paid women. A brief stint as president of a Hollywood movie company followed, then Army service in World War I, and finally law practice.

"I always wanted to be a lawyer," said Mr. O'Hara later. "There just were some detours."

As defense attorney, he tried nearly 300 homicide cases and won acquittals for more than 90 per cent of his clients. None was executed.

PRAISED BY DARROW

He was a man of great physical and moral courage. The legendary trial lawyer, Clarence Darrow, was quoted as saying, "I am envious of only one thing in the world—I wish I had Barratt O'Hara's courage."

During the depression, Mr. O'Hara did a daily radio commentary trying to help people. Once he announced that if a woman about to be evicted would meet him at a certain place he would try to help, and 20,000 people showed up, equally in need of help.

Elected to the House in 1948, he was defeated for reelection, but came back in 1952 and stayed, through the 89th Congress. Unlike many older members who prefer to sit back and listen and then vote no, Mr. O'Hara had a zest for debate and new ideas.

Once, when past 80, he leaped up so fast to answer a young speaker that he tripped over a colleague's feet and gashed his head. He was back next day with a bandage.

Mr. O'Hara was very proud of the fact that for years he had not missed a roll-call vote. His record was broken when he left town for a day when he understood there were to be no roll calls.

There was a roll call, but somehow his name appeared as being present. Rather than keep his record that way, Mr. O'Hara missed the next roll call on purpose. He missed more in 1965 when he was a member of the United States delegation to the United Nations General Assembly.

Mr. O'Hara is survived by three sons, Barratt Jr., and Lorence, both of Chicago, and Howard, of Guam, and three grandchildren. His wife, Florence, died in 1948.

A. M. CAUSEY, SPANISH WAR VETERAN NEARS 99

HON. TIM LEE CARTER

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. CARTER. Mr. Speaker, today I include in the RECORD for perusal by the Members the account of remembrances of A. M. Causey, one of the oldest Spanish-American War veterans in Kentucky and in the United States.

Mr. Causey, who will be 99 years old this fall, presently lives in Bowling Green, Ky. He has contributed many years to public service; and a record of such service to one's country is greatly admired and serves as an example to be followed by all. Mr. Causey's life truly portrays the spirit which has preserved our country.

The article follows:

OLDEST SPANISH WAR VETERAN NEARING 99—MEMORIAL DAY BRINGS MEMORIES TO A. M. CAUSEY OF WAR 71 YEARS AGO

(By Larry Wilkerson)

A. M. Causey sat in the kitchen of his Tenth Street home today and talked about the pleasant May weather outside as he prepared to attend Memorial Day ceremonies at the Davis-Hoffman Cemetery to honor the nation's war dead.

As he talked, his voice trailed off, he slowly bowed his head, and behind the dimming eyes, the memory of the sight and sound and smell of war in a foreign land raced through his mind like a movie seen long ago and nearly forgotten.

Causey, born Oct. 5, 1870 while wounds of a war that had split his country in half were slowly healing, is the oldest living veteran of the Spanish-American War, and the affairs of the world around him mean just as much to him now as they did over 70 years ago when he went to war.

Though his hearing is bad and a hip fracture several years ago prompts him to use a wheel chair in the house, Causey's mind is as alert as ever, and his opinions are as sharp as his tongue can be when he voices them.

He recalls the spring of 1898 vividly. In February of that year, tension was growing taut between the United States and Spain over disagreements in Cuba. On Feb. 15, the battleship Maine was blown up while on a goodwill tour to Cuba. American losses were 264 men and two officers. The explosion helped light the fuse that would explode in April, when the war was declared and President McKinley called for 400,000 volunteers to go to Cuba.

A. M. Causey was one of more than a million patriots who volunteered.

"When McKinley called, 458,157 men were put in uniform, every one of them volunteers," Causey recollects, "it was the only 100 percent volunteer army in all history."

As a member of the Third Kentucky Volunteer Infantry, Causey disembarked at Matanzas, Cuba, to begin living through nearly 13 months of that singular plague that has followed mankind since time began—war.

As an infantryman, Causey's job was to fight. He keeps no flags or medals or decorations or other mementos of the Spanish-American encounter on display in his home.

"I commanded a high position as a private," he chucked.

When the war ended, Causey returned to Bowling Green to attend the Business University and then managed the Western Union Office here for over 50 years. He retired, and went to work as proprietor of the Federal Collection Agency, which he ran until he turned 95 in 1965.

Though A. M. Causey had made his mark as a soldier and a businessman, he never sat down to rest.

His son, Dr. Kenneth Causey, recalls a tennis match with his dad on Causey's 75th birthday.

As he has aged, he has grown, perhaps, more active. Now closer to 99 than 98, Causey attends Sunday School every Sunday, Rotary every Wednesday and Senior Citizens every Thursday.

"In April of this year, I had 41 years perfect attendance at Rotary," Causey notes, the pride in his voice undisguised.

Regular attendance at meetings and a refusal to sit down and be still, however, aren't what makes Causey something of a legend in his own time.

Causey reads anything he can find to read. "I read all the time," he admits. On his kitchen table are copies of the Daily News, the Courier-Journal, Reader's Digest, National Geographic and Human Events, a Washington publication.

He frequently voices his opinions on current events in the letters to the editor columns of newspapers and, if he feels strongly about something, he'll write to the man responsible, as he did to Charles De Gaulle of France when De Gaulle ordered the withdrawal of NATO forces from France two years ago.

"I got a letter from him and a copy of a speech," Causey said.

Causey says he is "very dissatisfied" with America today.

"About two per cent of this country's young people are causing all the trouble today," he said, "and they should be punished for violating any laws that we have."

However, Causey says he thinks the trouble on campus and the "youth rebellion" are "at a peak."

"Law and order will eventually come back," he said.

Causey has his opinions on the Vietnam war and is not ambiguous in voicing them: "I think there's been no real effort to win that war. War should have been declared. The harbor of Haiphong should have been blockaded and Communist supplies stopped . . . if that had been done, the war would have been over in a few months."

If he were to be labeled by one of the two popular descriptions of those who express an opinion on Vietnam, Causey would be a hawk, who remembers declared wars and all-out fighting and victory.

"In World Wars I and II, the civilian population was given little consideration . . . no instruction has been given to destroy the cities of North Vietnam."

Commenting on the country's leadership since Vietnam has been a major issue, Causey said of former president Lyndon Johnson, "He was an honest man—but he was badly advised by Communist sympathizers in the state and other departments."

The life-long Republican, whose father voted for Abraham Lincoln, has quick praise for President Richard Nixon: "He's making the grandest president we've ever had, up to now," points out Causey, who has lived under the administrations of 18 presidents.

In spite of campus unrest, and undeclared war that still drags on, the generation gap, high taxes and inflation, Causey is not giving up on America.

"We've got the grandest country on the face of the earth," he said.

Causey was asked if he felt the country was worth fighting for as much as it ever was.

"Yes," he said, as the clock chimed, reminding him of his planned trip to the memorial services, "I really do."

The veteran paused and frowned slightly, as if he had almost forgotten what he was going to say.

"Freedom," he remembered, as the final chime rang out.

SECOND CONGRESSIONAL DISTRICT OF NEW YORK OPINION POLL

HON. JAMES R. GROVER, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. GROVER. Mr. Speaker, this year, as in the past, I have undertaken to poll my constituents on a number of issues vital to our great country on the national and international level. The questions, necessarily, were limited in number, and for the greatest accuracy in tabulation this year, the poll was electronically computed. I am pleased to report to the House the results of this questionnaire in which over 16,000 residents of New York's Second Congressional District expressed their opinion. Thousands of those responding wrote excellent letters with interesting comments and suggestions on the questionnaire and its issues, and on a wide variety of other matters of mutual concern.

Generally, my constituents applaud this effort to communicate with them. Some criticize it constructively, and only a few thought it of little value. In my experience, Mr. Speaker, perhaps the most important byproduct of such an opinion poll is its prompting a dialog and exchange of views between me, as the Representative, and thousands of citizens whom I represent. I am sure the question card also gave rise to serious and perhaps controversial discussion of its critical issues in many more than the 16,000 homes which returned a card to

me for tabulation. This is a healthy happening for our democratic process.

I shall not at this point, Mr. Speaker, try to interpret the overtones or meanings of the varying percentages in the results of the poll, but will rather leave it in its objectively computerized form for the further comment and interest of my alert and enlightened constituency.

The results are as follows:

OPINION POLL FROM SECOND CONGRESSIONAL DISTRICT OF NEW YORK

1. Do you favor legislation limiting the number and type of questions to be asked in taking the 1970 census?

Yes	59.6
No	26.3
Undecided	10.0
No Response	4.1

2. Do you favor lowering the voting age to 18?

Yes	31.4
No	62.8
Undecided	2.0
No Response	3.8

3. Do you favor renewal of the 10 percent tax surcharge—viewing the economy as it is today?

Yes	35.0
No	54.6
Undecided	5.9
No Response	4.5

4. Do you believe the Federal Government should guarantee an annual income to heads of families, whether or not they are working?

Yes	11.9
No	79.5
Undecided	4.7
No Response	3.9

5. Do you support the proposal to convert the Post Office Department into a government-owned corporation?

Yes	57.3
No	21.4
Undecided	16.4
No Response	4.9

6. Do you favor expulsion of students who violently disrupt the academic life of colleges and universities?

Yes	88.8
No	6.0
Undecided	1.5
No Response	3.7

7. Regarding the method by which we elect our President and Vice President should the electoral college system be (A) abolished in favor of a direct popular vote, (B) modified, (C) kept the way it is?

A	64.9
B	21.1
C	9.5
No Response	4.5

8. Should the Paris Peace Conference not produce meaningful peace negotiations, would you favor (A) resuming and intensifying full scale air attacks on North Vietnam, (B) increasing the U.S. commitment to insure military victory in South Vietnam, (C) gradually decreasing U.S. troops and shifting responsibility to South Vietnamese forces, (D) immediate withdrawal, (E) none of the foregoing answers reflect my views, (F) undecided.

A	18.4
B	7.4
C	51.4
D	13.5
E	3.2
F	3.3
No Response	2.7

9. Regarding America's missile defense, should the Congress (A) authorize President Nixon's "Safeguard" plan to build Anti-Ballistic Missiles (ABM) protecting offensive missile sites and command centers, (B) authorize a "thin" ABM system to protect certain cities and missile sites, (C) authorize a "thick" ABM system protecting all vital targets, (D) oppose deployment of any ABM system, (E) undecided?

A	37.9
B	6.7
C	14.7
D	19.9
E	17.2
No Response	3.5

10. Which one of the following factors do you consider to be contributing the most to the increase in crime, and is most seriously hampering adequate crime control (A) widespread use of drugs and narcotics, (B) flood of pornographic material, violence and obscenity in the entertainment media, (C) failure of the courts to deal promptly and toughly with criminals, (D) ready availability of firearms to everybody, (E) inadequacy or inefficiency of police forces, (F) none of the foregoing answers reflects my views.

A	13.2
B	3.6
C	64.4
D	3.0
E	3.0
F	9.3
No response	3.4

WHAT IT TAKES TO RUN THE WESTERN WHITE HOUSE

HON. BILL NICHOLS

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. NICHOLS. Mr. Speaker, some of my constituents have written to me expressing their disapproval of the use of the western White House by President Nixon. Certainly no one would begrudge the President a vacation, especially with the tremendous burden he has on him. However, I believe that some of the criticism might be warranted, particularly since the President asked for and Congress passed a continuation of the 10 percent surtax. Taxpayers find it difficult to understand why the Government needed more money to operate, then find the President spending several thousand dollars a day to operate the executive branch of Government on the west coast.

Even though the cost of operating the White House here in Washington has been reduced for the summer, there are still many duplicated costs. Among these are the tremendous costs involved in setting up duplicate communications systems in California, and the constant travel between Washington and California by Government officials.

At a time when Americans are being asked to pull in their belts, it seems that the President might take the lead in reducing costs instead of increasing them. I would hope that President Nixon might give this matter serious consideration before making another wholesale move in the future.

My constituents have called to my attention the following article concerning the costs of the western White House which appeared in the September 1 issue of U.S. News & World Report:

WHAT IT TAKES TO RUN THE WESTERN WHITE HOUSE

SAN CLEMENTE, CALIF.—Something new in presidential operations is in full swing here—a working White House 2,500 miles from the nation's capital, involving transcontinental movement of a substantial part of the top echelon of the U.S. Government.

Almost all Presidents have had vacation retreats—such as Lyndon Johnson's LBJ Ranch in Texas, John Kennedy's compound on Cape Cod, Dwight Eisenhower's villa at Palm Desert, Harry Truman's bungalow at the Key West naval station, Franklin Roosevelt's cottage at Warm Springs. These were essentially rest-and-recreation quarters. But the Western White House here at San Clemente is different—a business headquarters with all the personnel and panoply a Chief Executive requires.

President Nixon's August stay at the Western White House on the shore of the Pacific is geared to a plan that necessitates the presence of some of his Cabinet members and much of the White House staff. Besides those housed in this area, many other officials and aides are flying in and out, using a "jet shuttle" service of Government planes as well as regular commercial airliners.

PROBLEM IN LOGISTICS

The White House routine here in California, as in Washington, includes Cabinet sessions, meetings of the National Security Council, the Council for Urban Affairs and other key groups in the executive branch. Day-to-day activities call for personal appearances by batteries of experts in every field of government. It is a massive problem in logistics.

At a time of almost explosive discontent among voters about tax burdens and government spending generally, people are asking about costs of the West Coast White House which the President plans to use six to eight weeks a year—what it all means to taxpayers.

Ronald Ziegler, White House press secretary, says that "the total cost would be difficult to figure" because so many budgets are affected. Among agencies from which support funds are drawn are the White House itself, the State, Defense and Treasury Departments, the General Services Administration, the Department of Transportation, the Department of Justice and the National Park Service.

In the past, according to Administration sources, the "rule of thumb" was that a presidential vacation cost the taxpayers about $10,000 a day, including per diem expenses and transportation for aides but not such items as the extra buildings being used at San Clemente and the communications facilities installed here.

EVEN THE "HOT LINE"

One Government source said that "the total cost of operating the Western White House will run into the millions." He cited communications expenses, which are "running into the hundreds of thousands of dollars." Some 900 telephone circuits have been installed in the complex of executive offices newly erected on the grounds of the Coast Guard station that adjoins Mr. Nixon's $340,000 mansion. The "hot line" to Moscow was one of the facilities installed.

The office complex itself is to cost the Government about $130,000 a year. It will be partially staffed even when Mr. Nixon is not in residence.

According to Mr. Ziegler, about 100 persons are on hand on a full-time basis. Another official said, however, that "at least 300" are involved "in one way or another" in supporting the summer White House. This figure includes not only office aides but air-

craft pilots and maintenance men, chauffeurs for the fleet of White House cars driven to the West Coast, and 75 Secret Service men.

Per diem allowance for most of those performing routine work is $12 a day plus housing. In this area, even at "special rates," hotel rooms come to upward of $25 a day.

EXPENSIVE FOR AIDES

Houses have been leased by a number of Mr. Nixon's top associates, including Secretary of State William Rogers, Attorney General John Mitchell, and Henry Kissinger, the President's special assistant for national security affairs.

Mr. Ziegler says that "a great portion of the cost" of leasing the houses is being paid by the officials themselves. A "slight adjustment" has been approved by the President for those who are here for the full month's stay.

A San Clemente real estate man says that Secretary Rogers is paying $1,000 for a one-month lease on a three-bedroom home. Other houses leased by Government executives rent for from $800 to $1,500 a month—the latter being the rate for dwellings comparable to the ocean-front home, with swimming pool, occupied by Dr. Kissinger.

A comment from the real estate man:

"We've got places for $500 a month. They are cute little houses, but the Government people don't like that kind. I guess they need plenty of room for entertaining."

Air transportation back and forth across the continent is a big item of expense. Some officials use the White House "courier planes"—Lockheed Jetstars—which make at least three round trips a week between Washington and San Clemente. Operating costs—exclusive of crew salaries and maintenance—are $7,500 a week for these planes. When any of the three White House Boeing 707 jet transports are used the round-trip tab to the Government is $8,000 per plane.

Many presidential visitors use commercial air service. For example, in mid-August, six newly appointed U.S. ambassadors and five members of the Advisory Council on Executive Organization flew by commercial jetliners from various points for meetings with Mr. Nixon. First-class air travel is customary in such cases.

Wives of Cabinet officers are to accompany their husbands to San Clemente for a post-Labor Day visit.

Budgets of news media, as well as the Government, feel the effects of the Western White House operation. For instance, cost of the chartered airplane used by 55 newsmen and photographers for the round trip, coast to coast, is $25,000. Side trips will add $20,000 to the charter bill. Newsmen report that their expenses aside from transportation average $500 a week per individual.

In Washington, some agencies are complaining about funds being drained from their coffers by the President's stay in California.

An example given by one Government official was the state dinner in Los Angeles at which the President honored the moon-voyaging astronauts. Most of the expense of that dinner—estimated at $75,000—was assigned to the National Aeronautics and Space Administration. In addition, NASA underwrote bills totaling about $25,000 for air-ferrying legislators and space-agency officials from Washington and Houston to Los Angeles for the dinner.

"If that event had been held in Washington," said one disgruntled bureaucrat, "it would have cost only a fraction of what the taxpayers are having to pay."

Foreign diplomats invited to Los Angeles for the salute to the astronauts paid their own way—and some were reported to be resentful at having to spend as much as $1,500 each for air fare, hotel bills and incidentals.

The State Department defrayed expenses for the 250-plate dinner given at the St. Francis Hotel in San Francisco on August 21 by the President and Mrs. Nixon for South Korean President Park Chung Hee.

"That one would have cost a lot less in Washington, too," a Government official commented. "For one thing, such dinners at the Washington White House are attended by only about 100 guests, not 250."

Besides his salary of $200,000 a year, an expense allowance of $50,000 and a travel allowance of $40,000, Mr. Nixon has at his disposal a special-projects fund of 1.5 million dollars.

But officials say that the West Coast activities are putting no strain on White House funds because so many of the costs are "farmed out" to other areas of the Government.

MORE EFFICIENT THIS WAY

The rationale for the Western White House was described by Mr. Ziegler:

"By this particular setup, we have been able to co-ordinate everything, keep everything together, and we feel that the whole operation will be more efficient and effective this way."

Other members of the White House staff point out that the San Clemente enterprise did not involve any such expensive improvement as the fully equipped jet runway which was built on the LBJ Ranch.

One Government official observed that, while the costs of running the Western White House are high, "it's cheaper for the taxpayers to pay for a President's working vacation than for round-the-world presidential diplomacy." This official estimated the tab for Mr. Nixon's recent global trip at between 5 million and 10 million dollars.

Historically, Presidents have been eager to get away from Washington. Mr. Nixon now has three change-of-scene possibilities—Camp David, his winter home at Key Biscayne and San Clemente, which he, himself, has designated the "Western White House."

THE SOVIET OCCUPATION OF CZECHOSLOVAKIA

HON. CHARLES S. JOELSON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. JOELSON. Mr. Speaker, all of my colleagues will recall the events of August 21, 1968, when Czechoslovakia was occupied by forces of the Soviet Union. Americans of Slovak and Czech descent feel that the first anniversary of this occupation should not go by unrecorded. I, therefore, insert in the CONGRESSIONAL RECORD a story published in the Morning Call of Paterson, N.J., on August 2, 1969, expressing the feelings of those who want their kin in Czechoslovakia to lead tranquil, happy, and useful lives. The article, written by Tony Suchon, follows:

CZECHS RALLY IN NEW YORK

(By Tony Suchon)

NEW YORK.—Czechs and Slovaks from Passaic and Bergen counties plan to demonstrate unity with the freedom-fighters of their native land.

On the first anniversary of the Soviet occupation of Czechoslovakia, Aug. 21, they will join others from the metropolitan area in a rally at the Soviet Union offices in New York.

Throughout Czechoslovakia that day in a "Day of Shame", underground leaders plan a mass boycott of public services to honor their countrymen killed opposing the occupation.

John C. Sciranka, press director of the Slovak Catholic Federation of America, said last night the New York rally is not aimed at provoking the Russians.

"We want to let the world know that American Czechs and Slovaks haven't forgotten the people in their homeland," he said.

"There is a certain tension among the people that the Russians may surprise them with the use of force," he said, "and the Aug. 21 memorial is drawing much interest from both sides."

Sciranka said some of the leaders fear that veteran Stalinists may try to start a clash between the troops and the underground on that day.

According to reports from inside Czechoslovakia and from Americans who have visited, the "liberal" communism supported by former Communist party secretary Alexander Dubcek is a reality, Sciranka said.

Dubcek's plans to bring "socialism with a human face" to the country were thought to be smashed with the occupation.

But Sciranka said all those who return from Czechoslovakia have nothing but praise for Dubcek and the reforms he started.

Dubcek stepped down from his job last April to become chairman of the Czech Parliament. He said he decided to give his post to Gustav Husak, a more conservative Communist, as an appeasement to party leaders.

Sciranka said Dubcek intends to continue his struggle for political and economic reforms in Czechoslovakia even though his action program cost him his post.

Despite the occupation, Sciranka said the predominantly Catholic population of Czechoslovakia is free to worship. Many have gone to Rome where Pope Paul VI has assured them of his interest in their nation and its struggle.

THE PRESIDENT'S PROGRAM FOR THE OEO

HON. PAUL N. McCLOSKEY, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. McCLOSKEY. Mr. Speaker, I would like to comment on the President's message of August 11 in which he discussed the reorganization and reorientation of OEO under its new Director, our ex-colleague, Don Rumsfeld.

I believe the President's program for OEO is precisely on target.

It makes sense to use the OEO as the special research and development arm of the Government's social action programs. It likewise makes sense to divide the management responsibilities, separating the thinkers and innovators from the program managers.

The cycle in this incubator agency will flow from a research stage to a testing stage, where the merit of an idea or concept can be discovered without developing a full program. If ideas prove to be worthwhile, they can be put into a program that can be perfected, and, at the proper time, could be transferred to another Government agency or private group. This will keep the research element where it will be most effective in developing new ways to help the Nation's poor.

It is particularly impressive that the President and Director Rumsfeld have concluded that the OEO should concentrate on the causes rather than the symptoms of the inequality of economic

opportunity, that bold experimentation will be continued, creative risks taken and the agency's management streamlined to set up a variety of demonstration projects, carefully test their effectiveness, and systematically assess the results.

Those charged with conceiving and testing an experimental social concept will not be hampered by having to operate a conglomerate of new and old programs at the same time.

The Office of Operations will provide greater field and technical support to Community Action Agencies, and we should see a greatly improved field operation as a result. And I am delighted to learn that grants by the OEO have been getting and will continue to get a more careful review before this new organization commits its tax dollars.

Altogether the reorganization seems to be entirely a positive move. As the President has suggested, the OEO must martial the most creative minds in the country. In Don Rumsfeld he has already succeeded in obtaining one of the most creative Members of Congress, and I think under his leadership we can look forward to participation with OEO of every segment of American private enterprise and government. All of the specific changes in OEO, announced by the President, were constructive; all of them lend hope that we can indeed solve some of the most pressing problems which have ever faced any nation.

ORANGE COUNTY, CALIF.

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. UTT. Mr. Speaker, I would like to include in the RECORD a series of four brief articles which appeared in the Santa Ana, Calif., Register, commencing August 4.

Orange County, Calif., has been the subject of many attacks by the liberal press, and surely we in Orange County are entitled to a rebuttal. This rebuttal will be found in the following series of articles, written by Archie Shamblin:

OC No Longer a Standout: Conservatism Sweeps United States

(By Archie Shamblin)

(Editor's Note.—Election victories by "conservative" candidates from California to New York has sparked a national interest in conservatism. In Orange County, where conservatism has been almost a way of life for many years, things are the same—yet are changing. The following is the first in a series of four articles examining conservatism in Orange County.)

A historically conservative Orange County can look on the symptoms of growing conservatism across the United States with a certain amount of satisfaction and, perhaps, a bit of amusement.

For years this county has beer subjected to ridicule from the national communications media for its "covered wagon" politics.

Orange Countians were depicted as "John Birchers" and "reactionary nuts" because of their politically conservative attitudes.

But a funny thing happened on the way to the polls.

Conservatives are thumping liberals from California to New York and everyone is talking about the "conservative wave" sweeping the nation.

The so-called "experts" sagely classify these voting patterns as a surge in conservative attitudes caused by the instability of the times.

When Orange Countians were voting conservative in years gone by, the experts weren't so generous.

A typical reference to Orange County was the comment several years ago by a syndicated columnist who called it, "The land of smudge pots and John Birchers."

And, just before last fall's election, Fortune magazine ran an extensive article on the county, calling it a "stronghold of far-out conservative thought and action—the place one immediately thinks of on hearing the phrase 'Nut Country'."

The magazine said, "Orange County is said to be where little old men in tennis shoes fulminate against the Supreme Court, the United Nations and the disappearance of God from the public schools."

To cap off their observations, the magazine repeated the tired prediction about conservatism folding its tent and stealing away:

"The strength of conservatism in Orange County is gradually being diluted by the forces of growth and change."

A month after that article appeared, U.S. Rep. James Utt of Tustin, Orange County's most conservative legislator, pulled three times as many votes as his nearest competitor to win his ninth trip to Washington.

And county Republican voters—most of whom are considered conservative—cast more than twice as many votes as did the Democrats.

The margin of GOP ballots over the Democrats was the greatest ever.

The swinging of the pendulum across the nation toward conservatism provides the majority to say "I told you so" to the critics of the past who have been predicting for years that progress would move the county away from conservatism.

Not only has the county moved even more solidly into the conservative camp, but now it appears voters across the nation are finding out what residents here have been espousing for years.

It is beginning to look like Orange County was ahead of its time, instead of living in the past.

This parallels the thoughts on conservatism—expressed by one of Orange County's best known conservatives, Walter Knott, owner of Knott's Berry Farm.

"We think the conservative is the most progressive person of any along the political spectrum," Knott said. "He believes in the idea that people can govern themselves, which was a progressive experiment when this country was formed and is still a progressive experiment.

"A conservative believes there is much good in the past that must be conserved, and that he must use this good to lay a foundation for a solid future.

"A conservative believes the best government is the least government and that what can be done at the local level should be done there.

"And I think the nation is coming around to our way of thinking," he said.

But the nation, if it really is moving toward conservatism, is moving slowly and only after many years of plodding in the other direction.

Orange County, over the years, has stuck out like a sore thumb in its adherence to the principles of conservatism.

The reasons for this almost dogmatic resistance to the flow of national politics and in the face of a constant stream of ridicule are not clear.

Years ago, when the county was basically rural in nature, it was said that residents here were conservative because they were resisting change.

But the county exploded in riotous growth in the 1950s and for years has been the fastest growing county in the nation.

Now there are about 1.4 million persons in the county, a major metropolitan area.

In political attitudes, however, the story is the same—conservatism prevails.

A current edition of Newsweek magazine contains an article written by internationally known political writer Stewart Alsop who talks about "the Orange County Bug" sweeping the nation.

Alsop, a noted liberal, simplifies "the Bug" into terms of "white racism."

That analysis, of course, displays a total ignorance of the complexities of Orange County conservatism.

Home Ownership Called Key to OC Conservation

"People come to Orange County and buy a home. They then have a little piece of America and begin to think a lot differently about their government."

This assessment of conservatism in Orange County, provided by Walter Knott, is one of myriad answers to the question of why this area has long been one of the most politically conservative in the nation.

Knott, owner and operator of Knott's Berry Farm here since 1920, and a leader in conservative politics, offers the high rate of home ownership as part of the answer.

"When the great population increase hit Orange County 10 to 15 years ago, so many people moved in who had traditionally voted liberal and Democrat that for a time, the registration changed until there were more registered Democrats than Republicans.

"As these people bought homes and became landowners (capitalists), they became more conservative and changed their registration," he said.

Knott listed several other factors including the presence of newspapers with editorial policies leaning away from liberal politics.

"Orange County has had newspapers whose editorial policy has been conservative. Even though most of them would not endorse candidates or openly take political sides, they did endorse conservative economics year in and year out."

Politicians polled on the question, both Democrat and Republican, generally went along with Knott's answers.

U.S. Rep. Richard Hanna, one of only two Democrat legislators from Orange County at present, had three reasons for conservatism in the county.

"Perhaps some of the reasons for Orange County's over-all voting conservatively would include (1) registration figures, (2) the large base of private home ownership and, (3) perhaps most importantly, the conservatively oriented mass media."

Hanna, whose home base is the northern and western parts of Orange County, added that the western portion of the county "has demonstrated moderation in its voting habits."

Assemblyman Robert Badham feels the economics of Orange County is the prime factor in the voting patterns of its residents.

"The suburban aspect of the growth of Orange County gives rise to light industrial, research and development, and a highly sophisticated defense industry.

"This lends itself to habitation by people of greater than average wealth and income who generally tend to vote more conservatively to conserve their resources.

"And I believe the great natural beauty of the coastline here attracts persons who can afford the high cost of living along the water front. These people, also, vote more conservatively.

"All in all, I would say because of young, affluent, suburbanite executives and the older agriculturists that the county will con-

tinue in more conservative patterns" Badham said.

Sen. John Schmitz, former college political science teacher and a member of the John Birch Society, lists conservative newspapers, the type of people attracted to Orange County, and a favorable environment for the continuing strength of conservatism here.

He said the "consistently pro-freedom editorial position" of The Register and other newspapers in Orange County is "the primary explanation."

Schmitz, who has been elected twice to the state Senate despite public pronouncements on his membership in the Birch Society, also attributes conservatism here to the type of person who would move to Orange County.

"A majority of all residents move to Orange County from elsewhere in the nation to work, not to retire or go on welfare.

"The population is young and ambitious. The type of person that would leave his native state and come here seeking a better way of life during his productive years is the type of person who will be least interested in government as the father-image and nursemaid, and most attracted to laissez-faire concepts."

Schmitz said conservatism in this county has now reached the point where it has picked up its own momentum and will continue to grow.

Sen. Schmitz also touches on a factor that hasn't been explored to any extent by the oldline Orange County conservatives.

While the county has not shifted away from conservatism, it has changed somewhat in the type of conservatism that is now most popular here.

The days of the fiery Communist-hunting conservative are fading, to be replaced by a newer, younger conservative who is more fearful of Social Security than communism.

The new conservative lays the problems of today not as the tomb of Joseph Stalin, but at the fireside of Franklin Roosevelt.

He is a staunch opponent of Communist collectivism, but he sees that threat as remote. More pressing in his mind is the threat of indoctrination of the young in the tax-supported system and court decisions that "coddle criminals."

And, most important, he sees the spread of government power into the home, his job and the future of his children, as a threat to his basic freedoms.

Orange County Conservatism Shows Split Personality

Orange County conservatism has developed a case of split personality over the last two or three years.

Old-line conservatives are still the official leaders of the Republican party in the county.

They control the purse strings, run the county machinery and generally decide who is going where on the political highway.

But the new conservatives are reaching ever deeper into the fountainhead of political power and promise eventually to be the face this county turns to the world.

The philosophies of the "old" and the "new" are parallel in many ways, just as an offspring resembles his parent. But there are some major—and growing—differences between the two.

The older conservative in Orange County views international events as a battle between communism and capitalism. At home, the struggle is against taxes, socialists and immorality.

Young conservatives have more complex views, and they let the world know about them in fresh, strident voices.

Dana Rohrabacher, head of the county Young Americans for Freedom, is typical of the new conservative.

Young Americans for Freedom (YAF) was formed several years ago and had a tradition of being the kiddie corps for the John Birch Society.

Not anymore. At least, not in Orange County.

Rohrabacher launched the Orange County group in January with 20 members. He now claims more than 300 members with the number going up every day.

"We are conservatives, but not the traditional conservative," Rohrabacher said. "Our thing isn't Communists, although we are diametrically opposed to communism.

"Our thing is a free market, free people and a free country. We don't come on strong against ideas or philosophies. It's easy to be against everything.

"We take the positive approach, stressing what we favor. Instead of censuring opposing philosophies, we hit them with a better idea."

That "better idea" is liberty and freedom—especially economic freedom. The YAF members here wear a medallion around their necks bearing the words, "Sons of Liberty."

"We are for a free market, the rights of private property and freedom from force, threats of force and coercion of any kind," Rohrabacher said.

"But most of all, we favor the freedom of the individual. Anything the individual wants to do should be allowed as long as he isn't hurting someone else."

Rohrabacher said his organization fills a large void among younger people who don't like the standard conservative's tendency to dictate morals and the standard liberal's desire to bring government into every facet of their lives.

"We had a young man come into the organization recently who was an avowed Democrat. He was a guitar player and had found out that his freedom to make a living in music was regulated by the unions and the coercive force of union leaders.

"Needless to say, he was ripe for an organization that stood for his right to play his guitar whenever and wherever he wanted for whatever amount of money he was worth."

Rohrabacher, who said his group considers itself "libertarian," is also against a number of things.

"We are against taxation of any kind. We are against the draft because it is not in the tradition of our country to force an individual into circumstances he does not want. And we are against public schools because they use force to get students to attend and they use force to get their financing."

Rohrabacher said the state should sell the University of California system and the state college system and use the money for low interest loans to students who can't afford to pay tuition to private schools.

"You can bet that would bring an end to campus violence," he said. "Private owners of colleges don't have to put up with what taxpayers do."

Rohrabacher said the biggest problem of his sprouting young organization is getting operating funds.

"The old established conservative organizations control the funds so we are on our own. Right now we are trying to get out of our small office in Seal Beach and get a larger place in the central part of the county to take care of our growth. It's going to take money to do this."

Rohrabacher and his group probably speak the language of most of Orange County's young conservatives.

And, with the average age in the county dropping from 31.7 to 25.5 since 1950, the number of persons in the "young conservative" bracket probably is larger than those who still subscribe to the old line.

The bulk of the conservatives, however, are those whose political activity begins and ends in the voting booth. And most of these probably fit somewhere between the old and the new conservative.

Typical of this conservative is the young Garden Grove man who was interviewed on his political philosophy.

"You might call my philosophy a selfish one," the 30-year-old office worker said.

"I feel I have certain capabilities that will make me and my family well off some day. The biggest roadblock I can see is the federal government. It takes my money and passes laws that makes it useless for a young man to work hard and excel. It wants to equalize me. I don't want to be equal. I want to be better."

And another young man from Santa Ana said he is conservative simply because he wants to be left alone.

"It's a matter of personal freedom with me," he said. "Government nowadays pokes its long nose into my life and it just plain irritates hell out of me.

"So I do what I can to support conservative candidates who stand for a little less government and a little more individual."

Conservatives Vent Wrath on State, Federal Agencies

There are those who suggest the Indians who occupied the territory of Orange County before the Spaniards probably were conservatives.

Jesting or not, it is true that the county has been counted in the conservative camp for as long as most people can remember.

Criticism of "big government" and "creeping socialism" has been way of life for a great many native Orange Countians.

Strangely, however, the wrath of the conservative here has been directed almost exclusively at state and national governmental agencies while local government seems to be nearly immune to the criticism.

City and county governments have grown and prospered as well in this county as in other areas.

There has been scattered opposition to this growth, but conservatives never have mounted a solid front against local government as they have against the federal government.

Taxing and spending, the absolute gauge on growth of government, goes on in city halls, school districts and the county seat here with unstinted monotony.

However, comparative figures show Orange County cities, and the county government, spend less than governments in other counties.

Among the cities here, Garden Grove spending habits would seem most to represent a conservative government. It spent $60.61 per capita on city government in the 1967–68 fiscal year.

Santa Ana spent $87.45 and Anaheim $109.88. The state average for that year was $111.01 for the 20 largest cities.

The county government, during the same year, spent $104 for each citizen in the county. San Bernardino spent $101 and Los Angeles $142.

The spending levels of local government in Orange County were among the lowest in the state, but if there were a scale to compare political attitudes with actual spending, conservatives here would be made to look like all talk and no action.

Walter Knott, one of Orange County's leading conservatives, said he has no explanation for this curious pattern in the county.

"I would suspect that most of our politically active conservatives concentrate their energies on electing candidates to state and national offices," he said.

Knott also said that conservatives are strongly in favor of local government over regional or national government and may tend to forgive some extravagances in the name of local control.

There are some situations locally, however, where conservative philosophy has been a dominating factor.

Students for Democratic Society have found the ground in Orange County none too fertile. They have established chapters at the

two four-year colleges in the county, but have been rejected at most of the junior colleges.

And the prime target of conservatives—federal aid—met with almost immovable resistance here until the last few years when the dam was broken by the so-called war on poverty.

Now the conservatives are focused on the "law and order" theme which apparently is the prime factor in the swing toward conservatism around the country.

It is a natural rallying point for conservatives who are strong on constitutional law and who find their opponents in the fracas to be their familiar old foe—the liberals.

But this time the conservatives have an issue the nonpolitical public can be caught up in and it appears considerable political hay is being made.

Not only are conservative candidates finding a receptive public, but liberals are suffering from a growing stigma that may prove disastrous.

And the conservatives have been capitalizing on the swing in sentiment brought about by the "law and order" theme to sell other aspects of their philosophy previously ignored by much of the public.

In the same breath they are talking to the public about such old standbys as the "welfare state" and "liberal courts" that "coddle and encourage" the lazy and the criminal.

The success of this new crusade by conservatives is vouched for by recent elections in Los Angeles, New York and other metropolitan areas where the more conservative candidates have knocked off formidable opponents.

Whether this new conservative strength is part of a major change in the country or just a passing whim remains to be seen.

But Orange County conservatives can take heart that their revered ideology may take hold outside the county.

ROCKY MARCIANO

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. CONTE. Mr. Speaker, I want to take a moment to pay tribute to one of the greatest sportsmen who ever lived. Rocky Marciano, the undefeated heavyweight champion of the world, is dead and the sports world is greatly diminished by his passing.

They held a funeral service in Brockton, Mass., today and many were there, the famous and the unknown. Celebrities from all walks of life came because they had gotten to know Marciano after he became that most unique of sports heroes, the heavyweight champion. And they found after meeting him that he was more than just a sports hero. He was warm and likable and it was good to be with him.

The others came because they knew Rocky way back in the days when his name was Marchegiano. They knew the family and they knew the young kid who, without ever learning to be a stylist, fought his way on sheer guts, raw power, and stamina into the single top position in the boxing world.

I was very fortunate in counting Rocky as one of my good friends. When the news of his death came I thought immediately of a day, just a couple of years ago, when Rocky was at my home in Pittsfield for dinner following his appearance at a communion breakfast. My late mother, who loved to cook big meals, was made a Marciano fan for life because Rocky ate everything on the table.

Rocky flew out to Pittsfield that day to address the breakfast because he had promised a friend he would. Later, he hopped in a small plane and flew back to Boston to take part in a testimonial for another friend. That was the way he was. Friendships meant a lot to Rocky Marciano.

"The Brockton Strongman" was a magnificent fighter, a warm and modest man, and a great example for our youth. I join with the millions throughout the world who mourn the death of such a fine man.

MORE SPEED ON AUTO POLLUTION

HON. EDWARD I. KOCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. KOCH. Mr. Speaker, this week we will be extending for 1 year the authority of section 104 of the Clean Air Act which relates to research and development in the prevention of air pollution resulting from the combustion of fuels. It is this program that has the responsibility for finding the formula which will relieve our cities of that strangulating pollution caused by auto emissions.

The work done under this section, as well as the total Clean Air Act, will be very important in providing a healthy environment for the decades to come and for succeeding generations. I support this program and I support the intentions of H.R. 12085 which will give this administration greater flexibility in conducting its research programs.

But, I think that this opportunity should be used by the Congress to stress the urgency of the auto pollution problem and the need for dramatic change, indeed even if necessary, the abolition of the air polluting internal combustion engine. Today, the automobile is responsible for dumping more than 90 million tons of pollutants into the atmosphere each year, more than twice as much as any other single pollutant. The automobile accounts for 91 percent of all carbon monoxide, 63 percent of the unburned hydrocarbons, and 48 percent of the oxides of nitrogen emitted from all sources.

Los Angeles County, most notorious for its pollution problems, in January 1967 found 25 million pounds of contaminents in its atmosphere, 85 percent of which was caused by auto emissions. And in 1 year doctors in that city advised 10,000 persons to move away because their lives would otherwise be jeopardized by the exhaust emissions of the 3.5 million automobiles.

One cannot overrate the problem that exists and the forecasts for the next decade. The President last week in one of his most unimaginative statements to date set 1990 as the target date for a low pollution vehicle. We cannot wait until 1990. Indeed there are experts in this field who predict that by 1990 pollution in some cities will be so heavy that they will be uninhabitable.

I urge the National Pollution Control Administration to act now and with far greater speed and commitment than has been evidenced in pursuing its program for finding better internal combustion control devices and in the development of unconventional engines and that it not approach the problem as though it had until 1990.

Surely, if our country can engineer its way to the moon and back, we should be able to devise ways to measurably reduce auto pollution.

Detroit has been very reluctant to pursue the development of other than gasoline engines—such as steam or electrically driven systems. But, it is in these unconventional engines that the greatest hope for pollution free, or low pollution vehicles, lies. And while understandably there are some who wonder how steam engines compare in providing the power of conventional gasoline powered vehicles, prototype tests actually show that these unconventional engines can deliver twice the power of conventional engines.

Detroit has also been reluctant to pursue the development of more customary automotive air pollution control devices. While spending over a billion dollars for model changes, this industry spends but a mere million dollars for pollution control. And, now there is a civil case filed by the Justice Department against the Automobile Manufacturers Association and its principal members for a 15-year conspiracy to suppress research, development and application of automotive air pollution control devices.

Today I am joining with 18 other Congressmen in sending a letter to Attorney General John Mitchell urging that a full trial be pursued in this matter so that the facts on pollution might be made public and further so that if the auto industry is indeed guilty of such reprehensible collusion, running contrary to the public's good health, it should be held responsible just like any other law violator.

A LANDMARK IN SCHOOL RACIAL INTEGRATION: BERKELEY, CALIF.

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. COHELAN. Mr. Speaker, as the 1969–70 school year begins, we are reminded of both the successes and the failures in implementing school integration.

I have noted in the news media in the past few weeks that many of the school districts in this country, both North and South, have delayed or refused to implement court-ordered integration plans. These districts continually raise the ob-

jection that not enough time has been allowed to carry out these plans for racially balanced schools.

For the information of my colleagues, I wish to insert in the RECORD a study written by Mike M. Milstein and Dean E. Hoch. Mr. Milstein is assistant professor of education at the State University of New York at Buffalo, and Mr. Hoch is a doctoral student in the School of Education at the University of California at Berkeley.

This study clearly shows that integration can, and does, provide quality education for all students and can be gained with a degree of cooperation and educational statesmanship.

The Berkeley experience should be an example to all the many who have blocked the opportunity for many of our young citizens to enjoy the education which is rightfully theirs.

At this point I would like to have this study placed in the RECORD:

A LANDMARK IN SCHOOL RACIAL INTEGRATION: BERKELEY, CALIF.

(By Mike M. Milstein and Dean E. Hoch*)

This is a rare success story, but it reports no miracles. Vision, planning, hard work, and educational statesmanship were the essential ingredients.

After an agonizing period of educational decision making, a new era has begun in Berkeley, California. With the integration of its elementary schools in the fall of 1968, Berkeley became the first city with a population of 100,000 or more to integrate its public schools fully from kindergarten through high school. The U.S. Commissioner of Education wired Neil V. Sullivan, superintendent of the Berkeley Public Schools (who has since become Commissioner of Education in Massachusetts), saying, "You have struck a blow for justice that will have an impact far beyond the limits of Berkeley." Other school districts across the country have experimented with integration, but never before has a major community assured *that all schools will approximate the racial composition of the total school student body.*

In the short span of one decade the Berkeley district has changed from one which could be characterized as tranquil and nonprogressive to one which is capturing educational headlines because of its exciting innovativeness. Between 1958 and 1968 the district was shaken by the battle waged between pro- and anti-integration community groups. It has emerged from this conflict as a leader among school districts pursuing integration.

Tremendous pressure has been mobilized to achieve integration across the nation. Such demands have often been challenged by school boards and community leaders who have not been particularly sympathetic. Such was the case in Berkeley. Certainly the Berkeley school integration story holds meaning for other communities struggling to establish peaceful school integration. The extensive integration program in Berkeley is the product of much the same kind of controversy, debate, and study being carried on by both citizens and educators in many other districts today.

NAACP DEMAND, SCHOOL RESPONSE

As with most major public policy modifications, school integration is the result of specific demands for action. This happened in Berkeley in January, 1958, when the National Association for the Advancement of Colored People, Berkeley branch, told the Berkeley Board of Education that ". . . the racially separated schools in the Negro community run the risk, because of peculiar problems of cultural or educational unreadiness, of being considered inferior." The NAACP petitioned the board for action in the predominantly Negro schools, which, it said, were characterized by a "high degree of transiency, cultural unreadiness, latent prejudice, teacher inadequacies, and disciplinary problems." [1]

This first thrust for change, culminating in the NAACP demand, led to a board-appointed study committee of 14 lay persons which became known, after its chairman, as the Staats Committee. The board charged the Staats Committee with studying in-service programs dealing with minority groups and with exploring possible avenues of cooperation in racial relations among school, home, and community. In October, 1959, the Staats Committee reported that school segregation closely followed housing patterns; curriculum was uniform in the schools, but grouping patterns tended to segregate Negroes academically *within* the schools; the curriculum did not cover minority contributions adequately; the level of performance of minority groups in the elementary grades was not as high as it should have been; and, finally, these matters were not being discussed freely. The committee recommended that inter-school projects, including exchange visits, should be initiated, counselors should not arbitrarily place lower socioeconomic children in "job orientation" tracks, and school-community relations should be improved.[2] Although the committee did not recommend racial integration, it should be remembered that this first agonizing look at the problem opened the door to further and more ambitious proposals. However small this achievement may now look, it was much more than the neighboring Oakland School system was doing. At that time Oakland did not even admit it had a segregation problem.

CHANGING OF THE GUARD

The incumbent superintendent, hoping to end his career in relative tranquility and sensing the vastly changing environment surrounding his school system, announced his retirement at the time work of the Staats Committee was getting under way. The first notion of the board, composed of four "conservatives" and one "liberal," was to choose a successor from top aides within the district. Members of the central staff expressed concern that these candidates were members of the incumbent superintendent's "establishment" and resistant to *any* change. The need to retain staff cooperation led the board to seek an outside compromise candidate.

Demands by minority group representatives—first the NAACP and later the Congress for Racial Equality—and the appointment of an outsider as superintendent (C. H. Wennerberg, who was lured away from a white middle-class Southern California school district) were followed by a regular school board election. Reflecting the changing political climate of the community, a second liberal was elected. Soon after, one of the three conservatives resigned. Unable to agree on an appointment, the split board left the choice of a replacement to the community at the next regular election. Another liberal (a Negro) was elected; for the first time, liberals held a majority on the board.

With the changing of the guard, school officials began to modify procedures to reflect community demands. Personnel policy was re-examined so that hiring and placing of personnel would be decided strictly on merit. As a result, the number of Negro professional personnel in the district rose by three percent (from 7.3 percent of the total in 1960 and 10.3 percent in 1963).[3] But until a new director of personnel was appointed there was little effort to place Negro teachers in other than ghetto schools. Voluntary groups of teachers formed to discuss the Staats Report, seek alternatives, and make the curriculum more relevant to minority groups. Several educational enrichment programs were initiated and community relations efforts became more sophisticated and effective. The board and the administration began to adopt the philosophy that an informed citizenry is essential if there is to be sympathetic understanding of educational problems.

In short, approaches to "the problem" were multiple—aimed at school-community relations, personnel policy, in-service training, educational programs, counseling, and other pertinent areas. In the relatively short period of four years, the school system was opening up and accepting the challenge of meeting the needs of the changing school population. Both the community and the school system were actively working toward providing a better education for *all* students.

CORE AND INTEGRATION

On May 1, 1962, the Berkeley chapter of CORE, stating that "segregated education in any form—black, white, or yellow—is educationally undesirable," challenged the board to "formulate and put into operation a program for elimination of de facto segregation." [4] The board responded by appointing a racially mixed study group which became known as the Hadsell Committee after its chairman, John Hadsell. A year and a half later this committee presented its findings and recommendations. Where the Staats Committee worked around the edges of the segregation issue, the Hadsell Committee met it head on, stating that "recognition of basic human rights and dignity is the solution to the problems of discrimination." [5]

The committee found that all of Berkeley's 14 elementary schools were de facto segregated, and that only one of three junior highs and the single high school approximated the racial composition of the district's total student body. Even in the one racially balanced junior high, most Negro students were segregated in the lower academic tracks and in the high school, largely due to previous segregation, Caucasian and Negro students practiced self-segregation. Linking segregated education and achievement, the committee noted that intelligence scores among minority group students were underestimations of their true intelligence.[6] The committee found achievement differentials to be greater than ability differentials. Most important, children of equal ability were not learning language skills as well in largely Negro-populated schools as they were in predominantly Caucasian schools.

The Hadsell Committee's recommendations went well beyond those of the Staats Committee. The committee recommended 1) elementary school integration, either through redistricting, limited open enrollment, or through the "sister school concept" of Caucasian and Negro elementary schools working together; and 2) integration of the junior high schools through redistricting or limited open enrollment.[7] The report was widely distributed and discussed at PTA and other civic group meetings. Two public hearings, one drawing more than 2,000 people, were held. Finding wide community support, the board asked the administration to study the report and develop alternative means of achieving integration.

OPERATIONALIZING THE OBJECTIVE

An increasingly vocal minority group leadership and a changing school board were solid indications that environmental conditions surrounding the system were changing. How was this new environmental posture to be fed back into the system itself? How were the backers of integration to gain or-

Footnotes at end of article.

ganizational commitment to an innovation of such magnitude? First Wennerberg, and later Sullivan, employed a variety of means to achieve the ambitious objective of complete school racial integration:

Task Groups. The first effort was to form district-wide task groups to come up with proposals for implementing integration plans. Involved teachers and administrators who provided needed detailed planning felt themselves a part of the process. Membership on the task groups was broad enough to include negative critics of integration so that a necessary sounding board might be provided *before* innovations were implemented.

One of the task groups came up with the Ramsey Plan (named after the teacher who originally developed it) to achieve integration in the junior highs. Before integration only one junior high school approximated the racial composition of the total school population (54 percent Caucasian, 37.3 percent Negro, and 8.7 percent Oriental and "other").[8] The other two were largely de facto segregated. The Ramsey Plan as adopted and instituted by the board led to the housing of all seventh- and eighth-graders in two junior highs. All ninth-graders were housed at the third junior high. Attendance boundaries were altered to achieve a racial balance in the two seventh- and eighth-grade schools. Teachers were asked where they would prefer to teach and, in almost all cases, were given their first choice. Counselors were transferred with their counselees to lend a degree continuity to student programs.

The board accepted the Ramsey Plan but completely rejected another task group recommendation for elementary integration. This proposal, based on the Princeton Plan, would have necessitated the busing of approximately 50 percent of the district's primary and elementary pupils. The board felt that this was more than the community was ready or willing to accept. In our opinion this was a politically astute move, for it allowed the community to become accustomed to integration in a smaller but still meaningful dose, preparing parents for an effective and complete integration only four years later.

Finances. Backing up its commitment with dollars, the board allocated $200,000 in the first fiscal year of the integration plan for projects which "compensate for gaps in experiences and skills which some children bring to school."[9] Further monies were received from state programs earmarked for compensatory education and from the federally funded Elementary and Secondary Education Act of 1965.

Inter-group. With the help of university advisors, a district-wide group of teachers, labeled Inter-group, was organized to hold workshops, carry on group discussions, and study such things as Negro life, Negro history, and minority coverage in textbooks. Much learning takes place within the group, but more important, the feedback into the schools where open debate has become a reality has been an important factor in staff acceptance of integration and compensatory education programs. Inter-group, which has now become a permanent department called the Office of Human Relations, has grown from 15 voluntary school personnel in 1960 to 300 active participants this year. Spreading the value of the group beyond the school staff, it is now admitting members of the community.

Gaining Staff Commitment. At the classroom level, it is necessary to make teachers feel that the community supports the change. Parents were urged to come to the schools to discuss the issues. Community meetings were consciously pursued and parents were urged to play teaching roles in pre-school programs and as teacher aides. The result has been that many formerly critical parents are now supportive, and teachers feel they are not "fighting a losing battle."

Those administrators who were obstructionists or who refused to participate in the process had to be side-stepped or removed. As they were isolated and identified they were transferred to positions where they would be rendered harmless, encouraged to retire, or helped to find positions in other systems. An immediate result has been a boost in morale for staff members who are committed to racial integration in the schools.

To orient other administrators and minimize indirect methods of communications, several university personnel were employed to lead a group of administrators in sensitivity training (T-grouping). Some members of this group emerged as key participants who were "able to get things done" in the school district. Settling problems instead of imbedding them in an area as touchy as racial relations is critical.

MEETING COMMUNITY RESISTANCE

After the Board of Education voted to put the Ramsey Plan into effect in the fall of 1964, the opponents of integration organized as the Parents Association for Neighborhood Schools (PANS) and demanded removal of the board members who favored the plan. Supporters of integration formed the Berkeley Friends of Better Schools to counteract PANS. A moment of truth had been reached. The ensuing recall election was to indicate whether the schools would be allowed to move ahead with integration.

The result was an overwhelming vote of confidence for school integration. Incumbents who stayed to face the recall election retained their seats on the board by three-to-two victory margins. This election, which saw one of the largest voter turnouts in any Berkeley School Board election, was taken as the final signal for the board to move ahead with its integration plans. There were other positive indications of acceptance of integration in the schools. These included a reduced rate of teacher turnover, an increased student enrollment, and the passage of a tax election at a time when similar tax elections were failing across the nation.

ENTER SUPERINTENDENT SULLIVAN

In the fall of 1963, as final plans were being drawn up to institute the long-awaited integration program, Superintendent Wennerberg, deciding to concentrate on full-time graduate studies, tendered his resignation effective at the end of the school year. Wennerberg was an in-fighter, bloodied in battle. With his resignation, a new superintendent would be able to take advantage of the gains without having to contend with all of the accompanying animosities that developed in the war on segregation. The board set out to replace Wennerberg with a man who was known to be sympathetic to racial integration in the schools.

In the midst of the recall election, Neil Sullivan accepted the superintendency. His professional experience included chief educational administrator roles in suburban New York and New Hampshire communities. He was John F. Kennedy's hand-picked head of the "Free Schools" of Prince Edward County, Virginia. His commitment to integration and his aim to make Berkeley schools "worthy of imitation" buoyed the hopes of Board of Education supporters.

At Sullivan's request, the board established a 138-member School Master Plan Committee, two-thirds of whom were lay citizens, to study and make recommendations concerning the educational program. The committee presented a comprehensive report which urged immediate "racial and socioeconomic integration of students in Berkeley schools."[10] With this report as a guideline, the district was off and running towards the completion of its integration program.

The first major step was a pilot test run under the district's ESEA Title I program. In the spring of 1966, 250 students from the predominantly Negro South and West Berkeley elementary schools were bused to the predominantly Caucasian schools in the northeastern part of the city. The operation, which proved effective despite alarmist forebodings by critics, was well received by participating students and families of both races. Racial barriers were reduced as students became acquainted with each other, but most important, Sullivan contends that "the pilot integration program involving the busing of 250 Negro children to predominantly Caucasian schools . . . demonstrated that integration causes the achievement of Negro pupils to rise without causing any corresponding decline in the achievement of white pupils."[11]

These positive indicators, combined with extensive pressure from the Negro community and many teachers, convinced the board that the time to complete its integration program had arrived. Therefore, it unanimously adopted a resolution to have the administration present plans which would permit desegregation of all elementary schools by September, 1968. Sullivan, in turn, encouraged his administrators and teachers to submit ideas on how to best integrate the schools.

Two task groups were formed. One concentrated on the instructional component of integration to assure that increased achievement would be possible, while the other developed the organizational structure necessary for implementation of the desegregation plans. A lay Citizen Advisory and Review Committee was also formed to review the superintendent's recommendations.

Desegregation proposals were reviewed for feasibility in terms of the following criteria: (1) provision of racial balance in all elementary schools based upon actual school-wide racial enrollment percentages; (2) minimum school plant conversion costs; (3) equitable participation of children from all parts of the city in any necessary busing; (4) a minimum number of school changes in a child's career; and (5) acceptability to the community.[12]

From the proposals presented, the board selected a K–3, 4–6 plan. The plan requires all grades K–3 children to attend schools in predominantly white neighborhoods and all grades 4–6 children to attend schools in predominantly Negro neighborhoods. This two-way busing, unique for an urban area of this size, is almost identical with the original staff-proposed elementary integration plan of 1964. It requires the transportation of 3,400 students but provides a fair racial, socioeconomic, and achievement balance.

This momentous decision has made Berkeley (a community with a significant Negro minority) the first United States city of 100,000 or more population to achieve *total school desegregation.*

Sullivan has said, "We are not simply moving children's bodies. Every classroom will be integrated, racially and socioeconomically. Quality education will be maintained . . . Equally important, we will be changing attitudes, thereby preventing the growth of prejudice in the young."[13]

INTEGRATION ISSUES

Two major concerns articulated by integration opponents dealt with the safety of busing and the effects of integration on the quality of education in the schools. The concern over busing was reduced when the administration went to the community with evidence that pointed out that "the safest time in a child's school day is while riding in a school bus."[14]

The issue of quality education was, and is, a very real concern. Many feel that although integration might cause the achievement of Negro pupils to rise, it could well

Footnotes at end of article.

produce conditions detrimental to white student achievement. The few studies carried out in this area indicate that minority students tend to achieve at higher levels when racial mixing takes place, and even more important, that Caucasian student-achievement does not suffer. The administration publicized the much discussed Coleman Report, which concluded that ". . . if a white pupil from a home that is strongly and effectively supportive of eduction is put in a school where most pupils do not come from such homes, his achievement will be little different than if he were in a school composed of others like himself. But if a minority pupil from a home without much educational strength is put with schoolmates with strong educational backgrounds, his achievement is likely to increase." [15]

The administration claims that student achievement will not be endangered in Berkeley. In support of this objective, lower pupil-teacher ratios, special education programs, and an excellent elementary library program have been established. Many teacher aides and volunteer lay assistants have been employed. As a check on achievement, the board has asked the University of California to evaluate the results of its integration activities. Baseline data gathered before school closed in June, 1968, compared with data to be gathered at later dates will permit analysis of changes in individual student achievement, behavior, and attitudes.

IN CLOSING

The Berkeley integration success story is complex. Clearly, concomitant circumstances such as the civil rights movement and the growing liberalism of the Berkeley community have had an impact. The board, which has undergone a drastic reorganization, and the leadership catalyst supplied by Wennerberg and Sullivan were invaluable components. Together, the vast web of interrelationships involving many internal and external forces acted upon the schools to make them susceptible to change.

One can find comparable processes at work in other urban communities as demands for a more equitable distribution of students and resources increase. These communities are beginning to turn away board members who are unwilling or unable to meet the challenge. The same may happen to administrators who refuse to move with the times.

Whether one is talking about Berkeley, Buffalo, or Boston, the problem is there and must be dealt with. A new element, the changing racial composition of the schools, is knocking at the doors. Responses to the problem must transcend education to include other problem areas such as housing and employment, but the schools may well be an excellent place to begin. Realistically, school boards and educational administrators no longer have the luxury of deferring the problem.

INFORMATION, THE TAX LAW, AND THE LEGISLATIVE PROCESS

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. DADDARIO. Mr. Speaker, the legislation recently passed by the House to revise the tax law has caused considerable discussion because of possible effects on advice and information for the Congress. I am concerned that we not lose the valuable inputs which have come to us from professional technical societies.

Mr. Thomas C. Jorling, who is presently on the staff of the Senate Public Works Committee, has written a well researched article for the April 1969 issue of the Oregon Law Review. I commend it to the attention of the House and Senate as we continue to examine the possible effects of this legislation. I insert the article, "Information, the Tax Law, and the Legislative Process," in the RECORD at this point:

INFORMATION, THE TAX LAW, AND THE LEGISLATIVE PROCESS

(By Thomas C. Jorling*)

INTRODUCTION

It is essential that legislators have access to the most complete and efficient flow of relevant information possible.[1] This article represents a limited analysis of the flow of information from the citizenry, personal and corporate, in the legislative process. From the standpoint of the potential conveyor of such information, one crucial factor in the conveyance is the expense involved, and one factor directly influencing expense is the applicability of the federal income tax law. Consequently, the discussion herein will be limited to the effect of the federal income tax law on the flow of certain information in the legislative process.

THE PROBLEM

As indicated by a recent Internal Revenue Service letter to the Sierra Club,[2] the current tax law grants no special tax treatment to certain nonprofit citizens, or citizen groups, who advocate, oppose, or otherwise participate in the legislative process in a meaningful way; in fact, it can be argued that the tax law affirmatively limits such participation.[3] This conclusion is based on the following analysis of the interrelationships and effects of various sections of the Internal Revenue Code of 1954.

Section 170(c)(2) of the Code defines (for purposes relevant to this discussion) a charitable contribution entitling a donating individual or corporation to a deduction, as a contribution or gift to a corporation, trust, community chest, fund or foundation organized and operated exclusively for religious, charitable, scientific, literary, or educational purposes, for the prevention of cruelty to children or animals, and no substantial part of the activities of which is carrying on propaganda, or otherwise attempting, to influence legislation.[4]

Section 501(c) of the code provides that certain forms of organization are exempt from taxation; for purposes of this article, subsections 501(c)(3) and 501(c)(4) are important. Subsection 501(c)(3) is closely related to section 170(c)(2) in both its language and operation.[5] For the class of organizations for which section 170(c)(2) allows a donor to take a deduction in the amount of his gift, section 501(c)(3) grants exempt status. Thus, if an individual or a corporation makes a gift to an organization meeting the standards of section 501(c)(3), such individual or corporation is entitled to a deduction under section 170(c)(2). Prior to the recent Internal Revenue Service action this represented the Sierra Club's status; the Club was exempt under section 501(c)(3) and a donor could take a deduction under section 170(c)(2). The effect of the Internal Revenue Service action was to remove the Club's section 501(c)(3) status, and, therefore, deny a deduction to those making donations. It should be pointed out that this action did not necessarily remove the exempt status of the Club as it can still qualify for such status under section 501(c)(4), which provides an exemption for organizations not organized for profit but operated exclusively for the promotion of social welfare. However, it should be emphasized, section 501(c)(4) status alone does not enable a donor to take a charitable deduction for a contribution to such organizations.

The Sierra Club represents only one of a large number of nonprofit organizations extant in this country which generally have as their central objective the conservation of some aspect of the natural environment.[6] These organizations cover a broad spectrum of interests ranging from very specific to very broad, all sharing a common fundamental interest in conservation and the environment of man. When we examined this in the context of the income tax law's influence on the legislative process, however, it is important to look beyond organizations of this type and determine if, and what, other organizations are similarly affected by the law and thereby possibly precluded from meaningful participation in the legislative process.

Organizations such as the American Academy for the Advancement of Science, the Ecological Society of America, the American Zoological Society, the American Academy for Political and Social Science, and many other scientific, academic, or professional organizations, whose members constitute some of the most knowledgeable people in our society in areas which relate directly to the commonweal, should actively participate in the legislative process.[7] The information and the opinions of these types of organizations, and their members, should be made available in the same fashion as is the information and opinions of other groups in our society.[8] This would represent politics in a truly noble form. Our future can tolerate nothing less.

This leads, then, to a second consideration: the comparison of the involvement

Footnotes at end of article.

in legislative activities by nonprofit organizations concerned generally with science, the arts and letters, and the environment of man with similar involvement by organizations of private enterprise. In 1962 Congress amended Internal Revenue Code of 1954, section 162 (regarding trade or business expenses) to allow an income tax deduction for any expense by an individual or corporation which is incurred in carrying on any trade or business in direct connection with legislation or proposed legislation of direct interest to the taxpayer and any expense in direct connection with communication of information between the taxpayer and an organization of which he is a member with respect to legislation or proposed legislation of direct interest to the taxpayer; the amendment further provided that the taxpayer may deduct that portion of dues paid to any organization which can be attributed to lobbying activities of interest to the taxpayer's trade or business carried on by such organization.[9] Regulations promulgated pursuant to this amended section establish a test to determine whether legislation or proposed legislation will, or may reasonably be expected to, directly affect the trade or business of the taxpayer. Whether the legislative effect will be beneficial or detrimental to the trade or business is immaterial.[10] In addition to the direct interest limitation, section 162(e)(2) further limits the section 162(a) expense deduction to exclude any expenses for participation in, or intervention in, any political campaign on behalf of a candidate for public office, or any expense resulting from any attempt to influence the general public, or segment thereof, with respect to legislative matters, elections, or referendums. Even with such limitations, section 162(e) provides, as intended, a clear tax stimulus for private industrial organizations to expend funds in support of, or in opposition to, legislation affecting their trade or business, and to take a deduction for such expenses.[11]

Furthermore, it appears that a group of like-minded private enterprise organizations could establish a nonprofit corporation to conduct lobbying activities in support of their interests, make deductible contributions to it, cause the corporation to achieve exempt status under section 501(c)(6) as a Business League, and thereby further concentrate their lobbying power.

A hypothetical legislative proposal will serve to illustrate the relative lobbying strengths which can be brought to bear in support of divergent interests. Assume there is proposed legislation to support the research and development of a certain instrument of technology which will have undetermined effects on some aspect of man's habitation—for instance, a supersonic transport. In support of this proposal the aviation industry, including manufacturers, carriers, and related businesses, could wield great influence in support of such proposals and deduct all expenses which could meet the broad direct interest test of Treas. Reg. sec. 1.162-20(c)(2)(ii)(*b*)(*1*)(*i*). On the other hand, if there were some feeling among certain scientific, academic, or general public interest groups or individuals that certain aspects of the technology to be supported by legislation represented a possible threat to the public welfare, such groups would be hard put to marshal support and advance their cause in the legislative process. Any substantial effort to influence the legislation could cause an interested nonprofit organization to lose its section 501(c)(3) status and possibly jeopardize its very existence through consequent loss of contributions. Thus, most groups would refrain from becoming involved in the legislative process, no matter how deep the conviction.[12] Consequently, the present tax law contributes to a great disparity of power between opposing interests relating to legislation. Whether the instrument is a supersonic transport, a superhighway, a sea-level canal, an electronic device, pollution, or a dam, the result is the same. Even more compelling is the fact that the legislature has acted with incomplete evidence before it. In view of the exponential rate of scientific and technological growth, it is essential that this deficiency be remedied as soon as possible.

Other examples abound. There is being advanced a proposal to create a new national park in the northern reaches of the Cascade Mountains in the State of Washington. This area is at present a National Forest. Under the mining laws applicable to the National Forests, the Kennecott Copper Company has acquired mineral rights for certain lands included within the proposed park.[13] Such rights could, of course, be affected by the establishment of a National Park. In support of its position opposing the proposed National Park, the Company and, indeed, the copper industry in general can spend great sums of money in attempting to influence congressional disposition of proposed legislation and, at the same time, be afforded a tax deduction for such expenditures under section 162(e). On the other hand, a citizen or organization advocating the park for the sake of general social or conservation interests could not take a deduction for expenses incurred in attempting to influence the form of legislation. More importantly, an organization representing many interested and concerned individuals could not act significantly to influence legislation and maintain its section 501(c)(3) status. Thus, concerned individuals who form many nonprofit interest groups are effectively precluded, or at least greatly restricted, from engaging in the legislative process. The result often is that these citizens and organizations are not involved in the legislative process to the extent they should be, or to the exent required by Congress if it is to make balanced and well-informed judgments.

When the disparate financial capacity typically existing between industrial corporations and interested citizens and citizens groups is added to this inequitable tax situation, the disparity in lobbying strength becomes even greater. Although the disparity in financial capacity will remain, the inequity in the tax law should be remedied.

A PROPOSAL

With this background, it is now possible to take the further step of offering recommendations. Underlying these recommendations is the belief that citizens, corporate and personal, who sponsor the advancement of science, social welfare, and other nonprofit causes should be accorded equal treatment with citizens who are engaged in trade or business under the tax law which effectively regulates involvement in the legislative process. It is essential that those who believe that a technological development might in some manner be harmful to the social welfare should have equal opportunity under the tax law to voice their concerns to the legislature. This is not to say all conservation, scientific, or other similar groups are without bias on all issues. What it does say is that they should have equal ability under the law to present their views. Nor is this meant to suggest that nonprofit organizations should be able to retain section 501(c)(3) status, lobby, and, without restriction, advocate to the general public their views on legislation. Such a situation would tilt the scale of lobbying power in favor of the nonprofit interest. What is desired is simply the achievement of balance in the flow of information reaching the legislature.

Consequently, in addition to making applicable, ipso facto, the limitations of the Federal Regulation of Lobbying Act, the suggested amendment to the Internal Revenue Code advocated below would also adopt the limitation of section 162(e)(2) and thus deny section 501(c)(3) status to any nonprofit organization which participates in any campaign for political office or which attempts to influence the general public with respect to legislative matters.

Specifically, it is recommended that section 501(c)(3)[14] be amended by deleting the clause beginning "no part of the net earnings" to the end of the subsection and substituting therefor the following:

". . ., including appearances before, submission of statements to, or sending communications to, the committees, or individual members, of Congress or of any legislative body of a State, a possession of the United States, or a political subdivision of any of the foregoing with respect to legislation or proposed legislation of direct interest to the organization; no part of the net earnings of which inures to the benefit of any private shareholder or individual; no part of the activities of which is participating in, or intervening in, any political campaign on behalf of any candidate for public office, or in connection with any attempt to influence the general public or segments thereof, with respect to legislative matters, elections, or referendums."

Section 170(c)(2)(D)[15] should be amended by deleting the present paragraph (D) and substituting therefor limitations similar to those found in section 162(e)(2). Thus, section 170(c)(2)(D) would read as follows:

". . . no part of the activities of which is participating in, or intervening in, any political campaign on behalf of any candidate for public office or in connection with any attempt to influence the general public or segments thereof, with respect to legislative matters, elections, or referendums."

This amendment would place nonprofit organizations and trade or business organizations on an equal footing before the federal income tax law. However, there remain apparent distinctions and, of course, the practical effect of the proposed amendment to be considered.

The provision allowing business to deduct expenses for conducting activities supporting or opposing legislation of "direct interest"[16] is not immediately appropriate to limit many nonprofit organizations. The question will arise: What is of direct interest to the Ecological Society of America, the American Institute of Biological Sciences, the Conservation Foundation, the Sierra Club, etc.? It is clear the criteria used to determine direct interest for a trade or business are not suitable for a determination of direct interest to such groups. Consequently, a new set of criteria will necessarily have to be established to define the appropriate nexus between any given legislation and the nonprofit organization's purpose.

Nonprofit groups are presently required to file their corporate articles and other materials in support of an application for a declaration of section 501(c)(3) status. Precedent to a declaration of such status under the proposed section 501(c)(3), the applying organization could be required to state the nature of the legislative activity in which they intend to engage to enable the IRS to make a determination of consistency between the nonprofit purpose and legislative interest. In addition, any nonprofit group desiring to engage in permitted lobbying activity in legislative matters outside of those stated in the initial application for section 501(c)(3) status could be required by regulation to file an application for a permissive ruling setting forth the relationship of the purposes of the nonprofit group to the broadened legislative interest.

The relationship between purpose and legislative interest should not be narrowly interpreted. To do so would seriously undercut the benefit to Congress that this proposed amendment would bring, namely, better information on the effects of proposed legisla-

Footnotes at end of article.

tion. The message of the environmental crisis is clear. Technological development and environmental modification projects have, in addition to those readily apparent, many, and generally not evaluated, effects. A superhighway is more than a conduit of wheeled vehicles; it is an alteration of a substantial portion of the landscape. Similarly, many technological projects have wide ramifications on which Congress must have a wide spectrum of information if it is to act wisely and prudently.

It should be obvious that the amendment proposed would not operate to overturn the IRS ruling on the Sierra Club.[17] In fact, under the proposed amendment there would have been no issue; the Sierra Club could not obtain revised section 501(c)(3) status and still advocate to the general public, as it did, a legislative position. Therefore, some nonprofit organizations (and the Sierra Club might well be one), deciding that the proposed limitations are too restrictive, will not choose to apply for revised section 501(c)(3) status, and will choose, in the alternative, section 501(c)(4) status, which carries no limitations regarding legislative activity. Such an organization could not, of course, be dependent on eleemosynary intent contingent on a section 170 charitable deduction.

On the other hand, it is submitted that closer analysis of the legislative process clearly indicates the advantage of the legislative activity which would be permitted under the proposed amendment. In most instances, the die is cast on legislation long before it reaches the floor of either chamber, and often, even before it reaches committee hearing. Massive periodic letter writing at the public call of an interest group appears to have little real effect on the course of legislation. Conversely, the ultimate disposition of legislation is affected by the activities of professional liaison-lobbyists who have identified with, and maintain good and productive relationships with, key senators, congressmen, and staff personnel. In so doing, a professional lobbyist can acquire and furnish crucial information throughout the legislative process. It should be apparent that the interaction here described is dependent on a relationship of trust which only exists when the lobbyist is able to furnish useful and valid information. It is to be expected that scientific and other groups would furnish such information.

The effectiveness of this type of activity is not limited to the personal approach. Press coverage of the activities of Capitol Hill are as sensitive as they are extensive. Consequently, positions advocated by a nonprofit organization on specific legislation would reach the gamut of the communications media with the same, and possibly more effective, result as directly approaching the general public.

Another important consideration in weighing the merits of the proposed section 501(c)(3) status is the relationship of the educational purpose of most nonprofit organizations to permitted lobbying activity. It would not appear to take an inordinate amount of skill to combine legitimate educational activity having the effect of supporting a legislative position while avoiding the prohibition against attempts to influence the general public with respect to legislative matters.

In addition, for those who think that public exhortation on legislation is essential, it would appear that organizational alternatives are available. Thus, a small organization could be created and receive section 501(c)(4) status and have as its purpose the motivation of the general public regarding legislation. Caution would be required, especially regarding linkages with section 501(c)(3) organizations, but it is submitted that with the advice of counsel a legally supportable entity could be established which could usefully complement other nonprofit organizations without jeopardizing their section 501(c)(3) status.

CONCLUSION

It is the position of this writer that with intelligent management a nonprofit organization could more effectively furnish relevant information to Congress and accomplish legislative objectives by taking advantage of activities permitted under the proposed section 501(c)(3) amendment than it could by any other method, including solicitation of the general public. More importantly, Congress will have added effective channels of important information which now only trickles in from invited testimony. It is submitted that a desirable balance in the flow of information to the Congress will be achieved within the suggested framework.

The writer is a member of the American Academy for the Advancement of Science and the Ecological Society of America, but is not a member of any conservation organization. He is currently Minority Counsel to the United States Senate Committee on Public Works. He has also served as Assistant to the General Counsel, Smithsonian Institute, and in the Solicitor's Office of the United States Department of the Interior. The views expressed in this article are not necessarily those of the Senate Committee, the Smithsonian Institute, or the Department of the Interior.

[1] The population of the United States is over 200 million; given a similar rate of growth, the population will be 330 million by the year 2000. The population of the world is now in excess of 3 billion and given a similar rate of growth it will exceed 6 billion by the year 2000. NATIONAL ACADEMY OF SCIENCE, THE GROWTH OF WORLD POPULATION 1 (Pub. No. 1091, 1963). The rapid expansion of scientific research is such that more than 85 per cent of the scientists that have ever actively engaged in scientific research are active at the present time—with the result that scientific knowledge is doubling every ten years. *Panel on Science and Technology, Proceedings Before the Committee on Science and Astronautics,* 90th Cong., 1st Sess. 14 (Jan. 24, 1967). In 1950 there were fifteen computers operating in the United States; in 1966 the number reached 35,000; the projections for 1975 anticipate the number will exceed 85,000. McCarthy, Information, 215 SCIENTIFIC AMERICAN 65, 67 (Sept. 1966). The rate of social and technological change, for which these statistics merely represent an index, must be controlled and given direction for the benefit rather than exploitation, of mankind. Progress should provide for the broadening of human qualities, rather than their confinement.

[2] The Internal Revenue Service letter is reported at 7 CCH 1967 STAND. FED. TAX REP. par 63.67, at 71, 381. This letter gave notice to the Sierra Club that the IRS proposed to revoke its earlier ruling granting the Club exempt status under INT. REV. CODE of 1954, sec. 501(c)(3). The letter and the circumstances (and advisability) of this action have been the subject of recent law review notes which should be consulted for the facts and background of the Sierra Club case. *See* Note, *The Sierra Club, Political Activity, and Tax Exempt Charitable Status,* 55 GEO. L. J. 1128 (1967) and 55 CALIF. L. REV. 618 (1967).

[3] For a comprehensive discussion of the operation of the federal income tax law on tax exempt organizations, see STAFF OF HOUSE COMM. ON SCIENCE AND ASTRONAUTICS, 88th CONG., 2D SESS., SCIENTIFIC-TECHNICAL ADVICE FOR CONGRESS—NEEDS AND SOURCES 63 (Comm. Print 1964).

[4] Immediately a question arises as to the meaning of the "substantial" qualification. However, it is the position of this writer, as will become apparent below, that the remedies necessary to improve the law cannot be obtained by mere redefinition or modification of the word "substantial." *But see* 55 GEO. L. J., *supra* note 2, which discusses the history and case law of the "substantial" qualification and advocates redefinition.

[5] Sec. 501(c)(3) provides that exempt status may be granted to the following organizations: "Corporations, and any community chest, fund, or foundation, organized and operated exclusively for religious, charitable, scientific, testing for public safety, literary, or educational purposes, or for the prevention of cruelty to children or animals, no part of the net earnings of which inures to the benefit of any private shareholder or individual, no substantial part of the activities of which is carrying on propaganda, or otherwise attempting, to influence legislation, and which does not participate in, or intervene in (including the publishing or distributing of statements), any political campaign on behalf of any candidate for public office."

[6] *See generally* THE CONSERVATION DIRECTORY (1967), compiled by the National Wildlife Federation, 1412 N. W. 16th St., Washington, D.C. 20036, which contains a list of some 142 conservation organizations. This should in no way be interpreted as a classification of tax status; it is intended only as an index of the number of organizations concerned with conservation.

It may be helpful at this point to review the mechanics of how the tax law affects nonprofit organizations of the type discussed here. In most cases, the organizations are marginally capitalized and depend for their continued existence on contributions. One of the most important factors stimulating contributions is the ability of a contributor to take federal income tax deductions for such contributions. It is, therefore, necessary that the recipient organization meet the standards of a section 501(c)(3) organization. Such organizations are, therefore, extremely careful to avoid involvement in legislative affairs, for, without the section 501(c)(3) status (giving donors a deduction), it is possible that many of the organizations would fold.

[7] It is immediately conceded that the reticence of scientists and scientific organizations to become involved in legislative matters is not solely attributable to the income tax law. The aloofness and detachment from society of many scientists are major factors; and this detachment in the face of public support for the major portion of scientific research is somewhat incongruous. Amendment of the tax law is not a panacea, but it should serve as at least a portion of the span between the "two cultures": the scientific and general public communities. Another factor in the lack of participation in the legislative process may be the exercise of undue caution in interpretation of the tax law. This possibility is acknowledged in a recent letter that Congressman Emilio Q. Daddario (D-Conn.), Chairman of the House of Representatives Subcommittee on Science, Research, and Development, sent to the editor of SCIENCE in which he concluded: "I believe we should have a diversity of opinions in formulating science policy, and urge the participation of scientists everywhere. I can appreciate the hesitancy of organizations committing actions which would endanger their tax exempt status, but I believe that needless caution is a luxury we cannot afford in view of the issues facing society today." 160 SCIENCE 251 (1968).

[8] It is acknowledged that this will require compliance with the Federal Regulation of Lobbying Act, 60 Stat. 839 (1946), 2 U.S.C. sec. 261–270 (1964). Although there is often a stigma, at least in many people's minds, associated with "lobbying," lobbying is a most effective way of conveying information

to the legislature. It should be noted that the Lobbying Act was designed to apply "chiefly to three distinct classes of so-called lobbyists:

First: Those who do not visit the Capital but initiated propaganda. . . .

Second: The second class of lobbyists are those who are employed to come to the Capital under the false impression that they exert some powerful influence over Members of Congress . . .

Third: There is a third class of entirely honest and respectable representatives of business, professional, and philanthropic organizations who come to Washington openly and frankly to express their views for or against legislation, many of whom serve a useful and prefectly legitimate purpose in expressing the views and interpretations of their employers with respect to legislation which concerns them. They will likewise be required to register and state their compensation and the sources of their employment." S. Rep. No. 1400, 79th Cong., 2d Sess. 27 (1946).

There should certainly be no stigma attached to this last category. Interested citizens should engage enthusiastically in such legislative procedures.

[9] Pub. L. No. 87-834, sec. 3, 76 Stat. 960 (1962). As used in the Internal Revenue Code, "trade or business" is a term of art used to describe activities which occupy the time, attention, and labor of man in pursuit of profit. 4A J. Merten, Federal Income Taxation sec. 25.08 (rev. ed. 1966).

[10] Treas. Reg. sec. 1.162-20(c) (2) (ii) (b) (1) (i).

[11] The Senate Committee on Finance report accompanying the 1962 Internal Revenue Amendment Bill is enlightening on the purpose of the amendment granting a deduction to expenses incurred in lobbying. "It also is desirable that taxpayers who have information bearing on the impact of present laws, or proposed legislation, on their trade or business not be discouraged in making the information available to the Members of Congress or legislators in other levels of Government. The presentation of such information to the legislators is necessary to a proper evaluation on their part of the impact of present or proposed legislation." U.S. Code Cong & Ad. News 3325 (1962). It is submitted that the same logic applies to information issuing from nonprofit corporations, or other concerned citizens, particularly those qualified to judge the impact or potential impact, of present or proposed legislation on the well-being of man.

THE UNITED STATES: A THIRD-RATE MARITIME POWER?

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. FEIGHAN. Mr. Speaker, time is running out.

A continuing concern of mine has been the constant deterioration of our merchant marine fleet. This fleet, sometimes referred to as our fourth arm of defense, is in dire need of rejuvenation through an expanded shipbuilding program. Without such a program, the United States may suddenly come to realize that, as a maritime power, it is at best third rate.

The Labor-Management Maritime Committee, composed of major steamship lines representing some 70 percent of all ships in the liner trade, has published a brochure which effectively describes our national maritime dilemma. This brochure, published on December 6, 1968, is even more timely today than when it was originally written, and I would like to bring it to the attention of all my colleagues.

The brochure follows:

SUPPORT AN EXPANDED MERCHANT SHIPBUILDING PROGRAM

(NOTE.—This brochure sets forth in brief the rapidly widening construction gap between U.S. and foreign shipbuilding and the reasons therefore. A stalemate in U.S. merchant shipbuilding continues to persist. It not only impedes the promotion of our foreign commerce but endangers the national security by weakening our overall sea-power capability. Unless an effective merchant shipbuilding program is provided soon, the United States will sink to a third rate maritime power, or worse.)

(Time is fast running out. The time for corrective action is now.)

OUR NATIONAL MARITIME DILEMMA

Any organism that fails to perpetuate itself becomes extinct.

A merchant marine without a ship replacement program must die. Much of the U.S. merchant fleet is dying.

Many elements of the American Merchant Marine have made inadequate provision for new ship construction.

The replacement program of the berth line carriers is a notable exception.

Committing some $2.5 billion of private capital to the replacement of approximately 300 vessels, or their capacity equivalent, the berth line carriers have been building the finest and fastest new liner ships in the world.

However, this program now has a schedule lag equivalent to approximately 100 existing ships due substantially to Government neglect.

For a decade or more, the Government has failed to provide U.S. shipyards with adequate cost differential subsidy under the 1936 Act to keep pace with replacement schedules. For fiscal year 1969 it has even threatened to impound funds to reduce the level of merchant ship construction. Presently $101.6 million is being so reserved.

Simultaneously, it has prohibited berth operators from building their ships abroad even at no Government cost and denied legislative modifications to allow use of such ships in subsidized services.

Continued impounding of funds tends toward a vacuum in merchant shipbuilding. At any rate, few ships can be built under existing policies of maritime budgetary privation.

The horns of the dilemma are obvious; needed ships cannot be built in U.S. yards. Ships cannot be built in foreign yards. Needed ships cannot be built.

THE CONSTRUCTION GAP IN MERCHANT SHIPBUILDING

A rapidly mounting construction gap is developing between the United States and foreign maritime nations in merchant shipbuilding.

With each passing year, the time lost may be irretrievable, endangering both our commercial ocean transport capability and our national security.

During 1967 certain maritime nations built their merchant ships in both domestic and foreign shipyards, thus gaining substantial advantage.

Nation	In domestic yards	In foreign yards
Denmark	8	15
West Germany	59	14
Norway	19	94
Sweden	22	10
United Kingdom	31	31
U.S.S.R.	19	60

During the same year, of those nations building all their own merchant ships in domestic yards, all exceeded the U.S.

Nation	In domestic yards	In foreign yards
Italy	18	0
Japan	168	0
Spain	28	0
United States	12	0

In 1967 the United States built no merchant ships for other countries, nor has she since; not so with other maritime nations.

Nation	For herself	For other nations
Denmark	8	9
Finland	4	34
France	18	8
West Germany	59	26
Japan	168	171
Netherlands	8	15
Norway	19	14
Poland	8	18
Spain	28	11
Sweden	22	31
United Kingdom	31	31
U.S.S.R.	19	4
United States	12	0

Thus the construction gap widens and the pattern persists.

In sum, the United States—

Builds practically no merchant ships in foreign yards. [For U.S. flag operation]

Builds no merchant ships in U.S. yards for foreign markets.

Builds meagerly for itself for the foreign commerce (about 10 to 12 yearly).

Under continued fund impounding practices, will build few in 1969.

Aside from losing out in the race for world commerce, our merchant marine is already inadequate for the nation's defense.

The problem we face:

The nation has never had an adequate merchant fleet *in being* at the outset of any major conflict. It has relied on massive, and even wasteful, emergency or crash shipbuilding programs to bridge the gap.

In our previous conflicts, our shipyards were free from attack, enabling them to perform the job.

Future conflicts, with massive potentials in atomic rocketry, give no assurance of shipyard survival.

In such case, they will be fought with the aid of ships in being, already dispersed at sea.

Under current trends, our potential adversaries will have them; we will not.

THE LONG-TERM CHARTER BONANZA

The low road to fleet replacement

Outmoded fleets are now the unhappy possession of many U.S. carriers in the foreign commerce.

For some two decades many carriers have provided inadequate lay-aside for ship replacement.

Extensive distribution of profits for other purposes has created a sense of relatively high prosperity.

The awesome specter of rapid fleet deterioration now calls for sober re-assessment.

Some carriers facing this dilemma also operate foreign ships in substantial proportion to their total fleet.

The choice of some now seems to be: (1) go completely foreign, or (2) have Uncle Sam underwrite their total fleet replacement.

Under the latter alternative, they now seek to receive, like the prodigal son, both the robe and the fatted calf. Their proposals call for just that and assume the following pattern:

The Secretary of Commerce would be called upon to enter into 20-year bareboat charters of the ships to be constructed.

These charters would be at a rate sufficient to cover the cost of designing, building and financing new merchant fleets, spreading the Government cost over a 20-year period.

Long-term bareboat charters would pledge the faith and credit of the United States to pay out the entire construction costs—thus guaranteeing bank loans and advances.

Construction of some 100 merchant ships is proposed over a five year period, fifty of which would be liners.

The Secretary of Commerce would recharter the ships back to the same operators for daily operation in the foreign commerce.

The ships would be treated in all respects as ships owned and operated by private operators.

Instead of paying a fixed rate of sub-charter hire to equate Government output, the operators would only agree to share with Government any profit they could make.

Thus, the commitment of the Government (i.e., the taxpayer) would be a firm and fixed obligation for 20 years—uninterrupted and unequivocable.

The commitment of the operators would be only to share profits if any are realized; thus conditional, indefinite and unguaranteed.

They advance the following formula for profit sharing:

70% of net voyage profits up to one-third of annual bareboat hire, plus

50% of net voyage profits in excess of one-third of annual bareboat hire up to two-thirds plus

30% of net voyage profits in excess of two-thirds of bareboat hire, but not more than 100% of annual bareboat hire.

Sub-charters may be of one or more years' duration with no commitment to sub-charter for the duration of the 20-year bareboat charters. Government would take all the risks of future vessel employment.

In addition, the Government is asked to reserve all Government cargoes, both aid and military, for the sub-charter carriers.

To sweeten the pie, the Government is asked to set rates on all such cargo at a level to *guarantee a profit* to the sub-charter lines.

With bank loans assured under 20-year Government charters, operators would need to advance little or no funds whatsoever.

The plan of the charter advocates says to the Government, "Give us the ships free; give us a monopoly on all Government cargo; set rates to guarantee us a profit, you take all the risks, and we will let you share in such profits as occur but only on a limited basis."

Many have wished Christmas could be year round. The charter advocates have found a way.

A PROPER MANDATE TO BUILD MERCHANT SHIPS

United States shipyards build the finest ships in the world.

This has been traditionally true and will continue so if they get the business.

Substantial construction of ships in U.S. shipyards is, therefore, a proper mandate and should be vigorously pursued.

Unfortunately, the so-called non-subsidized lines, operating in the foreign commerce, build few new merchant ships in the United States. They build no new ships in the U.S. for the liner or dry bulk trade.

Their current ship construction program consists substantially of tankers or ships which will engage in the domestic commerce. Under law, ships for the domestic commerce cannot be built with construction subsidy. Under existing administrative policy, tankers are not built with construction subsidy.

Any comparison to new merchant ship construction under the 1936 Merchant Marine Act is, therefore, meaningless.

The new construction in the U.S. for the foreign commerce has been principally by contract-supported lines having broad government obligations to maintain berth services on essential trade routes.

Under this program *U.S. shipyards* (not the operators) have been subsidized for the difference between American and foreign shipyard costs.

While under law *shipyard* construction subsidy may be authorized for ships to be used in the foreign commerce, non-contract lines have not normally availed themselves of it.

This has been due in part to other factors:

Failure of government to approve liner applications for operating differential support.

Failure to appropriate funds to make this possible.

Failure to modify the 1936 Act to make its operating provisions available to dry bulk carriers.

Failure of such lines finally to elect such course.

The 1936 Merchant Marine Act should be amended to broaden its application to the needs of dry bulk carriers.

Appropriations for shipyard differential subsidy under the 1936 Act are urgent if the U.S. merchant marine is to keep pace with world merchant fleet expansion. Some 30 to 40 new ships a year is a minimum to keep pace with international maritime developments.

Qualified shipowners in the foreign commerce are entitled to purchase ships at world market prices. Logically, this can be accomplished in two ways—(a) in U.S. yards with shipyards receiving cost differential support, or (b) in foreign yards at no cost to the U.S. Government.

Nonetheless, in the current situation:

1. U.S. shipyards may not receive cost differential support sufficient to accomplish our maritime goals.

2. Subsidized operators may not build ships foreign, even at no cost to the government and return them to subsidized trade route operation.

These negative practices place a dog in each manger. The result is a stalemate. In any case, shipyards are given pre-eminence over ships. This philosophy, allowed to run its proper course, will destroy our merchant marine.

Maximum construction in U.S. shipyards is the ideal goal. It should be effectively assured by proper application of the 1936 Merchant Marine Act and the adoption of a positive maritime program.

Failure to do so must not create an altar upon which the merchant marine is to be sacrificed.

It must some day be realized that shipyards exist for the sake of ships, not vice versa. It is the end product that moves the commerce of the United States and transports our military needs.

The Labor-Management Maritime Committee favors maximum utilization of U.S. shipyards in re-building the American Merchant Marine. However, realization of such an objective mandates that Government provide cost differential funds to U.S. shipyards sufficient to accomplish the job. Continued budgetary privation must not be allowed to defeat the purposes of the 1936 Merchant Marine Act or render our national maritime policy ineffective.

There are no easy or magic short-cuts to merchant ship replacement. Currently offered alternate schemes for constructing and financing, when analyzed, tend to Federalize the merchant marine or leave the Government holding the bag. We should either underwrite the 1936 Act by making adequate funds available to do the job or amend it to allow foreign shipbuilding for subsidized trade route services. We favor the former. However, continued Government indifference will make the latter course imperative. The current drift and indecision must not persist.

SOVIETS ATTEMPTING TO OVERCOME AMERICAN SUPREMACY IN AIRCRAFT PRODUCTION

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. PELLY. Mr. Speaker, it is clear by recent activities of the Soviet Union that the Russians have begun an all-out effort to take U.S. dollars away from our economy, along with our supremacy in the field of aircraft manufacturing, by selling their own airplanes to the world's airlines.

The high quality of the product produced by American industry and labor can stand the competition, Mr. Speaker, despite the Russians' use of what has been labeled, "flexible" sales tactics.

But, my major concern is the supersonic transport, which Russia now has flown at a speed faster than that of sound. What we are facing is the loss of sales of aircraft to the Russians if our own SST is not allowed to be continued in its orderly development program.

Anyone who thinks the Soviets are not a threat, Mr. Speaker, is not facing the facts.

The Russians are known to be negotiating with the Japanese to purchase the Russian SST in exchange for the U.S.S.R.'s granting the Japanese air routes over Siberia from Tokyo to Moscow. In addition, the Russian airline Aeroflot is advertising in the United States for travelers headed for Tokyo from New York to take the Aeroflot route from New York to Moscow and then to Tokyo.

The point is that the Russians are lining up air routes for their SST, and they are entering the competitive market of aircraft sales. What this would mean to our balance of payments is monumental, both in sales of overseas airlines that ordinarily would have purchased U.S.-built airplanes or in sales that would have stayed in America but have gone to Russia instead.

The picture of what is happening is plain, Mr. Speaker, and I urge President Nixon to give the go-ahead to the U.S. SST project as a protection to our superiority in this, one of the last remaining industries where the American name is still on top; to our balance of payments; and to the American workingman in practically every State who will bene-

fit from the construction of the supersonic transport.

Meanwhile, Mr. Speaker, Robert L. Twiss, associate editor, Seattle Times, has recently written two feature articles on just this problem, and I include the articles at this point in the RECORD:

RUSS SST ON VIEW: LIMITED USE IN 1972 APPEARS TO BE GOAL

(By Robert L. Twiss)

The Russians appear to be aiming at limited operation of their TU–144 supersonic transport in 1972, Maynard L. Pennell, vice president of The Boeing Co., said yesterday in reporting on his recent inspection of the Soviet Union's SST in Moscow.

Russia, five years ahead of the United States in SST development but with a smaller, slower plane than the proposed American transport, is "most anxious" to take the lead in the SST race by selling TU–144s to the non-Communist world, Pennell said.

Pennell and four other American aviation experts viewed the TU–144 prototype at Moscow's Sheremetyevo Airport July 30. Pennell, who formerly headed Boeing's SST program, is one of the West's most knowledgeable aeronautical experts to see the Russian SST.

Now vice president of product development for Boeing's Commercial Airplane Group, Pennell said the TU–144 "is a satisfactory prototype of a supersonic transport." The workmanship, he added, "is satisfactory for a prototype airplane."

Pennell and other members of a group headed by Najeeb E. Halaby, president of Pan American World Airways, spent 90 minutes studying the TU–144. The visit was a reciprocal arrangement completed at the Paris Air Show, where the Russians were escorted through the Boeing 747 in return for display of their SST in Moscow.

While the Russians apparently are aiming at limited TU–144 operation in 1972, "I don't believe they are prepared to announce this until they get farther into their test program," Pennell said. "The Russian SST flew for the first time last New Year's Eve.

"They are probably five years ahead of us but with an airplane with less potential (than the Boeing SST)," Pennell said. The Boeing SST program is awaiting a Nixon-administration decision on whether to proceed with construction of two prototypes of the 1,800-mile-an-hour, fixed-delta-wing airliner.

The Russian plane will fly about 1,500 miles an hour.

The important feature of the Russian program is that the Soviet Union actually is flying an SST, Pennell said, pointing out this could pave the way for even more advanced planes. The visiting Americans "learned indirectly" the Soviet Union has four more prototype SSTs under construction, he added.

Pennell forecast a vigorous Russian attempt to market the TU–144 in the non-Communist world.

"I believe they are most anxious to do this and will utilize the full powers of their government with respect to favorable financing terms and even the use of this airplane (in exchange) for traffic rights over Russia," he explained.

"They have the world's largest land mass to bargain with, and it happens to be the most direct route between Western Europe and the Far East. I expect they will take full advantage of this and attempt to sell their products.

"I believe they want very much to get a lead on Western nations."

Pennell said the TU–144 "probably is somewhat less sophisticated than the Concorde today." The Concorde is a 1,400-mile-an-hour SST under development by the British and French and is expected to enter service in 1973.

Pennell called attention to "small but important differences" in wing aerodynamics in the two European SSTs. He suggested the TU–144 "may not be as good as the Concorde in low speed or supersonic flight."

The Russian plane weighs about 330,000 pounds, lighter than the Concorde and about the same weight as a Boeing 707 intercontinental subsonic airliner.

By United States standards, the TU–144 economics "probably will be quite poor," Pennell said. But he stressed that the Russians have different standards because of their economic system.

"I suspect as long as it's safe it will be well-patronized," he said. He explained he has no reservations about the TU–144's safety that do not apply to any airplane as new as this.

Pennell said the Russians told him they could not provide firm performance data on the SST until late in 1971. The plane has reached a top speed of between Mach 1.35 and Mach 1.4 at 45,000 feet (about 900 miles an hour), he said, compiling 22 minutes of supersonic flight time.

"But that's 20 minutes longer than we have," he stressed.

Pennell said the Russians told him the lighter TU–144 would be "somewhat better" than the Concorde for sonic boom.

"The Russians don't believe the sonic boom would be a serious constraint on operations over Siberia," Pennell said.

The TU–144 shows "some evidence" of use of titanium in key areas, Pennel said. Some electronic advances, such as inertial navigation, also are in the plane, he added.

Pennell said his view is that penetration of the non-Communist market by the TU–144 is a "possibility, and in my opinion, not necessarily a high probability. But, because it is a possibility, it is important."

If Britain and France decide not to proceed with the Concorde and the Russians prove the TU–144 to be a good airplane, "then it might have sales appeal outside the Communist world," Pennell added.

He noted the Russians have had difficulty in marketing commercial transports outside Communist lands, since they are "unwilling or seem unable within their system" to provide the technical information necessary for airlines to evaluate an airplane.

The TU–144 is designed to carry 120 passengers in all-tourist class. Pennell thinks the plane may not have as much range as the Concorde, and thus may fly a few more passengers shorter distances than the Western European plane.

Pennell stressed he saw the TU–144 "only 90 minutes" and was not permitted a detailed examination of the delta-wing airliner. Thus the agreement at the Paris Air Show meant "they didn't get much; we didn't get much."

"My impression is that the Russians are building an airplane very similar in basic characteristics to the Concorde," Pennell concluded.

SOVIET UNION OFFERS ARABS GOOD DEAL ON JET AIRPLANES

The Russians have stepped up their vigorous drive to sell commercial airliners to the Arab world.

As a result, substantial orders for the Soviet TU–154 medium-range trijet transport may be placed by United Arab Airlines and many other members of the 13-line Arab Air Carriers' Association, Ahmed Tewfik El-Bakry said during a Seattle visit.

El-Bakry, chairman of the board of United Arab Airlines, was here to study The Boeing Co.'s Model 727–200 long-body trijet, one of the contenders for the Cairo-based carrier's order for medium-range jets.

There are four competitors for the United Arab purchase, three from the West and the TU–154, El-Bakry said. The Western planes being studied, in addition to the 727–200, are the French Supercaravelle and British Trident.

"The Russians are very flexible and willing to consider our needs," El-Bakry said. "This is not the case in the United States."

A major consideration is long-term financing, El Bakry said.

"The Russians have offered 10 times more than extremely favorable terms, and they could deliver TU–154s in less than a year," he said.

United Arab will need three medium-range jets at first to begin replacing its fleet of seven British-built Comet 4C jets. But traffic growth and Comet-replacement needs indicate the line will require about 10 medium-range airliners by 1974, the chairman said.

El-Bakry said more than just the United Arab Airlines order is at stake in the competition.

"I think at least 10 of our confederation, the Arab Air Carriers' Association, will buy the plane we select," El-Bakry said. "Small Arab nations will continue to operate airlines as a matter of national pride.

"And they need more modern equipment to remain competitive," he added.

El-Bakry left no doubt of his admiration for American-built aircraft, indicating his personal favorite for a United Arab Airlines medium-range airliner is the 727–200.

The Russian transports were described as "satisfactory."

But the long-term, low-interest-rate financing arrangements offered by the Soviet Union, together with training programs in Russia for Arab technicians and maintenance of a spare-parts pool in Cairo, were cited as a major plus for the Russian sales drive.

"The Russians, for example, keep spare parts in Cairo at their own expense, not ours," El-Bakry said. "The support they offer airlines flying their aircraft is outstanding."

One reason El-Bakry likes the 727–200 is the fact United Arab already is a 707 operator. So are three other members of the Arab Air Carriers' Association—Saudi Arabian Airlines, Kuwait Airways and Middle East Airlines.

"We are looking for fleet standardization, but I must be encouraged (to buy) by the maker in training, spare parts support and so on," El-Bakry said.

The airline chairman chided Boeing for what he termed lack of interest in small carriers' problems.

"They think only of Pan American, of Air France and of the other large airlines," El-Bakry said. "Boeing must think of small airlines, too."

El-Bakry said he hopes to make a decision on a medium-range transport type by year end, noting his Comet fleet is aging and replacement must begin soon.

United Arab Airlines already operates two Russian-transport types—the AN–24B for internal routes and the IL–18 for flights from Cairo to Moscow, Prague and East Berlin. The Comets and 707s round out its fleet.

The carrier is continuing its expansion program, planning to fly to Turkey and to Madrid in 1972. Transatlantic flights to the United States are a long-term goal, El-Bakry said.

"But the (traffic) figures aren't telling us we can begin transatlantic service yet," he said. "It is difficult to predict just when traffic will justify North Atlantic service by United Arab Airlines."

United Arab expects to carry about 400,000 passengers this year, compared with about 340,000 last year, the chairman noted. Its busiest route is Cairo-London, with flights six days a week and daily service to begin in January.

El-Bakry said the "unrest" in the Middle East has had an impact on tourist travel to the United Arab Republic. Few Americans but many Europeans are vacationing in the republic, he said.

"Life is normal in Cairo, and tourism will boom once the unrest is settled," El-Bakry said.

CURING DOCTOR SHORTAGE

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. DERWINSKI. Mr. Speaker, since legislation is pending before the appropriate committees to stimulate the training of physicians to cure the shortage that exists in this country, I am pleased to direct the attention of the Members to an editorial in the Chicago Heights Star, Thursday, August 28, commenting on the steps being taken by the Illinois Board of Higher Education.

As a cosponsor of the bill to amend the Public Health Service Act to provide grants to develop training in family medicine, I recognize that emphasis must be placed at the proper education levels to meet the shortage of doctors. The editorial follows:

CURING DOCTOR SHORTAGE

The Illinois board of higher education set out recently to find a cure for the chronic shortage of physicians, a malady growing to epidemic proportions in this state as well as in the rest of the nation.

The University of Illinois college of medicine, at the Chicago medical center campus, has revealed details of a plan to proceed with negotiations to affiliate with six additional Chicago area hospitals. It is gratifying to note that two of the six—Lutheran General and MacNeal Memorial—are located in suburban areas. Another encouraging factor is that affiliation agreements with additional hospitals will be sought and are currently in the planning stages.

Negotiations by the college of medicine implement a request by the state board of higher education that the college expand its program of medical education by use of existing clinical facilities throughout the state.

The plans will allow the development of a more flexible and diverse educational program for the college's students.

Also planned is a massive program for the expansion of professional education in medicine at three levels: the medical school curriculum, internship-residency training, and continuing education for physicians. And the college will undergo an extensive reorganization and expansion. Now the second largest U.S. medical school in terms of enrollment, the college plans to provide more physicians for the state through a multi-campus, multi-community approach.

According to the plan, the college's enrollment will grow to some 1,900 students by 1983, more than twice its enrollment of 779 for the 1968–1969 academic year.

To facilitate this growth, the college will set up a number of clinical schools to provide training at hospitals in Chicago and down-state cities. Other schools to train first-year medical students in the basic sciencies will be created at the university's Chicago medical center, at the Urbana-Champaign campus and later at Chicago Circle campus.

The college also has launched a program for increasing the number of members of disadvantaged minority groups in the school. Recruitment of qualified prospects and special counseling for applicants, before and after entering medical school are included in the program.

This recruitment program for minority-group students will begin with the aid of a $42,000 grant from the privately endowed National Fund for Medical Education.

Much greater revenues—primarily from taxpayers and not from private foundations—undoubtedly will be needed to implement the university's total medical education program. But the venture should more than pay for itself in terms of greater health, and we feel that a solution to the doctor shortage is an eminently worthwhile—and necessary—expenditure of public funds.

LETTER TO CONSTITUENTS ON VIETNAM VETERANS

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, it is a pleasure to place in the CONGRESSIONAL RECORD the following letter which I am sending as a service to my congressional district:

TO MY GOOD FRIENDS: I am writing to let you know procedures for our Pennsylvania Vietnam Veterans, and their families, to apply for Penna Vietnam bonus.

Veterans and their families can obtain applications for the Vietnam bonus by writing to Vietnam Bonus Bureau, Harrisburg, Pennsylvania 17120.

Also applications can be obtained by writing to me as your Congressman, as a service to our District, or by writing to our Allegheny County State Legislators or State Senators. These state officials will, likewise, be glad to assist you with this service.

Also applications can be obtained from our local veterans organizations, the Red Cross, the Pennsylvania Director of Veteran's Affairs at 224 County Court House, Pittsburgh 15219, or write to the Adjutant General's Office, New Federal Office Building, 1000 Liberty Avenue, Pittsburgh 15222.

The amount of the Pennsylvania Vietnam bonus for servicemen and veterans varies with the amount of service. The payment will be $25 for each month in Vietnam. The maximum amount being $750. The deceased veteran's next of kin will be paid $1000 in cash upon verification of records.

On the back of this sheet I am giving you the specific requirements for our present US servicemen and women, and for discharged veterans, as well as the families of deceased Vietnam veterans.

Should you have any difficulty or delay in obtaining the Pennsylvania Vietnam bonus, write to me giving the facts and I will be glad to consult with your Allegheny County State Legislator and State Senator in order that we can work as a team, regardless of party or politics to expedite your application.

It is a pleasure to be able to have my office give this service for our deserving U.S. Vietnam servicemen, U.S. Vietnam veterans and their families.

REQUIREMENTS FOR VIETNAM SERVICE BONUS

1. Earned *Vietnam* Service Medal.
2. Been resident of Pennsylvania at time of entering military service.
3. If now a veteran—requires honorable discharge and photocopy of DD–214 (Report of Separation).

(NOTE.—If you have earned Vietnam medal, and have not received it—write to CO of your old outfit.)

Deceased U.S. Vietnam Veteran

Beneficiary must prove:

1. Relationship to veteran by submitting copy of birth certificate or marriage certificate.
2. Show veteran entitled to Vietnam Medal.
3. Furnish copy of casualty report from US Department of Defense.

Directions

With application, you will receive an addressed envelope for purpose of mailing your bonus application to Harrisburg. Stamp and send by ordinary mail.

If undue delay, write me and I will be glad to follow up for you.

Sincerely,

JIM FULTON.

ROCKY MARCIANO

HON. THOMAS P. O'NEILL, JR.

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. O'NEILL of Massachusetts. Mr. Speaker, I would like to take this opportunity to join my colleagues in expressing my profound sorrow at the death of a beloved friend and a great boxing champion, Rocky Marciano.

I first met Rocky 25 years ago, before the beginning of his pugilistic career, through a mutual friend, and member of the Massachusetts Legislature, John Asiaf. Thereafter I was to see Rocky on numerous occasions, for he often came to watch the Massachusetts State Legislature in action. He made his entry into the boxing world in 1947 and began a career that was to last for 9 glorious years.

This man compiled the most fantastic record of 49 victories out of his 49 boxing encounters, and managed to remain the undefeated world heavyweight boxing champion for 4 of those years before his voluntary retirement in 1956. The brilliance of his unblemished record dazzled the professional boxers and spectators alike. Although purists of the sport and critics deplored the lack of polish and refinement in his technique, they conceded that he possessed fantastic physical stamina and verve and an overwhelming desire to win. To the average sports fan Rocky symbolized the essence of boxing; that is, to hit your opponent as hard and as often as you can, hit him more than he can hit you, and keep going until you have earned a victory.

This primitive motif seemed to be the driving force behind his triumphs in the arena. He endured dreadful batterings and survived brutal bashings which would have caused admission of defeat by a less determined and courageous man. An outstanding example of this tremendous will to win was his victory over Jersey Joe Walcott in September 1952. Rocky had a very difficult time with Jersey Joe, who gave him quite a thrashing, but despite all the agony and the blood of 13 gruelling rounds, Rocky found the way to win. Indeed it was a fight well worth the effort, for this earned him the coveted title of world heavyweight champion. And what a winner he was.

Rocky worked hard and long for his successes, and he invested every ounce of energy and enthusiasm into his training sessions. He was an honest man who was

liked by those he had defeated, and admired by the public he entertained. He exuded an aura of sincerity, wholesomeness, and respectability, and wherever he appeared the crowds would greet him with warmth and adulation. The world knew and loved Rocky as a fighter of the first order, whose superior powers in the ring placed him with the giants in the history of American sports; but it was my privilege to know this man personally as a gentle soul with a good and kind heart.

Mr. Speaker, these words are inadequate expressions of the respect and affection which I felt for a valiant boxer and a very dear friend, Rocky Marciano.

Mrs. O'Neill joins me in extending my deepest sympathy to Mrs. Lena Marchegiano in her hour of loss and grief.

U.S. FOREIGN POLICY ON GREECE

HON. DON EDWARDS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. EDWARDS of California. Mr. Speaker, the official U.S. foreign policy concerning Greece is no longer a workable one.

Our State Department stand has been to deplore the lack of democracy in Greece under its present military dictatorship and to put diplomatic pressure on the military junta to end its reign of terror. But in one of those classic cases of "on the one hand and then on the other hand," the State Department and the Pentagon have said Greece is fulfilling its North Atlantic Treaty obligations and therefore the United States cannot get too tough with the junta.

This dual policy has led to a series of strange events involving the Voice of America, the State Department, and the U.S. Information Service, including apparent censorship of the opinions not only of Members of Congress, but also a representative of the Secretary of State. A policy of talking out of both sides of the American mouth has produced its usual results. The people of Greece, confused at best about the U.S. policy, are turning against this country. The military junta brags about our "support" and applauds our naming of an ambassador to that nation.

And that junta continues its destruction of the Greek Armed Forces, the only so-called reason for our continued military support of the dictatorship.

The Christian Science Monitor on Friday, August 29, 1969, documented the sad condition of the Greek Army.

I will insert the Monitor article in full at the end of my statement, but I would like to quote some of its conclusions at this time.

> The Greek Army no longer exists as a stable, organized force-in-being . . . In three successive waves the colonels' regime has jailed, placed under house arrest or exiled to remote villages large numbers of the nation's most influential military leaders . . . The Army is divided and humiliated and its effectiveness as an instrument of the Greek nation is broken.

These are harsh words, but the Monitor staff correspondent, Saville R. Davis, documents them with facts, figures, and names.

So, the United States through its confused foreign policy has in effect supported a government which is tearing down the NATO shield.

Our convoluted policy has led us into even deeper confusion, confusion which involves apparent censorship of the opinions and statements of Members of this House and of the U.S. Senate by the Voice of America.

On Sunday, August 17, 1969, Paul Grimes of the Philadelphia Bulletin, in a story entitled "Greek News Censored on Voice of America," reported on this situation. I will summarize his story, but I will have it be reprinted in full at the end of this statement.

> The Voice of America is deliberately subduing its service to Greece and permitting the State Department to censor its newscast so as not to upset the dictatorial military regime there.

Mr. Grimes reported.

He added that Greece is blackmailing the State Department by threatening Voice of America transmitters on Greek soil.

Mr. Grimes continued:

> One news item that the State Department is known to have censored was broadcast August 7. It concerned a letter dated July 30 that 47 members of the U.S. House of Representatives and three Senators sent to Secretary of State William P. Rogers.

As a signer of that letter, and as president of the U.S. Committee for Democracy in Greece, I was concerned about these charges. I asked the State Department, the Voice of America, and the U.S. Information Service to report on these allegations. Specifically I asked for transcripts of the original news scripts and for the changes made in them.

I am still waiting for a reply. I have been told by USIA the transcripts are available, but will not be released to me until senior officers, now out of the country, review the answers to be given me. A target date of September 8 has been set by USIA for release of this information. The reason for the delay, USIA has said, is to give me the "full picture" of what happened.

Without the transcripts, and the other information, I cannot say for sure whether censorship of those broadcasts took place. I can say for sure, however, that censorship is being imposed by USIA on the information I requested. I would suspect there might be reason for that censorship.

I would like a full explanation of that censorship, yet I can understand it when faced with the basic flows in the U.S. foreign policy toward Greece.

We have not made our opposition to the military dictatorship in Greece known. We must do so.

I ask the State Department to make clear its disapproval of the Greek Government.

I also ask that the Voice of America broadcast in full the letter to Secretary Rogers, signed by 50 Members of Congress, which was apparently censored by the Voice of America, and the State Department's reply, including both of its "on the other hands." Finally, I ask that the Voice report the Christian Science Monitor story on the destruction of the Greek Army.

Let us make clear where we stand.

The material referred to above follows:

[From the Christian Science Monitor, Aug. 29, 1969]

BLOW TO NATO—GREEK ARMED FORCES DISINTEGRATING?

(By Saville R. Davis)

ATHENS.—The main reason for American support of the present Greek Government has been removed. The United States depended on the integrity of the Greek armed forces to support the Western military position here and to act as a bridge to the Turkish Army on the east flank of the NATO defense area.

The Greek Army no longer exists as a stable, organized force-in-being.

This is conceded by friends and opponents of the "colonels' government" that now controls Greece.

In three successive waves the colonels' regime has jailed, placed under house arrest, or exiled to remote villages large numbers of the nation's most-influential military leaders. Names and facts are listed below.

The remainder of the armed forces have been subjected to a systematic campaign which, the regime says, is necessary to protect the government against a coup. Critics call it a reign of organized terror, designed to eliminate opposition.

In either event, the Army is divided and humiliated and its effectiveness as an instrument of the Greek nation is broken. Higher officers who remain are not allowed to command. Lower officers who hold power are faced with a passive resistance they cannot overcome.

This is the picture gained from well-informed sources both tolerant of the regime and opposing it. If this picture is oversimplified, the main argument still holds: The battle for allegiance of the armed forces has torn and dismembered them.

It was the former stability of the Greek armed forces which made that country a valuable military ally of the United States.

It cannot be said that in trying to purge the Army, the Navy, and the Air Force the Greek regime has been carrying out its announced policy of "saving the country from falling into the hands of the Communists."

Most of the arrested military leaders had fought directly against the Communists when they attempted to seize power by force in 1946–49. They were the bulwark of Greece against Communist subversion.

One of them said, "Their offense against the present government was that they were broadly nonpolitical, but pledged to the Western institutions of freedom that were born in their land, and they detest the enslavement of a free and proud people by the present rule of dictatorship and martial law."

Some of them supported King Constantine in his abortive effort to overthrow the dictatorship.

FACT SHEET ON ARRESTS

A fact sheet on the arrest and detention of the military leaders follows:

In later February of last year the first group of retired officers was exiled. In July and August, when the government was campaigning for a referendum coming in September, a second major group of officers was arrested. This year, after celebrating the second anniversary of the colonels' coup in April, a third group was taken.

Methods: arrests were normally between two and three o'clock in the morning. Police cars surrounded the residences and in some cases searchlights illuminated the houses.

The officers were removed in most cases without explanation other than the charge of being "dangerous to public order and security." They spent different amounts of time in the central security detention cells, sometimes under primitive conditions.

Most of them were then escorted to an Aegean island, in some cases to remote mountain villages. There they were asked to report to the local gendarmerie at specified intervals.

Villagers were warned by the gendarmerie not to approach the officers. Adequate medical help was denied in at least two cases of serious illness.

Some of the third group were charged with trying to alienate officers on active duty from the junta and were brought under formal judicial inquiry which is still in progress. Others were not charged, trials not scheduled, and in most cases the original period of detention extended.

IMPRISONED WITH CRIMINALS

Some of the officers are now in various prisons together with common criminals. They are not allowed to communicate with relatives or their lawyers.

Army officers not detained or arrested and still in active service have been subjected to surveillance by varied and intensive methods. These include the placing of informers in the lower ranks who report to the security forces on the statements and activities of their officers. They also include mail censorship and telephone tapping.

The result is said to be extensive and deep-lying demoralization, with no one able to be confident of who would support or oppose his position in the event of a showdown.

The ruling group is generally described as a small minority of men within the Army, coming largely from small village backgrounds, trained in intelligence and conspiratorial methods, and much tougher in their methods of seizing and holding power than at first was realized.

As the months passed under arbitrary rule and martial law, these methods became harder rather than easing. Because the "colonels" were a small minority seeking to eliminate the old leadership of the armed forces and to control the rest by a campaign of systematic and deliberate "terror tactics," they appear to have alienated large sections of the armed forces as well as to have controlled others.

TACTICS DEFENDED BY SOME

Friends of the regime argue that these tactics were necessary in order to compel hostile elements in the armed forces to obey the new government. Critics say these tactics are the prelude to the final destruction of freedom in Greece and that the regime does not dare to relax its use of terror tactics.

Arguing either way, it appears that the armed forces have themselves become a battleground in the struggle for power and that they are no longer the stable force that the United States counted upon.

Following is an incomplete list of arrested or exiled officers. The wartime record and experience of these officers, their outstanding training both in Greece and in the United States and their anti-Communist position is spread on the public record.

First group, February 1967:

Brig. Gen. Dimitrios Zafiropoulos, who had been second in command of an infantry division, who escaped in the Middle East during World War II and was severely wounded in action, had commanded the raiding forces and been assistant military attaché in London.

Brig. Gen. Andreas Hoerschelman, commanding general of the 20th Armored Division, who escaped from Greece during the German occupation, fought the Communists in 1946–49, served in NATO headquarters, and was top of his class in the Greek Military Academy.

Col. Demitrios Opropoulos, also top of his class, served in the Washington NATO staff, had an excellent combat record, and was promoted for bravery on the battlefield.

Col. Constantine Tzanetis, a highly respected senior artillery officer during the combat against the Communist guerrillas who became commanding officer of divisional artillery.

SECOND GROUP IN JULY

Col. Nicholas Zervoyannis, commanding officer of parachute school and the Greek officer with the largest number of parachute jumps, who escaped in the Middle East during the German occupation and fought against the Communists. Also navy commander Vardis Vardinoyannis.

Second group, July-August, 1968:

Lt. Gen. Antonakos, Air Force chief of staff who escaped in the Middle East during the German occupation, a fierce anti-Communist. Lt. Gen. K. Kolias, commanding general of the First Field Army and commanding officer of the raiding forces, who fought against the Communists.

Lt. Gen. George Peridis, a Ft. Leavenworth graduate who was twice promoted in the battlefield for bravery, was commanding general of the 3rd Army Corps, participated in the non-Communist guerrilla units during the German occupation, and fought the Communists in 1946–49. (General Peridis became seriously ill in exile, was hospitalized in Athens under guard, his hospitalization was discontinued before the conclusion of treatment, and he was sent into exile in May of this year.)

Rear Admiral Spanidis, representative of Greece at the SHAPE NATO headquarters, a submarine commander in World War II who escaped in the Middle East during the German occupation.

Brig. Gen. George Koumanakos, a Ft. Leavenworth graduate. (The cases of these last two officers were recently detailed in the American press in the Evans-Novak column.)

Gen. Kon. Koniotakis, who also represented Greece at the SHAPE NATO headquarters and had escaped in the Middle East under the German occupation.

EXILES ANNOUNCED

Col. Periklis Papathanasiou, a raiding forces combat officer who also escaped in the Middle East. Maj. John Demestichas, a field Army staff officer who fought against the Communists. Air Force Col. Tsasakos, who served with NATO, Navy Capt. Konofaos, who also served with NATO and escaped in the Middle East during World War II. Brig. Gen. Ch. Tsepapadakis, who was an instructor at the National War College and fought against the Communists. Maj. Bpissias, a brilliant young combat officer and an instructor at the Army War College.

Third group, May 1969: An official announcement which listed only 10 of the following said they were to be exiled for "activities directed against public orders." Two weeks later the junta said that a judicial inquiry was under way to determine responsibility for a movement against the regime.

Vice Admiral Avgeris, Navy chief of staff and chairman of the joint chiefs of staff, Lt. Gen. John Genimatas, commandant of the Army War College, director of a special group which developed the new organization of the modern Greek Army, Army corps commander, Army chief of staff who fought in Korea as well as against the Communists.

Lt. Gen. George Tsichlis, commanding general of an infantry division which had fought against the Communists. Vice Admiral Egolfopoulos, Navy chief of staff who served in NATO, who escaped in the Middle East and is one of the most talented and respected senior naval officers in Greece.

Maj. Gen. Vardoulakis, an officer with a brilliant war record, commander of an infantry division, participated during World War II in special wartime raiding forces missions from the Middle East against the Germans in the mainland of Greece and in the islands of the Aegean and fought against the Communists.

Brig. Gen. Const. Papageorgpou, commanding general of the military district of Athens, who fought both the Germans and Communists. Brig. Gen. Nicholas Demestichas, chief of staff of an Army corps who had fought the Communists.

Lt. Gen. Christos Papadatos, commanding officer of the military academy and commanding general of the Athens region. Brig. Gen. Dem. Papadopoulos, chief of staff of the Athens region, second in command of an infantry division.

RECORDS FULL OF HONORS

Navy Capt. Georg. Psalidas, who escaped in the Middle East. Brig. Gen. P. Panourias, commanding general of an armored division and Ft. Levenworth graduate, who escaped in the Middle East, fought the Communists, and was wounded in action.

Colonel Kalamakis, chief of staff of an Army corps who served with NATO headquarters, fought in Korea and against the Communists. Colonel Kalamakis was decorated by the United States as a member of the 7th Cavalry in combat action against the North Korean and Chinese Communists. Brig. Gen. Balkos, a Ft. Levenworth graduate, instructor at the War College, and a distinguished senior staff officer.

Col. Perivoliotis, regimental commander who fought the Communists. Brig. Gen. Bouras Anast, who served as assistant commander of an infantry division and with the Washington NATO mission, escaped in the Middle East, and fought the Communists.

Lt. Col. John Souravlas, who had escaped in the Middle East and been a raiding forces combat officer. Lt. Col. Drosoyannis, who was also a raiding forces combat officer and fought the Communists.

Col. George Tavernikis, a regimental commander who fought the Communists. Finally, the following combat officers who fought against the Communists: Air Force Colonels Diakoumakos, Pierakos, and Papageorgiou, three distinguished Air Force commanders and staff officers, who escaped as young pilots in the Middle East during the German occupation.

MORE ARRESTED SINCE MAY

Army Col. Pipanikolaou, Lt. Colonels Chrisostalis, Bouras Anast, Vlachos, Somarakakis, and Zajharopoulos. Majors Zervas, Maragakis, Moros, Yannopoulos, and Moustakzis, Captains Mathioudakis, Grivas, Zarkadas Alex. In addition Maj. B. Koqrkafas, an outstanding raiding forces officer, arrested in May, 1969, is feared missing since the time of his arrest.

Since May, 1969, among those arrested are Colonels Blouttsos, Mitsovoleas, Tzanetis, Maj. Gen. Em. Kehagias, an infantry division commander, and Lt. Gen. Sof. Tzanetis.

Gen. Tzanetis was arrested while vacationing in the Island of Rhodes. He escaped from Greece during the German occupation, he commanded an infantry unit in Italy in World War II, he was commanding general of the Army War College, he was vice chief of the National Defense General staff.

There are at least four young officers on active duty who during 1968 have been arrested in their units, court martialed, and are now serving sentences in various prisons. These are Lt. Charalamboulos (serving a 10-year sentence in the Koridalos Prison), Captain Zervopoulos (15 years in Egina Prison), Maj. Agelos Pnevmatikos (10 years in Korfu) and his brother Capt. Konst. Spnevmatikos (4 years in Kopidalos). There is positive evidence that these officers were subjected to severe tortures during the time of the investigations.

There are some hundreds of other distinguished officers of all ranks, who have been retired and removed from any position where their talents and their devotion to the mission of a modern soldier-officer in a free society, could be utilized for the defense of Greece and NATO.

Many of the United States-trained officers have been purged, arrested, or exiled. The purge continues.

The Greek press gave names of about 300 officers in January and February, 1969, and 463 in July, 1969, who were promoted. A large investment of the Greek people and of the United States is lost. War experience, professional training, and devotion to the ideals of the free world could eventually vanish.

These "terror tactics" are being witnessed by the population with apprehension and anxiety. Friends and opponents of the dictatorship are disturbed to see the prestige of the Army questioned by the people.

In talking with many people, one quickly realizes that the uniform of the Greek officer, once a symbol of pride, has become a source of embarrassment and even an object of scorn.

This is a disturbing fact to all concerned since in today's world, tanks, ships, planes, and men in uniform are known to be worthless if not supported by the will of the people. This popular support is lacking today in Greece.

Combined with this is a very rapidly growing "anti-Americanism" which stems from the conviction of most people in Greece that the dictatorship exists in power only because of American toleration and support.

[From the Philadelphia Sunday Bulletin, Aug. 17, 1969]

TRANSMITTERS AT STAKE—GREEK NEWS CENSORED ON VOICE OF AMERICA

(By Paul Grimes)

WASHINGTON.—The Voice of America is deliberately subduing its service to Greece and permitting the State Department to censor its newscasts so as not to upset the dictatorial military regime there.

At stake are nearly $35 million in radio transmitting facilities that the U.S. Government maintains or is constructing in Greece. Washington appears determined to keep them, even if this means compromising with a regime that it acknowledges is highly undemocratic.

SERVICE IS VULNERABLE

The Voice of America is the broadcasting arm of the U.S. Information Agency, the government body that is charged with carrying America's message abroad. Its commentaries and some other programs are admittedly tailored to suit U.S. policy, but its newscasts are ostensibly objective.

Richard G. Cushing, acting director of the Voice, conceded in an interview here last week that because "we have a lot of expensive real estate in Greece," the service is "vulnerable."

"The Greeks are very sensitive to anything we say about Greece," Cushing said. "We have to get along with the regime.

"We don't want to be thrown off Greek soil. We have this problem. Yet we don't want to compromise our broadcasts."

RELAY STATIONS

The most important real estate involved is a $28.7 million transmitter complex that is under construction at Kavalla in northern Greece. It will include ten 250-kilowatt and one 50-kilowatt transmitters for short wave and one 150-kilowatt for medium wave.

The transmitters will relay broadcasts that originate in Washington. They will be beamed primarily to central Europe, the Balkans and South Asia.

"The signal into India," Cushing said, "has not been good."

When the Kavalla complex is completed in about two and a half years, the United States plans to give Greece a $1.5 million, 150-kilowatt relay transmitter that it now uses at Thessalonike, also in the north. The Voice plans to retain, however, a $4.5 million transmitter on the Greek island of Rhodes in the Aegean Sea. The 300-kilowatt Rhodes installation relays broadcasts primarily to the Arab countries of the Middle East.

CENSORED ITEM

One news item that the State Department is known to have censored was broadcast Aug. 7. It concerned a letter dated July 30 that 47 members of the U.S. House of Representatives and three senators sent to Secretary of State William P. Rogers.

The signers included Rep. Joshua Eilberg, a Democrat from Northeast Philadelphia.

The letter expressed "deep concern" over actions and policies of Greece's military junta. It said the United States was losing friends abroad because it appeared to support the regime.

"Our policy of occasional, tepid expressions of 'hope' that the junta will return to democracy," the letter said, "stands in rather hollow contrast to the repeated instances of high-ranking American military figures being pictured and quoted in the controlled Athens press lavishing generous comments on the junta.

"In the short term, and in the long term, we are in danger of reaping the whirlwind of anti-Americanism, especially when the junta falls, as it inevitably must."

The letter urged that Secretary Rogers consider measures to show clear diplomatic, moral and political disapproval of the Greek regime and to curtail U.S. military aid.

GREEK STABILITY

Replying in Rogers' behalf, William B. Macomber, Jr., assistant secretary of state for congressional relations, stated that the present "internal order" in Greece "does not coincide with the best interests of Greece, whose stability, in the long run, we believe, depends upon the free play of democratic forces."

But Macomber also noted that Greece, "even under the junta, has fulfilled its treaty obligations" to the North Atlantic Treaty Organization.

"This, then," Macomber wrote, "is the dilemma—how to deal with an ally with whose internal order we disagree yet who is a loyal NATO partner."

In discussing the way the exchange was distorted in Voice of America Greek-language newscasts, officials here insisted that Greek membership in NATO was considerably more important than radio transmitters. They also made it clear, however, that the Athens regime doesn't seem about to withdraw from NATO, but that, if ruffled, it might very well seize the Voice facilities.

Thus, the transmitters appeared to be their greatest immediate concern.

STIFF STAND

The Aug. 7 newscast was pegged to Macomber's reply but also embraced the congressman's letter. It included nothing that was in the original letter, however—only a note that the congressmen had urged a "stiff stand" against the regime.

The newscast said Macomber's reply had been "welcomed" by Rep. Don Edwards (D-Calif), one of the most outspoken congressional critics of U.S. policy toward Greece. The script, as it was originally prepared in the Voice newsroom, included the following two sentences marked "opt," for optional:

"Congressman Edwards also said that widespread purges of the Greek armed forces have weakened the effectiveness of the Greek contribution to NATO. And he charged that Greek officials have refused entry to Greece to some American citizens with no advance warning and no explained reasons."

Before being broadcast, according to authoritative sources, the script was sent to the Greek desk at the State Department. It was returned to the Voice with the advice that the two sentences should be deleted. The Voice concurred.

DIRECTOR'S APPROVAL

The deletion is understood to have been approved personally by Henry Loomis, acting director of the USIA in the absence of Director Frank J. Shakespeare, Jr., who is in Vietnam. Loomis, who rejoined the agency in April, had resigned as Voice director four years earlier after complaining that his superiors were forcing the Voice to censor news.

The Voice has had several brushes with the Greek junta since it seized power in April, 1967. At first, according to Cushing, "they wanted to censor everything we said in the Greek language."

Rather than submit, Cushing said, he and John Chancellor, then the Voice director, decided "we would prefer to go off the air, which we did."

GREEKS EMBARRASSED

"But then," Cushing said, "the Greek regime went to the (U.S.) Embassy and said, 'Look, this is embarrassing. Go back on the air, be careful and we won't censor it.' So they backed down and we went back on the air.

"We have been careful in our output. We don't put anything out that hasn't been pretty well checked."

LEE HAMILTON

HON. ANDREW JACOBS, JR.

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. JACOBS. Mr. Speaker, I insert the following to illustrate the cause for the Indiana delegation's pride in LEE HAMILTON. The ability to express the essential with brevity is a rare talent indeed. His remarks follow:

REMARKS DELIVERED BY THE HONORABLE LEE HAMILTON ON SATURDAY, AUGUST 30, 1969, FRENCH LICK, IND.

Let me begin with some statistics. In 1965 the Democratic Party in Indiana had two Democratic Senators. We had won three straight senatorial races (1958, 1962, 1964). We had a Democratic governor and had won two straight contests for governor. The last race by the largest margin ever given an Indiana candidate. We had six of eleven U.S. Congressmen, 78 of 100 representatives in the General Assembly and 35 of 50 state senators. Every state office, except for a few judges, was filled by Democrats.

In 1965 Indiana was solidly Democratic.

In 1969, the figures are not quite so interesting. We still have two U.S. Democratic senators. There is a Republican governor, a Republican in every state office (except for a few judges).

Republicans have seven of eleven U.S. Congressmen; 73 of 100 seats in the Indiana House; and 33 of the 50 seats in the Indiana Senate.

You know the story of the woman who wrote her Congressman saying: "I'm so disgusted, let's give the country back to the Indians." The Congressman wrote back saying he was not sure that was the best thing to do but it was better than giving it back to the Republicans.

In Indiana we have given the government back to the Republicans.

So I come to French Lick with one question on my mind:

Are the Democrats of Indiana ready to begin in 1970 the climb back to power?

The answer to that question lies in this room. Because you will determine the will and the spirit and the vitality of the Democrat party in Indiana in 1970 and 1972.

Each of us instinctively wants to answer that question affirmatively.

But let me inject a note of caution.

The Democrats will begin to climb back to power to the extent we are able to understand the changes taking place in American politics today, and to articulate and capture the root feelings of the American people.

You and I must understand that politics in America has become unglued. The rules of the game have changed.

We can no longer automatically assure that the Democrat party is the dominant party. In the six presidential elections since World War II we have won a clear majority only once, in 1964. Truman and Kennedy were minority winners.

The Democratic Coalition, which gave us electoral victories many years, can no longer be counted on. The South is no longer automatically Democratic—Franklin D. Roosevelt used to get 75 to 80% of the vote of the deep South. Hubert Humphrey got 29%.

The working man, as he becomes increasingly middle class in status and concerns, does not vote Democratic automatically. Young people (and 60% of our population will be under 30 next year) and minority groups are asking—not should I be a Democrat or Republican—but the more probing question: will the system work? Will it meet the challenges of the 70's? And, they will not accept the glib cliches of politicians who want to solve the problem of the 70's with remedies that only partly worked for the problems of the 40's and 50's.

The suburbs have perhaps become the key to winning elections and when people move to the suburbs their thinking and their politics change. In short, the American politics is changing. Our efforts, as always, must be directed toward the common man. But, the common man of 1969 is not the same as the common man of the 30's. He earns more money, is better educated, expects more, and has different interests and concerns than his father and mother.

And we will begin our climb back to power as we grasp the implications of these changes. Let me venture to my fellow politicans in this room what some of those root feelings are:

The people are deeply concerned—and in some cases, even furious—about the relentless increase in taxes: local, state and federal. They neither understand nor accept those increases, and they think we can do better in collecting and spending the revenues of government.

They want tax relief and tax equity—a reasonable assurance that Americans in similar circumstances pay approximately the same tax.

They want a saner sense of priorities. Enough money for national security, but not for monstrous military expenditures.

Adequate funds to stop the fouling of our natural environment and to improve the quality of education and health care, but not swollen expenditures for programs with marginal results.

They perceive the global responsibilities of a world power, but they reject the idea that this nation is the policeman of the world, the gendarme to guard every gate.

They want from all of us in public life less rhetoric and more candor, fewer promises and more performance, less talking and more listening.

And, as much as anything, they want a piece of the action, a sense of participation, a feeling they are not shut out from the decision making processes in the political party and government.

These feelings and demands of the people are difficult to satisfy fully. But those of us in politics have the obligation to try. No one can really say if the Democrats will begin the climb back to power in 1970. But the formula for success in 1969 is what it has been since 1789: listen hard to what people say, and do our level best to respond with concern and reason and compassion.

ANNIVERSARY OF INVASION OF POLAND

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. DERWINSKI. Mr. Speaker, I remind the Members that the Polish Government-in-exile continues to function in London and the voices of its officials are far more representative of the people of Poland than the mutterings of the Moscow-controlled puppets in Warsaw.

Therefore, I insert into the RECORD the address of His Excellency August Zaleski, President of the Polish Republic in exile, on September 1, commemorating the 30th anniversary of the German invasion of Poland.

The text of President Zaleski's statement which follows is of unusual significance emphasizing as it properly does, this historic anniversary which started World War II:

MESSAGE OF THE PRESIDENT OF THE REPUBLIC OF POLAND TO THE POLISH NATION

It is thirty years since Poland fell victim to the treacherous aggression of Nazi Germany and Soviet Russia.

As a result of this onslaught the whole world was enveloped by the flames of the Second World War.

It was not the first time that Poland, which in the course of the thousand years of her history has always represented the ideals of human freedom, justice and love of one's neighbour, as well as respect for international treaties, became the object of aggression on the part of two adjacent imperialist powers. Poland, the most easterly outpost of Western civilisation, a country of civic freedom and hundreds of years of parliamentary democracy, the cradle of some of the greatest minds in the field of national and international law, a state of religious and cultural tolerance which in the Union of Lublin in the year 1569 gave birth to a free association of nations in a single Commonwealth—this Poland has always been an obstacle to the wilful egoism of the two neighbouring powers.

In the defence of these lofty ideals Polish Soldiers fought on all battlefields of the last war, on land, at sea and in the air. The September campaign, Narvik, the campaign in France, the Battle of Britain, Tobruk, Monte Cassino, Ancona, Bologna, Falaise, Arnheim, the Warsaw Rising—these were the stages of the Polish struggle for freedom.

After the war, however, in spite of these enormous sacrifices the Polish people were abandoned to the demands of unbridled Russian imperialism. And the world, since 1945, has not attained the desired peace.

The Polish people, undeterred by this experience, have not given up hope that in the end good will triumph over evil, and law over injustice and armed might.

We, Poles dispersed over all the corners of the free world, have the duty, put upon us by the captive nation, to show the world the nature of this conflict between law and justice on the one hand, and naked might and despotism on the other.

We are fully aware that the road to the victory of law and justice is hard and may extend into the indefinite future, but we shall never lose hope that by the Grace of God good will ventually triumph over evil.

COMMUNIST AGGRESSION

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. MARSH. Mr. Speaker, recently a perceptive article on the nature of Communist aggression appeared in the Washington Post. In his column, John P. Roche points out that although the Communist bloc may not be monolithic, nevertheless, it is still actively pursuing its imperialistic aims.

[From the Washington Post, Sept. 1, 1969]

"POLYCENTRISM" OF COMMUNIST WORLD DOES NOT LESSEN IMPERIALISTIC TAINT

(By John P. Roche)

Every columnist gets his quota of nut mail. Usually it can be identified before opening: no return address, strange, crabbed handwriting, odd forms of saluation (e.g., "Roche, Commie Columnist") and a recent favorite, several colors of ink. One writes this off as par for the course and chucks the missives in the wastebasket.

Far more distressing are the communications from obviously sincere and serious people, generally typed with return address, which regularly accuse me of singlehandedly carrying on the cold war with the Soviet Union, of having a vested interest in conflict, of flatly refusing to realize that communism has changed. For most critics, the key word is "polycentrism."

"Don't you realize, with all your college degrees," one letter asked, "that communism is no longer monolithic?"

To improve my education, correspondents include elaborate reading lists, suggesting that before I again venture into print I read Han J. Morgenthau, Arthur Schlesinger, Jr., and a half dozen other pundits.

All serious suggestions for self-improvement are welcome, but in fact I have read carefully just about everything published on the subject of "polycentrism." Most of it is not only true but banal: obviously the Communist world is fragmented today. There are at least four competing popes (Moscow, Peking, Belgrade, Hanoi) and perhaps a fifth in Havana if one takes Castro's ideological pretensions seriously. (I don't—he is in the tradition of romantic fascism rather than communism, and he has created the most militarized state in the Western Hemisphere.)

So much for the fact of polycentrism. However, the real problem is on another level. In operational terms, from the viewpoint of American policymakers, what difference does it make whether Communism is monolithic or polycentric? For persistently asking this question, Secretary of State Dean Rusk was written off as an archaic boob. But Rusk was right.

Suppose, for example, the North Koreans again invaded South Korea. How would it affect the situation on the ground if we knew that Pyongyang was in business for itself, rather than acting on instructions from Moscow (or Peking)? Nobody knows to this day precisely how the last Korean invasion was triggered, nor whether the seizure of the Pueblo was a local job or Soviet-inspired.

More to the point is the existing situation in Vietnam. I have been arguing for a decade that Ho Chi Minh is an independent Communist commander, that Hanoi is a "polycenter". It is quite clear that Ho's lifelong dream has been to reconstitute former French Indochina as a Communist state, including North and South Vietnam plus Laos and Cambodia. To attain this goal, he has been willing to disregard Moscow (for example, in ignoring the 1962 accord neutralizing Laos) and snub Peking (by barring Mao's little red book from mass circulation).

The crucial question then is how does aggression from a Communist polycenter differ from monolithic aggression? In other words, it is the character of the polycentrist regime—not the fact that it is independent—which is decisive. After all, in the 1930's we had polycentric fascism; Adolf Hitler never established a monolith. Some Fascist regimes were inert (Spain and Rumania, for example); others (Germany and Italy) were aggressive. When Benito Mussolini invaded Albania and Greece, it was no solace to know that Fascism was polycentric, particularly if you happened to be Albanian or Greek.

The meaningful criterion, then, for distinguishing among Communist states is whether they are internationally quiescent, as is the case with Yugoslavia, Poland, and Rumania, or imperialist, as is true of Hanoi, Peking, and—as the Czech episode once more demonstrates—Moscow. In short, we must remember that Communist imperialism is no less imperialistic for being polycentric.

THE FARMER IN THE TILL

HON. PAUL FINDLEY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. FINDLEY. Mr. Speaker, the August issue of the Atlantic Monthly carried an excellent review of the outlook for farm legislation written by Dr. John A. Schnittker and captioned, "The Farmer in the Till."

Dr. Schnittker drew on his experience as Under Secretary of Agriculture and identified the forces which have gathered in support of a limitation on individual farm payments. He is presently on the faculty of Kansas State University. Here is the text of his article:

THE FARMER IN THE TILL

(By John A. Schnittker)

John F. Kennedy is reported to have remarked that he didn't want to hear about agriculture from anyone except John Kenneth Galbraith, and didn't want to hear about it from him either. As President Lyndon Johnson nursed an incurable longing for the rustic pleasures of the LBJ Ranch, but he avoided farm-policy questions when he could. Public officials are alternately wary and weary of agricultural policy. There is ample reason for both attitudes. Farm voters are notoriously hard to please, and farm-policy debates are seldom stimulating. Yet the need for agricultural policy will not go away simply because frustrated politicians wish it. Advanced technology on the farm assures plenty of food for consumers. It also requires stable prices, and there are far too many farmers to arrange such a result without federal help.

Official lethargy on this score was shattered late in May this year when the House of Representatives, reacting against million-dollar payments to big farms, overwhelmingly approved a ceiling of $20,000 on direct subsidy payments to any farm. This revolt against the old order in farm policy was a replay of a surprising House action in 1968, an action later reversed by the Senate.

Congressional advocates of a farm-payment ceiling have some good things going for them. Farm-program costs, at $4 to $5 billion a year, are high and moving higher. In a careful survey made late in 1968, 85 percent of the farmers favored limiting farm benefits. City people are nearly unanimous in objecting to the big budget drain for farm programs when other priority needs beg for funds. Most important, advocates of farm-program reform in the House of Representatives and the Poor People's Lobby have skillfully contrasted giant federal payments to a few farms with the hand-to-mouth budget granted federal food programs by Southern-dominated Agriculture Committees in both houses of Congress, despite evidence of widespread malnutrition. Congressman Paul Findley (R., Ill.) has reported to the House that the cotton and wheat areas with the largest number of big farm payments were doing least about hunger and malnutrition. Finally, a study prepared last year at the request of President Johnson has destroyed the claim of the agricultural establishment in both political parties that surpluses and economic chaos would inevitably accompany a ceiling on farm benefits. Budget savings of $250 million per year are now anticipated by those who favor payment reform, and the savings could be doubled if the payment ceiling were set at $10,000 instead of the $20,000 that was proposed.

Those members of the Congress who opposed the ceiling on farm benefits claimed that such a plan could not be administered, that it was unworkable and unfair, and that it would not save money. Fortunately for the public, none of this is believed any more, at least not in the House of Representatives.

PARITY, PARITY, PARITY

It helps to know some of the words and symbols, if one is to understand the need for change in farm programs. Parity, price supports, and direct payments are the key words.

Parity has been the battle cry of farmers since the 1920s. Public discussion of farm policy, however, has been clouded by three parity doctrines. Parity in the abstract is hard to argue with; it is essentially a fairness doctrine. The effort to find out what is fair for farmers, however, has spawned two competing statistical measures of farm parity.

Parity prices originated a generation ago out of what seemed to be a sensible notion: that farm-product prices should increase in step with the general price level; this would maintain the farmer's purchasing power. Conceived before the new technology revolutionized farming, the parity-price system has failed to account for recent rapid gains in productivity. If farmers were guaranteed 100 percent parity prices in 1969 (instead of the present 65 to 70 percent of parity), wheat, corn, and cotton prices would increase by about 50 percent. Crop surpluses would be inevitable, and the Agriculture Department budget would soon rival the Defense budget. Clearly, the parity-price doctrine is obsolete, although not quite dead.

Parity income is a more recent standard. Simply put, the parity-income doctrine says that a good farmer investing his capital in an operation large enough to employ him more or less fully should be able to earn as much farming as he would earn operating any other small business. A recent Department of Agriculture study showed that a half million of the biggest farmers producing two thirds of our farm products are meeting this standard, at least on the average if not on every farm every year. Net incomes on the largest farms, thanks partly to big payments, are generally far above parity; rapid land-price escalation as farms are enlarged is a clear sign of this. In contrast, the smallest and poorest two million farms could not earn parity incomes on the farm even if market prices were doubled or tripled.

PRICE SUPPORTS AND PAYMENTS

Farm prices left to themselves are notoriously unstable. Price support programs, begun in 1933, grew out of that fact and out of the general economic depression. The new programs were supposed to raise prices by reducing crop production and by removing surpluses from the market. But neither the farm programs nor pump-priming expenditures in the rest of the economy brought real recovery in the 1930s. World War II did that, pushing farm prices so high that price ceilings and consumer food subsidies were applied. After the war, the farm bloc in Congress succeeded for a time in maintaining the high wartime prices under peacetime conditions, even though agricultural prices around the world were declining as Europe recovered and began producing again. The results were predictable. By the late 1950s high market-price guarantees and half-hearted production control were creating huge surpluses. More than that, farmers were gearing their expectations to high prices and buying their land at inflated values. Thus they were generating their own cost increases to justify future demands for even higher prices. By 1960, every grain- and butter-storage structure in the United States was filled. The annual cost of simply owning and storing the $9 billion farm surplus reached $1 billion in 1961. "How to let go of the bear's tail" became the principal preoccupation of reform-minded farm officials and economists.

The answer was a system of direct payments to farmers in place of high price supports. In the early 1960s, payments became the key instrument of farm-policy reform, cushioning the impact of an abrupt shift from high to lower price guarantees for wheat and cotton, and providing farmers the cash incentives required to reduce acreages and limit farm output. Big farmers, who had profited handsomely from high market-price guarantees in the 1950s, became identified in the 1960s as the recipients of huge government checks. The stage was set for the present struggle to reduce the size of those checks.

Recent developments in farming have also helped to focus public attention on farm-program benefits. When farm programs were introduced in 1933, there were 7 million farms in the United States. A few were huge holdings, but most were small, one-family enterprises. Benefits were geared to production, and so farm aid was spread fairly evenly. By 1968, more than half of those farms had disappeared. Today there are 3 million farms, but 2 million of them are small, part-time, residential, or hobby farms. One million top farmers produce nearly all of the farm products marketed, and they get most of the money spent on farm programs. A new study just published by the Joint Economic Committee of Congress, for example, shows that the largest 5 percent of sugarcane and cotton growers get 63 and 41 percent respectively of all the direct benefits from those programs. The largest one percent of cotton growers in California and Mississippi get 25 percent of all the direct federal benefits in those states. Under such circumstances, public concern is certainly understandable.

Clearly, the large payments are not going to the traditional American farm, still typically a one-family enterprise. Instead they help ensure financial security for such well-heeled enterprises as the J. G. Boswell Company of King's County, California, which collected direct farm payments of $3 million in 1968 and $4.1 million in 1967. The Boswell Company is a multimillion-dollar diversified cotton operation with good connections in Washington. Senators and congressman are not excluded from farming, nor do they always disqualify themselves when the Congress votes on big farm payments. Family interests of Senator James Eastland of Mississippi (the Eastland Plantation, Inc., and H. C. Eastland) collected payments totaling $142,078 in 1968, down from $189,050 in 1967. In October, 1968, Senator Eastland voted against the payment ceiling which would have cut the Eastland farm payments to

$60,000, or $20,000 on each of three farms. Campbell Farming of Big Horn County, Montana, often cited as the model of a modern wheat-farming operation, got $162,897 in 1968. Garst Farms, run by Roswell Garst, the international seed-corn figure and one-time host in Iowa to Premier Khrushchev, got $70,923 in 1966, but only $45,212 in 1968.

Nearly two and a half million farmers get federal payments, but only 10,000 farmers get over $20,000 per year. Most of the big payments go to cotton farmers in California, Texas, Mississippi, Arkansas, and Arizona. When Congressman Findley placed the names of all recipients of $25,000 or more in the *Congressional Record* this year, the list from the five biggest cotton states filled twenty-one pages. Five leading grain states required only four pages. Concentration of federal payments in a few cotton states makes them really ripe for reform, although sugar and wool, with powerful political support, are also involved.

Late this spring, when the House of Representatives voted a $20,000 ceiling on farm payments, the Majority and Minority Leaders were opposed, as were most committee chairmen. Understandably, the bulk of the opposing votes were from Texas, California, Mississippi, Arkansas, Kansas—the states with the biggest payments. The Senate could vote a ceiling this summer, if urban senators and the leadership take the initiative. If the Senate fails, final action may have to wait until the farm program is reviewed in 1970.

The White House does not seem to have learned anything from President Johnson's 1968 experience in this matter. When the House voted a payment ceiling last year despite intense Administration opposition, President Johnson began to have second thoughts about supporting his own farm bill, which continued the increasingly vulnerable big payments in a year when most budgets were being cut. Official embarrassment mounted after the Poor People's March when the Administration's expected assault on hunger fell before the tax surcharge, the $6 billion budget retrenchment, and higher Vietnam spending. When the Senate-House conferees on the farm bill dropped the payment-limiting amendments, last year's official White House strategy was designed to get the conference report stalled or rejected, so that the entire farm issue would have to be reviewed in 1969. That failed in a parliamentary maneuver designed without the President's knowledge by the Administration's own lobbyists. After that, President Johnson reluctantly signed the farm bill and directed "the Department of Agriculture to study the effect of a payment limitation on programs which require voluntary diversion of productive land."

That study was conducted in the Department of Agriculture and became public after President Johnson left office. Its findings flatly contradicted the principal argument the Administration and farm congressmen had made in recent years: that payment limits would destroy the production-control programs and would lead to new farm surpluses. The study also documented the potential budget savings associated with a payment ceiling. All this, even the potential budget savings, seems to have been lost on the new administration.

The advocates of unlimited payments are now left without any sensible arguments for their position. Previous opposition to the ceiling rested on the argument that big payments are needed *to prevent too much corn and wheat production*. This spurious claim had a limited validity in the 1961–1964 period of heavy surplus removal, but it has none in 1969 when grain surpluses are down. The Department of Agriculture simply did not know the distribution of payments by size of farm until around 1965. Acting on faulty information, Department officials took an early stand against a payment ceiling, and never found a way to change their position. Now we know that only 2 percent of all feed grains and 4 percent of all wheat would be affected by a $20,000 limit. Even a $5000 ceiling would not materially affect the stability of the feed-grain economy.

Cotton is more concentrated; one third of the crop is grown on some 5000 big farms (out of more than half a million cotton farms) which would be affected by a $20,000 ceiling. Legislative leaders who had insisted that a payment ceiling would cause a grain *surplus*, now said it would cause a cotton *shortage*, an argument so symmetrical it seemed plausible. Senator Holland said last year that the prospect of lower payments made "it appear very unlikely that such producers could continue to supply the mills with low priced cotton. . . ." This is a proposition that ought to be tested: if American cotton growers cannot compete on even terms in world fiber markets without unconscionably high federal payments, it is not too early to discover it. Major changes in addition to a payment ceiling are required in the cotton program. The most important is to remove a provision of the 1965 act which ingeniously exempted cotton from any future payment ceiling. This must be repealed before the ceiling can be effective for the crop and the areas with most of the huge payments.

WHAT TO DO

No firm principles have emerged to direct the Congress toward a particular maximum level for farm payments. Budget savings are the best guide. By that test the $20,000 ceiling is too generous; the figure should be no higher than $5000 per crop or $10,000 per farm, in order to save more money. Reduced payments will not undermine farm-price stability as long as top payments are not forced below those levels. Inevitably, the maximum payment level will be set somewhat arbitrarily: a $20,000 limit will save $200 to $300 million a year; a maximum of $5000 per crop or $10,000 per farm would save $500 million or more. If farms are allowed to split up to circumvent the new policy, however, some of these savings will be lost. This will bear watching; Congress should give the Department of Agriculture firm directions against farm splitting.

These reforms will not silence the sharpest critics of farm programs, who have never accepted the policy of limiting farm production to stabilize prices while anyone anywhere is hungry. So long as the agricultural economy remains inherently unstable, with too many producers to combine effectively to set their own prices the way industrial combines do, the opponents of any farm stabilization effort will probably be disappointed. We need a farm policy as well as a responsive food policy. But a sensible farm policy does not require giant payments.

Farm payments and food programs will inevitably be paired off in the coming debate, although ending big payments will not automatically ensure more food for the poor. The public can't help seeing tragic irony in Congress' tight-fisted approach to hunger, in contrast to its open-handed financing of farm programs. Budget pressures alone ought to encourage the Administration to sense its interest in this matter, if principle does not, although White House help may never materialize, given Mr. Nixon's dependence on the South. Political advantage seems assured for those members who help drive farm-payment reform through the Congress. Big payments lack any legitimacy in real program objectives. It is right, therefore, to end them. Only the most twisted sense of priorities will let us continue to pay millions every year to a few big farms while we procrastinate about ghetto reconstruction, postpone remedial education, close Job Corps Camps, and let poor people starve.

SEPTEMBER AT THE SMITHSONIAN

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following schedule for the Smithsonian Institution:

SEPTEMBER AT THE SMITHSONIAN

September 4: The Creative Screen. "Shape of Films To Come," a survey of revolutionary new techniques in motion picture making. Among techniques presented are films made by computers, a mixed media combination of live dancers and movies, shown on multiple screens and shown on screens of different sizes and shapes. Films will be shown every half hour from noon until 3 p.m. Free admission at the National Collection of Fine Arts.

September 5: Pharmacy in Prints. A collection of portraits, caricatures, broadsides and labels ranging from the satiric and political to the social and ethical, these prints show the doctor-pharmacist-patient relationship. Figures shown include Napoleon, Gladstone, and Presidents McKinley and Cleveland. Through February. National Museum of History and Technology.

September 6: The Creative Screen. "Shape of Films To Come," shown every half hour between noon and 3 p.m., at the National Collection of Fine Arts. See September 4 for details.

September 13: Insect Workshop. Conducted by the Smithsonian Department of Entomology. For members of the Associates ages 8–13. By reservation only.

A Lecture Demonstration Workshop on Stitchery as an Art Medium. Conducted by Constance Howard of London, England, and sponsored by the Smithsonian Associates from 10 a.m. to 4 p.m. Repeated Monday, September 15. This workshop must be taken in conjunction with that listed for September 20. Phone 381–5157 for details.

September 15: Hurricane Fighter Plane. This plane will go on exhibit commemorating the Battle of Britain and the participation of the American Eagle Squadron in that historic struggle. The Hurricane was one of the first and most numerous British fighter planes in World War II, but it is now an extremely rare type of aircraft. It will be shown in the Arts and Industries Building.

September 15: Atomic Art. An exhibition of art by Alyce Simon of New York. Controlled bombardment of acrylic plastic sheets by a particle accelerator combined with flat areas of color produces a unique art form. Hall of Nuclear Energy, first floor of the Museum of History and Technology. Closing indefinite.

Stitchery as an art medium (See September 13).

September 16: Our Dynamic Earth: The Japanese Bamboo Kill, lecture by Dr. F. A. McClure, Research Associate, Smithsonian Department of Botany. Museum of Natural History Auditorium, 8:30 p.m. For members of the Smithsonian Associates and their guests. Public admitted at 8:20 as seats are available.

September 18: The Creative Screen: "A Trip to the Moon." Whimsical drawings by children 6–15 from the U.S., Europe and Japan, showing their creative concepts of space ships and creatures on the moon. Drawn before exposed to moon flight accounts on TV and in the press. Also showing is "Lizzies in the Field," Mack Sennett at his best; a turbulent farce involving beautiful maidens and battered autos. Continuing showings at the National Collection of

Fine Arts every half hour from noon until 3 p.m. Free admission.

September 19: Art of Jannis Spyropoulos. Greece's best known contemporary painter, Jannis Spyropoulos, will be represented by 26 large abstract paintings in an exhibition under the patronage of the Greek Embassy. Spyropoulos has exhibited widely around the world and has won major prizes, including the UNESCO Prize at the 1960 Venice Biennale. At the National Collection of Fine Arts through October 19.

September 20: In-Depth Workshop on Stitchery as an Art Medium, conducted by J. H. Koslan Schwartz and sponsored by the Smithsonian Associates. 10 a.m.–4 p.m. Repeated Monday Sept. 22. By subscription only. This workshop must be taken in conjunction with that program listed for Sept. 13.

September 20: What Is a Mammal? Tiny Tots Zoo Talk by Mrs. Sarah Gagne, Smithsonian Office of Academic Programs. For members of the Smithsonian Associates, ages 4 through 7. By reservation only.

The Creative Screen. "A Trip to the Moon" and "Lizzies in the Field," shown every half hour between noon and 3 p.m. at the National Collection of Fine Arts, Free admission. See September 18 for details.

September 22: Stitchery as an Art Medium (See September 20).

September 24: The History of Film Class for adults begins. By subscription only. Call the Smithsonian Associates 381-5159, for information.

September 26: The Wizard of Oz—Special performance by the Smithsonian Puppet Theatre for members of the Smithsonian Associates and their guests.

September 30: The Film and the Producer featuring Czech filmmaker Jiri Bauer. Museum of Natural History Auditorium, 8:30 p.m. For members of the Smithsonian Associates and their guests.

MUSIC AT THE SMITHSONIAN AIRED OVER WAMU–FM

The following is the schedule of "Music at the Smithsonian," featuring concerts and broadcasts of Musical Instruments Division, aired over WAMU–FM for second year in a row. 9:30 p.m. to 11:00 p.m., Monday nights during September. Five shows of 90 minutes each.

September 1: Jean Hakes, soprano; Stoddard Lincoln, piano. Music of C. P. E. Bach, Mozart, Haydn, and William Linley.

September 8: Sonya Monosoff, violin; James Weaver, harpsichord and piano. Music of H. Biber, Kuhnau, Milhaud, Mozart, David Epstein, and Corelli.

September 15: Huges Cuenod, tenor; Raymond Lynch, lute. English lute songs and solos, German, French lute songs, and Spanish lute solos.

September 23: Alarius Ensemble of Brussels. Janine Rubinlicht, violin; Sigiswald Kuijken, violin and viola da gamba; Wieland Kuijken, viola da gamba; Robert Kohnen, harpsichord. Music of Barthali, Salomon Rossi, Locke, Hacquart, Francois Couperin, and Marais.

September 30: Jean-Louis Barrault, Madeleine Renaud, The New York Chamber Soloists. "Words and Music From the Court of the Sun-King, Louis XIV." Works from Moliere, Racine, LaFontaine and others, music by La Roux, Couperin and Rameau.

TOTAL BLACKMAIL

HON. LOUIS C. WYMAN

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. WYMAN. Mr. Speaker, some demands on America's social and economic structure are totally nonnegotiable. An example of one such is the IFCO demand for reparations from the church.

Such a demand should and must be met with total rejection. Those making it should be prosecuted for attempted blackmail and extortion under appropriate statutes.

Illustrative of this problem is a recent column by columnist James J. Kilpatrick:

FORMAN ENGAGED IN A MOST DANGEROUS GAME

(By James J. Kilpatrick)

Indications are growing that James Forman's Black Economic Development Conference has just about run its reckless course. A recent Gallup Poll found that even among Negroes, only 21 percent actively favor his demand for "reparations." Speakers at last week's NAACP convention in Jackson denounced his approach. Major denominations are pledging greater efforts among the urban poor, but they are pointedly excluding Forman from their charity.

If these signs correctly mark a repudiation of Forman—and especially if they mark a repudiation of the Interreligious Foundation for Community Organization (IFCO)—it is all for the best. Forman is bad news; and this IFCO outfit has become a banking house for revolution.

Not many persons will have read the text of Forman's April manifesto. It is known generally, of course, that he has been demanding $500 million to $3 billion from American churches and synagogues; in May he seized and for several days occupied offices of the National Council of Churches in New York. The tendency has been to regard him as some kind of nut or something.

Foreman ought to be taken more seriously. A number of guilt-stricken church leaders still truckle to him. They close their eyes to the actual wording of the manifesto he drafted for the Detroit meeting of the National Black Economic Development Conference—a meeting supported by IFCO with tax-exempt funds. This manifesto is a purulent exhortation for overthrow of government. These are typical passages:

"It is the power of the United States government, this racist, imperialist government, that is choking the life of all people around the world. . . . We live inside the U.S., which is the most barbaric country in the world, and we have a chance to help bring this government down. . . .

"Time is short and we do not have much time, and it is time we stopped mincing words. Caution is fine, but no oppressed people ever gained their liberation until they 'were ready to fight,' to use whatever means necessary, including the use of force and power of the gun to bring down the colonizer. . . .

"We are the vanguard force. . . . We have suffered the most from racism and exploitation, cultural degradation and lack of political power. It follows from the laws of revolution that the most oppressed will make the revolution. . . .

"But while we talk of revolution which will be an armed confrontation and long years of sustained guerrilla warfare inside this country, we must also talk of the type of world we want to live in. We must commit ourselves to a society where the total means of production are taken from the rich and placed into the hands of the state for the welfare of all the people. . . .

"Let us deal with some arguments that we should share power with whites. We say that there must be a revolutionary black vanguard and that white people in this country must be willing to accept black leadership. . . . Only an armed, well-disciplined, black-controlled government can insure the stamping out of racism in this country. . . . We say: 'Think in terms of total control of the U.S. Prepare ourselves to seize state power. . . .'

"In order to win our demands (for $500 million), we call for the total disruption of selected church-sponsored agencies operating anywhere in the U.S. and the world. Black workers, black women, black students, and the black unemployed are encouraged to seize the offices, telephones, and printing apparatus of all church-sponsored agencies and to hold these in trusteeship until our demands are met. . . ."

There is much more. Ann Lloyd Merriman, the hard-hitting senior editorial writer for The Richmond News Leader, first began exposing Forman and IFCO in May. Last month Human Events documented IFCO's grants since September, 1967, to an astonishing list of militant groups. The gullible members of Episcopal, Methodist, Baptist, Presbyterian and other congregations owe it to themselves to wake up to what is going on. Their money is being spent for the care and feeding of revolutionaries. This is Christian charity? No, indeed. This is lunacy.

SOURCE AND UTILIZATION OF MANPOWER FOR THE MINNESOTA EXPERIMENTAL CITY

HON. DONALD M. FRASER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. FRASER. Mr. Speaker, the task of establishing a new city with a population of 250,000 people in a 10-year period is unparalleled in the development of this country. Assuming a level influx of 25,000 people per year, for 10 years, there would be a requirement for 8,000 to 11,000 jobs per year and between 7,000 and 9,000 dwelling units per year.

To attract this inflow of manpower, a knowledge of the planned economic structure is necessary to attract the proper skills, and, secondly, the skills of available manpower must be determined to make provision for jobs to employ these people. Half of the jobs will be required for servicing the population with the other half required for basic activities including manufacturing.

It is essential that firm commitments be received from business and industry to provide job opportunities and to provide a base around which other activities could be tied. Training programs will be needed to provide the necessary skills required and to provide meaningful work for the minorities and disadvantaged. The matching of people and jobs provides a unique opportunity for experimentation in this area.

Following is a discussion of the source and utilization of manpower, extracted from volume II of the Minnesota Experimental City Progress Report, dated May 1969:

MANPOWER, IN-MIGRATION, AND MOTIVATION—MINNESOTA EXPERIMENTAL CITY WORKSHOP REPORT

(NOTE.—Report of the Workshop on Manpower, In-Migration, and Motivation held in Minneapolis, February 11–12, 1968, by the Minnesota Experimental City Project. University of Minnesota, Minneapolis, Minnesota. September 1968.)

Two major approaches are possible in dealing with the manpower input for the Min-

nesota Experimental City (MXC). The first, a manpower requirements approach, assumes either knowledge of, or a plan for, the range of economic activities and focuses on manpower needs to satisfy this economic structure. The second, a labor supply approach, looks at the region's existing population or a hypothetical future population and attempts to determine the types of jobs needed to employ these people.

The decision as to which approach to follow will partially depend on the choice of goals for the Experimental City. If the City is conceived primarily as a device to foster economic development in a depressed area of the state or as an experiment in encouraging rural population to remain in the region, then the labor supply approach would seem more appropriate. On the other hand, if the MXC is conceived of primarily as an experiment in city-building technology or in the application of technology to cities, the emphasis is shifted from supporting a region to assuring a viable city. In this case the manpower requirements approach would seem more appropriate.

The Experimental City seems likely to accept multiple goals, both with respect to its population and its physical structure. As a result, both approaches will probably be useful. Through an iterative approach, an integration of the two methods should be possible. Regardless of whether the Experimental City is conceived as a regional or national facility, it will draw manpower from both regional and national pools. Upwards of 25,000 people could be expected to reside already within normal commuting distance. Even if no direct recruitment effort were made, some of this population could be expected to work in the City. When IBM opened a new plant in Rochester, Minnesota, a surprising number of their workers continued to live in the hinterland and commute to work for several years. If the MXC were deliberately located so as to be accessible to the largest possible number of underemployed and unemployed persons, the percentage of commuters in its labor force would increase.

The dispersal of the disadvantaged population in northern Minnesota is so great that only a limited number would be directly affected by job opportunities in the City. While our experience at the national level with resettlement has not been a particularly successful one, a program of resettlement might provide a major breakthrough in how to deal with population in distressed areas. Involved here would be the development of a resettlement strategy which would ensure a variety of choices to each individual for the fullest possible development of his social and economic resources.

In 1967, Minnesota had 53,093 unemployed persons, 55 percent of whom resided in either Minneapolis-St. Paul, Duluth, or Rochester Regions. None of the eight remaining regions in the State, as defined by Hoyt,* had as many as 4,100 unemployed. The regions commonly considered to be most distressed, regions one, two and five, had only 1,734, 1,771 and 2,923 unemployed persons respectively. While these three regions, (plus region three, Duluth), had the highest unemployment rates (due to their smaller populations), their absolute number of unemployed was among the lowest in the state.

The Experimental City could be expected to draw manpower heavily from the larger multi-state region in which it is located. Rural residents of the Upper Midwest Region probably would consider the City carefully before deciding to go elsewhere in search of urban opportunities. Additionally the MXC would also draw population from the nation at large, especially among those interested in its experimental nature and in the adventure it represents.

Accepting the assumptions made by the U.S. Bureau of the Census regarding birth rates and out-migration rates, there would be a net out-migration between 1965–85 from the four states—Minnesota, North Dakota, South Dakota and Montana—ranging between 281,000 and 366,000. Two facts emerge from these figures: (1) in no case could the City be populated in *ten* years by what would otherwise be out-migrants from that four-state region. (2) Since the motivations and tastes of out-migrants vary, capturing them on a one for one basis, even with active encouragement from the States involved, would be unlikely.

Any effort to redistribute population within the region in favor of a new city would likely encounter political resistance. Similarly, only a portion of the natural increase in population (417,331 in 1960–65 for the four states) would be available. Thus it becomes obvious that the assumed population of one quarter million at the ten-year level could be met only by recruitment beyond the limits of the four-state area.

For the more highly specialized occupations, there is, of course, greater likelihood of persons being drawn from outside the region. This reflects both the greater mobility of the highly trained and their in-elastic supply over a limited geographic region.

Training programs will be in demand to upgrade the skills of large groups of the population. Hopefully, a true industry-education partnership could be formed. An adequately skilled labor force would permit greater fluidity in personal choices among competing economic opportunities in the City. The requirement for educational and training facilities would be intensified were the City located in a depressed area. Another approach would be to train functional illiterates and others lacking skills in their home cities before they arrive in the Experimental City. The psychological advantage would be significant as the people in question would then be able to come to the new cities as successes rather than as welfare problems. The goal of potentiality should be established; that is, encouraging each individual to develop to his full potential.

MINORITIES AND DISADVANTAGED

An *ample supply of jobs* would be the strongest possible inducement in attracting a new population to the Experimental City. Assuming competitive wage rates, the greater the choice in opportunities, the greater would be the drawing power. However, if free forces were allowed to operate unchecked, a natural selection process would take place in the labor market. Inasmuch as the Experimental City has established goals of diversity in population, positive steps will be necessary to obtain those groups who would not otherwise be attracted on their own, such as the less mobile elderly and the hard core unemployed.

There is, of course, a limit to the number of unskilled and low skilled jobs a city can provide as well as the number of jobs for which people may qualify through on-the-job training. In this respect, the goal of economic aid to a declining region may compete with the goal of providing a broad range of people of low economic status.

A recent experience of Control Data Corporation indicates that a recruitment program for minority and disadvantaged persons might yield workers with more skills than might be imagined. Control Data Corporation opened with an employment office in the ghetto area of North Minneapolis to train. To their surprise, within a short time hundreds of unemployed applied who were trained and ready to go to work immediately.

A special set of problems and opportunities arises in connection with the Indian minority in many parts of Minnesota. While Indians of South America have become an intergral part of their nations; in this country Indians have been set apart in reservations and treated as foreigners. Although efforts have been been made periodically to attract and integrate them into city life, such programs have met with little success. The field of building construction is among the few major industries in which American Indians have established themselves as an important element in the labor force. If Minnesota Indians could be drawn into the construction phases of the project, the likelihood of their becoming an integral part of the urban life would be enhanced. Construction workers in large numbers can be expected to become permanent residents of the City, and Indian construction workers should be encouraged and aided to do so. The cultural atmosphere could be greatly enriched by the presence of American Indians, and efforts to attract and hold them would be appropriate.

MANPOWER REQUIREMENT

This country has no experience in the planned populating of a new city of 250,000 people. One vital question is: To what extent would the recruitment of manpower be assumed by the private enterprises locating in the City? Certainly the opportunity is open for cooperation between enterprises in their recruitment programs. Through coordinated efforts, a form of centralized recruiting could be established which would work to the advantage of all parties, especially those businesses too small to conduct a manpower recruitment campaign on their own.

The manpower question can be approached by determining requirements under alternative assumptions about the City's economic base. Many industries have established guidelines for optimum plant size, and manpower requirements could be easily drawn from them. This degree of precision might be unnecessary, however, since—within a broad range groups of industries have manpower needs in common. In addition, well over half the labor force could be expected to work in easily anticipated secondary and tertiary industry positions. The location of a major university would greatly affect the skills that would be needed in the labor force, both directly through teaching positions and indirectly through spawned research-oriented industries. In any analysis of manpower requirements, it must be borne in mind that technological changes in the coming decade will affect both the quality and quantity of manpower needed.

One way of approaching manpower requirements is by examining the City's needs as they are likely to evolve over time. Obviously, there would be an initial phase during which construction activities would dominate and during which recruiting construction teams would be a major concern. Concomitant with the initial influx of construction workers would be the emergence of a lower order service sector to meet the earliest retail needs. A second major population push would develop with the establishment of export base industries. Again this would be followed by expansions in service sector demands. In a third round, supporting export activities would emerge along with higher level services and office functions.

During each phase, the occupational profile of the Experimental City would change and manpower demands in new areas would develop. Some of these demands might be met by occupational shifts on the part of city residents. For example, as much as 10 percent of the construction force in any given year could be expected to shift to other types of employment within the City.

AMENITY AND MANPOWER RECRUITMENT

After employment, the provision of amenities is the most important factor in attracting manpower to a new city. Among selected amenities are factors such as open space,

*John Hoyt, *Minnesota Economic Regions* (University of Minnesota, 1966).

recreational opportunities, social atmosphere, and the general physical, human, and cultural character of the environment. The ability of the City to draw manpower will also be strongly affected by the quality and range of services it provides, especially educational services.

A difficult problem in planning amenities is in identifying appropriate amenity packages. Ideally, the character of amenities should be geared to the tastes and needs of the population. A new city which draws its population predominantly from people with rural backgrounds would obviously experience demands for amenities different from those desired by a predominantly urban population. Advance planning is crucial, however, to preserve the option of providing certain forms of amenity, such as lakes and streams. Further, pressure is created by the need to provide a minimal level of amenity at the outset as an attraction for the initial population.

To the greatest extent possible, amenity questions should be left open until decisions can be made by the population. Where this is not possible, discussions should take place with representatives of the principal categories of people expected to be attracted to the City. In general, to appeal to the broadest possible population base, amenities should be varied and extend throughout the sections of the City.

MOTIVATION

Manpower planning responsibilities will extend beyond the time that the City reaches its target population. Problems might be anticipated in motivating the population to accept the City and its goals—especially those coming solely in response to employment opportunities. As most residents will be inmigrants, special efforts will be necessary to foster a sense of community.

The Experimental City Authority should capitalize on the opportunity available during the initial years of massive population influx to establish attitudes favorable to its objectives. During periods of personal change, there tends to be a greater receptivity to change. This receptivity might be expected to last one or two years. During this time, the population is likely to be intensely concerned with neighborhood and city problems. Leadership can be expected to emerge, often in response to perceived common grievances. If the population could be made to feel their views were monitored and respected, they would be more likely to remain flexible in expressing themselves, and to identify with the City. Institutions must, therefore, be encouraged through which the population can become involved in the City and its decisions.

To foster community responsibility, MXC Authority planners should keep options open for ultimate decision by the population. As the population grows, decision-making responsibilities of the residents should increase proportionally. This technique would help avoid a crisis when the City is turned over entirely to residents. Citizens education in the purposes and goals should remain an ongoing process to promote participation on a meaningful level.

Many problems of adjustment could be overcome if the City were to aid people in their search for housing and employment. Perhaps an orientation or induction period would be useful as part of a resettlement program. To provide necessary job security, it might well prove necessary for employers to guarantee positions for a specified period. A delicate balance is necessary, however, to avoid an excessively paternalistic attitude. Ultimately, responsibility for the city will be transferred to its residents, and the more broadly responsibility is shared, the more likely the population will be to accept it.

OPPORTUNITY

The Experimental City provides an opportunity to deal with a number of shortcomings in the present system of matching people and jobs. There is currently a considerable lag between the recognition of a manpower need and the training of people to fill it. What is required is better information both on the demand for manpower and on its supply. Vocational training programs should be more responsive to industry needs. Technological changes must be anticipated and incorporated into educational programs. Most important, industries must make an effort to plan their manpower requirements in advance and communicate them when applicable to the appropriate public agencies.

Job development is necessary where jobs are sought for trained people. Question has been raised about whether employment services are adequately used by industry. Currently, only 20 percent of the nation's job openings are filled by employment services. Instead of waiting for employers to consult unemployment offices for specific needs, job development people should knock on doors and "sell" industries on hiring their clients. This approach should be especially promising in a new city where new labor needs would be on the increase for such a long period of time.

With the aid of private enterprise, new methods of recruiting people for the Experimental City will have to be devised. Even if the City's ten-year population objective were extended to twenty years, the logistical problems associated with such a heavy in-migration would be overwhelming. The City might provide a central facility where information on job seekers and potential residents would be available. If employers were likewise to submit their manpower needs to a centralized resource, computers could be used to match manpower needs with available skills. Such a system may ultimately be used nationwide; its early inception in the MXC would provide a useful test.

Present laws call for the withholding of economic support from Indians once they leave reservations. If Indians residing in the Experimental City could get an exemption from this law, a useful experiment could be pursued regarding the effects of this policy on Indian motivation and on their transition from the rural reservation to urban life.

COMMEMORATION OF THE ANNIVERSARY OF THE INVASION OF POLAND

HON. GUS YATRON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. YATRON. Mr. Speaker, this week marks the 30th anniversary of Hitler's infamous attack on the brave and noble people of Poland. The brutal invasion of Poland in 1939 in turn touched off World War II, the war which brought so much suffering to millions of human beings throughout the world. It is impossible to recall these tragic events without bitterness and shame.

When the Nazis invaded Poland on September 1, their 76 superbly organized and mechanized divisions met with little difficulty in devastating the unprepared Polish forces, though the 830,000 soldiers and officers of the Polish Army fought doggedly and gallantly.

Alone and unaided, they maintained a courageous resistance, first to the Nazis, and 16 days after the Nazi invasion, to the Russians, who entered eastern Poland on the pretext that the Polish state no longer existed.

Thousands of Polish infantry, Navy, and Air Force troops, forced to flee the military might of the invaders, joined the Allies and took up arms once more in France, Norway, North Africa, Italy, and Sicily. As the regular army slowly disintegrated within the country, an underground movement developed, directed by the Polish government-in-exile. Stray divisions of the Polish Army together with civilian men, women, and children, destroyed Nazi planes, ammunition dumps, bridges, and other military installations.

Often forced to survive for months, or even years in forests and mountains, members of the resistance and the Polish populace at large reacted consistently with spirit and conviction. Refusing to betray their national honor and collaborate with the enemy, 6 million Poles preferred self-respect and death to capitulation.

Millions more suffered deportation and imprisonment in concentration camps. Even in 1945, there was no peace for Poland. Absorbed by Soviet imperialism, the Poles have continued to fight for personal liberty and national integrity.

Those who have immigrated to the United States have brought with them their love of liberty, and their respect for law and order. They have contributed much, socially, economically, politically, and culturally, to the advancement of our Nation, and have helped make the United States great. My admiration and respect go out to all the Poles in America and especially those in Pennsylvania's Sixth Congressional District.

EGEBERG MARIJUANA APPROACH IN CONFLICT WITH NIXON-MITCHELL BILL

HON. CHARLES H. WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. CHARLES H. WILSON. Mr. Speaker, in my continuing efforts to shed light on the narcotic addiction and drug abuse problem, I wish to call to my colleagues' attention an article appearing in yesterday's Washington Post.

Assistant Secretary for Health and Scientific Affairs, Dr. Roger O. Egeberg stated that, in his opinion, the penalties for posession of marijuana were too strict and that marijuana should not be classed with dangerous narcotics such as heroin. Dr. Egeberg is in such a high position within the administration and apparently his views conflict with the approach exemplified by the President Nixon-Attorney General Mitchell proposed narcotic legislation, I thought my colleagues on both sides of the aisle would be interested in Dr. Egeberg's remarks.

The Nixon-Mitchell handling of the problem is typified by strict, harsher penalties which will make felons out of all persons in possession of marijuana. Their bills link marijuana with the hard narcotic heroin. Much criticism has been leveled at this type of treatment of these

substances and obviously Dr. Egeberg is not in agreement with President Nixon and Attorney General Mitchell concerning them.

The article follows:

EGEBERG CRITICIZES MARIJUANA LAWS

NEW YORK, September 2.—Dr. Roger O. Egeberg, HEW Assistant Secretary for Health and Scientific Affairs, said today the penalties for possession of marijuana were too strict and that marijuana should not be classed with dangerous narcotics such as heroin.

Egeberg said in an interview that he believed "the present laws are completely out of proportion" to the dangers presented by marijuana.

"I think they're punitive," Egeberg said. "I don't personally think marijuana leads to heroin. I feel pretty strongly that it should be placed in a different category from barbiturates, heroin, amphetamines and LSD."

Egeberg was here to address a meeting of the international union against tuberculosis at the Waldorf-Astoria hotel.

(In 1967, Dr. James L. Goddard, head of the Food and Drug Administration, came under fire for expressing similar views. Goddard was originally quoted as saying he would no more object to his daughter smoking marijuana than he would to her drinking a cocktail. He later said he did not condone the use of marijuana but did oppose overly strict penalties, which make criminals out of youths who "experiment" with pot.)

TRIBUTE TO THE LATE HONORABLE BARRATT O'HARA

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. SCHWENGEL. Mr. Speaker, Members of Congress, the people of Illinois, and all those who knew Barratt O'Hara or who knew about him were deeply saddened by his death on August 11. He had served in this House for 18 years, and those of us who bade him fond farewell at his retirement from Congress last year had missed this kind and wise man whose youthful presence had inspired us despite his 87 years.

Barratt O'Hara will be remembered for many reasons, and by different people for their own special reasons, for he touched the lives of many of us. But I think he will be remembered by all for his devotion to underprivileged men and nations. Throughout his various careers he was faithful to his concern for the needs of the unfortunate.

Barratt O'Hara served his Nation and humanity for more years than many men are given to live. From the age of 15, when he joined the 33d Michigan Brigade, the second American force to enter Cuba in the Spanish-American War, he acted with courage and followed the call of duty.

He attended college and then began a successful career as a newspaperman, becoming sports editor of the St. Louis Chronicle at age 20 and later Sunday editor of the Chicago Examiner. At 30, he became the youngest, Lieutenant-Governor in Illinois history, and earned nationwide attention when his investigation of substandard wages paid to women resulted in the adoption of a minimum wage for women by eight States. He served in the Army in World War I and then enrolled in law school, in pursuit of the career he had dreamed of achieving. The son of Circuit Court Judge Thomas O'Hara, Barratt became known, during the years he had a law practice, as a defender of the poor and unfortunate.

Barratt O'Hara was first elected to the House of Representatives at an age many of us would consider advanced. But the 66-year-old freshman Congressman was young in spirit, and he remained so throughout the remainder of his life. He continued to champion the causes of a minimum wage, increased pensions for civil servants, health research, and civil rights. He believed in United States' loans to underdeveloped nations; he was especially interested in Latin America and in the emerging nations of Africa.

Barratt O'Hara lived 87 full years of service to America. We will long remember him for his outstanding achievements and for his great humanity toward fellow man.

WISCONSIN ATTORNEY GENERAL ISSUES OPINION ON FEDERAL AID TO STUDENTS CONVICTED IN CAMPUS DISORDER

HON. WILLIAM A. STEIGER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. STEIGER of Wisconsin. Mr. Speaker, Wisconsin's attorney general, Robert Warren, recently issued an opinion in response to a request from the State university board of regents on whether 25 students convicted of criminal charges resulting from a disturbance at Wisconsin State University-Oshkosh are eligible for Federal assistance.

Because of the high degree of interest in this matter in Congress, I am including as a part of my remarks the complete text of the attorney general's opinion for the information of my colleagues:

THE STATE OF WISCONSIN,
DEPARTMENT OF JUSTICE,
Madison, August 14, 1969.

Mr. EUGENE R. MCPHEE,
Director, Wisconsin State Universities,
Madison, Wis.

DEAR MR. MCPHEE: You have requested my opinion regarding the eligibility of approximately twenty-five students for Federal student assistance.

The twenty-five students had been suspended from the State University-Oshkosh last December for engaging in rioting on the campus. Subsequent to their suspension they had, it is my understanding, been convicted of a criminal charge arising out of the campus disturbance. It is my further understanding that the period of their suspension has expired and that they are now seeking readmission at Oshkosh and Federal assistance.

You are primarily concerned with the question of whether the University has discretion in the matter of granting Federal assistance or whether the granting of such aid has been prohibited by Act of Congress.

The applicable Federal law reads in part:

"Eligibility for student assistance—Conviction of crimes involving force, disruption, or seizure of property of the educational institution.

"(a) If an institution of higher education determines, after affording notice and opportunity for hearing to an individual attending, or employed by, such institution, that such individual has been convicted by any court of record of any crime which was committed after October 16, 1968, and which involved the use of (or assistance to others in the use of) force, disruption, or the seizure of property under control of any institution of higher education to prevent officials or students in such institution from engaging in their duties or pursuing their studies, and that such crime was of a serious nature and contributed to a substantial disruption of the administration of the institution with respect to which such crime was committed, then the institution which such individual attends, or is employed by, shall deny for a period of two years any further payment to, or for the direct benefit of, such individual under any of the programs specified in subsection (c) of this section. If an institution denies an individual assistance under the authority of the preceding sentence of this subsection, then any institution which such individual subsequently attends shall deny for the remainder of the two-year period any further payment to, or for the direct benefit of, such individual under any of the programs specified in subsection (c) of this section.

"REFUSAL TO OBEY REGULATIONS OR ORDERS; DISRUPTION OF ADMINISTRATION OF INSTITUTION

"(b) If an institution of higher education determines, after affording notice and opportunity for hearing to an individual attending, or employed by, such institution, that such individual has willfully refused to obey a lawful regulation or order of such institution after October 16, 1968, and that such refusal was of a serious nature and contributed to a substantial disruption of the administration of such institution, then such institution shall deny, for a period of two years, any further payment to, or for the direct benefit of, such individual under any of the programs specified in subsection (c) of this section.

"COVERED PROGRAMS

"(c) The programs referred to in subsection (a) and (b) of this section are as follows:

"(1) The student loan program under title II of the National Defense Education Act of 1958.

"(2) The educational opportunity grant program under part A of title IV of the Higher Education Act of 1965.

"(3) The student loan insurance program under part B of title IV of the Higher Education Act of 1965.

"(4) The college work-study program under part C of title IV of the Higher Education Act of 1965.

"(5) Any fellowship program carried on under title II, III, or V of the Higher Education Act of 1965 or title IV or VI of the National Defense Education Act of 1958." (Tit. 20 U.S.C.A. Sec. 1060; P.L. 90-575, title V, s. 504, Oct. 16, 1968).

As can be seen from the above quoted Act, eligibility for Federal assistance depends on the results of a hearing held for that express purpose. The obvious question is whether the University is obligated to hold such a hearing. In this respect the Act is ambiguous and resort may be had to rules of statutory construction.[1]

I have recently been advised that the Office of Education has not adopted any regulation designed to force compliance upon edu-

cational institutions.[2] Notwithsanding, the Office of Education has issued the statement that "* * * an institution may arbitrarily decide not to activate the statutory machinery. Such an interpretation of Sec. 504 (a) and (b) is not correct."[3]

It is a common rule of statutory construction that the interpretation of a statute by the agency having the responsibility of its enforcement is entitled to great weight.[4] Further, to say that the provisions of Sec. 504 are not mandatory could vitiate the purposes of the statute and would violate the rule of construction that statutes are to be interpreted so as to give them force and effect.[5]

In the light of these rules of statutory construction, I can only conclude that Sec. 504 places a duty upon educational institutions to initiate a hearing whenever it has a reasonable belief that a student-applicant would fall within the prohibition of the statute.[6]

As to the twenty-five or so students—applicants at State University-Oshkosh, I am of the opinion that Federal assistance cannot be either granted or denied without a hearing; that eligibility for Federal assistance must depend on the results of the hearing.

In regard to the hearings, ineligibility for benefits is mandatory upon a showing at the hearing that the applicant was either convicted of a criminal offense or found guilty in a school disciplinary hearing which conviction or school proceeding involved misconduct engaged in after October 16, 1968, that seriously and substantially contributed to the disruption of the administration of the institution or use of the facilities by those entitled to their use which involved the use of or assistance to others in the use of force, disruption or seizure. The issues presented in the hearing are the identity of the student and whether the conviction or school sanction involved conduct as described in the statute.

In this same regard it would not be proper, in my further opinion, to consider any issue other than those above discussed. For example, it would not be proper in the case of either the criminal conviction or the student disciplinary sanction to in effect review those prior determinations by allowing the student to raise the issue that he really wasn't guilty for he had been forced or coerced in participating in the disruption.

The school has no authority to review the prior decisions which are presumed under the law to be valid.

Any suspension under the statute commences on the date of the determination of ineligibility and runs for a period of two years from that date.

Additionally, you have requested my opinion as to whether these same students are barred by law from participating in the many state student programs.

At the present time there is no specific State statute comparable to the Federal Act just discussed.[7] Consequently, it is necessary to review the specific standards upon which the benefits are granted to determine whether the students are necessarily barred from participating. In this regard, you have specifically referred to those programs authorized by Secs. 37.11(12), 37.11(15), 37.11(17), 39.31 and 39.32, Wis. Stats.

Sec. 37.11(12), Wis. Stats., creates a scholarship dependent upon bona fide residency, being a good student (scholastic), financial need and qualification of leadership.

Sec. 37.11(15), Wis. Stats., establishes a scholarship having comparable criteria in the preceding section excepting residency.

Sec. 37.11(17), Wis. Stats., creates a scholastic grant to needy and worthy nonresidents who are deserving of relief because of extraordinary circumstances.

The conduct of the students in question, which gave rise to the school sanctions and criminal convictions, does not, in my opinion, as a matter of law, conflict with the prescribed standards nor necessarily bar the students from consideration under these three programs.

The honor scholarship created by Sec. 39.31, Wis. Stats., is only available to "first-time, full-time freshman" and, therefore, not relevant to the students in question.

Sec. 39.32, Wis. Stats., creates a student loan fund. This State program is in conjunction with the Federal program created by P.L. 89–329 and 89–287.

P.L. 89–329 relates in part to Federal, State and private programs of low-interest insured loans to students in institutions of higher education. Specific reference is made to this program in Tit. 20, USCA s. 1060 (c)(3), as a covered program. Consequently, it is my opinion that eligibility of the students in question for an insured loan under this State program is dependent upon a hearing as provided in Tit. 20 USCA s. 1060.8

Sec. 39.35, Wis. Stats., creates a teacher scholarship program. The standards for eligibility are set forth in the statute and do not foreclose the students in question from participation in this program. However, any suspended student who has been under this program when suspended would not appear to be eligible in view of the provisions of subsection (d) which requires the maintenance of a certain scholastic standing.

In conclusion it may be stated as a general proposition, the twenty-five students in question are not barred from the State programs by reason of their having engaged in disruptive activity on the Oshkosh campus last fall.

Sincerely yours,

ROBERT W. WARREN,
Attorney General.

FOOTNOTES

[1] 50 Am. Jur. s. 225, Statutes.

[2] The Office of Education does, however, require each institution to report the number of students whose Federal assistance was terminated under the Act.

[3] No. 8, May 27, 1969, *Keeping You Posted* by Office of Education.

[4] 2 Am. Jur. 2d 241, Admin. Law.

[5] 50 Am. Jur. s. 357, Statutes.

[6] "As with any provision of law, Section 504 demands compliance in good faith by those to whom it applies. So we expect that colleges and universities will strive in good faith to implement its provisions for aid termination where the facts disclose the 'abuse' has taken place Compliance in this sense is mandatory and, as I have already indicated, we have every good reason to believe educational institutions genuinely intend to comply." Secretary of Health, Education, and Welfare, Robert H. Finch, before the House Special Subcommittee on Education, April 18, 1969.

As further indicia of legislative intent P.L. 90–557 s. 411, October 11, 1968, reads:

"Sec. 411. No part of the funds appropriated under Act shall be used to provide a loan, guarantee of a loan or a grant to any applicant who has been convicted by any court of general jurisdiction of any crime which involves the use of or the assistance to others in the use of force, trespass or the seizure of property under control of an institution of higher education to prevent officials or students at such an institution from engaging in their duties or pursuing their studies."

The appropriation that Section 411 refers to apparently includes for the current year the National Defense Student Loan Program, Federally Insured Student Loans, State Guarantee Loans and Private Nonprofit Loans.

Currently pending in Congress is Sec. 407 of the 1969 HEW Appropriation Act which reads in part:

"None of the funds appropriated by this Act shall be used to formulate or carry out any grant to any institution of higher education that is not in full compliance with Section 504 of the Higher Education Amendments of 1968 (Public Law 90–575)."

[7] Such legislation is, however, pending; see Bills 53S, 442S and 260A.

[8] This is true regardless of whether the loan is made by a private corporation under Sec. 39.33, Wis. Stats., Guaranteed Student Loan Program; also see Note 7.

LAW AND ORDER

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. RARICK. Mr. Speaker, the long-suffering, quiet citizens of Baton Rouge, La., which I am honored to represent, have taken a strong stand for law and order.

They realize that their police officers are the front line in the battle against crime, anarchy, and insurrection. They also feel that government's duty is to protect the rights of the law-abiding individual before social programing and politics. For that reason, thousands organized a citizens for law and order to take a stand in defense of an orderly civilization.

I am pleased to ask unanimous consent of this body that a resolution adopted by the Batin Rouge Citizens for Law and Order be here placed in the RECORD of this House.

The resolution follows:

RESOLUTION BY BATON ROUGE CITIZENS FOR LAW AND ORDER

Whereas, There has been a subtle, but increasingly bolder and more extensive effort to harass and discredit our local police forces and their individual members in this country for more than a decade, and

Whereas, Local law enforcement officers are our first and last line of defense against crime, anarchy, and insurrection, and

Whereas, A strong, armed and independent police force is an impassable barrier to the advance of communism, and

Whereas, Communists, their dupes and allies in their unceasing effort to destroy local police forces do seek to establish and maintain civilian police review boards so as to make individual police officers afraid to do their duty, especially in connection with rioting mobs; and do seek to harass, discredit, and demoralize local police forces through brazenly unwarranted cries of "police brutality", and

Whereas, The elimination of local police forces entirely or reducing them to a statue where they cannot protect their friends, neighbors, and local communities from the minions of a central government is important to communists in connection with their plans for imposing a police-state tyranny on the American people, and

Whereas, Court decisions have unreasonably hampered police officers in execution of their duties in law enforcement, and

Whereas, There is a growing communist-inspired plan to disarm local police—partly at first; but later on, completely, and

Whereas, There is increasing lawlessness in Baton Rouge and increasing contempt for law officers by certain segments of the population, and

Whereas, The American Communist Party officially resolved as early as 1928 to use that same segment of the population in a bloody revolution to destroy the United States and create a soviet Negro republic out of several southeastern states, including Louisiana, and

Whereas, It is communist strategy to create

and incite hatred between groups in order to bring about their revolution, and

Whereas, "Liberation," "Civil Rights," "Biracial," "Equality," "Human Relations," and "Non-violent" groups have risen and recently gained great influence (each espousing causes the opposite of its nominal purpose), and

Whereas, These "anti-racist" groups complain about unjust and unequal persecution of members of the minority race by police in spite of the fact that statistics prove that this race commits six to twelve times the number of serious crimes (particularly crimes of passion) per capita as the majority, and

Whereas, Shameless do-gooders and pseudo-intellectual humanitarians without an average citizen's morality, loyalty or respect for the City or its Police Department (mercenaries without pay known as the "Legal Aid Society") have filed malicious and unfounded charges against the City and its Police Department on behalf of families of the three escaping felons who were legitimately shot in hot pursuit by police officers, and

Whereas, Law and order is essential to any society, and particularly to American society, based on Biblical ideals and the honor, faith and credit of one's fellow man, and

Whereas, The local government's primary responsibility is to protect the lives and property of all citizens of the community and to maintain law and order through its Police Department, and

Whereas, Elected local officials are yielding to the disruptive tactics and the outright demands and threads of organized pressure groups, and

Whereas, Local police officers are grossly underpaid and their salaries should be considerably upgraded,

Therefore, be it Resolved that Baton Rouge Citizens for Law and Order, with adequate justification and provocation as of this date and henceforth, will do all in its legal power to defend and enhance the authority of and the respect for the City-Parish Police Department and other local law enforcement bodies, including any remaining courts and judges which may believe in the U.S. Constitution rather than the present U.S. Supreme Court and/or the United Nations Charter, and

Be it further Resolved, that all citizens urge their congressional delegation to do all possible to reverse decisions of the U.S. Supreme Court which protect criminals at the expense of the law abiding citizens and which place unreasonable restrictions on police officers in law enforcement, and

Be it further Resolved, That responsible officials reject any "civilian review board" or other outside "supervision" of our police, including federal controls, and

Be it further Resolved, That all citizens obey all laws, whether considered unjust or not, and work for changes through the democratic processes; and that all our fellow citizens, white and black, wake up to the real meaning of what is happening all around us and display Christian charity, not hatred, towards all members of the community regardless of race or creed, and

Be it further Resolved, That the City Council approve without delay the new pay plan proposal submitted recently by the Police Chief and a group of policemen to a special committee of the City Council, and that every effort be made to provide this salary increase without additional taxes but rather through savings resulting from an economy and efficiency in government operations, and

Be it further Resolved, That police officers must be instructed and allowed to use whatever force is necessary to enforce the law and to defend themselves without regard to color or race, and

Be it further Resolved, That we will work diligently for the replacement, and, if necessary, recall of those elected officials who refuse to enforce the law, and

Be it further Resolved, That copies of this resolution be sent to the Mayor, Sheriff, Chief of Police, members of the City-Parish Council of Baton Rouge, and to the communications media.

IMPROVED SCHOOL MANAGEMENT CAPABILITY: RESPONSE TO STUDENT UNREST

HON. CLEMENT J. ZABLOCKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. ZABLOCKI. Mr. Speaker, Mr. Leon M. Lessinger, Associate Commissioner for Elementary and Secondary Education, Office of Education, addressed the 41st annual Harvard University Summer School Conference on Educational Administration on July 18, 1969.

His interesting and thought-provoking remarks on our Nation's educational system and student unrest deserve careful consideration.

In order to share with my colleagues Mr. Lessinger's views I am pleased to place his address in the CONGRESSIONAL RECORD at this point:

IMPROVED SCHOOL MANAGEMENT CAPABILITY: RESPONSE TO STUDENT UNREST

(By Leon M. Lessinger)

From our earliest beginnings, we Americans have been among the most introspective and self-conscious people on earth. The Pilgrims and the Puritans subjected their lives to continuous self-examination for fear they might incur divine displeasure. Anxious citizens kept lengthy diaries which reflect a probing for some hidden meaning in events of the time.

The effects of a Freudian era and the development of mass communications have made us, after 350 years, an even more self-conscious people. As in the past, our manners and morals—particularly the manners and morals of our youngsters—are of major concern. Our writers and commentators and many of our young activists direct their imaginative energies to exposing what they consider our delusions about the society we have produced. Everywhere we read of youthful alienation, disrespect for authority, and rejection of traditional values. Many of our ablest youth seem to see an emptiness behind the beguiling facade of middle-class American culture. The phrase "white-middle-class" has become an epithet rather than a social or economic description.

In the ill-founded, media-created faith that technology will provide instant solutions to human problems, we probe our society's dichotomies and hypocrisies and credit the young with insights formerly expected only of serious scholars. Our schools and universities, as fragile and vulnerable as life itself, have become special targets for the slings and arrows of these social critics.

There is no shortage of opinion—or even research findings—to suggest that something is happening here and the adult society doesn't know what it is.

It is ironic that the middle class culture itself has nurtured a large part of the current youth rebellion. I'm reminded of Sir Edward Appleton's comment about Whitehall: "You must not miss Whitehall. At one end you will find a statue of one of our kings who was beheaded; at the other, the monument of the man who did it. This is just an example of our attempts to be fair to everybody."

Robert Nisbet—perhaps in an effort to be fair to everybody—suggests that our youth are both bored and idealistic. I would agree. I would even suggest that a marriage of convenience has united boredom and idealism to ignite student rebellion.

Action is needed—and soon—if we are to preserve that idealism and eradicate the malignant ulcer of boredom.

Certainly we who have responsibilities for education must supply a massive part of the action, for we, and the schools we administer have stimulated a great deal of boredom among students.

Most of us can still recall the extraordinary dreariness of so much of the teaching we were exposed to: The lesson was less than first-rate, the passive note-taking, the rehearsal of opinion about books unread and authors unknown, the boring assignments, the perfunctory explanations, the flat stale textbooks, the mindless regurgitation of meaningless facts, and the capricious grading.

Our schools have made some progress in this area, but we have a long way to go. In too many classrooms these boring practices still occur. In today's exciting competitive market of television, magazines, electronic music, and easy travel, classroom boredom is unnecessary and unacceptable. Our schools must create an environment which enlivens, an environment which encourages idealism and provides productive channels for youthful energy.

Life to youngsters is exciting and exhilarating, not exhausting. They are eager to do, to learn, to taste, to see. Their vigor beguiles us, their brashness appalls us, their idealism invites us, and their energy evades us. We watch them, analyze them, and dissect them in an endless effort to understand and interpret them. Some of us admire them, perceiving their actions as steps toward fulfillment of our own hopes for a better world. Others fear them, foreseeing imminent chaos. We *react* to them, but seldom *act* with them. That they want us to act with them seems implicit in their tactics.

We know all this, yet are immobilized by how little we seem to know and how little we seem able to do. I believe we know so much more than we understand that we are unable to use what we know.

The survey report prepared by the National Association of Secondary School Principals makes it clear that most student protests are against the use of *power* as opposed to the exercise of *authority* which our society freely accords to effective experts. For example:

One-third of all schools surveyed reported student objections to the dress code.

One-fourth of the schools have experienced protests against the hair code.

Four-fifths of the schools have had protests against school regulations.

The way the school educates its pupils has triggered activist protests in 45 percent of the schools, the report tells us. Examination of the statistic indicates that much of the protest concerned class grouping, homework, scheduling, and similar matters which might just as easily be classified as objections to arbitrary use of power.

Challenges to the school's *authority* as opposed to its exercise of *power* seems to be greatest in urban senior high schools with more than 2,000 students. More than 80 percent of these schools reported protests against the instructional program.

The point, it seems to me, is that students see the school as an institution responsible for teaching and learning and simply refuse to grant it any recognition as a social arbiter. They see the school using power arbitrarily, while simultaneously failing in its primary duty of providing students with an adequate education. And they see great energy expended in the exercise of arbitrary power, but little effort applied to strengthening the educational process which would demonstrate the school's authority.

Please note that I am deliberately making a sharp distinction between "authority" and "power." A similar distinction has been made by John Gardner, Nisbet, and others. As I use

it, "authority" is the control derived from knowledge or wisdom, whereas "power" is an attribute of brute force. In this sense, the idea of "power" is expressed by the cynical adage "might makes right," while the idea of "authority" is the obverse "right makes might."

It is my opinion that legitimate social protest can and should be directed against power, while protests against authority must be intellectual and cerebral, in the sense of honest disagreement, if chaos is to be prevented. Protest against power should be an effort to reclaim some liberty or freedom which has been abrogated by the substitution of force for authority.

Our rebellious youth are, for the most part, protesting the use of power and demanding that it be supplanted by responsible and responsive authority. We are fortunate that this is true, but can claim no credit for it. Most of our protesting youth do not make the distinction I have made—nor do those who would use power to suppress student dissent.

What, then, has led to the rather sudden use of confrontation politics in our schools?

The Secondary School Principals' survey indicates it is not really the Vietnam war, nor the draft, both of which are frequently cited. I concur in that conclusion. It is my feeling that most of the protests which seem to attack authority rather than power really represent an assault on claims to authority which no longer are valid. If the claims to authority were in fact valid, a protest movement could not be mounted.

For the facts indicate that a certain amount of arbitrary power will be tolerated if those exercising it have a sufficient degree of true authority. Such use of power becomes intolerable, however, when there is a serious decline in true authority.

It is my contention that our schools have suffered a rapid decline in accepted authority and in freedom to use arbitrary power for very well known reasons.

During the past decade, the American public school system has both sought and been prodded to become responsive to major changes in the U.S. economy, culture, and society. Simultaneously, our schools have been confronted with the task of providing each and every child with the skills and the knowledge necessary to his future productive participation in society, regardless of race, creed, interest, ability, or place of residence.

This enormous increase in the burden on our schools is symbolized by recent Federal legislation. But our Federal programs really are only the most visible indicators. The real increases in demands on schools have come from the aggressive insistence of heretofore "hidden populations"—the ofttimes alienated and excluded minorities.

Through a combination of factors, these hidden populations have come to realize and accept the idea which we educators have long urged upon them that only by adequate education can they emerge from the bonds of isolation, economic deprivation, and prejudice.

Having accepted the investment value of education, our minorities have looked to the schools, only to find that these educational institutions are not prepared to provide the desired salvation. As middle class institutions, our schools seem able only to house minority students, not to educate them.

And the fault rests with the schools, not with the minorities.

Many of our schools traditionally have been Spartan in their attitude toward providing education. Students without the stamina to endure the course were cast aside with cavalier contempt. That tradition of the frontier by which a student either performed or perished academically no longer serves the needs of our youth, ourselves, or our Nation.

Therefore, I propose that we find a new educational strategy and build a new educational tradition.

Such a strategy would put the burden for performance where it belongs—on those who are paid to provide the conditions for learning. No longer can we afford to blame the learner for the teacher's failure. Putting the burden for student performance on adults who are paid to insure learning would enable us to serve the real learning needs of all students, instead of merely sifting and sorting them as we do now.

What I am saying is not new to you. You have heard it *ad nauseum*. Like many adults over 30, I am fully capable of mouthing glittering generalities and even inane banalities. But I hope and believe that the strategy I am about to propose may offer some suggestions on how our elementary and secondary schools can get from where they are to where they ought to be. At least, I hope my words offer some possible points for beginning what John Gardner has described as "a well-tested way out of the dizzying atmosphere of talk and emotion." Gardner's prescription is "to put one foot doggedly after another in some concrete, practical activity."

My remarks are directed to helping identify "some concrete, practical activity" which can engage us as educators as we begin putting "one foot doggedly after another."

I have suggested that a new educational tradition is needed. I prefer to think of it as a "zero reject" tradition. You may prefer Benjamin Bloom's term of "learning for mastery." Or you may like the generalization about providing every child with all the knowledge and skills he is capable of acquiring. Whatever you call it, the objective is the same: Providing equitable educational services for all children which will enable each to perform according to his own capability instead of simply fitting into a spot on the ubiquitous bell-shaped curve.

But, you object that has always been the objective of our best educators. Nevertheless, you protest, there has never been a single school system in any place at any time which has attained a "zero reject" performance—and I would agree with you.

I submit, however, that the tools are now at hand to make such performance a reality. What now is needed is the application of those tools to performing the tasks of our schools. To bring these tools to bear on the American public school system will require a vastly improved management capability in education.

Do I detect groans of despair? I am not surprised by your distress. We are educators largely because we deliberately sought a vocation which provided us with the continuing intellectual stimulation which teaching offers. Most of us are bored stiff or even philosophically opposed to the bureaucratic strictures and structures which seem inevitably to accompany the act of management. Like our activist youth, we prefer to do our thing. For most of us, that means teaching. We tend to avoid what we perceive as the tedium of devising bureaucratic plans and nurturing them to the maturity necessary to influence what other people do.

That, however, is the burden we have assumed as educational managers. And it is only through mastering that burden that we acquire the authority we seek. Too often, I fear, we have abrogated our professionalism and used power when we should have been seeking the authority which comes with mastery of our management task.

For the most part, our education agencies are not equipped with the management capability to respond effectively to the changing needs of their clientele. This is most obvious in our central cities, where the clientele has changed so rapidly.

Federal support has helped, but it has been something of a mixed blessing. The great Federal emphasis on instructional accomplishment has generated enormous concern and action in the form of new educational programs. A great deal of progress has been made toward the goal of equalizing the availability of educational programs and services among our schools, regardless of geographic location. Further equalization of resources remains to be achieved but is by no means the only action necessary. We must now begin moving toward achieving equality in student performance, a vastly more complex and difficult undertaking than merely equalizing resources.

It is our inability to achieve equality in student performance which is at the root of protests about instructional programs in our school systems. Until our schools are able to reclaim their rightful authority through effective management, they will continue to be the focus of escalating protest. The problem has surfaced most visibly in our cities, but other schools certainly will experience the same problems without improved management.

The basic objective of an improved management capability in education should, therefore, be to seek a higher level of *authority* for our schools, while rejecting the imposter of power.

Modern management techniques are available to our schools—at a price—but there has been no concerted effort to apply these techniques to education endeavor. Our failure to use the techniques which have been developed, refined, and proven by industry, business, and a few public agencies is at least partially understandable.

To me, improved management capability means the acquisition of improved competencies to perform certain functions. The functions which I believe educators must be able to perform, if they are to be true managers of the educational process, include the ability to determine and continuously modify objectives on a rational basis.

Modern management techniques require, first and foremost, a clear understanding of what the product is to be. This understanding must—in computereez—be output-oriented.

Our schools pay lip service to outputs, but usually in vague generalities such as "well prepared graduates" or "the encouragement of learning." Very seldom do we find educational objectives stated in terms of specific desired effects on the student or student behavior.

Almost all educational organization is designed to facilitate *the process of teaching, not the process of learning.*

Under our schools' present input-oriented management, time is apportioned, space is compartmented, materials are developed, and personnel roles are shaped primarily to serve the needs of the teaching process. But if we assume an output-orientation of serving the needs of learning, the responses to problems of time, space, materials, and similar matters may be far different.

For example, consider the problem of time for educational improvement. From an input-oriented view we might well conclude that the present school day is jampacked, that there is little or no time available for developing or introducing new curricula or procedures. But when the same problem is examined from the learning or output viewpoint, we discover that the learner's time is not fully utilized.

Or, similarly, consider the problem of providing academic and vocational education. The teaching, or input-oriented view, demonstrably holds that it is both logical and efficient to operate the programs separately because they require different personnel and resources. But the individual learner needs integrated skills which enable him to apply knowledge to production. Knowing how to calculate the hypotenuse of a triangle will be of little value to the learner building a set of stairs, unless he also knows the work skills required. And you have my assurance as a former engineer that stairs built ever-so-skillfully are likely to have a strangely skewered appearance if the lesson of the hypotenuse isn't applied in planning them.

One more quick example:

School district consolidation has engaged great energies and emotions for a number of years. The input-oriented view is that consolidation provides economic efficiency for the teaching process. Little attention has been given to the output-oriented view that what the learner requires is merely access to learning opportunities and that these may be provided just as well by adroit manipulation and shifting of the necessary learning resources as by moving the learner from one place to another.

Reorientation of present school management is essential to school acceptance of this new strategy. It is almost a truism to observe that if we can't really manage the educational enterprise, we can hardly be accountable for what that enterprise does or fails to do.

To make acquisition of this improved management capability a possibility for our schools, two major changes must occur:

First, local educational agencies must develop the capacity to renew themselves and to be more responsive to the changing needs of their clientele. They have demonstrated success in expansion and elaboration of existing programs in response to national concerns but need to develop the capacity to manage the problems of continuous renewal and flexibility. This implies the development of a new kind of educational management that concurrently (a) involves clientele in the definition of needs and policies, (b) brings real authority to bear upon the solution of problems, and (c) institutionalizes change.

Second, schools must accept the principle of "accountability" for student performance. Extension or expansion of services by local and State agencies is laudable but inadequate: They must be accountable for the learning *results* they produce with public funds. Schools for too long have operated as public monopolies and have been able to avoid the consequences of poor or mediocre performance. Student unrest is merely one consequence of these inadequacies.

I hope my remarks have made it clear that I am not neutral about the youth rebellion. I welcome many of the changes it presages. But as a father, as the son of immigrants whose lives were infinitely enriched by this great country and as one who has personally experienced the promise of the American dream, I cannot and will not accept as inevitable the growing trend of violence and anarchy I see coming as the full impact of the crisis among youth strikes at our schools.

I look with a certain wistfulness to calmer times when it could be said with a measure of truth that the faculty taught, the students studied and learned, and the administration presided over the operation with general support and approval. I also look with great hope to the time when improvements in our ability to manage the educational enterprise invests it again with the authority it deserves and needs if we are to preserve the freedom which comes only with the self-discipline of educated, able, productive citizens. It is our tasks as educators to produce such citizens.

GHETTO YOUTH FINDS EXPRESSION IN MUSIC

HON. JOHN M. MURPHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. MURPHY of New York. Mr. Speaker, a record album called "The Sounds of Ghetto Youth" was recently released in New York. The record was produced by Montego Joe, a musician who has found time in his busy life to work with ghetto youth in the HARYOU Act program in New York's Harlem. Joe entered the program in 1965 to teach percussion music. After 4 years of training, his students have achieved such competence and musicianship that they were asked to record this album. It combines a great variety of music, most of it based on Afro and jazz themes, and is a most professional and enjoyable record.

The musicians are almost all Afro-Americans and range in age from 16 to 19 years. Most of the tunes were written by Nick Kirksey and David Edmead.

I believe the album demonstrates that our Nation's ghetto youth can contribute substantially to society when given the opportunity, training, and encouragement available from people like Montego Joe. These men have found expression in their music. Proceeds from the sale of the album will go to a HARYOU scholarship fund. I commend it to you.

THE SAFEGUARD SYSTEM

HON. THOMAS N. DOWNING

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. DOWNING. Mr. Speaker, during the recent recess, I was most fortunate to hear a most informative address on the Safeguard anti-ballistic-missile system. It was delivered by the Honorable Wilbur B. Payne, Deputy Under Secretary of the Army, Operations Research, before a public meeting arranged by the Hampton Roads Junior Chamber of Commerce. I found the excellent remarks to be most thought provoking and I feel certain that the rest of the Members should have an opporunity to share them, as follows:

THE SAFEGUARD SYSTEM

(Address by Dr. Wilbur B. Payne, Deputy Under Secretary of the Army, Operations Research, before the Hampton Roads Jaycees, Newport News, Va., August 27, 1969)

This evening I would like to address the three principal questions about the Safeguard anti-ballistic missile deployment that were raised in the recent debate. First, is Safeguard necessary? Second, will Safeguard work? And third, is Safeguard provocative?

To understand the necessity for Safeguard it is necessary to realize that the present balance of strategic power is brought about by the survivability of offensive forces. Both the United States and the Soviet Union today have offensive forces that can survive any attack the other could launch. Then, in a second, retaliatory attack these forces can inflict damage so severe that it destroys the first attacker as a modern society. No one who thinks about it can believe that this represents the best of all possible worlds. It is a world that has resulted from the conflict that is called the Cold War. It is a conflict that we must sooner or later resolve peacefully through political means. Until if can be resolved, however, the best course to follow is to prevent war between the two major powers. To do this the United States has long held to a policy of maintaining strategic nuclear forces that by their size and their ability to survive, guarantee that the Soviet Union can find no advantage from attacking first.

These forces contain three major elements—land based ICBM bombers, and missiles to be launched from submarines. Our land based missiles are in hardened silos. Our nuclear submarines, the Polaris, are virtually impossible to locate when on station. Some of our bombers are on alert, prepared to take off on short notice. For these reasons, most of our nuclear striking power could today survive an attack by all of the missiles now in the Soviet arsenal.

In the absence of any other way to provide the nation a means to insure its survival, reliance on this second strike capability as a deterrent to attack has been endorsed by every President since General Eisenhower. In all likelihood, we will have to continue to rely on this deterrent until, either by agreement or through some other parallel action, we and the Soviet Union can move to some other basis for our mutual security.

For many years, the declared policy of the United States and our actions in deploying strategic forces have been intended to show the Soviet Union that we would make every effort to protect this deterrent power. It is because we see certain trends in Soviet deployments and activities in the development of nuclear weapons—trends that if continued could lead to substantial threats to our deterrent—that the President has recommended the initiation of the Safeguard deployment.

One of these trends is the continued deployment in the Soviet Union of the ICBM we call the SS–9. This is a very large missile, much larger than Minuteman. It can carry a warhead with a yield up to 25 megatons. If such a warhead hits within about 1 mile of a Minuteman silo it will very probably destroy the missile. During the past several months, we have seen evidence of testing in the Soviet Union of the SS–9 with multiple warheads. We have every reason to expect this testing will continue and thus provide the SS–9 a capability to deliver 3 warheads of 5 megaton yield. These smaller warheads would have to hit within about one-half mile of a Minuteman silo, but there is no insuperable technical obstacle to the achievement of such accuracy.

The nuclear weapons that were used against Hiroshima and Nagasaki had only about one-thousandth the yield of the SS–9. Only for a very small number of very large cities would yields larger than a few megatons be considered useful. A few such weapons might be found in a force designed as ours is for deterrence through an assured second strike capability. It is difficult to so interpret many hundred such weapons. Because of this, and because of the continued deployment of the SS–9, we can at this time see only one military use for so large a deployment of such large missiles and that is to erode our Minuteman deterrent forces.

At the same time the Soviet Union has started a rapid growth in its force of missile carrying submarines. The Soviets have built such ships for several years but recently have noticeably increased their construction rate.

This development can also be related to our retaliatory capability because the submarine launched missile in adequate numbers would represent a serious threat to our bomber force. The submarine launched missile gives only about half the warning time of an ICBM.

If these threats are developed and deployed we could be forced to rely primarily on our own submarine force for our deterrent. This

is a formidable force and one which we are confident is now secure and reliable. But just as we are constantly trying to counter the submarine threat, the Soviet Union is undoubtedly developing improved capability for detecting and destroying submarines.

I would like to emphasize that these are potential and evolving threats, not ones now in being. But if we do not begin now to counter them we can be left with a deterrent that may suddenly become vulnerable to some Soviet development we could not quickly counter. I believe it would be unwise to provide so great a temptation to our opponents. It has long been our national policy not to do so.

Because of these actions on the part of the Soviet Union, I believe the answer to the first question is yes, the Safeguard is necessary. Basically, Safeguard is a thin defense against ballistic missiles. It is called thin in the sense that it cannot protect our cities from a massive Soviet attack. Safeguard can, however, protect a minimum essential number of our missiles from a Soviet first strike. It can also provide added warning time for our bomber forces on alert. In addition, it will protect our population from any attack the Chinese Communists could launch in the coming decade. The Chinese are developing an ICBM capability. They are progressing somewhat more slowly than we once predicted, but they are progressing. Without action on our part they could achieve a capability to kill 10 to 20 million of our people by the mid-1970's. We can defend against this threat and since we are very uncertain about Chinese objectives and about how their present or future governments would behave in a crisis, it seems prudent to do so.

I believe that Safeguard will work in the sense that it can accomplish these limited objectives. We do not know how with presently feasible techniques to defend our cities against massive Soviet attacks. In his statement on March 14 President Nixon said:

"Although every instinct motivates me to provide the American people with complete protection against a major nuclear attack, it is not now within our power to do so."

Since we cannot defend the cities against Soviet attacks it is reasonable to ask why we are confident we can accomplish any of the objectives of the Safeguard deployment. The answer has two facets; one deriving from the technical character of the Safeguard system, the other deriving from the differences in the targets to be defended and the threats to those targets.

The Safeguard does not require any radical new technical breakthroughs to work. It is a very complicated system but it is only a very specialized combination of radar, guided missiles and electronic computers. All of these have their technical roots in the 1940's. The radars do not have large rotating antennae. Rather their beams are formed and steered electronically. This may seem like wizardry, but the fundamental theory of such systems was fully developed by 1941. We and the Russians have built and operated several such radars with all the power and sophistication needed for the Safeguard. We are testing a prototype of the principal Safeguard radar, the Missile Site Radar, at Kwajalein Atoll now.

Guided missiles are an engineering challenge but not a scientific puzzle. They obey Newton's laws of motion and they receive guidance commands that could have been generated any time since de Forest invented the three element vacuum tube.

The Safeguard computers also do not require any significant increase in speed of computation or storage capacity over some now in use. Writing the programs for them, checking these out is a major task. But it is possible with a little care to use computers effectively as well as their more familiar application: lousing up charge accounts and magazine subscriptions.

None of those who argue that Safeguard will not work point to any basic principles of science that prevent its working. Rather they point to its great complexity and the engineering difficulties. But the United States has been conducting Engineering Development of ABM systems continuously since 1956. Because of this, the Safeguard represents an application of a fully matured technology. We are extensively testing its components and will continue this testing. But there is no reason to view its design as more than a particularly complicated system using thoroughly understood principles.

On the operational side it is important to recognize that there is quite a difference between successful attack on a city and a Minuteman or on a bomber force. The most important difference is that only a few missiles need to penetrate the defense to destroy a city and those few need not be very accurately delivered. Hence, to defend a city against a massive attack, the defense must stop nearly every warhead, or everything it suspects is a warhead. To destroy Minuteman more than 1000 warheads must penetrate the defense and the ones that penetrate must be very accurately aimed. This, and the fact that the targets are hard so that high altitude bursts cannot damage them, gives the defense a great advantage. We have studied with great care the full range of alternatives that might be used in attacks against Minuteman. These include decoys intended to confuse the radar, chaff intended to hide the warheads from the radar and a wide variety of tactics that the enemy might adopt. The components of Safeguard can provide adequate protection against any that might be used with the SS–9 and, in combination with some increase in Minuteman's hardness, can defend adequately against any threats we can now conceive as being at all practical.

For protection of the bombers we need only provide adequate warning and an ability to intercept the first few missiles aimed at them. Thus we buy time for the alert bombers to launch, not protection of the base.

The Chinese threat will be quite different from the Soviet threat in both numbers and in sophistication. The Russians already have more than 900 missiles on launchers. The Russians, as we do, conduct an extensive research program in space and, most importantly, have a fully developed and deployed ABM system and a very active research program in defensive systems. The Chinese have neither an ABM program nor a space program. In fact, they have never even developed an air defense missile system much less an ABM system. This is very important because to penetrate a modern defense an offensive missile force must be both very large and very sophisticated. There are many things that might, in principle, confuse a radar and act as decoys. But unless the attacker knows what a radar can measure and how accurately it does measure, he had better not count on most of these many things. The third question I specified was, is Safeguard provocative.

There are two somewhat different aspects to this. First, does it represent another trip in the futile spiral of the arms race. That is, does it force the Soviets to react in a way that will in turn force us to react in a way that in turn and on and on forever. I do not believe it will make a Soviet reaction necessary unless they are unalterably committed to achieving a capability for a first strike. This Safeguard can prevent, but Safeguard is in every sense a limited defensive system. It will not impact on the Soviet deterrent force. It cannot attack either Russian offensive forces or the Russian population. Russia's present offensive force will remain a fully adequate deterrent if he believes he must have one. The best evidence Russia will have of this is not our insistence that it is so. Rather the Russians will be readily able to determine from the physical deployment of the sites that the system has a limited capability.

The first two sites will be in two of the present Minuteman fields. Others, if the threats continue to evolve, will be near other Minuteman fields and generally along both coasts of the mainland. The design and limitations of Safeguard will be obvious and it will be easy for the Russians to determine that Safeguard is not capable of urban defense against massive attacks.

A second aspect of the question of whether Safeguard is provocative is, "Will it lessen the chances for an arms control agreement with the Soviets?" Not only do I not believe it will lessen the chances of such an agreement, it may even improve them. After all, we have told the Soviets for many years through many channels of communication that we would respond if our deterrent were challenged. If I were a Russian I would see Safeguard as less provocative than the alternative of a large increase in U.S. offensive forces. Not only do I believe this, but I interpret recent Soviet actions to indicate they believe it. In May of last year the Congress vigorously debated the issues raised by President Johnson's recommendation to deploy the Sentinel system. In that debate, as in the current one, it was argued that ballistic missile defense would frustrate the chance for arms control talks. Nonetheless, the Congress authorized deployment and it was after that decision that the Soviet suggested that arms control talks begin very soon.

As you know, the Soviets have an ABM system already operational around Moscow and we believe that they intend to complete development and deployment. They have other defensive systems deployed that could be given an anti-missile capability and a very impressive research and development program underway. They have stated frequently that they do not regard defensive systems as provocative. Since they continue their deployments it seems obvious that they do not see any necessary inconsistency between ABM deployments and arms control talks.

In fact, if only by demonstrating that continuation of the arms race is futile, Safeguard may add incentive to negotiate. Finally, there is an element of the President's decision that does not receive the emphasis it deserves. The United States has not launched an all out emergency program to deploy a massive ABM system on a fixed schedule. Only two sites have been formally recommended for construction and both of these are for defense of Minuteman. The additional deployments are in reality options for the future. Given the threat we now see evolving it seems necessary to preserve these options. But they will be exercised only if subsequent information shows the threats continue to evolve. It requires many years to deploy Safeguard. The first site will not become operational until 1974.

No one can be absolutely certain of his prediction five years into the future. I hope 1974 provides us with a more peaceful world; a world in which freedom does not depend on threats of nuclear retaliation. I even believe that many people in Russia and China share this hope. But unfortunately wishing, alone, will not make it so. However much we might wish Safeguard were unnecessary, I do not believe President Nixon or the Senate had any prudent alternative but to proceed with those actions necessary to permit deployment of Safeguard.

SENATE—*Friday, September 5, 1969*

The Senate met at 12 o'clock noon and was called to order by the President pro tempore.

The Chaplain, the Reverend Edward L. R. Elson, D.D., offered the following prayer:

Our God, our help in ages past, our hope for years to come, with Thee is deliverance from sin and despair, from fear and anxiety. With Thee is grace for all our need, and in Thy will is our peace.

O Thou who dost illumine the shadowy places, put to shame those who would make darkness to be light and light to be darkness. Confound those in whom lust for wealth or power threatens new disasters. Open the eyes of those who are blinded by ignorance, superstition, or prejudice. In Thy great mercy bring good tidings to the poor, heal the broken hearted, set at liberty the oppressed, and fill with rejoicing all workers for good. Fit us to be makers of peace and builders of Thy kingdom.

And unto Thee, O Father of our spirits, be glory and majesty, dominion and power, both now and forever. Amen.

THE JOURNAL

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the reading of the Journal of the proceedings of Thursday, September 4, 1969, be dispensed with.

The PRESIDENT pro tempore. Without objection, it is so ordered.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States submitting a nomination was communicated to the Senate by Mr. Leonard, one of his secretaries.

EXECUTIVE MESSAGE REFERRED

As in executive session, the President pro tempore laid before the Senate a message from the President of the United States submitting the nomination of Rear Adm. Walter L. Curtis, Jr., U.S. Navy, for commands and other duties determined by the President, for appointment to the grade of vice admiral while so serving, which was referred to the Committee on Armed Services.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Hackney, one of its reading clerks, announced that the House had passed the following bills and joint resolution of the Senate, severally with an amendment, in which it requested the concurrence of the Senate:

S. 1689. An act to amend the Federal Hazardous Substance Act to protect children from toys and other articles intended for use by children which are hazardous due to the presence of electrical, mechanical, or thermal hazards, and for other purposes;

S. 2276. An act to extend for one year the authorization for research relating to fuels and vehicles under the provisions of the Clean Air Act; and

S.J. Res. 46. Joint resolution to authorize the President to designate the period beginning November 16, 1969, and ending November 22, 1969, as "National Family Health Week".

The message also announced that the House had agreed to the amendment of the Senate to the bill (H.R. 7206) to adjust the salaries of the Vice President of the United States and certain officers of the Congress.

The message further announced that the House had passed the following joint resolutions in which it requested the concurrence of the Senate:

H.J. Res. 250. Joint resolution authorizing the President of the United States of America to proclaim September 17, 1969, General von Steuben Memorial Day for the observance and commemoration of the birth of General Friedrich Wilhelm von Steuben; and

H.J. Res. 851. Joint resolution requesting the President of the United States to issue a proclamation calling for a "Day of Bread" and "Harvest Festival."

ENROLLED BILLS SIGNED

The message also announced that the Speaker had affixed his signature to the enrolled bill (H.R. 11235) to amend the Older Americans Act of 1965, and for other purposes, and it was signed by the President pro tempore.

HOUSE JOINT RESOLUTIONS REFERRED

The following joint resolutions were each read twice by their titles and referred to the Committee on the Judiciary:

H.J. Res. 250. Joint resolution authorizing the President of the United States of America to proclaim September 17, 1969, General von Steuben Memorial Day for the observance and commemoration of the birth of General Friedrich Wilhelm von Steuben; and

H.J. Res. 851. Joint resolution requesting the President of the United States to issue a proclamation calling for a "Day of Bread" and "Harvest Festival."

LIMITATION ON STATEMENTS DURING TRANSACTION OF ROUTINE MORNING BUSINESS

Mr. MANSFIELD. Mr. President, I ask unanimous consent that statements in relation to the transaction of routine morning business be limited to 3 minutes.

The PRESIDENT pro tempore. Without objection, it is so ordered.

COMMITTEE MEETINGS DURING SENATE SESSION

Mr. MANSFIELD. Mr. President, I ask unanimous consent that all committees be authorized to meet during the session of the Senate today.

The PRESIDENT pro tempore. Without objection, it is so ordered.

HOUSING AND URBAN DEVELOPMENT ACT OF 1969—INDIVIDUAL VIEWS (S. REPT. NO. 91-392)—AUTHORIZATION FOR COMMITTEE ON BANKING AND CURRENCY UNTIL MIDNIGHT TONIGHT TO FILE A REPORT

Mr. SPARKMAN. Mr. President, from the Committee on Banking and Currency, I report an original bill (S. 2864) to amend and extend laws relating to housing and urban development, and for other purposes. I ask unanimous consent that the Committee on Banking and Currency have until midnight tonight to file a report on the bill, together with individual views.

The PRESIDENT pro tempore. The bill will be received and will be placed on the calendar; and, without objection, the request of the Senator from Alabama relating to filing of the report is granted.

THE CALENDAR

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar Nos. 384 and 385.

The PRESIDENT pro tempore. Without objection, it is so ordered.

MINING AND MINERALS POLICY ACT OF 1969

The Senate proceeded to consider the bill (S. 719) to establish a national mining and minerals policy which had been reported from the Committee on Interior and Insular Affairs, with amendments, on page 1, line 9, after the word "orderly" insert "and economic"; in line 10, after the word "reserves" strike out "necessary"; in the same line after the word "to" insert "help"; and on page 2, at the beginning of line 5, strike out "in" and insert "when exercising his authority under"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Mining and Minerals Policy Act of 1969".

SEC. 2. The Congress declares that it is the continuing policy of the Federal Government in the national interest to foster and encourage (1) the development of an economically sound and stable domestic mining and minerals industry, (2) the orderly and economic development of domestic mineral resources and reserves to help assure satisfaction of industrial and security needs, and (3) mining, mineral, and metallurgical research to promote the wise and efficient use of our mineral resources. It shall be the responsibility of the Secretary of the Interior to carry out this policy when exercising his authority under such programs as may be authorized by law other than this Act. For this purpose the Secretary of the Interior shall include in his annual report to the Congress a report on the state of the domestic mining and minerals industry, including a statement of the trend in utilization and depletion of these resources, together with such recommendations for legislative programs as may be necessary to implement the policy of this Act.

Mr. ALLOTT. Mr. President, the Committee on Interior and Insular Affairs acted unanimously in reporting favorably to the Senate S. 719, a bill to establish a national mining and minerals policy. This was very gratifying to me, personally, because I am firmly convinced of the need for this legislation. When I introduced the bill on January 28 of this year, it was the sixth successive Congress in which I had introduced a similar measure.

Hearings were held on S. 719 before the Minerals, Materials, and Fuels Subcommittee on July 9, 1969. More than 30 witnesses either appeared in person or filed written statements, all of which were favorable. In addition, many communications were received supporting or endorsing the measure, a large number of which came from colleges and universities.

Mr. President, in my opinion, these were some of the finest hearings that I have ever attended before a Senate committee. The testimony was pertinent in all cases; it was well reasoned, and nonrepetitive. I wish to congratulate the witnesses for their excellent work. I, also, wish to thank the chairman of the subcommittee, the Senator from Utah (Mr. Moss), who is a cosponsor of the measure, for his many courtesies and thoughtful comments while presiding.

The presentations contained in the printed hearings are of such high quality that I recommend them to anyone interested in the problems of providing our economy and industry with the necessary raw materials.

Mr. President, this bill and similar previous bills have enjoyed broad bipartisan support and cosponsorship. The administration supports the bill as did the former Director of the Bureau of Mines, Dr. Walter Hibbard. I hope it will receive similar bipartisan support in the House of Representatives.

PURPOSE

The purpose of S. 719 is to concisely enunciate and declare an overall national minerals policy, as a matter of law. Under the provisions of S. 719, a national policy would be established to guide the Federal Government in fostering and encouraging: First, development of an economically sound and stable domestic mining and minerals industry; second, the orderly and economic development of domestic mineral resources and reserves to help to assure satisfaction of industrial and security needs, and third, mining, mineral, and metallurgical research to promote the wise and efficient use of domestic mineral resources. The responsibility for carrying out the provisions of S. 719 is assigned to the Secretary of the Interior, thus placing primary, overall responsibility on a single Cabinet officer and assuring Congress of a direct source of advice and counsel as to attainment of the objectives of the bill. The Secretary of the Interior would submit an annual report to Congress on the state of the domestic mining and minerals industry, including an analysis of trends and his recommendations.

It should be made clear, as it was during the hearings on this measure, that coal, oil, gas, oil shale, and uranium are excluded from the definition of minerals as the term is used in S. 719. These commodities more properly fit into the energy picture along with hydroelectric power and solar energy. There are many common factors to the energy field that are peculiar to energy and simply do not apply to minerals in general, and therefore, should be treated separately.

NEED

The United States is an enormous consumer of minerals. Population growth and increasing per capita mineral demands are placing unprecedented pressures upon the Nation's minerals base. The Congress cannot avoid its responsibility to establish policies designed to insure that an adequate supply of mineral commodities are available to our manufacturing industry. As the former Director of the Bureau of Mines pointed out in hearings before our committee last year:

> Major tonnages of our key basic materials are coming from foreign operations: 85 percent of our bauxite for aluminum; almost 20 percent of copper (and probably much more in 1967 and 1968); 40 percent of our iron ore; nearly 40 percent of our zinc and more than 25 percent of our lead; all of our manganese and chromium needed for steel, our gold and silver production is about one-fourth of our industrial consumption.

As we permit our Nation to become more and more dependent upon foreign sources for minerals important to our industry and security, we tend to lose the ability to find and produce these minerals domestically. Our dependence tends to encumber our foreign policy and limit our freedom of movement within the family of nations. In my opinion, it is in the long-term national interest that our ability to domestically produce important mineral commodities be improved and maintained.

The best hope for achieving this objective is through technological advancement in methods of finding, mining, and processing available resources. Radically new approaches may be necessary to achieve this, and research is the logical path to new technology. Our continued progress depends upon it. As Dr. Lee A. DuBridge, Director of the Office of Science and Technology, pointed out in his report to the committee on this legislation:

> Increased productivity through adaptation of new technology has been the established road to progress in this country in industry generally and has resulted in a standard of living for the U.S. worker second to none. I believe that the minerals industries can also expect to participate in an improved standard of living, but we must devote a great effort to the need for better technology in order to meet our future needs. Certainly a Congressional declaration of policy to that effect—as is contemplated by S. 719—would be a useful step in that direction.

The declaration of a national minerals policy would not be a panacea to all our minerals problems. It would be, however, an important first step. Such a declaration of policy can serve as a springboard from which solutions to the myriad of minerals problems could unfold. It would serve as a beacon for both legislative and administrative efforts to deal with these problems, and it would put the world on notice as to what our intentions are.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91-390), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of Senate bill 719 is to concisely enunciate and declare an overall national minerals policy. The bill further declares that "it shall be the duty of the Secretary of the Interior to carry out this policy when exercising his authority under such programs as may be authorized by law other than this act" and directs the Secretary of Interior to include in his annual report to the Congress "a report on the state of the domestic mining and minerals industry, including a statement of the trend of utilization and depletion of these resources, together with such recommendations for legislative programs as may be necessary to implement the policy of this act."

These two directives of the bill clearly place upon the Secretary of Interior the responsibility of carrying out the national minerals and mining policy established by the bill.

NATIONAL MINERALS POLICY

Under the provisions of S. 719, a national policy would be established to guide the Federal Government in fostering and encouraging: (1) development of an economically sound and stable domestic mining and minerals industry, (2) the orderly and economic development of domestic mineral resources and reserves to help assure satisfaction of industrial and security needs, and (3) mining, mineral, and metallurgical research to promote the wise and efficient use of domestic mineral resources. The responsibility for carrying out the provisions of S. 719 is assigned to the Secretary of the Interior thus placing primary, overall responsibility on a single Cabinet Officer and assuring Congress of a direct source of advice and counsel as to attainment of the bill's objectives.

The Secretary of the Interior would submit an annual report to Congress on the state of the domestic mining and minerals industry, including a statement of the trend in utilization and depletion of these resources, together with recommendations for legislative action necessary to make effective the policy of the act. Such a report would provide an assessment and objective evaluation of national progress in providing for a strong domestic mining and minerals industry.

The functions of a number of agencies of the Federal Government affect minerals and mining directly or indirectly, including international relations, foreign trade, taxation, and air and water pollution, to name a few. Yet there is no stated policy or overall set of guidelines by which their actions can be coordinated. S. 719 would provide such coordination of Federal planning and action with respect to the domestic mining industry. While such a policy is concerned with principle rather than detail, and is an expression of broad goals, it would give direction to Federal Government procedures and policy through its basic statement of principle.

There are myriad Federal laws that affect the mining and minerals industry, but each was passed to meet a particular problem or purpose, and usually, the overview of the direction of the minerals industry was not considered. As a result, some of the actions taken have been counter-productive of the objectives of this measure. S. 719 would give clear direction to the executive branch of Government in its implementation and coordination of these laws. The same would apply to development of future legislation.

A national mining and minerals policy would serve as a statement of fundamental principles or objectives against which the executive branch can measure proposed action and against which the Congress can

measure legislation. This includes such areas of critical importance to the mining industry as manpower training and recruitment, research in mineral recovery, mining methods and health and safety, environmental quality, public lands, stockpiling, tax policy, mine finance, and foreign trade. Overall, it has profound implications to the economic future of the United States, which is based so heavily on a continuing supply of minerals, both domestic and foreign.

As we permit our Nation to become more and more dependent upon foreign sources for minerals important to our industry, we tend to lose the ability to find and produce these minerals domestically. Our dependence tends to encumber our foreign policy and limit our freedom of movement within the family of nations. It is, therefore, in the national interest both in terms of foreign policy and national defense, that our ability to domestically produce important mineral commodities be improved and maintained.

The wise and efficient use of mineral resources is necessary for the advancement of technological knowledge in the minerals field, on which, in turn, the future of the Nation is dependent.

S. 719 would serve to give impetus to the alleviation of the severe shortage of trained mineral specialists and engineers by encouraging young people to favorably consider a career in the minerals industry. Today enrollments in mineral technology courses are at an all-time low and the number of mining schools declines each year.

Ultimately, we are going to be required to turn to the lower grade ore deposits and deposits at very great depths to satisfy our mineral requirements. Such endeavors will require research, both basic and applied. The bill establishes the policy of fostering research, both Government sponsored and private, to deal with the technological problems of locating and extracting such mineral deposits.

The Nation has become painfully aware of our deteriorating environment. The mining industry is also aware of the problem and has developed practical solutions for many of the problems. But, as further environmental quality improvement is sought, the technical difficulties and the cost of gaining each new increment of quality, greatly increases the costs of operation and may make the difference between feasibility and infeasibility in the mine's economic picture. A national mining and minerals policy will help to prevent the promulgation of inconsistent regulations and the adoption of counter-productive policies that tend to thwart these national objectives.

Research can be particularly beneficial in assisting the mining industry to cope with the many new requirements that our increased concern over environmental quality places upon mine operators. The Federal Government should engage in long-range research programs which will provide the technology necessary for private industry to implement practices designed to improve the quality of our environment. It should establish and maintain policies and programs which supply the needed trained specialists, and publish and disseminate data and technical information relevant to environmental quality matters.

Before the mining industry can be expected to deal effectively with the new demands of environmental quality concerns and remain economically viable, the industry must have the necessary tools. These tools include trained specialists, the results of successful research in improved mining, beneficiation, and waste disposal practices, and governmental policies which take into account the increased costs involved.

While private enterprise must supply the national demand for minerals, the Federal Government has the obligation to encourage a healthy domestic mining industry for the sake of the Nation's overall security and economic well-being. Minerals are recognized as being critical and essential to the Nation's economy and security, and as such a dependable and adequate supply would be encouraged by the development of a coordinated national mining and minerals policy. The Federal Government can contribute to mineral development through policies that permit and encourage exploration and mining and through activities carried out in close cooperation with private industry.

A national minerals policy would foster the improvement of the Nation's capability to use mineral supplies more efficiently and encourage the reuse of minerals.

Encouragement of research as envisioned in S. 719 would help develop practical methods for supplementing resources found in land with those found under the sea.

While it is recognized that all of our mineral requirements cannot be met by domestic sources, improvement of our ability to produce important minerals, domestically, is in the national interest, and a national mining and minerals policy would provide goals toward which the mining industry and the Federal Government can work together in close cooperation.

Finally, this policy is designed deliberately in general terms, recognizing the need for flexibility. The policy will require continual scrutiny and review and must be flexible to respond to changes in demand, economics, security, and environmental requirements.

NEED

The United States is an enormous consumer of minerals and fuels. The startling truth is that we have consumed more of these resources in the past 10 years than the entire peoples of the world consumed in all previous history. Population growth and increasing per capita mineral demands are placing unprecedented pressures upon the Nation's minerals base. The Congress cannot avoid its responsibility to establish policies designed to insure that an adequate supply of mineral commodities are available to our manufacturing industry. A minerals policy that encourages a strong domestic mining industry will assist in developing the capability of supplying these projected needs.

There is a great need for increased domestic mineral exploration and development. Factors which now serve to encourage foreign operations by American companies are growing less attractive and many domestic producers, lacking a broad financial base, find themselves captive to a declining resource base and a static technology.

A mineral policy must recognize the need for domestic industry to enter upon and explore the public lands. These lands are a major source of domestic minerals and should not be closed to mineral development unless there is a compelling national interest.

The development of a sound and enlightened minerals policy can only come about when the general public has an awareness of the importance of minerals in its everyday life. Passage of legislation by itself will not insure that the public realizes that its future depends on minerals. There is a great need for increased education and awareness in this area and a minerals policy would improve the opportunities for such communication.

There is a continuing decline in the number of students studying earth sciences. The colleges and universities are not producing enough graduates in mineral technology to meet the expanding needs. The number of schools with accredited curricula in mining engineering has dropped seriously.

The Assistant Secretary of the Interior, Hollis Dole, made this point graphically in his excellent presentation to the committee:

In the professional areas of mining and earth sciences, we are facing a crisis. Our colleges and universities are not producing enough graduates in the mineral sciences to meet our expanding needs. In fact, we are losing ground. This year, for example, American universities are graduating a total of only 110 mining engineers, and many of these are foreign students who are returning to their own countries.

Equally alarming is the fact that in 1967 only 17 educational institutions had an accredited curriculum in mining engineering. The median number of seniors was approximately six. There were at the same time 19 graduate programs in mining with a median participation of eight graduate students, and half of these were foreign nationals.

Encouragement and assistance are needed if mining and mineral technology is to be improved. Should the Nation continue on its present course, with a relatively static technology, its economic growth and standard of living will be severely limited by resource constraints in a few years. There is a need for the country's long-term mineral supplies to come from sources not now technically or economically feasible to obtain. The encouragement of improved technology is essential to fully develop these resources.

In summary, as the United States seeks to maintain and improve its high standard of living, it must insure that essential mineral needs are met at reasonable cost. S. 719 would encourage new discoveries, technologies, and capabilities thus assuring the Nation's continued economic strength.

The committee believes it is important that this policy be enacted in the form of a law, with full and binding effect. As a law, enacted under constitutional procedure, it will not only bind all agencies of the Government, but it will, more importantly, serve as a beacon, giving guidance to all agencies in carrying out their missions. As a result, contradictory and counterproductive regulations and programs are less likely to be adopted and effected.

MINERALS POLICY

Hearings

Hearings were held on S. 719 before the Minerals, Materials, and Fuels Subcommittee on July 9, 1969. These hearings extended until late in the afternoon. More than 30 witnesses either appeared in person or filed written statements, all of which were favorable. In addition, many communications were received supporting or endorsing the measure, a large number of which came from colleges and universities. The present administration favors the bill as did Dr. Walter Hibbard, former Director of the Bureau of Mines, and he so indicated at the March 21, 1968, hearings before the subcommittee.

Commenting upon the testimony during the hearings, Senator Allott, principal sponsor of the measure, observed:

* * * that this is without doubt the finest coordinated set of papers I have seen in any committee before Congress.

It was evident, by the high quality of the various presentations that considerable thought had gone into their preparation.

Amendments

The Department of Interior recommended three minor clarifying amendments, which were adopted in substance by the committee with minor changes to conform the grammar.

1. On page 1, line 9, after the word "orderly" the words "and economic" were inserted.

2. On page 1, line 10, the committee struck out "necessary" and inserted in lieu thereof the words "to help".

These amendments reflect the fact that some necessary minerals may not be available domestically or that domestic production may not be economic.

3. On page 2, line 4, the committee struck out the word "in" and inserted in lieu thereof the words "when exercising his authority under".

The Department of the Interior requested this amendment in order to bring the language of the bill in accord with the mineral

policy and program responsibilities of the Secretary.

The committee accepted these amendments since they did not, in any way, change nor modify the purpose and intent of the bill.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

CHOUTEAU LOCK AND DAM, OKLAHOMA

The bill (S. 1499) to name the authorized lock and dam numbered 17 on the Verdigris River in Oklahoma for the Chouteau family, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

S. 1499

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That lock and dam numbered 17 on the Verdigris River, Oklahoma, a feature of the Arkansas River and tributaries navigation project, authorized to be constructed by the River and Harbor Act of July 24, 1946 (60 Stat. 641, 647), as amended, shall be known and designated hereafter as the Chouteau lock and dam. Any law, regulation, map, document, record, or other paper of the United States in which such lock and dam is referred to shall be held to refer to such lock and dam as the Chouteau lock and dam.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 91–391), explaining the purposes of the measure.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF BILL

The purpose of S. 1499 is to designate the authorized lock and dam No. 17, on the Verdigris River in Oklahoma and the lake created thereby for the Chouteau family.

GENERAL STATEMENT

Lock and dam No. 17 is a feature of the Arkansas River and tributaries navigation project, authorized by the River and Harbor Act of July 24, 1946, as amended. The overall project will provide a 9-foot navigation channel from the Mississippi River at the mouth of the White River, to Catoosa, Okla.

Col. Auguste P. Chouteau, in 1823, constructed a shipyard at the falls of the Verdigris River, near the site of lock and dam No. 17, for the construction of large keel boats to transport hides and produce down the Verdigris, Arkansas, and Mississippi Rivers to New Orleans. The bill will honor not only Colonel Chouteau, who was the first to envision the feasibility of navigation over the route being improved, but also all of the Chouteaus who were involved in the earliest settlement of Oklahoma and navigation of its streams.

COST TO THE UNITED STATES IF LEGISLATION IS ENACTED

Enactment of this legislation will not result in any cost to the Federal Government.

COMMITTEE VIEWS

The committee believes it fitting and proper to name lock and dam No. 17 on the Verdigris River, Okla., and the lake to be created by such structure, in honor of the Chouteau family, whose early efforts at developing commerce on the Verdigris and Arkansas Rivers contributed much to promoting navigation on those rivers. Accordingly, enactment of S. 1499 is recommended.

U.S. COMMITMENTS TO FOREIGN POWERS

Mr. GOLDWATER. Mr. President, during the course of the debate on the bill which is the pending business of the Senate, I have on a few occasions tried to make the point that until we know the extent to which our country will follow the commitments made in treaties with other countries around the world, we cannot intelligently debate cuts in the military. At one time, I mentioned that we have 15 or 17 treaties which commit us to war, without any question.

I said the other day that I have asked our President to speak to the American people on these commitments, and several Members of the Senate have asked me my sources. To satisfy their inquiries, I ask unanimous consent to have printed at this point in the RECORD the hearings before the Committee on Foreign Relations, held Thursday, August 17, 1967, entitled "U.S. Commitments to Foreign Powers." This includes a letter from William B. Macomber, Jr., and a paper entitled "U.S. Defense Commitments and Assurances, Department of State, August, 1967."

There being no objection, the material was ordered to be printed in the RECORD, as follows:

[U.S. Senate, Committee on Foreign Relations, Washington, D.C., Aug. 17, 1967]

U.S. COMMITMENTS TO FOREIGN POWERS

The committee met, pursuant to recess, at 10:05 a.m., in room 4221, New Senate Office Building, Senator J. W. Fulbright (chairman) presiding.

Present: Senators Fulbright, Gore, Lausche, Symington, Clark, Pell, McCarthy, Aiken Carlson, Mundt, Case and Cooper.

The CHAIRMAN. The committee will come to order.

The committee today continues its inquiry into the nature, extent, and source of our country's foreign commitments as well as the broader question of congressional responsibility in the making of foreign policy.

In preparation for these hearings the committee directed an inquiry to the Department of State as to what it regards to be the outstanding foreign commitments of the United States deriving both from treaties and from statements and agreements entered into by the Executive. I wish to insert in the record the reply of the Department of State dated August 15, 1967, under the title "U.S. Defense Commitments and Assurances."

DEPARTMENT OF STATE,
Washington, D.C., August 15, 1967.

Hon. J. W. FULBRIGHT,
Chairman,
Committee on Foreign Relations,
U.S. Senate.

DEAR MR. CHAIRMAN: This is in reply to your letter to Secretary Rusk of August 1, 1967 concerning Senate Resolution 151 "Relative to United States Commitments to Foreign Powers".

You have asked in your letter for the Department's comments on the general subject of Resolution 151 and for answers to four specific questions. We believe the Department's general views on the subject of the resolution can best be presented in testimony before the Committee when hearings are held next week. In this letter the Department undertakes to answer the four specific questions.

Last year at approximately this time, Secretary Rusk appeared before the Preparedness Investigating Subcommittee of the Senate Committee on Armed Services to discuss some matters relevant to the specific questions posed in your letter of August 1, 1967. Prior to his appearance, the Department provided that Subcommittee with a compilation of United States commitments and assurances consisting of provisions of formal treaties and agreements, and official declarations by the Congress, the President, the Vice President, and the Secretary of State concerning actions the United States would take if another country were the victim of aggression. For the convenience of the Committee on Foreign Relations, and to provide a context for the answers to specific questions posed in your letter of August 1, 1967, which appear below, I have attached an updated version of the compilation earlier supplied to the Preparedness Investigating Subcommittee.

Question 1: Of the 42 countries with which the United States has bilateral treaties or multilateral agreements for collective defense, in how many instances would the Executive Branch view as automatic the American commitment as one upon which the United States would act unilaterally—meaning that we view the obligations not only as collective but individual, as the Department has interpreted the SEATO Treaty? For example, should *one* of the members of the 1947 Inter-American treaty of reciprocal assistance be attacked by subversion or from an external source, to what extent, if any, would there be a commitment for the United States on its own to supply men or materiel to respond to such attack? We would like to have such nations listed, not only in the American Republics, but elsewhere.

This question raises the issue whether the United States obligation to assist another party to one of these treaties is an individual obligation or an obligation that arises only when there has been a multilateral determination by the treaty parties. The question is asked with regard to responses in the case of armed attack and in the case of subversion.

Under each of our multilateral treaties, the commitment to extend assistance in the event of an armed attack is individual and requires no collective finding or decision by a multilateral organization. The Rio Treaty provides that in the event of an armed attack against an American state *"each* one of the said Contracting Parties undertakes to assist in meeting the attack" (Art. 3(1), emphasis added). The Treaty goes on to provide that *"each one* of the Contracting Parties may determine the immediate measures which it may *individually* take" (Art. 3(2), emphasis added). In the North Atlantic Treaty, *"each"* of the signatories "in the exercise of the right of individual or collective self-defense recognized by Article 51 of the Charter of the United Nations, will assist the party or parties attacked by taking forthwith, *individually* and in concert with the other parties, such action . . ." (Art. 5, emphasis added). In the Southeast Asia Collective Defense Treaty and in the Anzus Security Treaty "each party" agrees that "it" will act to meet the common danger (Art. IV in both). The same is true of the bilateral treaties with the Philippines, Korea, Republic of China and Japan. Thus, under each of these treaties there is an individual obligation independent of any collective action.

The question posed in your letter of August 1 is asked also in regard to actions taken in response to attack by subversion. All of our defense treaties call for consultation in the event of a threat other than armed attack—such as externally supported subversion. Article 6 of the Rio Treaty provides for a meeting of the Organ of Consultation "if the inviolability or integrity of the territory or the sovereignty or political independence of any American State should be affected by an aggression which is not an armed attack . . . or by any other fact, or

situation that might endanger the peace of America". The Organ of Consultation can determine "the measures which must be taken . . . to assist the victim of the aggression or, in any case, the measures which should be taken for the common defense and for the maintenance of the peace and security of the continent". Article 4 of the NATO Treaty provides that "[t]he Parties will consult together whenever in the opinion of any of them, the territorial integrity, political independence or security of any of the Parties is threatened". Substantially similar language exists in the Anzus and SEATO Treaties (Arts. III and IV(2), respectively). Thus, when the threat takes the form of subversion rather than armed attack, each multilateral treaty calls for consultation. No individual obligation of unilateral action is imposed. The same is true by virtue of similar language under the bilateral treaties with the Philippines and Korea. Under the Japanese treaty consultation is called for "whenever the security of Japan or international peace and security in the Far East is threatened."

Question 2: Specifically, does the United States (United Nations obligations aside) have a national commitment in the event of attack from an external source or from internal subversion to come either to the military or economic aid of Israel or any of the Arab States? In short, is the United States as a nation committed to supply American military or economic resources to protect the territorial integrity of these states?

President Johnson and his three predecessors have stated the United States interest and concern in supporting the political independence and territorial integrity of the countries of the Near East. This is a statement of policy and not a commitment to take particular actions in particular circumstances. Unrest and conflict in the Middle East have been of serious concern to the United States for a long time. The use of armed force in the Middle East can have especially serious consequences for international peace extending far beyond that area. We have bent our efforts to avoid a renewal of conflict there. Thus, we have stated our position in an effort to use our influence in the cause of peace.

Question 3: Bearing in mind recent situations in the Congo and Nigeria, is there any United States national commitment to supply American military or economic resources in the event of aggression or threats to the integrity of those states or any states in Africa?

With regard to the Congo, the United States has supported policies and actions of the United Nations in preserving the territorial integrity, political independence and economic unity of that country. We have no specific commitment to supply military or economic resources to the Congo in the event of aggression or a threat to its integrity. We have extended military and economic assistance to the Congo as a part of the implementation of our foreign assistance legislation. Recently, at the request of the Government of the Congo, we made available to it three C–130 aircraft. The decision to furnish this assistance was not based on any prior commitment of the United States to defend or assist in the defense of the Congo.

The United States has no commitment to come to the defense of Nigeria in the event of an armed attack or subversion. We hope that the current fighting in that country will be brought to an early end, but we have maintained that the crisis is an internal matter and we have refrained from any action that could be interpreted as interference in Nigeria's affairs such as the sale of arms from the United States to that country.

There are two other countries in Africa that should be mentioned in this context. The United States has an agreement of Cooperation with the Government of Liberia (TIAS 4303). Article 1 of that agreement provides: "In the event of aggression or threat of aggression against Liberia, the Government of the United States of America and the Government of Liberia will immediately determine what action may be appropriate for the defense of Liberia."

That language does not create a commitment by the United States to supply military or economic resources in defense of Liberia.

The United States has an agreement with the Kingdom of Libya relating to Wheelus Air Base. The Preamble to that agreement provides in part that the two Governments confirm their determination "to cooperate to the maintenance of peace and security within the framework of the Charter of the United Nations" and are "of the opinion that cooperation within the territory of Libya will assist in achieving these objectives." The presence of United States Air Force personnel in Libya makes the security of that country of special interest to the United States. We have recently undertaken discussions with the Government of Libya concerning the phasing out of United States use of the Wheelus airfield.

Question 4: Finally, could the Administration at this time provide the Committee with a full list of all nations which upon the basis of past official statements, communiques, or other public or private understandings, as well as formal treaties, reasonably assume that they have a United States commitment under some set of circumstances involving either an economic or military threat to their existence, to receive either economic or military assistance from the United States?

The attached compilations set forth the provisions of formal treaties and agreements, and official declarations by the Congress, the President, the Vice President, and the Secretary of State concerning actions the United States would take if another country were the victim of aggression. We have, with the countries covered by these lists and with others, military and economic assistance agreements entered into pursuant to existing legislation. Some of these agreements are present commitments of the United States to provide specified assistance. They are not conditioned on the occurrence of a threat to the peace or security of the recipient country and they involve no commitments of the United States apart from their specific terms.

If the Department can be of any further assistance, please let me know.

Sincerely yours,

WILLIAM B. MACOMBER, Jr.,
Assistant Secretary for Congressional Relations.

U.S. DEFENSE COMMITMENTS AND ASSURANCES, DEPARTMENT OF STATE, AUGUST 1967

I. PROVISIONS IN TREATIES AND OTHER FORMAL AGREEMENTS

A. Charter of the United Nations, June, 26, 1945 [1]

Parties

United States
116 other countries [as of June 20, 1966].

Relevant provisions

Art. 42: Should the Security Council consider that measures provided for in Article 41 would be inadequate or have proved to be inadequate, it may take such action by air, sea, or land forces as may be necessary to maintain or restore international peace and security. Such action may include demonstrations, blockade, and other operations by air, sea, or land forces of Members of the United Nations.

Art. 43: All Members of the United Nations, in order to contribute to the maintenance of international peace and security, undertake to make available to the Security Council, on its call and in accordance with a special agreement or agreements, armed forces, assistance, and facilities, including rights of passage, necessary for the purpose of maintaining international peace and security.

* * * * *

3. The agreement or agreements shall be negotiated as soon as possible on the initiative of the Security Council. . . .

Art. 51: Nothing in the present Charter shall impair the inherent right of individual or collective self-defense if an armed attack occurs against a Member of the United Nations, until the Security Council has taken the measures necessary to maintain international peace and security. Measures taken by Members in the exercise of this right of self-defense shall be immediately reported to the Security Council and shall not in any way affect the authority and responsibility of the Security Council under the present Charter to take at any time such action as it deems necessary in order to maintain or restore international peace and security.

* * * * *

B. Western hemisphere

1. Inter-American Treaty of Reciprocal Assistance (Rio Pact), September 2, 1947 [2]

Parties

United States, Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba,[3] Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, Uruguay, and Venezuela.

Relevant provisions

Art. 3:

(i) The High Contracting Parties agree that an armed attack by any State against an American State shall be considered as an attack against all the American States and, consequently, each one of the said Contracting Parties undertakes to assist in meeting the attack in the exercise of the inherent right of individual or collective self-defense recognized by Article 51 of the Charter of the United Nations.

(ii) On the request of the State or States directly attacked and until the decision of the Organ of Consultation of the Inter-American System, each one of the Contracting Parties may determine the immediate measures which it may individually take in fulfillment of the obligation contained in the preceding paragraph and in accordance with the principle of continental solidarity. The Organ of Consultation shall meet without delay for the purpose of examining those measures and agreeing upon the measures of a collective character that should be taken.

(iii) The provisions of this Article shall be applied in case of any armed attack which takes place within the region described in Article 4 or within the territory of an American State. When the attack takes place outside of the said areas, the provisions of Article 6 shall be applied.

(iv) * * *

Art. 6: If the inviolability or the integrity of the territory or the sovereignty or political independence of any American State should be affected by an aggression which is not an armed attack or by an extra-continental or intracontinental conflict, or by any other fact or situation that might endanger the peace of America, the Organ of Consultation shall meet immediately in order to agree on the measures which must be taken in case of aggression to assist the victim of the aggression or, in any case, the measures which should be taken for the common defense and for the maintenance of the peace and security of the Continent.

Art. 8: For the purposes of this Treaty, the measures on which the Organ of Consultation may agree will comprise one or more of the following: . . . and use of armed force.

Footnotes at end of article.

Art. 20: Decisions which require the application of the measures specified in Article 8 shall be binding upon all the Signatory States which have ratified this Treaty, with the sole exception that no State shall be required to use armed force without its consent.

2. Applicability of North Atlantic Treaty, April 4, 1949

[Canada and Iceland, as signatories to the North Atlantic Treaty, are covered by the commitments embodied in that Treaty. Greenland, as part of the Kingdom of Denmark, and the Bahamas and Bermuda as "islands under the Jurisdiction of any of the parties in the North Atlantic area north of the Tropic of Cancer" are likewise covered by that Treaty. For the NATO commitments, see C. 1., below.]

3. Bilateral Agreements

a. Agreement Between the Government of the United States and the Government of the Kingdom of Denmark, Pursuant to the North Atlantic Treaty, Concerning the Defense of Greenland, April 27, 1951.[4]

Relevant provisions

Art. 1: The Government of the United States of America and the Government of the Kingdom of Denmark, in order to promote stability and well-being in the North Atlantic Treaty area [5] by uniting their efforts for collective defense and for the preservation of peace and security and for the development of their collective capacity to resist armed attack, will each take such measures as are necessary or appropriate to carry out expeditiously their respective and joint responsibilities in Greenland, in accordance with NATO plans.

Art. 2: In order that the Government of the United States of America as a party to the North Atlantic Treaty may assist the Government of the Kingdom of Denmark by establishing and/or operating such defense areas as the two Governments, on the basis of NATO defense plans, may from time to time agree to be necessary for the development of the defense of Greenland and the rest of the North Atlantic Treaty Area, and which the Government of the Kingdom of Denmark is unable to establish and operate single-handed, the two Governments in respect of the defense areas thus selected, agree to the following:

* * *

(3) In cases where it is agreed that responsibility for the operation and maintenance of any defense area shall fall to the Government of the United States of America, the following provisions shall apply:

* * *

(b) * * * the Government of the United States of America, without compensation to the Government of the Kingdom of Denmark, shall be entitled within such defense area and the air spaces and waters adjacent thereto:

* * *

(iii) to station and house personnel and to provide for their health, recreation and welfare.

* * *

(4) In cases where it is agreed that responsibility for the operation and maintenance of any defense area shall fall to the Government of the Kingdom of Denmark, the following provisions shall apply:

(a) The Government of the United States of America may attach United States military personnel to the staff of the commanding officer of such defense area, under the command of an officer with whom the Danish commanding officer shall consult of all important local matters affecting United States interest pursuant to the North Atlantic Treaty.

(b) The Government of the United States of America * * * may use such defense area in cooperation with the Government of the Kingdom of Denmark for the defense of Greenland and the rest of the North Atlantic Treaty area * * *

* * *

Art. 4: In connection with activities for the defense of Greenland and the rest of the North Atlantic Treaty area, the defense area will so far as practicable, be made available to vessels and aircraft belonging to other Governments parties to the North Atlantic Treaty and to the armed forces of such Governments.

* * *

b. Defense Agreement Pursuant to the North Atlantic Treaty Between the United States and the Republic of Iceland, May 5, 1951.[6]

Relevant provisions

Having regard to the fact that the people of Iceland cannot themselves adequately secure their own defenses, * * * [the North Atlantic Treaty Organization has requested the U.S. and Iceland to] make arrangements for the use of facilities in Iceland in defense of Iceland. * * *

Art. 1: The United States on behalf of the North Atlantic Treaty Organization and in accordance with its responsibilities under the North Atlantic Treaty will make arrangements regarding the defense of Iceland subject to the conditions set forth in this agreement. For this purpose and in view of the defense of the North Atlantic Treaty area, Iceland will provide such facilities in Iceland as are mutually agreed to be necessary.

[Arts. 2–8 relate to the use of facilities, the composition of forces, the status of Keflavik Airport, etc.]

c. North American Air Defense Command Agreement Effected by Exchange of Notes, United States-Canada, May 12, 1958.[7]

Relevant provisions

Studies made by representatives of our two Governments led to the conclusion that the problem of the air defence of our two countries could best be met by delegating to an integrated headquarters the task of exercising operational control over combat units of the national forces made available for the air defence of the two countries. * * * The agreed integration is intended to assist the two Governments to develop and maintain their individual and collective capacity to resist air attack on their territories in North America in mutual self-defence.

* * * My Government proposes that the following principles should govern the future organization and operations of the North American Air Defence Command.

1. * * *

2. The North American Air Defence Command will include such combat units and individuals as are specifically allocated to it by the two Governments. The jurisdiction of the Commander-in-Chief, NORAD, over those units and individuals is limited to operational control as hereinafter defined.

3. "Operational Control" is the power to direct, co-ordinate, and control the operational activities of forces assigned, attached or otherwise made available. * * *

4–11. * * *

d. General Treaty Between the United States and Panama, March 2, 1936.[8]

Article X

In case of an international conflagration or the existence of any threat of aggression which would endanger the security of the Republic of Panama or the neutrality or security of the Panama Canal, the Governments of the United States of America and the Republic of Panama will take such measures of prevention and defense as they may consider necessary for the protection of their common interests. Any measures, in safeguarding such interests, which it shall appear essential to one Government to take, and which may affect the territory under the jurisdiction of the other Government, will be the subject of consultation between the two Governments.

C. Europe

1. North Atlantic Treaty, April 4, 1949 [9]

Parties

United States, Belgium, Canada, Demark, France, Iceland, Italy, Luxembourg, Netherlands, Norway, Portugal, United Kingdom, Greece,[10] Turkey,[10] Federal Republic of Germany.[11]

Relevant provisions

Art. 3: * * * The Parties, separately and jointly, by means of continuous and effective self-help and mutual aid. will maintain and develop their individual and collective capacity to resist armed attack.

Art. 4: The Parties will consult together whenever, in the opinion of any of them, the territorial integrity, political independence or security of any of the Parties is threatened.

Art. 5: The Parties agree that an armed attack against one or more of them in Europe or North America shall be considered an attack against them all; and consequently they agree that, if such an armed attack occurs, each of them. * * * [on the basis of Art. 51 of the UN Charter] will assist the Party or Parties so attacked by taking forthwith, individually and in concert with the other Parties, such action as it deems necessary, including the use of armed force, to restore and maintain the security of the North Atlantic area. [Provides also for "immediately" reporting to the UN Security Council any armed attacks and all consequent measures, and for terminating such measures when the Security Council has acted to restore and maintain peace and security.]

Art. 6: [As modified by the Protocol on the Accession of Greece and Turkey] For the purpose of Article 5, an armed attack on one or more of the Parties is deemed to include an armed attack—

(i) on the territory of any of the Parties in Europe or North America, on the Algerian Departments of France,[12] on the territory of Turkey or on the islands under the jurisdiction of any of the Parties in the North Atlantic area north of the Tropic of Cancer;

(ii) on the forces, vessels, or aircraft of any of the Parties when in or over these territories or any other area in Europe in which occupation forces of any of the Parties were stationed on the date when the Treaty entered into force or the Mediterranean Sea or the North Atlantic area north of the Tropic of Cancer.

Art. 11: This Treaty shall be ratified and its provisions carried out by the Parties in accordance with their respective constitutional processes.

2. Joint Declaration Concerning the Renewal of the Defense Agreement of September 26, 1953, United States-Spain, September 26, 1963.[13]

Relevant provisions

* * * In affirming the importance of their bilateral Defense Agreement [signed Sept. 26, 1953. TIAS 2850] which will be applied in the new five year period of its validity in the spirit of this Declaration, they [the Governments of the United States of America and of Spain] consider it to be necessary and appropriate that the Agreement form a part of the security arrangements for the Atlantic and Mediterranean areas.

The United States Government reaffirms its recognition of the importance of Spain to the security, well-being and development of the Atlantic and Mediterranean areas. The two governments recognize that the security and integrity of both the United States and Spain are necessary for the common security. A threat to either country, and to the joint facilities that each provides for the common defense, would be a matter of common concern to both countries, and each country would take such action as it may consider

Footnotes at end of article.

appropriate within the frame work of its constitutional processes.

* * * * *

[Signed by Secretary of State Dean Rusk for the United States]

D. Near East-Middle East

1. Applicability of North Atlantic Treaty Since 1952

[On February 18, 1952, Greece and Turkey acceded to the North Atlantic Treaty. Since that date they have been covered by the commitments of that Treaty. (See C.1., above).]

2. United States Membership in CENTO Committees

The Pact of Mutual Cooperation (Baghdad Pact) between Iraq, Turkey, the United Kingdom, Pakistan, and Iran was signed at Baghdad, February 24, 1955. (Text in *American Foreign Policy, 1950–1955: Basic Documents,* pp. 1257–1259.) It was redesignated the Central Treaty Organization (CENTO) by a resolution of the Council of the Treaty Organization adopted August 21, 1959 following the announcement by Iraq of its decision to withdraw. The United States is a member of the Military, Economic, and Anti-Subversion Committees of CENTO and an observer at the Council meetings.

3. Bilateral Agreements

a. Agreement of Cooperation Between the Government of the United States and the Imperial Government of Iran, March 5, 1959 [14]

Relevant provisions

Art. 1: The Imperial Government of Iran is determined to resist aggression. In case of aggression against Iran, the Government of the United States of America, in accordance with the Constitution of the United States of America, will take such appropriate action, including the use of armed forces, as may be mutually agreed upon and as is envisaged in the Joint Resolution to Promote Peace and Stability in the Middle East, in order to assist the Government of Iran at its request.

b. Agreement of Cooperation Between the Government of the United States and the Government of the Republic of Turkey, March 5, 1959.[15]

Relevant provisions

1. The Government of Turkey is determined to resist aggression. In case of aggression against Turkey, the Government of the United States of America, in accordance with the Constitution of the United States of America, will take such appropriate action, including the use of armed forces, as may be mutually agreed upon and as is envisaged in the Joint Resolution to Promote Peace and Stability in the Middle East, in order to assist the Government of Turkey at its request.

e. Africa

a. Agreement of Cooperation Between the Government of the United States and the Government of Liberia, July 8, 1959.[16]

Relevant provisions

Art. 1: In the event of aggression or threat of aggression against Liberia, the Government of the United States of America and the Government of Liberia will immediately determine what action may be appropriate for the defense of Liberia.

f. South Asia

1. United States Membership in CENTO Committees

[Pakistan is a member of CENTO, in certain activities of which the United States participates. (See Sect. I.D. 2., above).]

2. Membership of the United States and Pakistan in SEATO

[See Section G.1., "Southeast Asia-Southwest Pacific.]

3. Agreement of Cooperation Between the Government of the United States and the Government of Pakistan, March 5, 1959.[17]

Relevant provisions

Art. 1.: The Government of Pakistan is determined to resist aggression. In case of aggression against Pakistan, the Government of the United States of America, in accordance with the Constitution of the United States of America, will take such appropriate action, including the use of armed forces, as may be mutually agreed upon and is envisaged in the Joint Resolution to Promote Peace and Stability in the Middle East, in order to assist the Government of Pakistan at its request.

g. Southeast Asia-Southwest Pacific

1. Southeast Asia Collective Defense Treaty, September 8, 1954: [18]

United States, Australia, France, New Zealand, Pakistan, Philippines, Thailand, United Kingdom, Cambodia,[19] Laos,[19] Free territory under the jurisdiction of the State of Vietnam.[19]

Relevant provisions

Art. 2. In order more effectively to achieve the objectives of this Treaty, the Parties, separately and jointly, by means of continous and effective self-help and mutual aid will maintain and develop their individual and collective capacity to resist armed attack and to prevent and counter subversive activities directed from without against their territorial integrity and political stability.

Art. 4:

(i) Each Party recognizes that aggression by means of armed attack in the treaty area against any of the Parties or against any State or territory which the Parties by unanimous agreement may hereafter designate, would endanger its own peace and safety, and agrees that it will in that event act to meet the common danger in accordance with its constitutional processes. Measures taken under this paragraph shall be immediately reported to the Security Council of the United Nations.

(ii) If, in the opinion of any of the Parties, the inviolability or the integrity of the territory or the sovereignty or political independence of any Party in the treaty area or of any other State or territory to which the provisions of paragraph 1 of this Article from time to time apply is threatened in any way other than by armed attack or is affected or threatened by any fact or situation which might endanger the peace of the area, the Parties shall consult immediately in order to agree on the measures which should be taken for the common defense.

(iii) It is understood that no action on the territory of any State designated by unanimous agreement under paragraph 1 of this Article or on any territory so designated shall be taken except at the invitation or with the consent of the government concerned.

Understanding of the United States of America

The United States of America in executing the present Treaty does so with the understanding that its recognition of the effect of aggression and armed attack and its agreement with reference thereto in Article IV, paragraph 1, apply only to communist aggression but affirms that in the event of other aggression or armed attack it will consult under the provisions of Article IV, paragraph 2.

2. Security Treaty Between Australia, New Zealand, and the United States (ANZUS Pact) September 1, 1951 [20]

Relevant provisions

Art. 4: Each Party recognizes that an armed attack in the Pacific Area on any of the Parties would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional processes.

Any such armed attack and all measures taken as a result thereof shall be immediately reported to the Security Council of the United Nations. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

3. Mutual Defense Treaty Between the United States and the Republic of the Philippines, August 30, 1951 [21]

Revelant provisions

Art. 4: Each Party recognizes that an armed attack in the Pacific Area on either of the Parties would be dangerous to its own peace and safety and declares that it would act to meet the common dangers in accordance with its constitutional processes.

Any such armed attack and all measures taken as a result thereof shall be immediately reported to the Security Council of the United Nations. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

Art. 5: * * * an armed attack on either of the Parties is deemed to include an armed attack on the metropolitan territory of either of the Parties, or on the island territories under its jurisdiction in the Pacific or on its armed forces, public vessels or aircraft in the Pacific.

4. Memorandum of Agreement, Ambassador Bohlen and Foreign Secretary Serrano of the Philippines, October 12, 1959 [22]

Relevant passages

1. In accordance with the understandings reached during our discussions in August, September and October 1959, the following is agreed:

* * * * *

(c) *Mutual Defense:* The policy of the United States with regard to armed attack on the Philippines is contained in the Mutual Defense Treaty. Further the United States reaffirms the policy set forth in the statement of September 7, 1954 of then Secretary of State Dulles which reads as follows:

"Under our Mutual Defense Treaty and related actions, there have resulted air and naval dispositions of the United States in the Philippines, such that an armed attack on the Philippines could not but be also an attack upon the military forces of the United States. As between our nations, it is no legal fiction to say that an attack on one is an attack on both. It is a reality that an attack on the Philippines is an attack also on the United States."

and in the joint communique issued on June 20, 1958 by President Eisenhower and President Garcia the pertinent part of which reads as follows:

"President Eisenhower made clear that, in accordance with these existing alliances and the deployments and dispositions thereunder, any armed attack against the Philippines would involve an attack against United States forces stationed there and against the United States and would instantly be repelled."

5. Exchange of Notes Between Secretary Rusk and Foreign Secretary Ramos of the Philippines, September 16, 1966 [23]

Relevant provision

[Referring to the Memorandum of Agreement of Foreign Secretary Serrano and Ambassador Bohlen of October 12, 1959:] . . . I have the honor on behalf of my government to reaffirm the policy of the United States regarding mutual defense expressed in the 1959 Memorandum. * * *

H. East Asia

1. Treaty of Mutual Cooperation from Security Between the United States and Japan, January 19, 1960 [24]

Relevant provisions

Art. 5: Each Party recognizes that an armed attack against either Party in the

---

Footnotes at end of article.

territory under the administration of Japan would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional provisions and processes.

Any such armed attack and all measures taken as a result thereof shall be immediately reported to the Security Council of the United Nations in accordance with the provisions of Article 51 of the Charter. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

2. Mutual Defense Treaty Between the United States and the Republic of China, December 2, 1954 [25]

Relevant provisions

Art. 2: In order more effectively to achieve the objective of this Treaty, the Parties separately and jointly by self-help and mutual aid will maintain and develop their individual and collective capacity to resist armed attack and communist subversive activities directed from without against their territorial integrity and political stability.

Art. 5: Each Party recognizes that an armed attack in the West Pacific Area directed against the territories of either of the Parties would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional processes.

Any such armed attack and all measures taken as a result thereof shall be immediately reported to the Security Council of the United Nations. Such measures shall be terminated when the Security Council has taken the measures necessary to restore and maintain international peace and security.

[In its report on the Treaty, the Senate Committee on Foreign Relations included the following: "It is the understanding of the Senate that the obligations of the parties under Article V apply only in the event of external armed attack; and that military operations by either party from the territories held by the Republic of China shall not be undertaken except by joint agreement."]

3. Mutual Defense Treaty Between the United States and Republic of Korea, October 1, 1953 [26]

Relevant provisions

Art. 2: The Parties will consult together whenever, in the opinion of either of them, the political independence or security of either of the Parties is threatened by external armed attack. Separate and jointly, by self-help and mutual aid, the Parties will maintain and develop appropriate means to deter armed attack and will take suitable measures in consultation and agreement to implement this Treaty and to further its purposes.

Art. 3: Each Party recognizes that an armed attack in the Pacific area on either of the Parties in territories now under their respective administrative control, or hereafter recognized by one of the Parties as lawfully brought under the administrative control of the other, would be dangerous to its own peace and safety and declares that it would act to meet the common danger in accordance with its constitutional processes.

[In advising and consenting to the ratification of the treaty the Senate added the following understanding: "It is the understanding of the United States that neither party is obligated, under Article III of the above Treaty, to come to the aid of the other except in case of an external attack against such party; nor shall anything in the present Treaty be construed as requiring the United States to give assistance to Korea except in the event of an armed attack against territory which has been recognized by the United States as lawfully brought under the administrative control of the Republic of Korea."]

Footnotes at end of article.

II. PROVISIONS OF OFFICIAL DECLARATIONS

A. Western Hemisphere

1. Seventh Annual Message of President Monroe to Congress ("The Monroe Doctrine"), December 2, 1823 [27]

Relevant passages

* * * The occasion has been judged proper for asserting, as a principle in which the rights and interest of the United States are involved, that the American continents, by the free and independent condition which they have assumed and maintain, are henceforth not to be considered as subjects for future colonization by any European powers. * * * The political system of the allied powers [the "Holy Alliance"] is essentially different * * * from that of America. * * * We owe it, therefore, to candor and to the amicable relations existing between the United States and those powers to declare that we should consider any attempt on their part to extend their system to any portion of this hemisphere as dangerous to our peace and safety. * * * With the Governments who have declared their independence and maintained it, and whose independence we have, on great consideration and on just principles, acknowledged, we could not view any interposition for the purpose of oppressing them, or controlling in any other manner their destiny by any Europen power in any other light than as the manifestation of an unfriendly disposition toward the United States. * * *

2. Statement by the Department of State on the Monroe Doctrine July 14, 1960 [28]

Relevant passage

* * * * *

The principles [of the Monroe Doctrine] which the United States Government enunciated in the face of the attempts of the old imperialism to intervene in the affairs of this hemisphere are as valid today for the attempts of the new imperialism. * * * Today, nearly a century and a half later, the United States is gratified that these principles are not professed by itself alone but represent through solemn agreements the views of the American community as a whole.

3. The Ogdensburg Agreement: Joint Statement by President Roosevelt and Prime Minister Mackenzie King of Canada, August 18, 1940 [29]

Relevant passages

The Prime Minister and the President have discussed the mutual problems of defense in relation to the safety of Canada and the United States.

It has been agreed that a Permanent Joint Board on Defense shall be set up at once by the two countries.

This Permanent Joint Board on Defense shall commence immediate studies relating to sea, land, and air problems including personnel and matériel.

It will consider in the broad sense the defense of the north half of the Western Hemisphere.

* * * * *

4. Joint Announcement on Defense, United States-Canada, February 12, 1947 [30]

Relevant passages

In the interest of efficiency and economy, each Government has decided that its national defense establishment shall, to the extent authorized by law, continue to collaborate for peacetime joint security purposes. * * *

[Citing the "identity, of view and interest between the two countries", and noting that "no treaty, executive agreement, or contractual obligation has been entered into," [31] the announcement quoted the Ogdensburg Agreement of August 1940 which established the Permanent Joint Board on Defense.]

In discharging this continuing responsibility [for the defense of the north half of the Western Hemisphere] the Board's work led to the building up of a pattern of close defense cooperation. The principles announced on February 12 are in continuance of this cooperation. * * *

5. Joint Resolution Expressing the Determination of the United States With Respect to the Situation in Cuba (Cuban Resolution) October 3, 1962

5. Cuban Resolution—Text of Public Law 87–733 [S.J. Res. 230], 76 Stat. 697, approved October 3, 1962: Joint Resolution expressing the determination of the United States with respect to the situation in Cuba:

Whereas President James Monroe, announcing the Monroe Doctrine in 1823, declared that the United States would consider any attempt on the part of European powers "to extend their system to any portion of this hemisphere as dangerous to our peace and safety"; and

Whereas in the Rio Treaty of 1947 the parties agreed that "an armed attack by any State against an American State shall be considered as an attack against all the American States, and, consequently, each one of the said contracting parties undertakes to assist in meeting the attack in the exercise of the inherent right of individual or collective self-defense recognized by article 51 of the Charter of the United Nations"; and

Whereas the Foreign Ministers of the Organization of American States at Punta del Este in January 1962 declared: "The present Government of Cub has identified itself with the principles of Marxist-Leninist ideology, has established a political, economic, and social system based on that doctrine, and accepts military assistance from extracontinental Communist powers, including even the threat of military intervention in American on part of the Soviet Union"; and

Whereas the international Communist movement has increasingly extended into Cuba its political, economic, and military sphere of influence: Now, therefore, be it

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the United States is determined—

(a) to prevent by whatever means may be necessary, including the use of arms the Marxist-Leninist regime in Cuba from extending, by force or the threat of force, its aggressive or subversive activities to any part of this hemisphere;

(b) to prevent in Cuba the creation or use of an externally supported military capability endangering the security of the United States; and

(c) to work with the Organization of American States and with freedom-loving Cubans to support the aspirations of the Cuban people for self-determination.

6. Joint statement at Washington by President Kennedy and President Betancourt of Venezuela, February 20, 1963 [32]

Relevant passage

* * * * *

The President of the United States pledged the full support of his country to the Republic of Venezuela in resisting the all-out campaign of the international Communists, aided especially by their Cuban allies, to overthrow the constitutional Government of President Betancourt.

* * * * *

[When asked at a news conference on March 6, 1963 about the nature of the "full support" in case of a serious or successful revolution against Betancourt, President Kennedy replied: "Well, it would depend a good deal on the conditions and what our obligations might be under the Rio treaty. We strongly support President Betancourt's efforts in Venezuela in a good number of ways. But if you are asking me, I would have to see what the conditions were, what the responsibilities were under the Rio treaty,

the OAS, if we knew we were going into a more substantial situation. If you are talking about aggression from the outside, the answer is very clear. If you are talking about internal acts, we would have to judge those acts, and depend a good deal on what the Government of Venezuela decided as the appropriate response."] [33]

B. Europe

1. Statement by President Eisenhower on United States Policy Towards the Western European Union, March 10, 1955 [34]

[In a message of the Prime Ministers of the signatories to the Western European Union protocols—Belgium, France, Federal Republic of Germany, Italy, Luxembourg, the Netherlands, and the United Kingdom—President Eisenhower referred to a similar statement of principles he had made on April 15, 1954, in anticipation of the European Defense Community, and to the fact that the latter evolved into the Western European Union plan.]

Relevant passages

I am glad to affirm that when the Paris Agreements [establishing the Western European Union arrangements] have been ratified and have come into force, it will be the policy of the United States:

* * * * *

(3) To continue to maintain in Europe, including Germany, such units of its armed forces as may be necessary and appropriate to contribute its fair share of the forces needed for the joint defense of the North Atlantic area while a threat to that area exists, and will continue [sic] to deploy such forces in accordance with agreed North Atlantic strategy for the defense of this area;

* * * * *

(6) * * * to regard any action from whatever quarter which threatens the integrity and unity of the Western European Union as a threat to the security of the parties to the North Atlantic Treaty calling for consultation in accordance with Article 4 of that Treaty.

2. Communique, North Atlantic Council Ministerial Session, Athens, May 6, 1962 [35]

Relevant passage

* * * the Ministers welcomed the confirmation by the United States that it will continue to make available for the Alliance the nuclear weapons necessary for NATO defense, concerting with its allies on basic plans and arrangements in regard to these weapons. In addition, both the United Kingdom and the United States Governments have given firm assurances that their strategic forces will continue to provide defense against threats to the Alliance beyond the capability of NATO-committed forces to deal with.

3. Final Act, London Nine-Power Conference, Declaration by the Governments of the United States, the United Kingdom, and France, October 3, 1954 [36]

Relevant passages

5. The security and welfare of Berlin and the maintenance of the position of the Three Powers there are regarded by the Three Powers as essential elements of the peace of the free world in the present international situation. Accordingly they will maintain armed forces within the territory of Berlin as long as their responsibilities require it. They therefore reaffirm that they will treat any attack against Berlin from any quarter as an attack upon their forces and themselves.

6. They will regard as a threat to their own peace and safety any recourse to force which in violation of the principles of the United Nations Charter threatens the integrity and unity of the Atlantic alliance or its defensive purposes. In the event any such action the three Governments, * * * will act in accordance with Article 4 of the North Atlantic Treaty [which calls for consultation] with a view to taking other measures which may be appropriate.

4. Statement by President Kennedy Regarding Berlin, in Address to the Nation, July 25, 1961 [37]

Relevant passage

We are there [Berlin] as a result of our victory over Nazi Germany and our basic rights to be there deriving from that victory include both our presence in West Berlin and the enjoyment of access across East Germany. * * * But in addition to those rights is our commitment to sustain—and defend, if need be—the opportunity for more than 2 million people to determine their own future and choose their own way of life. * * * The NATO shield was long ago extended to cover West Berlin, and we have given our word that an attack in that city will be regarded as an attack upon us all.

5. Address by Vice-President Johnson before the West Berlin House of Representatives, August 19, 1961 [38]

Relevant passage

I have come to Berlin by direction of President Kennedy. He wants you to know—and I want you to know—that the pledge he has given to the freedom of West Berlin and to the rights of Western access to Berlin is firm. To the survival and to the creative future of this city we Americans have pledged in effect, what our ancestors pledged in forming the United States: "* * * our Lives, our Fortunes and our Sacred Honor". * * *

6. Statement by Secretary of State Rusk Regarding Berlin, in Address at Davidson College, February 22, 1962 [39]

Relevant passage

The Western allies, backed by all the NATO powers have the most solemn obligation to protect the freedom of the West Berliners. * * * To protect this freedom requires the continued presence of Allied troops and free rights of access. * * *

7. Concurrent Resolution 570 (Berlin Resolution), October 10, 1962

Concurrent resolution

Whereas the primary purpose of the United States in its relations with all other nations is and has been to develop and sustain a just and enduring peace for all; and

Whereas it is the purpose of the United States to encourage and support the establishment of a free, unified, and democratic Germany; and

Whereas in connection with the termination of hostilities in World War II the United States, the United Kingdom, France, and the Soviet Union freely entered into binding agreements under which the four powers have the right to remain in Berlin, with the right of ingress and egress, until the conclusion of a final settlement with the Government of Germany; and

Whereas no such final settlement has been concluded by the four powers and the aforementioned agreements continue in force: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress—

(a) that the continued exercise of United States, British, and French rights in Berlin constitutes a fundamental political and moral determination;

(b) that the United States would regard as intolerable any violation by the Soviet Union directly or through others of those rights in Berlin, including the right of ingress and egress;

(c) that the United States is determined to prevent by whatever means may be necessary, including the use of arms, any violation of those rights by the Soviet Union directly or through others, and to fulfill our commitment to the people of Berlin with respect to their resolve for Freedom.

8. Joint Communique, President Kennedy and Chancellor Adenauer of Germany, November 15, 1962 [40]

Relevant passage

It is agreed * * * that the freedom and viability of Berlin will be preserved in all circumstances and with all means.

9. Joint Communique, President Johnson and Chancellor Erhard of Germany, June 12, 1964 [41]

Relevant passage

The President restated the determination of the United States to carry out fully its commitments with respect to Berlin, including the maintenance of the right of free access to West Berlin and the continued freedom and viability of the city.

C. Near East-Middle East

1. Message of President Truman to Congress ("The Truman Doctrine"), March 12, 1947 [42]

Relevant passages

* * * * *

I believe that it must be the policy of the United States to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures.

I believe that we must assist free peoples to work out their own destinies in their own way.

I believe that our help should be primarily through economic and financial aid which is essential to economic stability and orderly processes.

* * * * *

2. Joint Resolution to Promote Peace and Stability in the Middle East ("The Eisenhower Doctrine"), March 9, 1957 [43]

Relevant passage

SEC. 2. The President is authorized to undertake, in the general area of the Middle East, military assistance programs with any nation or group of nations of that area desiring assistance. Furthermore, the United States regards as vital to the national interest and world peace the preservation of the independence and integrity of the nations of the Middle East. To this end, if the President determines the necessity thereof, the United States is prepared to use armed forces to assist any such nation or groups of such nations requesting assistance against armed aggression from any country controlled by international communism: *Provided*, That such employment shall be consonant with the treaty obligations of the United States and with the Constitution of the United States.

3. Tripartite Declaration (United States-United Kingdom-France) Regarding Security in the Near East, May 25, 1950 [44]

Relevant passage

3. The three Governments take this opportunity of declaring their deep interest in and their desire to promote the establishment and maintenance of peace and stability in the area and their unalterable opposition to the use of force or threat of force between any of the states in that area. The three Governments, should they find that any of these states [i.e. the Arab States and Israel] was preparing to violate frontiers or armistice lines, would, consistently with their obligations as members of the United Nations, immdiately take action, both within and outside the United Nations, to prevent such violation.

4. Multilateral Declaration Respecting the Baghdad Pact, July 28, 1958 [45]

Parties

United States, Pakistan, Iran, Turkey, United Kingdom.

Relevant passages

1. The members of the Baghdad Pact attending the Ministerial meeting in London [46]

Footnotes at end of article.

* * * declare their determination to maintain their collective security and to resist aggression, direct or indirect.

4. Article 1 of the Pact of Mutual Co-operation signed at Baghdad on February 24, 1955, provides that the parties will co-operate for their security and defense and that such measures as they agree to take to give effect to this co-operation may form the subject of special agreements. Similarly, the United States in the interest of world peace, and pursuant to existing Congressional authorization, agrees to co-operate with the nations making this Declaration for their security and defense and will promptly enter into agreements designed to give effect to this cooperation.

5. Joint Communique, President Kennedy and the Shah of Iran (Mohammed Reza Pahlavi), Washington, April 13, 1962 [47]

Relevant passages

* * * * *

Their talks included a review of political and military situations in the world; a discussion of the progress which Iran is making in economic and social advancement; a review of defense arrangements in which the two countries are associated; and aspects of United States economic and military aid programs in Iran.

* * * * *

They discussed and were in complete agreement on the subject of the nature of the threat to the Middle East and to all free peoples. They reaffirmed the provisions of the bilateral agreement of 1959 concerning the maintenance of the independence and territorial integrity of Iran, and agreed on the necessity of collective security arrangements to achieve this end.

* * * * *

6. Letter from President Kennedy to Crown Prince Faisal of Saudi Arabia, October 25, 1962 [48]

Relevant passage

* * * * *

* * * Under your firm and enlightened leadership I am confident Saudi Arabia will move ahead successfully on the path of modernization and reform which it has already charted for itself. In pursuing this course you may be assured of full United States support for the maintenance of Saudi Arabia's integrity.

* * * * *

7. Statement on Jordan and Saudi Arabia by Secretary of State Rusk, in a News Conference, March 8, 1963 [49]

Relevant passages

[In response to a question on political stability in Saudi Arabia and Jordan, Secretary Rusk stated:]

* * * * *

We of course are concerned about the independence of these Arab states and their freedom from external penetration. * * * We are very much interested in the independence and the security of our friends in Jordan and Arabia and will be very much alert to any threats against them.

8. Reply by President Kennedy to a News Conference Question concerning the Middle East, May 8, 1963 [50]

Relevant passage

* * * * *

We strongly oppose the use of force or the threat of force in the Near East, and we also seek to limit the spread of communism in the Middle East which would, of course destroy the independence of the people. This government has been and remains strongly opposed to the use of force or the threat of force in the Near East. In the event of aggression or preparations for aggression, whether direct or indirect, we would support appropriate measures in the United Nations, adopt other courses of action on our own to prevent or to put a stop to such aggression, which, of course, has been the policy which the United States has followed for some time.

9. Remarks of President Johnson during Exchange of Toasts with President Shazar of Israel, August 2, 1966 [51]

Relevant passage

* * * * *

[Reaffirming President Kennedy's statement of May 8, 1963 which expressed American support for the security of both Israel and her neighbors,[52] President Johnson said:]

We subscribe to that policy.

10. Statement by President Johnson on the Near East Situation, at the White House, May 23, 1967 [53]

Relevant passage

* * * * *

To the leaders of all the nations of the Near East, I wish to say what three American Presidents have said before me—that the United States is firmly committed to the support of the political independence and territorial integrity of all the nations of that area. The United States strongly opposes aggression by anyone in the area, in any form, overt or clandestine.

* * * * *

11. Address by President Johnson at a Foreign Policy Conference of Educators Sponsored by the Department of State, June 19, 1967 [54]

Relevant passages

* * * * *

Our country is committed—and we here reiterate that commitment today—to a peace [in the Middle East] that is based on five principles:

First, the recognized right of national life;

Second, justice for the refugees;

Third, innocent maritime passage;

Fourth, limits on the wasteful and destructive arms race; and

Fifth, political independence and territorial integrity for all.

D. Africa

The Department is not aware of any published official statements by the Congress, the President, the Vice President, or the Secretary of State containing United States defense assurances to African countries.

E. South Asia

1. Letter from President Eisenhower to Prime Minister Nehru of India, February 24, 1954 [55]

Relevant passage

* * * * *

* * * I am confirming publicly that if our aid to any country, including Pakistan, is misused and directed against another in aggression I will undertake immediately, in accordance with my constitutional authority, appropriate action both within and without the U.N. to thwart such aggression. * * *

* * * * *

2. Assurances to Pakistan Respecting the Extension of Military Assistance to India: Statement by the Department of State, November 17, 1962 [56]

Relevant passages

[Referring to an exchange of notes between the United States Government and the Government of India released the same day (November 17), which concerned the provision of military aid to India, and citing the assurances given to India in 1954 when similar aid was extended to Pakistan,[57] the statement continued:]

* * * * *

The Government of the United States of America has similarly assured the Government of Pakistan that, if our assistance to India should be misused and directed against another in aggression, the United States would undertake immediately, in accordance with constitutional authority appropriate action both within and without the United Nations to thwart such aggression.

Needless to say, in giving these assurances the United States is confident that neither of the countries which it is aiding harbors aggressive designs.

F. Southeast Asia

1. Joint Resolution To Promote the Maintenance of International Peace and Security in Southeast Asia (Tonkin Gulf Resolution), August 10, 1964 [58]

Relevant passages

Resolved by the Senate and the House of Representatives of the United States of America in Congress assembled, That the Congress approves and supports the determination of the President, as Commander in Chief to take all necessary measures to repel any armed attack against the forces of the United States and to prevent further aggression.

SEC. 2. The United States regards as vital to its national interest and to world peace the maintenance of international peace and security in Southeast Asia. Consonant with the Constitution of the United States and the Charter of the United Nations and in accordance with its obligations under the Southeast Asia Collective Defense Treaty the United States is, therefore, prepared, as the President determines, to take all necessary steps, including the use of armed force, to assist any member or protocol state of the Southeast Asia Collective Defense Treaty requesting assistance in defense of its freedom.

2. Statement of Congressional Policy, March 16, 1967 [59]

The Congress hereby declares—

(1) its firm intentions to provide all necessary support for members of the Armed Forces of the United States fighting in Vietnam:

(2) its support of efforts being made by the President of the United States and other men of good will throughout the world to prevent an expansion of the war in Vietnam and to bring that conflict to an end through a negotiated settlement which will preserve the honor of the United States, protect the vital interests of this country, and allow the people of South Vietnam to determine the affairs of that nation in their own way; and

(3) its support for the convening of the nations that participated in the Geneva Conferences or any other meeting of nations similarly involved and interested as soon as possible for the purpose of pursuing the general principles of the Geneva accords of 1954 and 1962 and for formulating plans for bringing the conflict to an honorable conclusion.

3. Joint Statement, Secretary of State Rusk and Foreign Minister Thanat Khoman of Thailand, March 6, 1962 [60]

Relevant passages

* * * * *

The Secretary of State reaffirmed that the United States regards the preservation of the independence and integrity of Thailand as vital to the national interest of the United States and to world peace. He expressed the firm intention of the United States to aid Thailand, its ally and historic friend, in resisting Communist aggression and subversion.

The Foreign Minister and the Secretary of State * * * agreed that the Treaty [Southeast Asia Collective Defense Treaty] provides the basis for the signatories collectively to assist Thailand in case of [direct] Communist armed attack against that country. The Secretary of State assured the Foreign Minister that in the event of such aggression,

Footnotes at end of article.

the United States intends to give full effect to its obligations under the Treaty to act to meet the common danger in accordance with its constitutional processes. The Secretary of State reaffirmed that this obligation of the United States does not depend upon the prior agreement of all other parties to the treaty, since this treaty obligation is individual as well as collective.

In reviewing measures to meet indirect aggression, the Secretary of State stated that the United States regards its commitments to Thailand under the Southeast Asia Collective Treaty and under its bilateral economic and military assistance agreements with Thailand as providing an important basis for United States actions to help Thailand meet indirect aggression. In this connection the Secretary reviewed with the Foreign Minister the actions being taken by the United States to assist the Republic of Viet-Nam to meet the threat of indirect aggression.

4. Declaration of Honolulu, President Johnson, Chairman Nguyen Van Thieu and Prime Minister Nguyen Cooky, February 8, 1966 [61]

Relevant passage

The President of the United States and the Chief of State and Prime Minister of the Republic of Vietnam are thus pledged again—

To defense against aggression;

To the work of social revolution;

To the goal of free self-government;

To the attack on hunger, ignorance, and disease; and

To the unending quest for peace.

5. Communique of Seven Nations, Manila Conference, October 25, 1966 (Australia, Korea, New Zealand, Philippines, Thailand, United States, Republic of Vietnam) [62]

"We are united in our determination that the South Vietnamese people shall not be conquered by aggressive force and shall enjoy the inherent right to choose their own way of life and their own form of government. We shall continue our military and all other efforts, as firmly and as long as may be necessary, in close consultation among ourselves until the aggression is ended."

6. Remarks of President Johnson in Offering a Toast to the King of Thailand, Bangkok, October 28, 1966 [63]

Relevant passages

* * * * *

Tonight we stand as allies in a common cause. * * * We know the risks that we both run to meet the common dangers. But we know, also, that we act from a joint conviction of common interest.

Let me assure you in this regard that Thailand can count on the United States to meet its obligations under the SEATO treaty. The commitment of the United States under the SEATO treaty is not of a particular political party or administration in my country but is a commitment of the American people.

I repeat to you: America keeps its commitments. [64]

G. East Asia

1. Joint Resolution Authorizing the President To Employ the Armed Forces of the United States for Protecting the Security of Formosa, the Pescadores and Related Positions and Territories of That Area (Formosa Straits Resolution), January 29, 1955 [65]

Relevant passage

Resolved by the Senate and the House of Representatives of the United States of America in Congress assembled, That the President of the United States be and he hereby is authorized to employ the Armed Forces of the United States as he deems necessary for the specific purpose of securing and protecting Formosa and the Pescadores against armed attack, this authority to include the securing and protection of such related positions and territories of that area now in friendly hands and the taking of such other measures as he judges to be required or appropriate in assuring the defense of Formosa and the Pescadores. * * *

2. Statement on Formosa and the Offshore Islands by President Kennedy in a Press Conference, June 27, 1962 [66]

Our basic position has always been that we are opposed to the use of force in this area. * * * [In the event of] aggressive action against the offshore islands of Matsu and Quemoy * * * the United States will take the action necessary to assure the defense of Formosa and the Pescadores. * * * In my own discussion of this issue in the campaign of 1960, * * * I stated this position very plainly, for example, on October 16, 1960: "The position of the administration has been that we would defend Quemoy and Matsu if there were an attack which was part of an attack on Formosa and the Pescadores. * * *" Under this policy sustained continuously by the United States Government since 1954, it is clear that any threat to the offshore islands must be judged in relation to its wider meaning for the safety of Formosa and the peace of the area. Exactly what action would be necessary in the event of any such act of force would depend on the situation as it developed. * * *

3. Reply to Question at Press Conference in Korea by Vice President Humphrey, February 23, 1966 [67]

Relevant passage

The United States Government and the people of the United States have a firm commitment to the defense of Korea. As long as there is one American soldier on the line of the border, the demarkation line, the whole and the entire power of the United States of America is committed to the security and defense of Korea. Korea today is as strong as the United States and Korea put together. America today is as strong as the United States and Korea put together. We are allies, we are friends, you should have no questions, no doubts.

H. Southwest Pacific

1. Joint Communique, President Johnson and President Macapagal, October 6, 1964

Relevant passage

The two Presidents recognized that the aggressive intentions and activities of Communist China continue to present an imminent threat in the Far East and in Southeast Asia. They reviewed, in this connection, the importance of the Mutual Defense Treaty between the Philippines and the United States in maintaining the security of both countries and reaffirmed their commitment to meet any threat that might arise against their security. President Johnson made it clear that, in accordance with these existing alliances and the deployment and dispositions thereunder, any armed attack against the Philippines would be regarded as an attack against United States forces stationed there and against the United States and would instantly be repelled.

2. Joint Communique, President Johnson and President Marcos of the Philippines, September 15, 1966

Relevant passages

* * * * *

14. Mutual Security. Both Presidents recognized the strategic role which the Philippines plays in the network of allied defenses and agreed to strengthen their mutual defense capabilities.

* * * * *

16. The two Presidents pledged themselves to strengthen the unity of the two countries in meeting any threat to their security. In this regard, they noted the continuing importance of the Mutual Defense Treaty between the Philippines and the United States in maintaining the security of both countries. President Johnson reiterated to President Marcos the policy of the United States regarding mutual defense as stated by him and by past U.S. Administrations to the Philippine Government since 1954.

YET WE NEGLECT OUR OWN

Mr. YOUNG of Ohio. Mr. President, American citizens should know that in the last 18 years nearly $40 billion worth of armaments and ammunition have been given away to other nations in the form of military assistance. Incidentally, this includes many billions of American taxpayers' money we have given to the Saigon militarist regime of Thieu and Ky and those other generals born in North Vietnam who overthrew by force the civilian government of Saigon in 1965. Very definitely, this regime has the support of fewer than 20 percent of South Vietnamese men and women. In 4 years Ky and Thieu, who have been kept in power by our Armed Forces who week after week have suffered more men killed and wounded than have the friendly forces of South Vietnam, have done nothing whatever for land reform for their own nationals.

Incidentally, during the period August 3 through August 30, 5,587 men of our Armed Forces were killed and wounded in Vietnam. During that same time, the ARVN, the so-called friendly forces of South Vietnam—too friendly to fight very hard—sustained fewer casualties. Their total was 5,305 killed and wounded, compared with 5,587 Americans killed and wounded. In addition, some GI's died of wounds and others of malaria fever, bubonic plague, and other jungle diseases.

Nor does that tell the entire story. During that period, 133 GI's were killed in what the Pentagon terms accidents and incidents. Speaking as one who served in World War II, I recall that when trucks would collide at night or run off the road and men were killed or injured, they were termed combat casualities. But when that occurs in Vietnam, the Pentagon terms them accidents or incidents.

The PRESIDENT pro tempore. The time of the Senator from Ohio has expired. Does the Senator desire to take additional time?

Mr. YOUNG of Ohio. Yes. I ask unanimous consent that I may proceed for 5 additional minutes.

The PRESIDENT pro tempore. Is there objection? The Chair hears none, and the Senator from Ohio is recognized for an additional 5 minutes.

Mr. YOUNG of Ohio. Mr. President, we Americans have given away as foreign aid military assistance during the past 18 years nearly 4,500 F–84 fighter planes, 2,900 F–86 fighter planes, 350 F–100 fighter planes, 390 F–104 fighter planes, 3,200 trainer planes, 700 helicopters, 835 cargo planes, and 4,200 other planes of various types to be used in combat. During this same period we have given 350,000 trucks, 20,000 tanks, 2,500 personnel carriers, 3,200 armored vehicles of various types. Also, we have enlarged the navies of other nations with 36 destroyers, 25 submarines, 1,400 land craft of various types, and 820 other ships.

When it comes to missiles, rifles, cannons and machineguns the total is tremendous—3,500,000 rifles and carbines, 152,500 machineguns, 29,000 mortars, 23,000 cannon and large guns of various sizes. In addition, 27,500 Nike, Hawk, and other missiles capable of firing nuclear warheads.

No sane American citizen, even the ardent warhawks, can claim that the United States has a mandate from Almighty God to police the entire world. Yet, we have more than 400 major air, naval, Army and Marine Corps bases in some 24 nations including 146 in West Germany, 55 in Korea, 48 in Japan, and 16 in South Vietnam. These are all mammoth U.S. bases abroad. I have seen our huge installations in Vietnam, Thailand, and in various European countries apparently built to last a hundred years or more. When we count the 2,687 minor installations in countries such as Turkey and Pakistan, the total exceeds 3,000. This, in countries ranging from South Vietnam with more than 535,000 U.S. Armed Forces to Tunisia with a group of only four.

Why do we now need 320,000 men in Western Europe and 23,000 in Latin America? How long will we continue to station 60,000 men in South Korea, 40,000 in Japan, 30,000 in the Philippine Republic, and some 50,000 in Thailand? Why is it necessary for 643,000 seaborne forces to remain outside of the United States?

The PRESIDING OFFICER (Mr. GRAVEL in the chair). The time of the Senator from Ohio has expired.

Mr. YOUNG of Ohio. Mr. President, I ask unanimous consent that I may proceed for an additional 5 minutes.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and the Senator from Ohio is recognized for an additional 5 minutes.

Mr. YOUNG of Ohio. Mr. President, why do we maintain 230,000 servicemen and their dependents in West Germany? Not because they are essential to the defense of Europe but because the West Germans do not want to give up the fat payrolls that nourish their economy. This, despite the fact that the West German economy is stronger than that of any nation in the world except the United States. These forces did not prevent the seizure of Czechoslovakia and they would not prevent an attack on Western Europe. The deterrent against

any such remote threat is our nuclear power rather than our manpower.

How long will we continue to support worldwide military commitments that soak up $80 billion a year of taxpayers' money and drain resources badly needed at home?

Unfortunately, more than 40 percent of our tremendous Air Force is committed to combat in South Vietnam, Thailand and Laos and more than 35 percent of our Army, Navy and Marines are now fighting in this far-distant area due to our involvement from 1963 on in a civil insurrection in South Vietnam.

President Nixon was elected on the pledge that he had a secret plan to end the war in Vietnam. He made this statement in New Hampshire and elsewhere. Many citizens believed him. He became our President. Yet, last month more Americans were killed and wounded in combat than were the friendly forces of South Vietnam. Yet, Americans have every reason to fear that we shall still be fighting this long and most unpopular war—and an undeclared war at that—beyond 1972. Only the most optimistic in Washington feel that our combat planes flying from bases in Thailand and in South Vietnam and from U.S. naval carriers in the South China Sea will not still be fighting well into 1973.

TAX REFORM

Mr. YOUNG of Ohio. Mr. President, the Internal Revenue Service records for 1967 show that 766,751 individual American taxpayers claimed—and got away with their claim—that they suffered $1,194,000,000 as farm losses. It has been the practice for more than 10 years for ultrawealthy executives and businessmen to buy farms.

What does each of these so-called gentleman farmers care if the operation of the farm, so called, shows a deficit of $50,000 a year? One reason for the purchase is to claim and receive tax deductions for these losses.

The Internal Revenue Service officials' term for this tax loophole is "Gettysburg farms," referring to the action of three wealthy friends of President Eisenhower who purchased his farm retreat in Pennsylvania.

Of course, as a rule, the value of farm acreage keeps going up so that in the end these gentleman farmers benefit greatly by increased land values. The annual operating losses mean nothing but tax credits for the affluent holders.

The Committee on Finance is considering and will be considering throughout this month, and perhaps throughout October and November a tax reform bill rewriting the tax reform bill which came to us from the other body. Let us hope that we in the Senate, before the end of this year, will be able to put an end to this tax loophole which has unduly benefited so many of these gentlemen farmers, so called. At the same time, the average family man in this country bears an extremely heavy burden in the payment of income taxes. In addition, he has had placed on top of that burden the surtax. I am happy to report that I voted against the 10-percent surtax when President Johnson proposed it, and I voted against it when President Nixon requested its extension.

Mr. President, as you know, and as all of us know, the 10-percent surtax, that atrocious tax on top of a tax, lays the heaviest burden on those families least able to pay it. Let us hope, and I do believe, the Senate will enact a good tax reform bill which will uphold that sound principle of just taxation that taxes should be levied according to ability to pay.

THE C–5A CARGO PLANE

Mr. TALMADGE. Mr. President, I am compelled to rise in opposition to the amendment of the Senator from Wisconsin to cut off the second production run of the giant C–5A cargo plane.

Such action would be drastic and precipitant.

We all regret the cost growth of the C–5 aircraft, as does Lockheed. We also regret abnormal inflation in the Nation's economy, which to a large degree has been responsible for the estimated cost overrun—not just in the C–5 project, but in other major defense programs as well.

There are other considerations besides inflation. This procurement was made under a new type and very complicated contractual arrangement. There have been a multitude of technical and engineering problems directly and indirectly associated with building the largest aircraft in the world. All of this must be taken into account.

I have carefully examined the hearings before the Armed Services Committee of the Senate and the House of Representatives. I know there is great concern, on the part of the Government and on the part of Lockheed. The company itself estimates a contract loss of some $13 million.

But all the facts are not in yet. We are still dealing in estimates and will be until the program is completed in 1973. A punitive approach to the C–5 problem can in no way be justified.

A meat-ax attack against the C–5 aircraft not only is unwarranted, it is ill-advised and contrary to the national interest.

Putting aside the emotional and controversial aspects of the C–5 program, there is one vitally important factor we cannot afford to overlook. It must not be obscured by the current rage in some quarters about the so-called industrial complex.

The Air Force and the Nation need the C–5 aircraft. Its mission is vital to the U.S. defense posture.

The United States is engaged in a mighty struggle to keep the peace and maintain freedom in this and other lands throughout the world, at a time when there are forces that threaten the peace and that would enslave free men.

The C–5 is no small part of this global effort.

The threat of Communist expansion, the real menace of outright aggression, and "brush-fire" conflicts that can explode into major confrontations demand the rapid deployment of U.S. troops and materiel, wherever they are needed and whenever they are needed.

The C–5 is not a personnel carrier. But fighting men need weapons and equipment. This then is the mission of the C–5 transport. This giant aircraft will give the United States air mobility unmatched by any other nation. It will provide for the emergency movement of weapons and equipment for an entire division, plus the men directly associated with the equipment.

Thus will the United States achieve airlift superiority and strengthen the Defense Establishment, for the security of the people of this country and for all the free world.

No other aircraft in the planning stages or in the air can accomplish this mission. This was the mission requested by the Air Force. This was the mission approved by the Armed Services Committee and the Congress.

To halt production of the second run of the C–5, resulting in the loss of three squadrons, would virtually negate this mission. The capabilities of the aircraft could not be performed as desired and needed.

I ask the Senate to reject the Proxmire amendment and to permit construction of the C–5 aircraft as planned to meet criteria established by the Joint Chiefs of Staff.

I say, let us get on with the business of giving this Nation a strategic airlift capability that will further strengthen our national security. This, to my mind, is the overriding issue at hand.

Mr. President, the lessons of history are replete with the successful strategy of the swift mobility of armed forces. One can study the campaigns of Julius Caesar and of Hannibal, as well as Napoleon Bonaparte, and find that the most effective thing about the success of those campaigns was the speed and mobility with which they could place men and arms at a particular site at a given time.

I think perhaps the greatest cavalry officer of the Civil War that the world has ever known was Gen. Nathan Bedford Forrest, whose famous slogan was "I git thar fustest with the mostest men."

That is the essence of victory in warfare. We learned the same lesson in World War II, the lesson that Rommel taught us in North Africa, the lessons learned from General Patton's fast and mobile troops in Europe, and the lesson that we learned from our vast strategic carrier forces in the South Pacific.

Mr. President, let us not kiss away so lightly those lessons of history. If we strike down the capability that the C–5A aircraft will give this country to deploy men and weapons with vast speed to any part of the world, it will strike a vital blow at the security of this country.

I trust that the Senate will take no such foolish action.

ORDER OF BUSINESS

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

EXECUTIVE COMMUNICATIONS, ETC.

The PRESIDENT pro tempore laid before the Senate the following letters, which were referred as indicated:

REPORT OF COMPTROLLER GENERAL

A letter from the Comptroller General of the United States, transmitting, pursuant to law, a report on the effectiveness and administrative efficiency of the Neighborhood Youth Corps program under title IB of the Economic Opportunity Act of 1964, Gila River Indian Reservation and Pinal County, Ariz., Department of Labor, dated September 4, 1969 (with an accompanying report); to the Committee on Government Operations.

LOAN APPLICATION BY THE CENTRAL OREGON IRRIGATION DISTRICT OF REDMOND, OREG.

A letter from the Assistant Secretary of the Interior, transmitting, pursuant to law, a loan application by the Central Oregon Irrigation District of Redmond, Oreg. (with accompanying papers); to the Committee on Interior and Insular Affairs.

REPORT OF AN AUDIT FOR THE AMERICAN SYMPHONY ORCHESTRA LEAGUE, INC.

A letter from a certified public accountant, transmitting, pursuant to law, a report of an audit for the American Symphony Orchestra League, Inc., for the fiscal year ended May 31, 1969 (with an accompanying report); to the Committee on the Judiciary.

PRINTING OF REPORT ON FRENCHBORO HARBOR, MAINE (S. DOC. NO. 91-32)

Mr. BYRD of West Virginia. Mr. President, on behalf of my colleague, the senior Senator from West Virginia (Mr. RANDOLPH), I present a letter from the Acting Secretary of the Army, transmitting a report dated April 30, 1969, from the Chief of Engineers, Department of the Army, together with accompanying papers and illustrations, on Frenchboro Harbor, Maine, requested by a resolution of the Committee on Public Works, U.S. Senate, adopted January 17, 1963. I ask unanimous consent that the report be printed as a Senate document, with illustrations, and referred to the Committee on Public Works.

The PRESIDING OFFICER. Without objection, it is so ordered.

BILL REPORTED

A bill was reported, read the first time, and, by unanimous consent, the second time, and placed on the calendar, as follows:

By Mr. SPARKMAN:

S. 2864. A bill to amend and extend laws relating to housing and urban development, and for other purposes; placed on the calendar.

(The remarks of Mr. SPARKMAN when he reported the bill appear earlier in the RECORD under the appropriate heading.)

ADDITIONAL COSPONSORS OF BILLS

S. 1185

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent that, at the next printing, the names of the Senator from Michigan (Mr. HART) and the Senator from Maryland (Mr. TYDINGS) be added as cosponsors of S. 1185, a bill to protect the public from certain fraudulent practices in used cars.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2677

Mr. STENNIS. Mr. President, I ask unanimous consent that, at the next printing, my name be added as a cosponsor of S. 2677, to prohibit the disruption of federally assisted institutions of higher education, to provide for the enforcement of such prohibition, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

S. 2847

Mr. BYRD of West Virginia. Mr. President, at the request of the Senator from Wisconsin (Mr. NELSON), I ask unanimous consent that, at the next printing, the name of the junior Senator from Minnesota (Mr. MONDALE) be added as a cosponsor of the bill (S. 2847) to amend the Foreign Assistance Act, as amended, to authorize the Secretary of State to participate in the development of a large prototype desalting plant in Israel, and for other purposes.

The PRESIDING OFFICER. Without objection, it is so ordered.

NOTICE OF HEARINGS ON REPORT OF THE COMMISSION ON MORTGAGE INTEREST RATES

Mr. SPARKMAN. Mr. President, I wish to announce that the Senate Committee on Banking and Currency will hold hearings on September 25, 26, 29, 30, and October 1, 1969, to receive testimony on the report of the Commission on Mortgage Interest Rates. This report was made to the President and to the Congress on August 13, 1969.

The hearings will be held in room 5302, New Senate Office Building, and will commence at 10 a.m. each day.

NOTICE OF HEARING ON NOMINATION OF A. SYDNEY HERLONG

Mr. SPARKMAN. Mr. President, I wish to announce that the Committee on Banking and Currency will hold a hearing on Thursday, September 18, 1969, on the nomination of A. Sydney Herlong, of Florida, to be a member of the Securities and Exchange Commission.

The hearing will commence at 10 a.m. in room 5302, New Senate Office Building.

NOTICE OF HEARING ON CITIZEN INVOLVEMENT IN AGENCY DECISIONMAKING AND AGENCY RESPONSIVENESS TO PUBLIC NEEDS

Mr. KENNEDY. Mr. President, I wish to announce that on Wednesday and Thursday, September 10 and 11 at 9 a.m. in room 5202, New Senate Office Building, the Subcommittee on Administrative Practice and Procedure of the Senate Judiciary Committee will hold the first in a series of hearings on citizen involvement in agency decisionmaking and agency responsiveness to public needs. The hearings will be based on responses to a questionnaire sent by the subcommittee to many Federal agencies and bureaus last February. The first set of hearings will cover the questionnaire responses of the Federal Trade Commission, and the witnesses will be the members of that Commission.

WHERE THE WAY UP BEGINS

Mr. BYRD of West Virginia. Mr. President, recently the Dominion-News, of Morgantown, W. Va., published an excellent series of articles on juvenile delinquency. While most of the articles covered juvenile delinquency in Monongalia County, the sixth part of the series dealt with the Robert F. Kennedy Youth Center—a Federal institution of national importance, and one in which I am especially interested.

In August 1962, President John F. Kennedy approved my request to move what was then the National Training School from its inadequate, century-old facilities in Washington to a site in Morgantown. There, the most modern facilities were constructed to house and rehabilitate juvenile offenders of Federal laws.

I am pleased that I was able to be instrumental in gaining the $11 million of funds necessary to build the Center; and I am gratified at the work that has been conducted there since its opening last year.

I have made visits to the Center, including a recent trip, during which I was honored by the Morgantown Chamber of Commerce for helping to obtain the Center for that community.

During each of these visits, which have included talks with the officials and the youths at the Center, I have become more impressed with the rehabilitation work being done there.

Mr. President, the article in the Morgantown Dominion-News, written by Mike Connell, is entitled "Kennedy Youth Center, Where the Way Up Begins." It reports on the activities at the Center and describes the educational and recreational opportunities available to the youths there.

I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KENNEDY YOUTH CENTER, WHERE THE WAY UP BEGINS

(By Mike Connell)

Birds wheel freely about the top of Dorsey's Knob, the highest point in Monongalia County.

And far below, several dozen juvenile lawbreakers are detained in the Robert F. Kennedy Youth Center, at the nadir of their young lives.

It is unfortunate that they have broken the law and must be punished. It is fortunate that they are at Kennedy Youth Center, which is setting the example in treatment of juvenile delinquents. The way up begins here.

The KYC itself is an $11 million complex that includes vocational and academic schools, an Olympic-size swimming pool, gymnasium, dining hall, modern cottages, chapel and an administration building. Other facilities range from softball fields to an

ice-skating pond. All in all, the complex completed only last winter is an impressive sight.

The individual student at the KYC becomes part of the center's society. A society without bars or fences, that asks rather than tells him to stay, and attempts to teach and prepare him for the outside society, which has rejected him, and in turn he has rejected.

The student is placed in a cottage at the center after completing an orientation period where he is shown the workings of the institute, and is tested so that his place at the KYC can be better established.

After the orientation period he is housed by personality categories. The groupings include immature, neurotic, psychopathic and sub-cultural. Thus the boy is placed with youths similar to his own personality, and with counselors that fit especially well with his category. For example an immature boy would be taught by the more fatherly counselor.

Once settled in the cottage, the boy is taken into the KYC's own miniature society. At first the youth wears uniforms and lives in a large room with other youths.

If he works with the society, however, he amasses points, or money, whereby he can purchase civilian clothes, can rent a private room, buy toilet articles, candy and other such small luxuries. If he fails to work with the society of course, he cannot receive these extras.

The cottage itself is a small community. There are various wings, or suburbs, each distinctly different from the other. One wing would become the "elite neighborhood", and another similar to the "crowded slum."

In the center of the cottage is the "downtown section", with facilities for television, billiards and other recreational facilities. Outside the cottage is more of the city, including the schools, dining hall and more recreational facilities.

The center attempts, according to Assistant Director Herbert Beall, to ready the youth for society and teach him a variety of skills as well as the basics in such areas as English social studies, and mathematics.

The teacher ratio at the center is one for every 10 students, and in the small classes, two new concepts are being taught.

The first is the "cluster" concept, where the student is taught in a variety of skills areas. In other institutes, the youth was taught in one, concentrated area. At the youth center, the teaching is diversified, giving the youth a chance to learn more types of skills, and thus have a better chance of finding employment after his release from the institution.

The second new concept is the "integrated curriculum" program, explained by Jack Torrence, supervisor of education at the center.

"Rather than use the old academic approach," he explained, "we try a two or three prong attack to increase academic prowess."

An example of the "attack" is making other fields of study relevant to the student's main program of interest. A KYC English teacher, for example, will teach a youth the phoenetics and grammar or shop talk, if the youth's interest is in say auto mechanics. "It is more important," Mr. Torrence said, "for an auto mechanics student to be able to spell and pronounce carburetor than a word of less importance to his future."

Likewise in mathematics the problems are designed to be applicable to the students jobs later.

Mr. Torrence noted that the institute has just begun to work at full capacity. "We've been open less than a year," he said, "and only now have we received many of the things we asked for. We're just getting fully tooled up."

The program seems to have brought forward some brightening results. Mr. Torrence said of 25 of the first boys who took tests for a high school diploma, 22 passed.

ROCKY MARCIANO

Mr. PASTORE. Mr. President, when, on Sunday, August 31, 1969, on the eve of his 46th birthday, a plane crash took the life of Rocky Marciano, there was, first, unbelieving silence and a crushing sadness in all the world that loved this great fighter and good man.

Then, out of the hearts of all who knew this fighting champion came the sincerest and sweetest sentiments of sorrow and adulation. Gifted pens wrote their honest praise and humble hearts offered their prayers—eulogies that the highest of humans would prize.

They were for a humble youth, the gentlest of persons in private, but in the prize ring the conqueror of fistic's mightiest in our time.

It was a privilege to possess Rocky's friendship. I found inspiration in our every meeting—his visits to my office and the Senate through the years.

It is a tonic to our times that the news media have recorded the affectionate elegies from every fighter, every writer, every lover of clean sportsmanship.

May they one day be compiled in an appropriate volume, not only for the consolation of Rocky's loved ones, to whom he was so deeply devoted, but as an exemplar to the restless youth of America.

For the RECORD, I would select just one observant writer and friend, Barney Madden, sports editor of the Providence Journal-Bulletin.

It was truly in Providence that the "Brockton Strongboy," in some 29 fights, climbed the rungs toward world championship and along the way won the affection of everybody for "the nice guy" that Rocky was.

I ask unanimous consent that the article written by Barney Madden be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHARACTER HIS GREATEST STRENGTH

(By Barney Madden)

Rocky Marciano, retired undefeated heavyweight boxing champion who lost his life Sunday night in an airplane crash, was one of boxing's paradoxes.

Once the bell rang he became a fearless tiger, but outside the ring he was a veritable kitten, one of the gentlest fellows you could expect to meet.

Referred to variously as the Brockton Strongboy, Blockbuster and Hard Rock, he was hailed far and wide as "a nice guy." He had to "build up" to his fighting fury, but his deferential manner in private life, came naturally. Truly, Rocky was a nice guy.

If ever there was a dedicated boxer it was Marciano. He trained diligently, he didn't drink or smoke. He didn't like parties. In fact the "victory celebrations" held after his bouts, never got more than a token visit from him.

Providence was virtually his home away from home since he got his fistic start here, acquired countless friends here—and never forgot either.

Manny Almeida, who promoted all the boxing shows at which Marciano appeared in Providence, was badly shaken by his death.

"I was so close to the boy I can't believe it yet" he said yesterday. Theirs was a close relationship, Almeida advising, helping direct his climb to the title. In fact Rocky fought 29 times in Providence on Almeida cards.

Another close friend and adviser, Tony Petronella, boxing commissioner in Rhode Island during Rocky's heyday, said, "I know the sad news. Rocky was a very dear friend, a grand guy."

In the ring Rocky was tough, almost indestructible. His courage never was questioned and if anyone had doubts about it they vanished after his bouts with Johnny Shkor, who cut him severely over the eye; Red Applegate, with whom he fought a veritable war at the Auditorium; Keene Simmons, the first to buckle his knees, or Ezzard Charles, who split his nose with a punch. Each of them learned that Rocky wouldn't fold and every one of them became his victims as Rocky won 49 straight fights.

Rocky, incidentally, was christened "Marciano" in Providence after the late Harold Warman, Auditorium announcer, struggled vainly with his proper name, Marchegiano, before his first two bouts.

Almeida, who had much to do with Marciano's eventual financial security as well as his fistic rise, maintains "Nobody had his one-punch power." The great former champion, Jack Dempsey, concurs. "I took them out with an accumulation of punches," Dempsey said, "but Rocky could do it with one."

His big punch felled Joe Walcott and dethroned him in the 13th round when Walcott was well ahead on points. Joe Louis suffered the same fate as did Phil Muscato, on Dec. 19, 1948, when Rocky met his first "name" opponent. That bout he regarded as the turning point in his career, lifting him from the "local fighter" category to national recognition.

In addition to his ability to end a bout with a single crushing blow, he also was a "hurting" puncher. Opponents found it hard to lift their arms after blocking punches for a few rounds. Walcott, in fact, after Marciano had beaten him for the world title, said: "I saw the punch coming, but couldn't lift my arms to defend myself."

Charles, also a former champion, was asked if it was true that Rocky hurt you wherever he hit you. He replied: "If he hits you on the seat of the pants, it hurts."

Marciano's purses aggregated more than a million and a half dollars but time was when affluence was a total stranger to him. For his early bouts in Providence he would arrive with steaks carefully wrapped in wax paper by his mother. Eddie Beck, then a diner operator as well as fight fan, broiled them for a time. Later on, the Marciano steaks—one for him, one for his pal and trainer, the late Allie Columbo—were prepared at the home of Mike Thomas, Journal-Bulletin boxing writer, who was to become one of Rocky's closest friends and favorite companions during the nerve-wracking hours prior to his bouts.

Rocky wanted Mike in his dressing room before the fights he wanted him with him when he motored or flew to the fight scene from his training camps. Whenever any of us encountered Rocky in later years, his first query was: "How's Mike. Say hello for me, please."

Early in his career Rocky was a guest of a radio show some of us Journal-Bulletin sports writers had on WEAN, and he came back again when things were going well for him. Then we invited him to join us four weeks hence, little knowing that in the meantime he would sign for an important bout. He accepted.

Four weeks passed and he was in strict training at Grossinger's so we were sure he wouldn't appear. We didn't know Rocky, evidently. An hour before air time he walked in and, observing that we were flabbergasted—he wasn't one to interrupt his training program—he asked:

"Why are you guys so surprised? I told you I'd be here, and here I am. I'm flying back as soon as we finish."

His "fee" was precisely nothing, but, to him, a promise was something to be kept.

ABUSE OF TAX PRIVILEGED STATUS BY FOUNDATIONS

Mr. MONDALE. Mr. President, abuse of their tax privileged status by some foundations has placed that status in jeopardy for all foundations, both good and bad. Congress has heard a great deal about flagrant abuses of tax-exemption privileges by a few foundations. In considering tax reform, I believe we need to hear also of the good foundations have done and can do.

I recently received a letter from the mayor of St. Cloud, Minn., detailing the creative role of foundations in assisting small cities.

I ask unanimous consent that the letter from Dr. Edward L. Henry be printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

CITY OF ST. CLOUD,
St. Cloud, Minn., August 21, 1969.

Hon. WALTER MONDALE,
Senator from Minnesota,
U.S. Senate Office Building,
Washington, D.C.

DEAR SENATOR MONDALE: May I urge caution in circumscribing the educational and research grant policies of American Foundations as incorporated in current bills before the Senate.

I am aware of some of the more flagrant abuses and social wastage involved in the conduct of some few of the many hundreds of foundations in this country.

On the other hand, America owes much to the pioneering efforts of the major foundations in unleashing creativity in our society and as an offset to the frequently pragmatic and even pedestrian research that is supported under governmental categorical aid programs. This is particularly true in the social sciences where except for the major foundations social science research for many years threatened to founder while natural science research, heavily funded by the government, was clearly skewing the resources of the nation away from humanistic studies.

As a member of the "establishment" (past president of the Minnesota League of Municipalities; past president of the Minnesota Mayors' Association; current mayor of a Minnesota municipality, 40,000 citizens), perhaps I should be suspicious of foundations. On the other hand, in my twenty years as a college professor I have had a first-hand opportunity to observe their operations, and I have been impressed.

Recently, Ford Foundation, for example, spearheaded attention to the plight of small cities in the United States with a research grant to my college, St. John's University of Collegeville, Minnesota. There was a lacuna here in terms of social need to which the Ford Foundation responded.

This was in fall of 1967. Subsequently the seed planted by Ford has contributed significantly in stimulating attention to the smaller cities on the part of both public and private agencies, including the Federal government which set up an Office of Small Towns Services in January of 1968.

In a pluralistic society, private and public agencies may respond to quite different needs and pressures. Occasionally there is an aberration. This social wastage is a necessary cost of freedom in our society. However, in my judgment, the major foundations have been one of the great idea-generating forces in our culture; a force that rather than promoting revolution has been urging society to reflect on its own institutions and adapt to changing needs.

The alternative to adaptation is ossification and ultimate collapse. In this respect the foundations have been radically conservative, and they have contributed significantly in terms of retaining the vitality that hitherto has characterized our socio-economic system.

In my humble opinion as both an elective public official for thirteen years and as an educator for twenty, the foundations have made an immense contribution to a viable society and to a healthier governmental system. I would urge you to reflect very seriously on the significance of taking what I would regard as unfortunate action against foundations—action that could seriously hamper the creative role they have played in the recent history of this nation.

Yours very sincerely,

DR. EDWARD L. HENRY,
Mayor.

BOISE CASCADE CORP.

Mr. JORDAN of Idaho. Mr. President, Idaho has many reasons to be a proud State. Newsweek magazine for September 1, 1969, touched upon one of the most recent reasons for this pride—the tremendous growth of one of the largest U.S. corporations, Boise Cascade.

The success story of Boise Cascade, and of its president, Bob Hansberger, is a heartening example of what can be accomplished through private enterprise in our State. It is a story that Members of Congress and the numerous other readers of the CONGRESSIONAL RECORD will, I am sure, find of great interest. I, therefore, ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMPANIES: A STATE OF MIND

Boise, Idaho, where the tallest structure is the twelve-story Bank of Idaho and a major event is still the Western Idaho Fair, is an unlikely—if picturesque—headquarters city for major corporations. But bustling Boise (population: 72,000, up 38,000 since 1950) has more than its share. Albertson's, Inc., a supermarket chain with 214 stores in nine Western states, is based there, as is Morrison-Knudsen Co., the giant worldwide construction firm. But the busiest of Boise's corporations is Boise Cascade, a company that is growing like a forest fire. Formed in 1957 of three sick lumber firms limping along on combined annual sales of $34 million, Boise Cascade last year earned $45.4 million on $1 billion in sales of products ranging from writing paper to cruise-ship tickets. On the Fortune list of the 500 largest U.S. corporations, it ranks 100th.

Informality: Robert V. Hansberger is the man who put Boise Cascade together and now has it branching out to all points of the business and geographical compass. A balding, energetic Harvard MBA, Hansberger, 49, has staffed the firm's front office with bright, young (William M. Agee, BCC's vice president for finance, is only 31) graduates of top-flight Ivy League and West Coast business schools. Around the Boise headquarters there is a studied air of informality. "I don't know any of the secretaries who call us Mister," says the relaxed Bill Agee. "I don't hear it very often and it bothers me when I do."

To hear Hansberger tell it, Boise Cascade has grown in a deliberately related fashion. "We started out in the tree business," he points out, "and that led us into pulp and paper in order to get more value from the trees we were harvesting, buying and raising. We then went into paper products in order to be a more effective marketer of pulp and paper production. We found ourselves entering the housing field because we thought this was a very big, exciting market, and it also provides an opportunity to use some of our lumber, plywood and other wood products. That led us into land development, because land is a very important part of the housing package. And because the highest value of some land is as recreational land, we went into recreation—the building of golf courses, lakes, ski resorts and so on."

Cruises, too: Over the past few years, Boise Cascade has bought a southern California home builder (R. A. Watt Co., Inc.), two land-development firms (United States Land, Inc., and Lake Arrowhead Development Co.) and merged with Divco-Wayne Corp., a manufacturer of mobile homes, travel trailers, trucks and buses. This year, BCC, still known primarily as a lumber and paper producer, will build about 18,000 mobile homes, some 6,000 factory-built homes and about 3,000 on-site units. It also is developing 23 second-home developments, among them Incline Village at Lake Tahoe, Nev., which will include a golf course, ski runs and club houses. Just for diversity, the firm this year is offering Pacific Ocean and Caribbean cruises on two chartered liners, the Princess Italia and Princess Carla. And it plans urban renewal projects in rundown areas of Boise, Boston, Indianapolis, Pittsburgh and Harlem.

For all that bustle, company executives think Boise Cascade is just getting into stride. Last month, the company broke ground on a new six-story, $14 million headquarters building in downtown Boise, and this week it will celebrate an event of far richer significance: completion of its merger with Ebasco Industries, one of the world's largest ($680 million in assets) closed-end management investment companies. When NEWSWEEK's William J. Cook asked Bill Agee last week what the Ebasco merger would mean, Agee responded with one happy word: "Money." As he explained: "We've always had two or three opportunities for every dollar we've had to spend. With Ebasco, we have cash and liquidity—more cash than we've ever had at any point." Some of the money is certain to go for developing new recreational facilities in Europe and South America and perhaps for other Boise Cascade projects in the planning stage: fiber-glass pleasure boats, resort hotels, camping equipment, hospital supplies. As Bob Hansberger says, Boise Cascade "is a kind of state of mind," and its state of mind is growth.

PROPOSED CUTBACK IN PUBLIC WORKS SPENDING

Mr. PROXMIRE. Mr. President, the President of the United States has indicated that he favors a cutback in public works spending. In making this announcement, he has been received by some of the Governors very unfavorably and has been criticized widely around the country. I intend to support the President. I think he is doing the right thing. I think this is the right kind of medicine with which to fight inflation, but I do not think it is nearly enough of it.

President Nixon's public works cutback is good news in the fight against inflation, but just like the administration's military spending cutback, it is too little.

The public works budget is now in excess of $10 billion. It is higher than it has ever been in the history of this country. And it is highly inflationary.

In the depths of the depression in the thirties public works was a necessary and desirable method of putting some of the enormous legions of unemployed to work. It was timely and wise, but it totaled only a billion dollars a year.

Now it is 10 times as large. Much of it should be canceled. Some of it should be postponed or stretched out. The President should aim at $3 to $4 billion cut in public works. The $1.6 billion Nixon cut is a timid step in the right direction.

The highway building program is

barely touched in the President's program. The President fortunately has indicated that he would impose definite highway spending cuts if the States failed to make voluntary reductions. Substantial voluntary reductions by the States in a highway building program in which the Federal Government pays 90 percent of the cost is about as likely as big oil asking for further reductions in depletion allowances. This is simply postponing the inevitable if we are to see a substantial slash in highway spending.

President Nixon should follow President Johnson's action of December 1966 when highway spending at an annual rate of $3 billion was held up for several months.

The effect on inflationary forces at that time was swift and decisive.

A further cutback by the President will be even more unpopular with the Nation's Governors and many others, but it is the kind of stiff anti-inflationary medicine this Nation needs.

If the President would act in a big and decisive way to cut back military and space spending along with public works spending, there is no question that we can both curb inflation and provide moderate tax relief.

Unless major reductions are achieved in these areas, any tax relief will be irresponsible and inflation will be in danger of getting out of control.

TESTIMONY IN SUPPORT OF S. 2004

Mr. PEARSON. Mr. President, the Communications Subcommittee of the Committee on Commerce has been holding hearings on S. 2004, a bill introduced by the distinguished Senator from Rhode Island (Mr. PASTORE) in April of this year. I consider this a most important and necessary proposal and have joined as a cosponsor.

Mr. President, I have submitted a statement before the Subcommittee on Communications, and I ask unanimous consent that it be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR JAMES B. PEARSON

Mr. Chairman, I wish to express complete support for S. 2004.

The bill provides that a broadcaster who has been operating under the Communications Act is entitled to a renewal of his license if the FCC finds, on the basis of his record, that he has served the public interest. This proposal, in my opinion, is fair and reasonable. It establishes an orderly procedure for the consideration of applications for renewal of broadcast licenses.

Many of our current broadcast franchises have been built up over a number of years and after considerable personal effort. A great majority of these existing station owners were willing and able to risk financial hardship in hopes of building sound production broadcast stations. There were times when television looked like a practical impossibility; there were times when the profitability of television franchises, especially in rather moderately populated areas such as my home state of Kansas, were seriously questioned. But with hard work, many stations survived.

Today, however, this spirit of enterprise in broadcasting is endangered by industry-wide instability. Our stature as the most advanced and far reaching communications system in the world is challenged by recent decisions of the Federal Communications Commission which have given strength to the so-called "strike application."

Any analysis of this overall problem must begin with the premise that the Communications Act intended that paramount consideration in broadcasting services must be the public interest. Secondly, our nation is dependent upon regulating private enterprise to encourage the expanded role which broadcasting plays in our society. And thirdly, that Congress intended the FCC to have no authority to censor broadcasters. All of these basic ideas are culminated in a statement by our new Chief Justice Warren Burger who, in a recent case said: "by whatever name or classification, broadcasters are temporary permittees-fiduciaries of a great public resource and they must meet the highest standards which are embraced in the public interest concept." I think this statement by an eminent jurist to be indeed a wise pronouncement.

Thus, a broadcast licensee must apply for the renewal of his license every three years. He must stand on his record. If the FCC finds on the basis of their investigation, their inquiry of his record of public service that he has discharged the obligation which he, as a professional broadcaster bears, then I think it only fair that he be granted the opportunity to continue with his work.

Recently, the FCC began the practice of so-called "comparative hearings" wherein an existing licensee and a rival applicant are placed on equal grounds in applying for a license. Furthermore, in a recent case in Boston involving station WHDH, the FCC actually granted the license to a rival applicant—in the absence of any showing that the existing licensee had not performed in the public interest. Following that decision a rash of "strike applications" have been filed in numerous cities across the country. This frenzy of activity with its potentially damaging effects on our national broadcast system has prompted Senator Pastore and the many other distinguished members of this body who co-sponsor S. 2004 to take appropriate action. I have joined this group as a co-sponsor.

My reason for this is simple. Television is a very costly and expanding enterprise. Broadcasters must maintain the best possible equipment and the most qualified professional personnel in order to serve the public in this electronic age. To carry out this responsibility, I think it only fair that the broadcaster have reasonable assurance that if he does his job, that if he performs according to the high ideals of the broadcasting profession—in short, that if he serves in the public interest—then his license will not be revoked and his investment will not go down the drain.

This procedure, as provided for in S. 2004 does not by any means grant a broadcast license in perpetuity. It does not give a broadcaster any special protected status. Rather, it forces him to defend his record.

I realize that there have been instances over the years in which a broadcast licensee has not performed in the public interest but maintained his license. I do not overlook nor condone such instances. However, I do not believe that the procedure whereby the licensee and the rival applicant are placed on equal grounds is a reasonable way to prevent the abuses of a broadcast franchise.

I believe the proper way to fairly allocate the use of our nation's airways is through the vigorous scrutiny by the FCC, by placing the burden of proof for continued operation upon the existing licensees as proposed by S. 2004.

For these reasons, Mr. Chairman, I support this legislation.

POLLUTION ATTENTION

Mr. NELSON. Mr. President, it is indeed a welcome sign to see attention given by more and more publications to the perils of air pollution. It is especially encouraging to see the medical profession offer its services by contributing medical facts concerning the relationship between air pollution and diseases and death.

As an example, an article appearing in the August 22, 1969, edition of the Medical World News points out the need for more medical research in this area, the initial steps and findings that are available, and the need for physicians to use these facts in combating air pollution on local, regional, and national levels.

Because the effort to clean up our Nation's air needs the help and information that physicians can give, and because this article appeals for such aid in addition to pointing out some of the dangerous relationships between pollution and health, I commend Medical World News for such a fine article and ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEATH, DISEASE AND DIRTY AIR

Some 500 Chicagoans go to a wall calendar each day to make physiologic notations. They are not following the rhythm method of birth control. Rather, they are recording bronchopulmonary symptoms to aid a study of the relationship of respiratory illness to their city's air pollution levels.

The instructions: "Check 'chest illness' if you were bothered much more than usual by your chest for most of the day: for example, by having coughed more than usual, by having more shortness of breath than usual, if you were less active than usual because of your chest, or if you had a chest cold. Check 'no chest illness' if you were not bothered much more than usual." At the end of each month, the subjects mail the calendars to Dr. Bertram W. Carnow at the Chicago Chronic Bronchopulmonary Registry. Dr. Carnow, associate professor of preventive medicine and community health at the University of Illinois, compares them with the daily sulfur dioxide readings collected from monitoring stations scattered throughout the city.

Dr. Carnow and his associates are among the too-small number of physicians linking the "hyper-reactive" patient to local pollution control officials hungry for information about the effects of pollutants on health.

Their conclusion: Among elderly persons with advanced bronchitis, high levels of sulfur dioxide exacerbate symptoms and precipitate acute respiratory illness. Persons over 55 suffer twice as many episodes of acute bronchitis on days of high pollution. If the humidity is high, too, bronchopulmonary disease is aggravated even more. Dr. Carnow has been able to assign each subject his own "personal pollution index" based on the pollution levels in the square mile of his residence and occupation.

Sometimes patients must move or change their job locations. For example, a middle-aged, nonsmoking businessman lived near the University of Chicago in the midst of the city's highest sulfur dioxide and particulate pollution. He had progressive deteriorating asthma and bronchitis, and his recrurring episodes, which seemed to be related to "changes in the weather," interfered with his daily work routine and sometimes

kept him off the job entirely. Dr. Carnow finally advised him to move to a less-polluted suburb north of Chicago. The man has shown "marked improvement," reports Dr. Carnow—fewer acute attacks, less infection, and decreased frequency of cough.

Such data and clinical impressions are not rare. Clinical, epidemiologic, and laboratory studies throughout the world strongly suggest, if they do not yet quite prove, that pollutants in the air are causing substantial amounts of illness, debility, and death.

The National Air Pollution Control Administration reports that "adverse health effects" become evident when the 24-hour-average levels of sulfur dioxide exceed 0.11 parts per million for more than three days in a row. Above 0.52 ppm, an increased death rate can be expected. Through its National Air Surveillance Network, NAPCA takes 24-hour samples of sulfur dioxide from about 100 sites 26 times per year. The sampling shows average concentrations ranging from 0.002 ppm in Kansas City, Mo., to 0.17 ppm in New York City, where the sulfur dioxide, much of it from Consolidated Edison's smokestacks, has gone as high as 0.86 ppm.

Dr. Carnow finds that acute morbidity in bronchitic persons over 55 years seems to follow an exposure of 0.25 ppm for one day. But the real problem, he says, is determining the "long-term effects on health of pollution at lower than catastrophic levels, acting on humans for 24 hours a day over a period of many years."

Pollutants aggravate bronchial asthma, chronic bronchitis, and chronic obstructive emphysema. When the pulmonary system is compromised, the heart is likely to become involved.

At the recent meeting of the Air Pollution Control Association, Dr. John R. Goldsmith of the Department of Public Health in Berkeley, Calif., reported evidence from several sources suggesting that ambient community exposure to carbon monoxide may increase the death rate of patients hospitalized with myocardial infarction. Substantiating this impression, he said, will require a study of "the prognosis of myocardial infarction patients in relationship to carboxyhemoglobin levels" measured on admission to the hospital.

In a study reported by Dr. Stephen M. Ayres of St. Vincent's Hospital and Medical Center of New York, brief exposure to carbon monoxide levels high enough to raise carboxyhemoglobin to an average of 8.96% saturation also decreased oxygen extraction and increased cardiac output. What was once thought to be a harmless level of carboxyhemoglobin turns out to pose "an adaptive challenge to the coronary circulation," he told the Ninth AMA Air Pollution Medical Research Conference.

The conference also heard Dr. Warren Winkelstein of the University of California, Berkeley, report that mortality rates for gastric cancer are nearly twice as high for adult men and women in areas of high suspended particulate pollution as in areas of low pollution. His study, made in the Buffalo, N.Y., area, was bolstered by similar findings from three other localities. Dr. Winkelstein has also found among nonsmokers 45 and older a "positive association" between a productive cough and suspended particulates. Among groups of men aged 50 to 69 and of comparable socioeconomic status, his earlier studies had found rates of death from all causes and of death due to chronic respiratory disease running as much as 50% higher in the most-polluted areas of Buffalo than in the least.

Dr. Mary O. Amdur of the Harvard School of Public Health has reported that sulfuric acid and irritant particulate sulfates have a greater irritant potency at a given concentration than does sulfur dioxide alone. Dr. Ayres, who has observed that sulfur dioxide increases airway resistance at concentrations as low as 0.2 ppm (a level frequently recorded in New York City air), reports that combinations of sulfuric acid and its salts are "many times as potent."

In Japan and Great Britain, school children living in highly polluted areas show more evidence of expiratory obstructive airway disease than those in nonpolluted areas. Other British data suggest a link between pollutants and atherogenesis. And by most cardiopulmonary criteria, country folk are better off than their city cousins—though nowadays there is dirty air even in the wide open spaces, and when MWN looked for a pink adult country lung to put on the cover, the specimens from rural nonsmokers turned out to be largely black.

Air pollution's most dramatic effects have been the "killer smogs" produced by a combination of hot weather, moisture, pollutants, and atmospheric inversion. These have occurred in the Meuse Valley of Belgium in 1930, in Donora, Pa., in 1948, in London in 1952 and 1962, and in New York City in 1953, 1962, and 1966. In London, where 4,000 "excess deaths" were recorded in the 1952 episode, widespread acute illness was noted within 12 hours after the fog began. Hospital admissions for acute respiratory diseases were higher than normal, as were admissions for heart disease. Mortality rates increased in all age groups, with the highest increments among infants under one year old and adults above age 45.

Donora reported 17 deaths. Normally, two deaths would have been expected in an equivalent period. What's more, 5,910 persons—nearly half the population—took ill with cardiorespiratory and gastrointestinal symptoms. In the "Thanksgiving smog" of 1966, New York reported 168 deaths related to the three-day temperature inversion and high concentration of pollutants.

The degree to which air pollution was involved in these "excess deaths" is still being debated. Many of the victims had pre-existing respiratory or cardiovascular disease and faced limited longevity at best. "But we cannot toss off the problem by saying that these people would have died anyway," replies Dr. Carnow. "We at least owe such chronically ill the right to be comfortable. Remember, too, that a significant number of these deaths were children."

How pollutants cause these reactions is only partially known. Various types of particulates, liquid droplets, and gases cause bronchoconstriction with immediate discomfort to the subject. Pollutants can overcome the protective mucociliary lining of the tracheobronchial tree and form deposits in the lung, paralyzing cilia and increasing mucus production. They may combine adversely with the surfactant of the alveoli. Some investigators also suspect that at the molecular level, pollutants may block enzyme processes and alter the normal metabolism of substrates.

And in addition to their adverse effects on people, pollutants in the air damage vegetation, crops, livestock, clothing, home furnishings, metals, masonry, and paint. Recently headstones in the cemetery of Trinity Church in New York City were treated with a substance to prevent corrosion by sulfur dioxide. "Air pollution gets you even after you're dead," one onlooker remarked. To families living in the city, the average annual cost of air pollution is estimated at $850, including time lost from work.

Can physicians cope with this health-impairing aspect of mankind's twentieth-century environment? So far, not many are trying. "We shouldn't wait until we know every last effect of pollution on health before acting," insists Dr. Carnow. "I tell the technologists: This is the problem—solve it. If they tell me they can't, I instruct some of my patients to move out of Chicago. We can't be practical about health or people dying."

"We know what pollution levels are harmful," adds Berkeley's Dr. Goldsmith. "We know enough to begin."

Indicting air pollutants as causative agents in human disease is only part of the problem. Another part is communicating the already-known medical information to engineers, industrialists, politicians, and the public. This is a job for physicians.

Asked if medical societies have been behind antipollution efforts in the Chicago area, Dr. Carnow replied quickly, "They haven't been active at all." In this and other matters of environmental hazards, medicine has been delinquent, he claims.

He is not alone in his complaint. James T. Reilly, a New York consultant to municipalities in the financing of pollution control programs, says: "Sure, I see a few physicians involved locally, but none of them are carrying banners. So far, the problem is being handled by politicians and engineers, and they need the doctors' help."

"Too damn few doctors are available to tell us what pollutants do to people," adds William J. Stanley, director of Chicago's Air Pollution Control Department. Physicians like Dr. Carnow feel they would have more chance of success with public agencies if they had more muscle from organized medicine.

The AMA's record has been mixed. Through its Council on Environmental Health, headed by Dr. John S. Chapman of Dallas, it has created a prestigious forum for intra- and interprofessional exchange of information. Berkeley's Dr. Goldsmith believes the AMA has shown "excellent responsiveness, scientifically and legislatively," to the threat of pollution. Its House of Delegates has given formal support to control of pollutants. But the AMA's lobbying and public relations forces, marshaled noisily and expensively for other wars, have whipped up no public campaign to counteract the exploitation and soiling of the environment.

"The AMA can only recommend that component societies take an active role," says Frank W. Barton, director of the AMA's Department of Environmental Health, which does the staff work for the council. Brandishing a packet of printed material, he declared that the department tries to help by keeping the medical societies informed. Among the items forwarded to every state and county society is the *Physician's Guide to Air Pollution*, which urges medical societies to become active in community and regional control programs, to collect epidemiologic data, and to "rally constructive support from all interested publics involved."

Consultant Reilly puts it this way: "People will listen to their community doctors. These men have a lot of respect and their opinions carry a lot of weight. I don't think we'll really get moving on pollution control until medical groups become outraged at what is happening."

A few have, of course. In California, the State Medical Society, the Los Angeles County Medical Society, the Santa Clara County Medical Society, and others have long been involved in pushing state and local programs to control LA's infamous air pollution. Through their efforts, legislation has been passed regulating fuel oil composition, controlling automobile exhaust, and establishing air quality standards. Physicians have been behind similar legislative efforts in Michigan, New York, Alabama, Tennessee, and Maryland. Still, less than half the states in the Union have instituted even the most rudimentary pollution control programs.

Air pollution is at once local, regional, and universal. Raking leaves in your yard doesn't do much good unless your neighbors rake, too. Likewise, local pollution control is apt to have limited effect. But efforts to initiate regional control can become a brier patch of conflicting political jurisdictions, jealousies, disputes of authority, and plain inertia. The anachronistic structure of town, township, county, and state government cannot handle regional pollution.

Physicians are likely to be put off by the time-consuming wrangling. "I tried to take part in a local committee on air pollution," reports one allergist in Springfield, Ill. "I

attended planning sessions, public hearings, county board meetings. All I found were plant owners and politicians blaming one another for the pollution. It was appalling and a waste of time."

In view of the need for regional control and the improbability of voluntary regional action ever being taken, the federal government's Air Quality Act of 1967 appears to make some sense, though it leaves much room for delay. The spirit is one of assistance to the states, with the provisions for federal enforcement underplayed. The government provides financial aid in return for the states' cleaning their own air. "We see very little reason why the states would not comply," says Charles C. Johnson Jr., administrator of the Consumer Protection and Environmental Health Service of HEW.

The law calls on HEW to designate "air quality regions." Thus far, there are 13—the metropolitan areas of Washington, D.C.; New York, Philadelphia, Boston, Chicago, Cincinnati, St. Louis, Cleveland, Denver, Buffalo, San Francisco, Pittsburgh, and Los Angeles. By next summer, the department expects to have specified a total of 57 such regions, encompassing at least a portion of all 50 states. All states thus far designated have registered their intent to comply, Johnson is pleased to point out. But even in those states, according to one HEW spokesman, "implementation is a long way off yet."

At the same time, HEW is required to publish air quality criteria, stating the known effects of a pollutant or group of pollutants, and it is on these criteria that states are required to base their air quality standards. Two such documents—on sulfuroxides and particulate matter—have been published to date. Others will cover carbon monoxide, nitrogen oxides, photoreactive compounds, and lead and fluorides.

For their part, the designated states have three months to file notice of intent to establish standards, six months to hold public hearings and complete the setting of standards, and another six months to develop implementation plans. The final plans, along with a timetable for implementation and a plan for meeting an air pollution emergency, must be submitted to HEW for review.

If a state fails in its obligation, the federal government is required, "not just permitted, required," stresses Johnson, "to move in and set standards—to do what the state should have done."

The "crucial phase of the act's implementation," according to Dr. John T. Middleton, commissioner of the National Air Pollution Control Administration, is the public hearings required of each state as part of its standard-setting process. Dr. Middleton has insisted repeatedly that states publicize their hearings so that "all segments of the community can be heard." No federal official would put it this way, but without large-scale publicity the air quality hearings could become mutual back-scratching sessions between government, industry, and utilities. The AMA and HEW are urging medical organizations to use the public hearings to see that the health of the community is the prime consideration in the setting of standards.

"Presenting a united medical front to local officials can be very effective," says internist Goldsmith. But speaking before the AMA Air Pollution Medical Research Conference, he questioned whether "most medical societies know which are the priority goals for their local control programs," and whether "most of the air pollution control programs know what are the major air quality-related complaints of patients to their physicians."

Once a society is involved, the physicians may properly seek regulations that go beyond rigorous scientific proof, Dr. Goldsmith believes. As an example, he cites an ordinance which requires that schoolchildren skip periods of outdoor recreation when pollution is high. "One may not be able to support such a restriction scientifically, but you have to admit it's a sound idea," he says.

And the physician may well be a polluter himself. According to an editorial in *Massachusetts Physician:* "The time has come when even you as a single individual must give second thought to the air pollution problem. If you contribute toward it through a poorly burning home heating system or by driving a car which unnecessarily discharges fumes, by burning leaves, garden debris, household trash, you must realize that your actions are causing pollution. Remember that every bit of contamination pitched up into the atmosphere will surely return—often to our sorrow."

All physicians—concerned and unconcerned alike—breathe the same air. Annually, the nation's air contains an estimated 143 million tons of pollutants.

In the atmosphere the substances, listed in the box on page 22, mix and react, influenced by solar radiation, conduction, convection, wind, temperature, and moisture, to form a confounding array of pollutants. In combination, they have a far greater potential for causing bronchopulmonary morbidity than any single substance acting alone. And some investigators fear the atmosphere incest may be creating combinations that are not even known.

The omnipresence and diversity of pollutants caused Dr. Barry Commoner, Washington University's eminent cell physiologist turned environmental biologist, to remark: "The new technological man carries strontium-90 in his bones, iodine-131 in his thyroid, DDT in his fat, and asbestos in his lungs." To the latter, of course, he could have added several score of substances which are largely the result of energy conversion processes—for transportation, electrical generation, manufacturing, and space heating. The by-products of these processes are part of the whole issue of the terrestrial ecology now unbalanced by a single species currently widespread on the planet—the perhaps misnamed *Homo sapiens*.

Two factors—increasing population and increasing urbanization—are widening the imbalance. In the U.S. alone, the population is expected to reach 338 million by the turn of the millennium, just over three decades from now.

Even assuming that Earth's resources (natural and recycled) can meet the demands of increasing population, planners are asking if the by-products can be managed so that people can enjoy a livable environment. Dr. Middleton points to the "very real danger that the progress we make through application of control technology will be outstripped by the sheer growth of the air pollution problem." Numbers alone could cancel out any technologic gains in the control of pollutants.

The technology for control of air pollution exists right now. Generally it can be invoked by (1) altering the composition of fuel, (2) altering the mechanics of combustion, (3) removing the by-products by mechanical or biochemical means before emission, or (4) stopping the process temporarily or permanently.

But control agencies, short of personnel and punch, are finding it difficult to enforce those antipollution regulations that are already on the books. Besides, combating pollution means running head-on into public utilities, large industries, and even the municipal agencies themselves—something that elected officials and job holders don't relish. The vested interests, on the other hand, can frequently secure "extensions" of compliance deadlines or "deferred enforcement" of pollution reduction programs. And for a corporation of any size, the small fines levied so far seldom make a dent in one day's profit.

Consultant Reilly claims that "any problem can be solved with money invested in the proper way. If you don't believe that," he adds, "look at the moon landing. Fantastic!" So far, at least, Americans believe that continuing the war in Vietnam, the space program, and producing excessive military weapons are more important than preservation of the natural environment and of human health. This may change, but it probably won't unless physicians play a leading role in changing public opinion.

Meanwhile, someone has to treat the illnesses of the "new technological man" in his new environment. Speaking as an engineer, Pollution Control Director Stanley says: "We need a new kind of doctor, an environmentalist or super general practitioner who can evaluate the total environment and its effect on human beings. As an ideal example, look at the space program in which a total environment has to be designed, manufactured, lived in, and evalulated. The doctors did a beautiful job. More than that, they were part of a group effort with engineers, physicists, chemists, meteorologists—everybody." He foresees "a doctor who can interpret the effects of human beings living in the microecology of the city—an environment of high-people density and high-energy usage. I'm no medic," he adds, "but this seems to be a tremendous challenge for the young doctor." He has sensed a change in emphasis that is currently being debated in medicine itself.

Dr. Carnow puts it another way: "Medicine has been preoccupied with biologic factors. We're just now beginning to realize that physical, chemical, nutritional, and other environmental factors have a major involvement in disease. After all, the major causes of death today are not biologic in origin. Medicine has to tell politicians, engineers, and scientists the consequences of their actions."

Implications of this shift are cropping up throughout the profession. The University of Texas Medical School at San Antonio has a "human ecology" program which requires that each first-year student spend about 60 hours working with various community social agencies. A Ph.D.-level program for the "environmentalist" is being carried on at the University of California in Berkeley. "Environtology" will help fill the void "which traditional public health has not filled satisfactorily," according to the school. At the University of Illinois, Dr. Carnow has medical students working on noise, air, and industrial pollution and hopes to set up an environmental medicine division within the department of preventive medicine.

A new emphasis is also being sought in medical societies. At the recent American College of Cardiology meeting, the "new breed of doctor" was also called for by William B. Kannel, medical director of the Framingham, Mass., study (MWN, April 11). "He will know that he must learn how to work with environmental specialists—the men who legislate mandatory smallpox vaccinations, build good sewers, and add vitamins to their milk—not just with other doctors."

Whether physicians can cope with dirty air and the other health-reducing features of mankind's new environment is only part of the problem. The larger question is whether people can cope with the new environment, which has come far too explosively for the generations to adjust. The physician may understand the interrelationship of environment and health thoroughly, but his judgment and caution may often run counter to the desires of formidable organizations of technologists, archaic political institutions, entrenched vested interests, and public apathy. Maybe the new environment is not made for people.

THE POISONS WE BREATHE EVERY DAY

Sulfur oxides. Produced mainly by combustion of fuels. Form sulfurous acid, which joins easily with oxygen to become sulfuric

acid. By another route, sulfur dioxide cohabits with oxygen to become sulfur trioxide, which can build up, react with water vapor, and become sulfuric acid.

Carbon. Also emitted from fuel combustion, soot is one of the few pollutants that calls the eye's attention to the air pollution problem as it covers a snowfall, forms deposits on windowsills, and eats into porcelain. Besides being unsightly, soot can carry carcinogenic hydrocarbons beyond the lung's mucociliary lining.

Carbon monoxide. Reaches the highest relative concentrations of any gaseous pollutant in the urban atmosphere. Carbon monoxide levels in the blood of drivers involved in accidents are being studied.

Carbon dioxide. Admits radiant heat from the sun and keeps convection heat close to the surface—the so-called greenhouse effect. At the present rate of increase of natural carbon in the earth's atmosphere (estimated at six billion tons per year), Lord Ritchie-Calder suggests that the mean annual temperature of the earth "might increase by 5.8°F in the next 40 to 50 years.

Hydrocarbons. Found in petroleum, natural gas, and coal. Two groups, olefins and aromatics, are important contributors to air pollution. One aromatic, benzo(a)pyrene, is a carcinogen in lab animals.

Nitrogen oxides. Free nitrogen comprises 78% of the natural atmosphere, but two "unnatural" compounds of nitrogen, the oxides—nitric oxide and nitrogen dioxide—are considered pollutants. Among the hazards: pollution of surface waters, with disruption of their self-purification mechanism, and potential toxicity to human beings through ingestion of nitrates, their conversion to nitrites by intestinal bacteria, and the consequent methemoglobinemia.

Miscellaneous pollutants. Fluorides, oxidants, ozone, peroxyacetylnitrate, aldehydes, lead, beryllium, arsenic, asbestos, plus pesticides, fungicides, and herbicides containing varying amounts of kerosene, sulfur, copper sulfate, cyanide.

THE PETROLEUM SITUATION

Mr. HANSEN. Mr. President, I call the attention of the Senate to an article published in the July issue of the Chase Manhattan Bank publication entitled the Petroleum Situation.

The article calls attention to the fact that the United States is gradually losing its ability to meet the petroleum needs of this Nation. The loss of our self-sufficiency over the past decade is reflected in the fact that the United States now relies upon imports for nearly one-fourth of its needs. At the same time the situation in areas of the world traditionally relied upon by the United States to supply its foreign oil has deteriorated to the point where the United States cannot realistically rely on these areas to supply a large percentage of our oil needs.

The points raised in the article should seriously be considered by the Members of this body before we take action to eliminate provisions of the law which have been used to provide the incentive and ability to spend the capital necessary to maintain a healthy domestic petroleum industry and meet the needs of the American public for this vital energy resource.

Mr. President, I ask unanimous consent to have printed in the RECORD the article entitled "Can't We Ever Learn?" published in the Petroleum Situation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAN'T WE EVER LEARN?

Last year the United States consumed 50 percent more oil than the domestic petroleum industry added to its proved reserves. It was not the first time the industry has been unable to keep pace with the nation's growing needs. Indeed, 1968 was the ninth consecutive year in which reserve additions of crude oil and other petroleum liquids were below the level of consumption. For the entire nine year period, the new reserves represented little more than four-fifths of the accumulated consumption in that time.

Ideally, the new reserves added each year should not only match consumption but should exceed it. Proved reserves are in the nature of underground inventories. And, as such, they should expand in reasonable proportion to the growth of market demand—if the market's needs are to be fully and continuously accommodated. If that goal had been achieved over the past nine years, the petroleum industry would have had to find 1.4 barrels of proved reserves for each barrel consumed instead of the 0.8 barrel it actually did find. In other words, it should have discovered a total of 51 billion barrels in the nine year period—two-thirds more than the 30 billion actually found.

It is not absolutely essential, of course, that the ideal situation be achieved. To a degree, the nation's domestic reserves can be supplemented with oil imported from foreign sources. And the United States now relies upon imports for nearly one-fourth of its needs. But the nation would incur a very grave risk indeed if it became heavily dependent upon outside sources. As the record forcefully demonstrates, reason does not prevail throughout the world. And there is no real assurance that oil from abroad would be continuously and fully available. The economy of the United States is much too dependent upon oil to tolerate an inadequate supply. And in the unfortunate event of another international war the nation's position would be perilous if it had to rely upon a high proportion of imported oil. Prudence and common sense, therefore, require that the nation remain largely self-sufficient.

But it won't be for much longer, if the trend of the past nine years continues. By 1980, the annual consumption of oil products in the United States is expected to reach 19 million barrels per day—nearly 50 percent more than 13 million a day consumed in 1968. Between 1968 and 1980, the accumulated consumption is expected to amount to 70 billion barrels. If the United States is to maintain a minimum safe inventory of proved reserves and not become more dependent upon outside sources than it now is—obviously a desirable goal from the standpoint of the nation's well-being—the domestic petroleum industry will need to find and develop a total of 87 billion barrels between 1968 and 1980. Against that requirement, the recently reported discoveries in Alaska do not loom large—and we should be mindful that they are not yet in the category of proved reserves.

To find such a tremendous amount of oil will require an equally enormous capital expenditure. For the past two decades there has been a consistent relationship between the amount of money spent in the search for oil and natural gas and the proved reserves actually found. And if this relationship continues, the petroleum industry will need to spend approximately 116 billion dollars to find and develop 87 billion barrels of oil. That would necessitate an average outlay of 9.7 billion dollars a year between 1968 and 1980—well over twice as much as the industry has been spending in recent years.

In the past nine years—the period during which domestic reserve additions were less than consumption—the petroleum industry spent as much as 40 billion dollars trying to find and develop new sources of petroleum in the United States. By any standard, that was a huge financial effort. But, obviously, it was not enough. To have found sufficient oil to match market needs and maintain a satisfactory level of proved reserves, a capital expenditure of about 68 billion dollars would have been required—70 percent more than was actually spent. Why—if there was a need—did the industry fail to spend that much? The answer hinges primarily upon two factors: (1) the incentive to spend, and (2) the ability to spend.

Insofar as the search for oil and natural gas in the United States is concerned, the petroleum industry may be divided into two basic groups—the major companies and the independent producers. For a decade following World War II, both groups spent nearly identical amounts of money. And they both increased their levels of spending year after year, keeping pace with market expansion. By the mid-fifties, each group was spending approximately 2.5 billion dollars a year—more than three times as much as they were a decade earlier. But since that time, their pattern of capital spending has changed to a marked degree. The major companies have sharply curtailed the rate of growth of their expenditures. And the independent producers have progressively reduced their annual outlay. Currently, the independents are spending only half as much as they were a dozen years ago.

These developments provide clear evidence of damage to the incentive to spend. Obviously, if the rate of return on their investment had been more attractive relative to other investment opportunities both groups would have spent more than they did in their search for additional domestic reserves of oil and natural gas.

But neither group had financial resources sufficient to support a fully adequate expenditure. The petroleum industry is far more capital intensive than most others. And the scope of its activities creates vast capital needs. It is also an industry whose operations involve a substantially higher degree of risk than most others. And, for that reason, it has had to generate most of the funds for its capital and other financial requirements from its operations. Historically, about 45 percent of the money needed has been derived from net earnings, another 45 percent from the various provisions for capital recovery, and only 10 percent from the capital markets. But in recent years the industry has been unable to generate enough from operations and has had to depend much more heavily upon borrowed capital. Currently, its use of borrowed funds is well over twice as large as the historical proportion. Had the industry chosen to spend all the money required to maintain a satisfactory level of proved reserves over the past nine years, it would have been forced to borrow far more than it actually did. And we must be mindful, of course, that all borrowed capital eventually must be repaid with funds generated from operations.

Clearly, the availability of sufficient petroleum from domestic sources is vital to the welfare of the United States. And, obviously, if the petroleum industry is to satisfy the nation's needs and also maintain a safe margin of proved reserves, it must have enough capital to perform that function. It must also have sufficient incentive to use its capital for that purpose. In the face of these demonstrated needs, it would be logical to think that nothing would be done to prevent the industry from accomplishing its essential purpose. Yet, incredible as it may seem, obstacles are indeed placed in the industry's way.

For the last decade and a half, the industry's generation of capital funds has been severely limited by governmental regulation of the price of natural gas. Carried on without sufficient regard for economic and competitive circumstances, the regulation forces the industry to accept a price for gas that is much too low. Since various oil products must compete in the market with the low priced gas, their prices are indirectly affected

also by the regulation. These circumstances limited both the generation of capital and the incentive to invest the funds that actually were available. Significantly, the cutback of capital spending devoted to the search for new oil and gas reserves was initated shortly after the imposition of the price control. And, as a result, the nation is now faced with a shortage of both oil and natural gas. How, we might wonder, could anyone ever have believed the United States could continue to have adequate supplies of oil and natural gas, if the petroleum industry were denied sufficient funds to search for them? Yet, that denial has persisted, despite repeated warnings of the consequences.

And there exists today a situation that demonstrates further how poorly the lesson has been learned. As noted earlier, the petroleum industry derives a large proportion of its capital funds from the various provisions for capital recovery. Together, amortization, depreciation, depletion, etc. rank equally with net income as a source of capital. Until recently, they satisfied as much as 45 percent of the industry's over-all financial needs. All private industries, of course, have provisions for capital recovery—otherwise, they could not survive. But they all do not have the same provisions. A factory or a piece of machinery can be depreciated over its lifetime. And when they are worn out, they can be replaced. But when oil and natural gas have been extracted from the earth and consumed they cannot be replaced—new sources must be found instead. And that can be an exceedingly costly and risky undertaking. The record abundantly demonstrates that vast sums of money can be spent without any oil or gas being found. Since, in fact, the production of oil and gas represents a depletion of its capital assets, the petroleum industry is permitted by law to recover a portion of this capital by means of a depletion allowance.

This procedure, however, has been subjected to increasing attack. And there are mounting demands that the allowance be reduced or eliminated. Some of the attacks obviously are politically motivated. But there is also criticism that reflects a lack of understanding of the true role played by the depletion allowance. There is a failure to recognize that the allowance applies only to revenue generated by the industry's successful producing properties—and the benefits derived do not offset the large sums spent on the search for petroleum that proves unsuccessful. Most often, the allowance is labeled by its critics as a tax loophole—conveying the impression that the money thus obtained is utilized for some nonessential purpose. But regardless of what its detractors choose to call it, the depletion allowance is today what it always has been—a source of capital. And if that source is reduced or eliminated, it must be replaced by another.

There is only one practical alternate source. If, for example, the industry's generation of capital funds were reduced 10 percent by a change in the depletion allowance, net income would have to be increased by an equal amount. And that could be achieved only with an increase in gross revenue—which, of course, would necessitate higher prices for petroleum products. Thus, a cut in the depletion allowance would, for all practical purposes, be the equivalent of a tax increase to consumers. And, as such, it would carry all the inflationary force of any other rise in their costs.

Clearly, a reduction in the depletion allowance—or any of the other provisions for capital recovery—would not be in the best interests of the United States. The nation's dependence upon petroleum, its tremendous needs, the vast amount of capital required by the petroleum industry to satisfy those needs, the industry's decreasing ability to generate enough capital and mounting dependence upon borrowed funds, and the developing shortage of both oil and natural gas are all reasons why such an action would be ill advised. Rather than inhibit the generation of capital and thereby discourage its use, the interests of the United States would be far better served by positive actions designed to achieve the opposite results. If we are to have enough oil and gas, we have to pay enough for them—and there simply is no other way. Why is that elementary fact so difficult to understand?

RECREATIONAL OPPORTUNITIES AROUND THE AMISTAD RESERVOIR

Mr. YARBOROUGH. Mr. President, I recently introduced a bill, S. 2627, to create a national recreation area on the lake now filling behind the Amistad Dam on the Rio Grande near Del Rio, Tex.

As I said when I introduced the bill, it is estimated that more than 2 million people would visit such a recreation area by 1972. Within a 250 mile radius of this site over 2⅓ million people make their homes. On December 3, 1966, President Johnson said at the dam construction site:

Looking into the future—we will see millions of farmers and townspeople on both sides of this great river enjoying the protection which this great dam will afford and the resources and recreatiton which this great lake will provide.

On September 8, 1969, President Nixon and President Diaz Ordaz of Mexico will dedicate the Amistad Dam. I am honored by the President's invitation to accompany him to this ceremony.

Although the lake behind the Amistad Dam has been filling for only a year now, it already covers some 40 square miles. It will grow even larger and will eventually be more extensive than even the Falcon Reservoir, located further down the Rio Grande.

I have been seeking the approval of an Amistad national recreation area since June 21, 1965, when I introduced S. 2168 in the 89th Congress. In August 1966, the Department of the Interior issued a formal report endorsing the project. I hope that this year Congress will see fit to enact it into law.

The San Antonio Light recently published an excellent article about the outstanding recreational opportunities which this lake will afford. The article makes clear the need for passage of my bill.

Mr. President, I ask unanimous consent that the article entitled "Area To Be One of Most Spectacular Recreation Sites in State," published in the San Antonio Light of August 11, 1969, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AREA TO BE ONE OF MOST SPECTACULAR RECREATION SITES IN STATE

(By Susan Bauernfeind)

If you got it (a boat), float it!

Or, to put it another way, "Go West, young man."

West is Del Rio. West also is Amistad Dam. And reservoir. And lake.

In the West, Del Rio area, is rising one of the most spectacular recreation sites ever to hit the shores of Texas.

Prior to the building of the Amistad Dam, the banks of the muddy Rio Grande that divide Del Rio from its sister Mexican city, Ciudad Acuna, could hardly have been called shores.

Today, with the lake approximately one-third full and gentle cactus-covered hills quickly disappearing under cool, clear water, the reservoir has all the dignity of a full-fledged lake—with shores.

The fact that gentle hills are still in the process of being submerged doesn't mean the lake is shallow, or small or, muddy.

At the dam site, the water currently measures 164 feet. In other places, it may be 70, 80, or 50 feet deep.

Waters, impounded for just a little over a year, already cover about 40-square miles. Near the dam is the confluence of the Rio Grande and the Devil's River, now running tributaries under the lake.

Further upstream are the Pecos and Conchos Rivers being the principal source of the water now in the lake.

It is rare in this country of water pollution that man is given a new chance with a brand new body of water. This is the case with Amistad. Its water is pure and an enlightened nation and determined National Park Service are going to keep it that way.

Currently, the National Park Service, under an interim agreement with the International Boundary and Water Commission, has responsibility for the reservoir and its surrounding areas.

Bills have been introduced by Sen. Ralph W. Yarborough and Congressman O. C. Fisher to make the arrangement permanent. "Chances are favorable," it will pass, Fisher said.

BEING STUDIED

The House bill is being studied by the Department of the Interior and the Bureau of the Budget. The State Department already has given its stamp of approval.

"Amistad," said Fisher, "is going to be one of the most attractive recreation areas in the United States."

Those who have been there know the potential of the area. They also know that even with only a fraction of the planned development completed, it is the place to be now.

Vacationers, who in the past hauled their boats to other parts of Texas, are heading West this summer and sliding their crafts into Amistad off one of the two completed 1,600-foot ramps.

It's a strange sight to many Del Rioans who remember the days when a boat hitch on a car was a rarity in that area.

What is really strange, though, is standing on a cactus-covered hill, surrounded by more rocky, desert hills, and gazing onto a sun-glittered lake, there for the taking.

It nearly approaches sensations of a mirage.

But, mirage it is not. Amistad and Del Rio have, right now all that it takes to make a vacation fun and full.

TWO PUMPS

At this lake itself, there are the two immense boat ramps where several hundred craft are being launched each weekend.

One is located at Diablo East, adjacent to the new U.S. Highway 90 bridge over Devil's River, and about 10 miles west of Del Rio.

The second is at Rough Canyon, up the Devil's River arm and about 22 miles from Del Rio.

While the road to Diablo East is paved right to the water's edge, the one at Rough Canyon is not. Still, numerous visitors make the trip over the 7.2 miles of dirt road to get to the ramp.

At both sites there are primitive camping grounds with picnic tables, water, and garbage and waste disposal units. A few hundred feet down, there is a concession-operated shop selling fishing equipment, marina gas and oil, snacks and drinks and anything else needed for a day's outing on the lake.

(Non-out-doorsmen will find plenty of sleeping and eating accommodations in the town of Del Rio and on the road leading out to the dam.)

RENTS BOATS

The concession also rents outboard motor boats at a cost of $17 per 24-hour period, and sailboats for a lesser amount.

For those who plan to stay a long time, boat slips at a per-foot rate are available in the harbors.

Just recently added at Diablo East was a 40' by 60' floating fuel dock. Another will be installed later at Rough Canyon.

No swimming beaches as such have been set aside by the park service. However, as the rangers explain, there is plenty of good swimming off boats and many of the small islands (actually the tops of submerged hills) will provide quite good, though somewhat rocky, beaches.

Fishing has been average with promise of excellent catches to come.

The Texas Parks and Wildlife Service, in coordination with federal entries, has stocked the lake with close to four million channel cat and large mouth bass with 100 croppies, North American sunfish, thrown in for good measure.

Some of the hottest summer weather in the country comes out of West Texas. Temperatures in the 100-degree-plus range are not unusual. However, the heat is dry and breezes off the lake will cool those visiting boaters and fishermen not used to it.

MANY BELIEVE

Many believe the ever-expanding lake eventually will bring the climate to a more moderate level.

Here is a picture of what Amistad will be a few years from now. The National Park Service has a five-year development program at a projected cost of $14 million.

"The park service will be developing the sites as fast as they can," Frederick V. Vest, a chief ranger, said. Superintendent of parks for the National Parks Board at the lake is Coleman Newman.

A total of six sites are in the plans, encompassing some 3,600 acres. The remaining 61,400 acres, including the water surface acreage, of the national park land will remain undeveloped, public and unspoiled.

Planned for Diablo East, specifically, are an 18-hole golf course, a 550-unit campground, an olympic-size pool, dry storage for 400 boats, a 150-unit motel, a 40-site walk-in campground, picnic shelters and the headquarters buildings of the park service.

Other sites will be developed according to location and size, and with any luck at all, much of the development should be well on its way by 1972.

SAFETY FIRST

One special program the park service has in mind is "environmental education," trips to some of the ancient Indian pictographs located in caves that will be accessible by boat, campfire sessions devoted to the area's flora and fauna, and historical and nature trail trips.

Above all, special emphasis will be put on safety. Since the reservoir is considered "navigable," U.S. Coast Guard boating regulations apply.

Park service rangers patrolling on the lake spot check boats for safety equipment and keep a close watch for boaters who might be in trouble.

Not a single life has been lost in a boating accident.

At the moment, and likely to continue, a "no fee" system exists for usage of all national park facilities. Controlled prices are and will be in effect at concession-operated facilities.

"In other words," said Vest, "if you live in San Antonio or anywhere, and you want to come down for a weekend camping trip on the lake, and if you have your own boat and facilities, you can come in, launch your boat, park your trailer, go up the lake, camp on shore, load your boat and leave, and it won't cost you a cent."

DEATH OF HO CHI MINH AND A CEASE-FIRE IN VIETNAM

Mr. NELSON. Mr. President, the death of President Ho Chi Minh has signaled the call by the North Vietnamese for a 3-day truce in the Vietnam war while the North Vietnamese mourn their leader.

It seems to me that this is an excellent opportunity for the President of the United States to call for a total cease-fire to stop the senseless waste of human lives in a war that measures victories on the basis of body counts. It has been a war of no strategic victories with troops fighting up and down hills and in and out of swamps and rice paddies with a continuous loss of lives—and no end is in sight.

Americans, South Vietnamese, and North Vietnamese men are being killed in staggering totals. From January 1, 1961, to August 30, 1969, some 38,313 Americans were killed and 244,592 wounded. On the other side, it has been estimated that more than 500,000 men have died with countless others wounded. In the last week alone, 185 American boys died in combat and more than 1,000 were wounded.

There is no rational reason to perpetuate this senseless loss of human lives for some vague goals yet to be spelled out to the American people. We should take steps immediately to take advantage of this new opportunity for peace during the 3-day truce and call for an indefinite cease-fire to give both sides the opportunity to seriously talk peace.

It should be made clear to our commanders in the field that we will observe the truce and that American troops will not provoke incidents and will not fire unless fired upon.

Concerned Americans have been calling for an end to this senseless war. We have missed countless opportunities for peace in the past. We cannot afford to allow this new opportunity to pass.

In addition to all the human tragedy this war has brought to everyone involved, it has also threatened the economic stability of this country and twisted the national priorities. A war that is costing nearly $30 billion this year has raised taxes and decreased the value of the purchasing dollar. Solution of our economic crisis is not to be found in the cutting back of our public works programs, halting of spending for new schools and highways, continuing the surtax and limiting such vital domestic programs as those that deal with the urban crisis, pollution, poverty, hunger, and education. The answer is in stopping the war.

In 1965, I opposed increasing our military commitment in South Vietnam and voted against the appropriations bill. Early last year I proposed a three-point plan to end the war. It included total ceasefire free elections, and withdrawal of troops.

I said then that we should propose that there be no further troop movements and that neither would seek strategic advantage through the occupation of additional territory. There should be international supervision of the cease-fire, both on the ground and in the air.

This would stop the fighting and the killing and prevent any further escalation of the war. It would create a climate for constructive negotiations.

Second, we should propose self-determination for the South Vietnamese through the ballot box.

Elections should be held over a period of time, province by province. We should agree on the first province, and then propose that our troops withdraw from that province and the Vietcong stop its insurgency there. The elections should be supervised by the United Nations or other acceptable international authority.

Whoever wins the election should govern that province. Over a period of a year or so, we could have elections in each province. Then there should be a national election.

Finally, North Vietnam and the United States should agree upon a date for complete withdrawal of all their combat troops, with the peace indefinitely supervised by international authority.

This is a fair proposal that no country in the world could legitimately quarrel about.

It makes it clear that we favor self-determination, and it ultimately turns the control of the country over to the Vietnamese where it belongs.

THE SCHWEIKER AMENDMENT ADVANCES CONGRESSIONAL OVERSIGHT OF DEFENSE CONTRACTS

Mr. MATHIAS. Mr. President, I was pleased to join the junior Senator from Pennsylvania (Mr. SCHWEIKER), as a cosponsor of his amendment to require periodic GAO audits of major defense contracts. As the Baltimore Sun noted, Senate adoption of this amendment expressed the conviction that—

> Congress must assert its own authority—indeed, its responsibility—in the making of defense policy and in the supervision of defense spending.

More effective oversight of defense spending, as the Schweiker amendment would provide, is essential to any broad review of our budgetary commitments and national priorities. The sense of congressional initiative and self-assertion so evident in our debates this year is, in my judgment, very healthy and constructve.

I believe the Senator from Pennsylvania merits our congratulations for the hard work which secured approval of this important amendment. His efforts on this project, on reform of the draft, and on other fronts show that he has the perception and energy to make great contributions to the Senate and the Nation.

I ask unanimous consent that the editorial published in the Baltimore Sun on August 9, 1969, be printed in the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFENSE CONTROLS

The approval by the Senate of a defense bill amendment which would make major military contracts subject to audit by the General Accounting Office, an agency of Congress, must be considered as part of the ABM

debate. It adds up to a declaration by a substantial number of senators—drawn from both political parties—that from now on a tighter congressional control will be applied to military spending. In the case of the ABM, 50 senators voted against the Safeguard deployment plan of the Nixon administration. The administration was upheld in the Safeguard case, but it should be noted that the President had himself modified the ABM plan of the Johnson administration and that the administration victory in the Senate was by the narrowest possible margin.

The long debate and the close vote on the ABM were significant moves in the relationship between the President and Congress; for the first time since the end of World War II a branch of Congress had thoroughly debated and only narrowly approved an important new military program. Up until now, speedy congressional approval of comparable programs had been taken for granted.

The amendment calling for GAO audits of big military contracts was sponsored by Senator Schweiker (R., Pa.), one of the group of new Republicans who had voted against Mr. Nixon on the ABM. Mr. Schweiker's amendment was approved by a vote of 47–46. It indicated the feeling, expressed by opponents of the ABM, that Congress must assert its own authority—indeed, its responsibility—in the making of defense policy and in the supervision of defense spending. This is as it should be.

EDUCATION—THE PRIME NEED OF SPANISH-SPEAKING AMERICANS

Mr. YARBOROUGH. Mr. President, as Congress reconvenes, one of its legislative priorities is Senate action on appropriations for education. This makes it an appropriate time to make available to Senators a thought-provoking article entitled "Education Called Biggest Problem of Poor Chicano" written by Richard Beene of the Associated Press and published in the Houston Chronicle of August 17, 1969.

For the American child of Spanish-speaking heritage, the language difference that prevents him from absorbing the education of which he is capable is the least justified of all the differences that have held back this group of Americans from their rightful gains in American society. There is no justification for the figures showing that nationally, Mexican-Americans have an average school education of 8 years, compared to 12 years for Anglo-Americans. The figure compiled in Texas by the Texas Education Agency shows that children of Mexican-American background in Texas stay in school only 4.6 years, compared to 11.5 years for children of Anglo background. By every measure, the language barrier is the largest single factor in this high dropout rate.

Congress took the first step to attack this education deficiency when it adopted my Bilingual Education Act in 1967. Under that act, we authorized $40 million to be spent in fiscal year 1970 so local school districts can teach these children in a language they already understand, as well as in English. The budget before us asks for only $10 million for the program.

This ably written article describing the problems of this group of Americans, is an eloquent case for full funding of bilingual education. I ask unanimous consent that it be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATION CALLED BIGGEST PROBLEM OF POOR CHICANO

(By Richard Beene)

Lupe Chavez squinted in the New Mexico sun at the dirt road, stagnant drainage ditch and ramshackle homes that she and her children know so well.

A breeze came to life. Puffs of dust and the stench of sewage drifted toward her.

She shook her head in disgust and a black strand of hair fell across her face. "I know one thing," she said, "I don't want to live this way all my life."

Lupe, 26, had voiced softly the complaint by a growing number of her fellow Mexican-Americans throughout the Southwest, who shout they are fed up with being second class citizens and demand Brown Power.

FIVE MILLION IN UNITED STATES

An estimated five million Mexican-Americans live in the vast Southwest. Poverty war officials, researchers and Mexican-American leaders say Lupe's plight is a way of life for most of her race. They are the second largest minority in the nation.

Lupe lives in one of Albuquerque's poorest "barrios" neighborhoods. Outdoor toilets and wood stoves are common. Houses are a slapped-together jumble of boards, tin and cement.

For Lupe and her three dust-streaked little boys, virtually every meal is the same: beans, rice, "meat when you can afford it," surplus peanut butter, flour tortillas.

MOST LIVE IN CITIES

Like Lupe, about 80 percent of the "Chicanos," as they often call themselves, live in the cities, with the heaviest concentrations in Los Angeles and San Antonio, "The Mexican-American capitals."

Their problems are countless, but the biggest is lack of education. The average Mexican-American has just eight years of schooling, compared to 12 for Anglo-Americans.

Only the American Indian is said to be lower in education.

Witnesses told a U.S. Civil Rights Commission hearing that most Chicanos automatically assume they won't be able to attend college. "From the beginning," said one high school senior, tears in her eyes, "we're taught that this is an impossible dream."

SURVEY MADE

Dr. Leo Grebler of the University of California at Los Angeles, who directed a lengthy survey of Mexican-Americans, blames their high dropout rate on school systems that he claims alienate the Chicano while concentrating on white pupils.

A common complaint is that Mexican-Americans are forced into vocational classes and that school systems promote shop courses for Chicanos rather than upgrade the curriculum.

Texas State Rep. Joe Bernal, a former teacher, charges that vocational classes for Mexican-Americans in his state are grossly inferior. "They graduate from high school making bookends," he says, "but they don't have a saleable skill."

WINNING ACCEPTANCE

The root of Mexican-American problems, however, goes deeper than poverty or lack of education. It's a matter of the Chicano winning acceptance, more than mere token recognition, from his fellow Americans—whom he calls Anglos—while still maintaining his own identity as a Mexican-American.

Chicanos want to erase the stereotyped image of the lazy Mexican taking an endless siesta.

For many years, persons who bore Spanish surnames were subject to discrimination and lack of acceptance in areas of the Southwest. While this has diminished considerably, less than six years ago in Crystal City, Texas, 70 percent of the residents were Mexican-Americans but had no representation at a city hall.

TABLES TURNED

Anglo political machinery had controlled the town for 20 years. An intensive voter organization campaign turned the tables.

Until a few months ago Chicanos weren't allowed in Tahoka, Texas, barber shops and in a Marlin, Texas, swimming pool. In both cases, the recently formed Mexican-American Legal Defense Fund of San Antonio applied pressure and won desegregation.

From early childhood, the Mexican-American is faced with trying to strike a happy medium between two cultures.

Fellow Chicanos tell him that if he rejects Mexican American culture and identifies with the Anglo, "he may be considered a traitor to his own ethnic group," says Dr. Manuel Ramirez, a Rice University psychology professor.

ANOTHER MESSAGE

Still another message, Ramirez says, comes from teachers, employers or Anglo friends "who tell him that if he doesn't reject the Mexican-American culture, then he will be unable to reap the educational and economic benefits of the Anglo society."

While many think the Brown Power push was sparked by the Negro upheaval, the majority of the Mexican-Americans contacted in an Associated Press survey of the five-state Southwest say they want no part of the violence that has permeated the Negro cause.

Mexican-American leaders say their problems, culture and even their grievances are different from that of the blacks.

BROWN BERETS

California leaders of the Brown Berets, an activist Chicano youth organization, say they have not aligned themselves with the Negroes—but that they have signed "nonaggression pacts" with militant black factions to avoid clashes between the two groups.

Notably in Texas and California, the young adult Mexican-Americans are more impatient than any other age group.

Some of the younger people warn of violence if the "gringo" white racist establishment doesn't change its views toward the Chicano.

DEMONSTRATIONS STAGED

Within the past two years, Mexican-American youngsters have staged unprecedented high school demonstrations in Los Angeles, Denver, San Antonio and deep South Texas to protest "Anglo-oriented" school systems and to focus national attention on the Brown movement—what they call "La Revolucion."

A look at Mexican-American conditions in the Southwest indicates why a prominent Mexican-American minister, the Rev. Roger Granados, told a San Antonio audience that "as a people, we have come a long way to nowhere."

Deep inside the Texas Gulf Coast city of Corpus Christi, in the barrios that tourists seldom see, there is a saying among Chicanos: "The only way a family can get out of debt here is for their son to get killed in Vietnam, so they can collect on his insurance policy."

ALL SEEK BETTERMENT

Almost without fail, wherever there is a large concentration of Spanish-surnamed people there is an organization dedicated to the betterment of the Chicano.

Among the best known are the American GI Forum and League of United Latin-American Citizens (LULAC).

But young Mexican-Americans say such groups have worked too quietly, too patiently, far too slow.

Popping into public view in the past two years have been young Chicano groups such as the Brown Berets in California and the Mexican-American Youth Organization (MAYO) in Texas. David Sanchez, a handsome, clean-cut young man of 20, is the

founder and "prime minister" of the Berets, headquartered in predominantly Mexican-American East Los Angeles.

HAS 26 CHAPTERS

Sanchez says the Berets have 26 chapters in California, Texas and other states as far east as Michigan. Their aim he says, is to achieve unity among the Chicanos in the arrios and "restore the dignity in our people."

The Texas counterpart to the Brown Berets is MAYO, whose trademarks have become serape jackets and clenched brown fists raised in defiance of the Anglo "establishment."

Like the Brown Berets, MAYO spokesmen say they would resort to violence only in self-defense.

MAYO leaders talk of plans to fight the Chicano problem nonviolently through politics, education and the establishment of Chicano-owned businesses.

FARM WORKERS ORGANIZED

Perhaps the central symbol to thousands in the Brown Power movement is the United Farm Workers Organizing Committee, headed by soft-spoken, sad-faced Cesar Chavez—who once fasted 25 days to dramatize his dedication to nonviolence. Mexican-Americans state flatly there will be no widespread violence from this ethnic group. The younger Chicanos aren't so sure.

"To deny myself the use of violence would be like forming a union without being able to strike," said one young Mexican-American at UCLA. "I'll tell you one thing. If it does come to violence, we won't be destroying our own homes."

A BIG BARRIER

Educators say one big barrier the Mexican-American faces is the English language, particularly in Texas, which has thousands of first and second generation immigrants from Mexico.

Generally, a Chicano child starts the first grade knowing no English at all.

In the past, teachers punished youngsters for speaking Spanish in the classroom and even on the playground. It was officially barred from school in some areas, except in language courses. Texas repealed state public school laws to this effect this year.

Five years ago the San Antonio school district, like others in the Southwest, launched a bilingual education project in elementary schools.

BILINGUAL EDUCATION

"Years ago you couldn't utter one word of Spanish in the schools and you got to thinking your language is no good so you yourself are no good," recalled high school principal Nick Garza, former principal at one of the bilingual project schools in San Antonio.

But with bilingual education, which encourages pupils to become fluent in both languages, "you should see the confidence they have gained," Garza said.

As Garza sees it, the key to solving the Chicano dilemma is educating the young. "I have been of the opinion that whatever good I will be able to do will be through the youngsters rather than the parents and the older people," he said.

Near Garza's desk hangs a poster bearing a photograph of a Mexican-American child. Its caption reads: "He will get ahead, given time—your time."

THE TIME IS NOT NOW—THE TIME WAS LONG AGO

Mr. PROXMIRE. Mr. President, I quote from the preamble of the Charter of the United Nations:

We, the peoples of the United Nations, determined to save succeeding generations from the scourge of war, which twice in our lifetime has brought untold sorrow to mankind, and to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal right of men and women and of nations large and small . . .

And for these ends to practice tolerance and live together in peace with one another as good neighbors . . .

Have resolved to combine these efforts to accomplish our aims.

Mr. President, this preamble was codified in June of 1945. To update this statement, the words and the intentions hopefully remain the same, but tragically the numbers change. The scourge of war has hit us as a nation twice since then. It is both practical and easy for us to say—now we must commit ourselves to no more wars and no more strife. More truthfully, the time is not now—the time was long ago. Let us not fall into the fate of entangling ourselves in so many complexities that we leave ourselves paths of escape everywhere and not one path to anywhere.

Again, I repeat, "to reaffirm faith in fundamental human rights, in the dignity and worth of the human person, in the equal right of men and women and of nations large and small."

Let us take a step, simple as it is, toward this goal by ratifying the Human Rights Convention on Genocide, Political Rights of Women, and Forced Labor.

VICTIM COMPENSATION ENDORSED BY POLICE MAGAZINE

Mr. YARBOROUGH. Mr. President, the concept of compensating victims of crime has long interested me. From my days as a State judge in Texas, I have been puzzled by our legal tradition which provides help only for the criminals after the commission of a crime. Victims are completely ignored and given no help.

My bill S. 9, which is now before the Judiciary Committee, would create a commission to compensate innocent victims of crime in the District of Columbia and certain other federally administered areas.

Recently, Police magazine published a thorough article, ably written by Mr. Gilbert Geis, on victim compensations, to which I invite the attention of the Senate.

I ask unanimous consent that the article, entitled "Compensation for Crime Victims and the Police" published in Police magazine for May–June 1969, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMPENSATION FOR CRIME VICTIMS AND THE POLICE

(By Gilbert Geis)

Five states of the United States now operate programs to provide money to victims of violent crime or their survivors, and at least a dozen others are contemplating similar programs. For the police, this growing concern with the plight of the victim of crime can be regarded as one of the most encouraging developments in recent years. For one thing, compensation of a victim is invariably tied closely by legislation to the victim's cooperation in reporting the criminal offense promptly and contributing to the fullest possible extent in arriving at a solution. Compensation programs also serve to relieve law enforcement officers of the burden of explaining to crime victims that however much they have suffered, and however extensive have been their financial losses due to an inability to work, or because of medical expenses, there is little or nothing that can be done to assist them. Another encouraging note is that the presently operative victim compensation programs have proven to be particularly helpful to law enforcement officers and their families in providing extra financial benefits to police officers victimized by crimes of violence.

Additional benefits of compensation plans include the fact that they make more obvious to the public the financial cost of criminal activity, and for this reason may lead to greater support for programs of prevention and enforcement. In addition, victim compensation legislation has often been accompanied by or led to the passing of "Good Samaritan" laws which provide financial assistance to persons injured while attempting to prevent a criminal act, or while aiding law enforcement officers in the performance of their duties.[1]

Considerations such as the foregoing have prompted almost universal support of the idea of victim compensation. Some opposition has been based on the possibility of compensation inviting carelessness on the part of potential victims, in the same way that property insurance appears to lead some persons to protect their possessions less well than they might since they know that they will be reimbursed for any loss.[2] While money can be an adequate replacement for most property, however, it rarely soothes altogether the kinds of pain and suffering resulting from crimes of violence, and the idea that possible victims of homicide, rape, and assault will be more negligent when compensation is available seems somewhat far-fetched. Much more common is the view that victim compensation represents a gesture by the state which is worthy of enthusiastic support, since it not only assuages the loss of innocent victims, but is also responsive to some degree to public concern regarding the alleged breakdown in law and order.

Among supporters of the idea of compensation has been the National Association of Chiefs of Police, which at its annual conference in 1966 adopted the following resolution:

In view of the considerable concern for the rights of the criminal defendant expressed in recent rulings of the Supreme Court of the United States and the little concern expressed for the victims of violent crime and their families, the NACP goes on record as advocating that suitable legislation be enacted either in the states or on the federal level to provide for reasonable indemnification to the victims of violent crime and/or their survivors.[3]

In the same vein, the President's Commission on Law Enforcement and Administration of Justice noted in their 1967 report that several victim-compensation bills had been filed in Congress and called for public hearings to "provide a national forum for much needed debate over the philosophy, assumptions, and potential advantages and disadvantages of such programs generally, and the relative merits and design of a program on the Federal level in particular."[4] The report also put on record the following endorsement:

The Commission has been impressed by the consensus among legislators and law enforcement officials that some kind of State compensation for victims of violent crime is desirable. Recent public opinion polls indicate that a considerable majority of the public is in favor of victim compensation. The Commission believes that the general principle of

Footnotes at end of article.

victim compensation, especially to persons who suffer injury in violent crime, is sound and that the experiments now being conducted with different types of compensation programs are valuable.

STATE COMPENSATION PROGRAMS

The first victim compensation program in the United States was inaugurated in California at the beginning of 1966, but its impact was severely limited by a scanty appropriation of $100,000 a year and the locating of the program within the State Department of Social Welfare. Under provisions of the California compensation program, persons could qualify for assistance only if they met the criteria for welfare aid. They were dealt with by social caseworkers and, in general, were treated as if they were charity cases rather than unfortunate and innocent victims of criminal violence.[6] In 1967, because of complaints concerning its welfare focus, the California compensation program was relocated under the Board of Control—the agency charged with adjudicating claims against the state. The program, however, remained fiscally undernourished and patently inadequate.

The New York victim compensation program begun in 1967 was the second such program in the United States, and comes much nearer than the California system to helping the innocent person who suffers a loss as a consequence of a crime of violence. Impetus for passage of the New York act was provided by widespread public agitation following the fatal stabbing of Arthur Collins in New York City during October of 1965. Collins was killed while attempting to eject from a subway a disorderly man who was annoying several women. Collins' demise left his wife and child without any insurance or source of income.

Among persons testifying during public hearings on the New York bill was Arthur Cornelius, Jr., superintendent of the state police, who supported the measure and indicated that "redress should not be left to accidental circumstances stimulating the generous impulses of the public but rather should be a matter of public policy, a matter of equity."[7] Al Scaglione, president of the Police Conference of New York, told the legislative committee that his group favored the state providing free training and rehabilitation for victims of crimes of violence who were unable to continue their usual type of work due to their injuries.

The measure passed by the New York legislature requires that victims must show "serious financial hardship" before they can receive money from the state, but this provision is interpreted as benignly as possible, so that deserving victims will not be denied the help they need. A team of seven investigators examines claims and presents findings to members of the Crime Victims Compensation Board. The New York law provides that no compensation can be given an accomplice of a criminal nor a member of the offender's family. Claims must be filed within ninety days of the crime, and the crime must be reported to the police within 48 hours of its occurrence, though both of these provisions may be waived for sufficient cause. One member of the Board hears the claim, and the victim may appeal to the full Board if he is dissatisfied with the original decision. In addition, the state may appeal to the courts if the Attorney General believes that an award was unreasonably high. To receive compensation the claimant must have suffered an out-of-pocket expense of at least one hundred dollars which is not reimbursed from other sources. Maximum payment is limited to $15,000.

During its first year of operation the New York victim compensation program, operating with a budget of 1.1 million dollars, was bedevilled primarily by its inability to broadcast its existence adequately so that all possible claimants might receive assistance. Leaflets were sent to all hospitals and distributed to every police precinct in the state. Radio and television interviews with successful claimants were also used to spread word of the existence of the compensation program. Of the 149 claims during the year, eighty awards were made with an average of $750 per award. Typical of the awards granted in New York during this period were the following cases:[8]

(1) Female, aged 26, unmarried, school teacher—assaulted by unknown youth in her apartment building. Sustained severe laceration palm of right hand requiring extensive surgery. Confined to two hospitals for eleven days—covered under hospital insurance. Unreimbursed medical $840, and maximum allowable unreimbursed loss of earnings $1,144. Total financial resources $500. Serious financial hardship determined. Awarded $2,280.

(2) Male, aged 47, cab driver, married with two teenage children—assaulted by passenger who refused to pay fare. Received dislocated left shoulder, fracture of left humerus, and body bruises and contusions. Emergency hospital treatment; loss of earnings for forty-five days. Assailant arrested for third degree assault. Compensation for loss of earnings $582.04; out of pocket expenses for medical bills of $30 not covered by insurance. No provocation or serious financial hardship found. Awarded $612.04.

(3) Claimant was assaulted and robbed in apartment house where he lives. Sustained a fractured skull and other serious injuries. Hospitalized for 18 days and disabled for seven weeks and one day. Self-employed and carried no insurance to cover loss of earnings or hospital and dental expenses in the sum of $1,628.85. Operates a grocery store which was closed during the period of disability. Savings of $5,924 held in trust for his daughter to cover the cost of her education. Besides his wife and daughter he has a grown son who is an inmate of a mental institution. Sustained serious financial hardship. Award made in the sum of $2,343.15, covering $714.30 for loss of earnings, and $1,628.85 for hospital and dental expenses. Of this sum, the attorney was awarded $220 for his services.

Stanley L. Van Rensselaer, Chairman of the New York Board and a former Federal Bureau of Investigation agent as well as a onetime member of the State legislature, has indicated his response to the first year of the compensation program:

The need in our society for this Board to compensate innocent victims of crimes of violence has been well shown during the first year. It is true that many of the applications submitted relate to comparatively minor injuries and the compensation award is correspondingly small. However, when one sees the claims filed on behalf of a deceased victim or by a claimant who has been severely and permanently injured as a result of a violent and vicious crime, as well as those claims of the elderly and infirm, no one can fail to feel deeply that a worthwhile program has been established to complete the full administration of justice through the power of this Board to award compensation.[9]

In addition to California and New York, victim compensation schemes have begun recently in three other American states—Maryland, Hawaii, and Massachusetts. Each state has a somewhat different focus. Hawaii, for instance, is the only American jurisdiction that does not require a showing of "hardship" or "need" in order to qualify for an award, thought the legislation, administered by a three-member Criminal Injuries Compensation Commission, declares that the Commission "may consider any circumstances it deems to be relevant" in reaching its decisions. The Hawaii law indicates fifteen crimes which qualify their victims for assistance, whereas most states merely designate the victim of "any" crime of violence as eligible for aid. Hawaii's law further stimulates that a private citizen who incurs injury or property loss in preventing the commission of one of the specified crimes of violence, or in apprehending a person who has committed such a crime, or in materially assisting a peace officer, is eligible for compensation.

The Massachusetts program is unique in that it places the administration of the compensation plan within the judiciary. Victims bring their claim to the district court in the territorial jurisdiction where they reside. The first Massachusetts grant was made on December 9, 1968 to a 17-year-old boy who received $548.60 for expenses incurred from a fractured jaw suffered during a gang attack upon him. His assailants had not been apprehended.

Finally, the Maryland program, signed into law in May, 1968 by the then Governor, Spiro T. Agnew, is modeled on the state's workmen's compensation program. It provides a ceiling of $30,000 for victim compensation, the highest figure in the United States.

Compensation legislation is also pending before the Federal Congress, where a measure authored by Senator Ralph W. Yarborough is in the Senate Judiciary Committee, and nine bills are pending before the Judiciary Committee of the House of Representatives. These measures are restricted to the federal territories and the District of Columbia. At least a dozen states are also considering compensation programs at present. Typical of the law enforcement response to such measures is the testimony of Detective Hugh Langcaskey of the Trenton Police, before the State Senate Committee on Law and Public Safety. "This bill, if it becomes law," said Langcaskey, who is also Vice President of the New Jersey Policeman's Benevolent Association, "will greatly aid law enforcement," and went on to indicate some ways in which he felt the measure might help:

As a police officer myself, I know that quite often I went to the scene of a crime and people were reluctant to tell you anything. They know it means loss of pay while they are at a hearing or at a trial in the county courts. And I also know that many victims of muggings are a little reluctant to tell you. They feel they've only lost a few dollars and they may as well lose that few dollars as get involved in court and lose time off from work.[10]

FOREIGN JURISDICTIONS

With its roots deep in antiquity, public and private compensation of crime victims was abandoned in the Middle Ages when the state took over complete responsibility for criminal prosecutions and state leaders used such prosecutions as a means of replenishing government coffers at the expense of criminal offenders and to the total neglect of their victims.[11] State compensation of crime victims was first reinstituted in New Zealand in 1963. Since that time Great Britain, the Australian state of New South Wales, and the Canadian provinces of Saskatchewan and Newfoundland have also inaugurated compensation systems.

The program in Great Britain, the most comprehensive and far reaching in the world, might be looked at briefly to indicate further characteristics of victim compensation as it bears upon police work. During its first four and one-half years of operation, the British Board made some 10,000 awards, and now operates under a budget of approximately three million dollars per year. Some thirty-three persons have received awards in Britain for injuries sustained while assisting the police, while law enforcement cases involving awards to police officers represent 16 percent of the British Board's total caseload. During the year ending April 1968, the Board received 505 applications from police officers, most of which resulted in cash awards, and

Footnotes at end of article.

supplemented amounts available under regular police assistance programs. It was a law enforcement case, in fact, which resulted in the world's first appellate court decision on victim compensation. The case involved a constable who had suffered blindness in his left eye after being shot in the face by a suspect he was about to question. A few days later, the constable committed suicide. The Compensation Board, charged with subtracting from its awards other monies derived by the claimant from public funds, reduced the widow's benefit by the amount of her police pension. The court upheld this decision,[12] but subsequently a new rule was promulgated for the Compensation Board providing a formula for such cases so that civil servants would not be unduly disadvantaged vis-a-vis other persons who had received monies from other than public sources.

In Britain, the cooperation of the victim with the police is taken into account and is illustrated in the following case where a failure to provide adequate assistance resulted in a denial of compensation:

An applicant, lured from a public house by a woman whom he recognized, was shot in the legs by a gunman he did not see in a dark alleyway, but whose identity he had reason to suspect. When interviewed by a police officer, he said: "You don't expect me to tell you, Guy—you know who it was—I will settle this my own way." The shooting was not the subject of a prosecution, but sometime later, when the woman and the man he suspected had been arrested on other charges, the shooting victim then made a statement to the police. The board decided that the circumstances of the shooting injuries should have been reported to the police without delay—it was *not* the board's concern to consider to what extent, if at all, the applicant's information would have assisted the police.[13]

CONCLUSION

The question of victim compensation, currently under debate in foreign and domestic legislative bodies, is also being considered by the National Commission on the Causes and Prevention of Violence, the group appointed by President Johnson in the wake of the assassination of Senator Robert F. Kennedy. The Commission co-sponsored with the University of Southern California the First International Conference on Compensation to Innocent Victims of Violent Crime, held in Los Angeles in December, 1968. The meeting brought together representatives of the world's compensation systems and offered a range of suggestions for consideration by the Violence Commission, including the following items:

(1) Victim compensation must be regarded as a right for all citizens, and therefore financial hardship or need should be eliminated from all existing and future programs.

(2) The Federal government should adopt a plan for compensating victims of violent crime which will cover all the territories and the District of Columbia. Bills presently before the respective Judiciary Committees should be given open public hearings to determine which proposal will most successfully accomplish this goal.

(3) The Congress and the Department of Justice should give serious and immediate consideration to the matter of providing compensation to all persons physically injured by violators of any Federal Civil Rights legislation.

(4) All future programs adopted to compensate victims of violent crime should be administered by a separate Board which deals exclusively with victim compensation.

(5) Maximum or minimum awards should be left within the discretion of the Board and should not be regulated by statute.

Delegates to the International Conference also heard personal testimony regarding the importance of victim compensation presented by Mrs. Myrlie Evers (widow of Medgar Evers, a slain civil rights leader) who spoke of the circumstances which surrounded her life following the death of her husband.

"We lived with a constant knowledge that this might happen," Mrs. Evers said. "But when the time comes you are totally unprepared for the shock, for the emptiness afterwards. We were fortunate; we had help. We had people who cared." Mrs. Evers told the conference delegates. She spoke on behalf of other victims of violent crime, more anonymous than herself: "My concern," she said in an endorsement of compensation programs, "is with that man, that woman, those children—the ordinary people—who need help in a moment of crisis." She also stressed the value of compensation for young people in a victimized family: "I cannot overemphasize the impact of a crime of violence upon the young people who survive the victim," she noted. "Financial help can save such youngsters for the country, which needs all the talent it can get. Otherwise, the kids grow bitter, grow cruel, drop out, and see no need for doing their best, for no one seems to care."

It is in these terms, then, that victim compensation may be evaluated. It combines social self-interest with impulses of compassion, decency, and justice. It assists the deserving, and it aids law enforcement in reasonably balancing the scales against the depredator and in favor of his innocent victim.

COMMENCEMENT ADDRESS BY AL CAPP

Mr. ALLEN. Mr. President, Mr. Al Capp, one of America's most renowned political satirists and cartoonists, has delivered a series of social and political commentaries on college campuses throughout the Nation for which he has been widely acclaimed.

One such address was delivered on August 15, 1969, at Troy State University—one of Alabama's newest universities and one of which all Alabamians are justifiably proud.

Mr. Capp's remarks on this occasion are of a nature which will appeal to the commonsense and good judgment of a vast majority of American people and I believe that Members of the Senate and the public will profit by reading his remarks in the RECORD.

Mr. President, I ask unanimous consent that the remarks Mr. Capp delivered on this occasion at Troy State University be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

COMMENCEMENT ADDRESS, TROY STATE UNIVERSITY, TROY, ALA., AUGUST 15, 1969

Last night a student here asked me what the difference was between Troy State and an Ivy League college, and I said, "A thousand dollars in my lecture fee."

I charge Ivy League colleges a thousand dollars more—Combat pay. You here at Troy State haven't had the advantage of an Ivy League education. When you dissent with a speaker, you simply sit there and dissent. At Ivy League Colleges they get up and punch the speaker in the nose. That's why I charge them a thousand dollars more. Medicare doesn't cover everything.

I don't know how many of you saw the movie "Planet of the Apes" but I'm sure you all know the story. It's the one where the monkeys make the men do tricks. And that's the story on so many of our campuses today. The monkeys are making the men do tricks at Harvard, Cornell, Columbia, N.Y.U., Berkeley—We have areas of glorious desolation on this planet too, areas where they accept, as the natural order of things, the theory that the half-educated are the only group capable of re-structuring our educational institutions. After the brutal and obscene takeover at Princeton this Spring, one of the Student leaders of the mob was appointed to its Board of Trustees. If the world was run as Princeton is, Richard Speck would have been appointed night watchman at the nurses' dormitory, and Adolf Eichmann, Chief Rabbi of Berlin.

The new Ivy League (or Planet of the Apes) educational theory is that those who need instruction so desperately they are unfit to go out into the real world until they get four years of it are fit, however, from the moment they arrive on campus to instruct their instructors; that those who look, act, and smell like subhumans are the only true voices of humanity; that the only clear thinkers among us are the half-stoned, and that everyone else has rocks in his head; that our totally non-productive is the only class worth producing for, and that only our untoilet-trained can clean up the mess society is in.

Yes—on so many of our campuses today, the apes are laffing their furry li'l heads off at the antics of the men.

Now, our campus apes weren't smart enough to learn that trick themselves. They had to be taught.

They had to be taught that accomplishing puberty, and the skill to endorse their fathers' allowance checks, gave them the right to shout down a man like say, Arthur Goldberg, who earned his education—an experience those who bludgeoned him to silence had avoided. They had to be taught they

had the right to fling filth at Richard Nixon, who served his country . . . an experience those who were howling obscenities at him were avoiding at that very moment; thanks to a draft law which deems a student who shouts obscenities at a President more valuable to his country than a G.I. who shoots back at Communists. They had to be taught what fun it was to fill a hall in which Hubert Humphrey was to speak for the sole purpose of walking out when he began to. They had to be taught to jeer at Edmund Muskie who was defending his country instead of defaming it when he was their age. They had to be taught that they were truer representatives of the Democratic process than those who approached it with work and wisdom instead of rocks and Molotov cocktails.

Yes, our campus apes had to be taught how to make the rest of us do tricks, because creative thinking doesn't develop much compulsively masturbatory.

Who taught them to hate America's past, and welsh on America's future? Who taught them to detest their nation, and defend their nation's enemies? Who taught them to loathe their fathers, and love only themselves? Who taught the student ape at Columbia, Harvard, Princeton, Berkeley—to sneer at the system that feeds him, shelters him, teaches him skills, and which protects his life with the lives of the less fortunate? Who taught them to befoul an America which, for all its faults, has created, by unarguable immigration figures, the most desirable place on earth for men to live?

They are taught by a new breed of academic Fagin—In "Oliver Twist", Dickens' Fagin waited in the gutters of London to corrupt the innocent. The new Fagins wait for our innocents on the campuses of Harvard, Princeton, Columbia, but not at Notre Dame or San Francisco State or here. And it is on the campus, not in the home, not in the neighborhood, and not in the high school, that they're corrupted.

Not long ago, I spoke at Penn State. There were nearly six thousand students in the auditorium, about 5,900 humans and 100 apes. At the question period, the apes rushed to the microphones—as they always do. No one else had a chance to speak, as the apes make sure they always don't. They dominated, and would have, eventually demolished that lecture for the thousands of others, if the lecturer hadn't happened to be a pretty good demolisher himself.

I quieted the animals with the gallantry that has made me a legend, finished the lecture, and the next day I flew to another town in Pennsylvania where I spoke to an audience of high school seniors. I spoke about many of the same things I spoke about at Penn. State—expressed the same ideas. My audience may change, but I don't change my ideas for them, and when the question period came, those high school kids asked the same sort of questions the college kids had the day before—the difference was: they genuinely wanted answers. They didn't agree with all of my answers, but they listened with the courtesy I gave their questions. And those who disagreed expressed their disagreement—not by screaming obscenities as the college students had but in reasoned rational discourse.

When I left the high schoolers, I'd had a civilized dialogue. When I'd left the college students I had to bury my clothes. One of the high schoolers parents said to me, "Nice kids, aren't they? But it frightens me to think that next year, they'll be in college."

How many parents of nice kids today are frightened at the thought that next year those kids will be in colleges—where the Fagins are waiting for them. Once American parents were proud to send their children away to college—today they're afraid to. It isn't because today's young generation is different. They are as decent as any generation before them. It's because colleges are different.

Once there were, waiting at our colleges, men who taught our young how to enrich their country, intellectually, spiritually, and materially by service, skill, and sacrifice.

Those men are still at our colleges, but among them lurks the new breed, the faculty Fagins, undetectable in the protective credentials of Nobel laureates like the ignoble Professor Wald who called Senator Russell "criminally insane" to a cheering student audience last year at M.I.T. for having made a patriotic speech in the U.S. Senate; ex-Presidential Advisors whose advice nearly blew up the planet, such as Professor Schlesinger of the New school in N.Y.; authors of best sellers on economics based on the fiscal theories of Edna St. Vincent Millay, such as Professor Galbraith at Harvard; experts on Urban problems based on the self-help theories of the Brinks Bandits, such as the faculty Fagins who supported the students who stole a million dollars worth of property from the University of California; poets with programs for the American future based on visions that came to them in the psychopathic ward—lifelong authorities on diaper rash who have become overnight authorities on military strategy, like Dr. Spock, and rampaging, rioting, civil rights militants who want civil rights for militants, but for nobody else; like Professor Hare—formerly, I'm delighted to say—of San Francisco State. The hysterics and the haters, the frauds, the fascists and the Fagins, are waiting on our campuses to teach your kid brothers and sisters, and one day—your kids . . . not how to enrich our country with skill, service and sacrifice, but how to impoverish it, by downgrading the acquisition of useful skills as the slavery of squares, by disdaining service, by demanding sacrifice; by reviling our past, instead of revering it, by spitting on those the democratic process has chosen to govern us, instead of defending the democratic process as their one chance to govern themselves; by laughing at the law and order that protects society and by whining for law and order to protect them.

What do we do about the Fagins on our facilities? Do we silence them? Do we toss them bodily off our campuses? Let us pause for a moment and think of how satisfying that would be. And then lets forget it. Repression and violence—the methods of the lynch mob—are the methods the Fagins teach. A couple of years ago, at Dartmouth, a major Presidential candidate, a former—and possibly—future Governor of this state—had been invited to state his case. He'd hardly begun when a mob of roaring students rampaged toward the stage, led by a young instructor screaming "kill him, kill him!". As far as I know, that young instructor is still at Dartmouth teaching Humanities.

Last Spring a herd of girl apes, registered as students at Harvard's sister school, Radcliffe, thundered into the office of President Mary Bunting, accusing and reviling her. When she attempted to answer they screamed her down with a storm of filth a Bourbon Street prostitute wouldn't use to a madame who'd short-changed her. When there was some talk of rebuking them, they were defended as idealists by several Fagins on the Radcliffe faculty.

When a mob of male apes, registered as students at Harvard invaded University Hall last spring and bodily tossed several administrators down the stairs and out of the building, they were led by as high command of faculty Fagins. The lynch mob has disappeared from the South, but not from American life. It has reappeared on the campuses of Harvard, Radcliffe, Berkeley, Antioch, organized by the faculty Fagins, led by the Faculty Fagins—and, if you're not vigilant . . . they're coming here. That isn't an opinion. It is their stated aim in all their literature to radicalise—to make planets of the apes—of Universities like yours next year . . . and the faculty Fagins, will be cheering them on with extra fervor.

We must prepare the kids we send to them—for them. We must teach young Americans to love America as artfully, and as ardently as the Fagins teach them to hate it.

I suggest that every institution of learning in America add one more course. A course in love.

The sort of love the professional love people—those who wear love beads, carry love flowers and flourish love signs—have never shown much affection for—Love of Country.

It should be a course that doesn't overlook America's foolishness, but that will also look at America's greatness.

A Course that doesn't overlook America's history of callousness to some of its own but that will also look long, and with reverence at our history of generosity and Christian welcome to the humble and hopeless of the world, a history no other nation, ever, has matched.

Basic Love of Country won't be an easy course to teach. And it will be all but impossible to get any big academic names to teach it. Becoming known for Love of Country isn't the way you become a big name in academic circles—not lately.

Once I spoke at Yale. A student came up to me, shook my hand and said "Mr. Capp, it took courage to stand up on that platform and tell an audience of Ivy League students you love America." I have never been paid a compliment that made me sadder. The Fagins have made our Ivy League campuses places where it now takes courage for an American to tell other Americans he loves America.

It is time then, for all of us to have the courage, if that's what it takes, to say this—on our campuses, in our homes, in our churches, in our press, on TV and say it with pride and resolution: America is, with all its faults the loveliest and most liveable of all nations. And what makes it that, isn't anything we found here—its something we created here—it is the freedom we have to repair and sense America's faults—not in the way of the Fagins—the way of hate and hysteria, the way of maddened apes, but the way of patience and persuasion, the way of thinking men.

THE POWER OF OIL

Mr. PROXMIRE. Mr. President, the Senator from Michigan (Mr. HART) has been holding the most thorough hearings into the mandatory oil import program that have been held in Congress.

Of necessity, the testimony has been extensive and complex. The natural tendency when faced with such a mass of complex data is to either ignore it or find someone whom you trust and who has taken the time to analyze it.

Fortunately, Spencer Rich who covered part of the hearings for the Washington Post has taken the time to analyze some of the data developed by Senator HART and has written an article about it.

Because of the importance of this issue I ask unanimous consent that Mr. Rich's article from the Progressive be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE POWER OF OIL

(By Spencer Rich)

(NOTE.—Spencer Rich is a staff writer for The Washington Post who covered the hearings of the Hart Antitrust and Monopoly Subcommittee.)

In the movies oilmen are usually pictured as tough, independent operators, fiercely in-

dividualistic, dependent on no one and accepting no interference—or handout—from the Government. The John Wayne image immediately comes to mind.

But that is not the picture emerging from a series of hearings on the petroleum industry held by Senator Philip A. Hart's Senate Antitrust and Monopoly Subcommittee. There, a battery of oil industry spokesmen has pleaded that the vast system of Government subsidies—the extent of which has never before been detailed so completely to the public—must be maintained or domestic oil production will be unable to meet foreign price competition and will shrivel to a trickle.

The result, as pictured by men like Humble Oil's M. A. Wright, Sun Oil's Robert Dunlop, and the Independent Petroleum Association's Harold McClure, will be U.S. dependence on foreign suppliers. This nation would be forced to grovel, trembling, before petty Middle Eastern satraps, lest they cut off supplies of the vital juice.

That the industry profits handsomely from the 27.5 per cent depletion allowance has long been known. What has not previously been etched so sharply is the extent to which domestic oil companies reap subsidies from an additional system of economic aids generously provided by the U.S. Government and the states. As a series of professional economists suggested to the Senate subcommittee, the industry may actually take in three to five times as much each year from the workings of the oil import quota system as it does from the far more publicized depletion allowance. The foreign tax credit adds still more money to the pot.

The oil import quota system was put into effect on a mandatory basis by President Eisenhower in 1959, under pressure from the Independent Petroleum Association of America, spokesman for the smaller, independent oil and gas operators whose holdings are concentrated on U.S. soil and whose production costs are frequently far higher than those of the big international companies.

The quota limits crude oil imports in the eastern United States to 12.2 per cent of domestic production, with restrictions on imports to the western states also. Since the West is a "crude-deficit" area, with insufficient production to meet its needs, there is no percentage limit on imports. Instead, oil imports are simply limited to the difference between available domestic supply and anticipated need.

There are no limits on imports of residual fuel oil, provided it is not brought in for reprocessing. Residual is the heavy, thick product left after all other derivatives are taken out. It is used for heating large buildings and for electric power production. Overall, about one-fifth of the nearly five billion barrels of petroleum consumed annually in the United States comes from abroad. The rest is supplied from domestic production.

The professed purpose of the import limitations is to keep the domestic industry healthy, so that in case of a national emergency or cutoff of foreign supplies, the nation will have enough domestically produced oil to carry on. But many of the noted economists who testified at the Hart Subcommittee hearings—such as the waspish M. A. Adelman of the Massachusetts Institute of Technology—who clashed with Republican Senators, telling them all the Government's previous studies had simply been a justification for aiding the industry, and the cigar-chomping Walter Adams, acting president of Michigan State University, who looked like an oilman but talked like a populist—suggested that the import control system may simply be a handout to the industry which costs the public billions of dollars a year.

The import controls, along with ceilings imposed on domestic production by "market demand pro-rationing" systems in Louisiana and Texas, the states which together produce three-quarters of U.S. oil, limit oil supplies in this country and keep the domestic price far higher than the world market price.

The domestic price at the well is now about three dollars a barrel for crude oil. Transportation costs by tanker to the East Coast from Gulf of Mexico depots bring the price to wholesalers in the Northeast to about $3.50 a barrel or more. But witness after witness testified—and oil industry spokesmen conceded—that oil imported from the Middle East could be purchased on the East Coast of the United States for only $2 a barrel, *including* shipping charges from the Persian Gulf, provided the oil comes in under a quota. That is a differential of about $1.50 a barrel.

One ironic result of the import barriers is that foreign nations are able to buy oil far more cheaply than American consumers, and sometimes from the same U.S. companies. Thus, in the first half of 1968, when domestic oil prices—not including shipping costs to market—were around $3 a barrel for crude oil, the Japanese government was able to buy 2.3 million barrels a day of largely Middle East crude at prices averaging $1.42 a barrel. Standard Oil of New Jersey—an enormous worldwide company, two-thirds of whose 1968 sales were *outside* the United States—and other well known U.S. firms sell oil in Japan as well as in the United States.

How much could U.S. consumers save if low-cost foreign oil were allowed to enter freely? No one knows exactly, but the added cost to domestic purchasers under this system of artificially high prices was estimated *at a minimum* of $4 billion a year by M.I.T.'s Adelman, one of the nation's most respected economists in this field. Dr. John Blair, the subcommittee's able chief economist, came up with a calculation of about $7.2 billion a year. Even John Lichtblau, a private economist whose work is financed by several major oil companies, estimated the figure at $2.7 billion a year, and Wright of Humble Oil, which is Standard of New Jersey's chief domestic subsidiary, put it at $3.4 billion. Wright claimed offsetting domestic benefits such as domestic wages and taxes paid by the oil industry. He failed to mention that if these billions were invested in other needed enterprises, they would presumably create jobs and generate taxes there too.

What all this means, the shrewd Dr. Blair was quick to point out, is that the oil import program coupled with pro-rationing has, by inflating domestic prices, cost the nation *40 to 70 billion dollars in overcharges*, at wholesale, over the ten years since the quota system was made mandatory. These added costs were multiplied when passed along in retail sales of heating oil, gasoline, motor oil, electricity generated with oil, and oil-based chemical products.

Dr. Blair translated these overall figures into terms meaningful to the average consumer. He estimated that the average price of gasoline to consumers *would drop five cents a gallon if oil import quotas were abolished*. For the average car owner buying 700 gallons of gas a year, this would mean an annual saving of $35. Blair calculated that abolition of quotas could also bring a *3.9-cent reduction in the cost of home heating oil—an annual saving of about $58.50 for the homeowner with oil heat*.

In addition to the huge import quota bonanza, the 27.5 per cent depletion allowance, and the right to "expense" intangible drilling costs—charge off certain expenses as annual operating costs for Federal tax purposes rather than depreciating them over a long period—save the industry about $1.6 billion in Federal taxes yearly, according to a recent Treasury Department study.

Under the gentle but highly effective leadership of Hart, the Subcommittee chairman who was the only Senator present at every hearing, witnesses brought out some curious points about the privileged position of the oil industry. For example, oilmen claim that the depletion allowance is needed to stimulate domestic exploration for new oil reserves, so that an assured supply will always be available on this continent. But Treasury studies show that oil firms are allowed to claim the depletion allowance not only on domestic but on foreign operations as well. In fact, at least a quarter of the depletion claimed involves foreign holdings of U.S. companies. Thus, oil companies have a strong tax incentive to explore overseas as well as in the United States, and capital that might be invested here to give the nation its needed national security reserve is spent looking for oil on other continents.

The foreign tax credit enjoyed by the industry works much the same way. Witnesses testified that oil from the huge Middle Eastern pools costs only twelve to twenty cents a barrel to produce, including return on investment, and a big portion of the ultimate two dollars delivered cost in the United States consists of a "tax" of perhaps eighty-five cents a barrel levied by the host Mideast government.

Under present U.S. tax policies, the oil firm is entitled to deduct this entire eighty-five cent "tax," which many economists defined as simply a royalty under another name, not from taxable income but taxes payable to the United States on their overall profits. This tax credit gives oil firms another incentive to explore and operate overseas, rather than in this country.

These and other forms of favored treatment add up to a tremendous special system of public subsidies for the oil and gas industry which likes to portray itself as fiercely devoted to "free enterprise" and as fiercely opposed to "Government intervention." One result, is that oil companies pay exceptionally low Federal taxes, though the industry is one of the nation's largest, with $60 billion in worldwide sales. Senator William Proxmire, Wisconsin Democrat, has cited Internal Revenue Service figures disclosing that only about half the industry's net income is subject to Federal tax, while the average figure for all other manufacturing concerns is ninety-seven per cent. Proxmire said reports filed with the Securities and Exchange Commission revealed that in 1968 oil refineries averaged only eleven per cent Federal tax on their actual earnings while other manufacturing firms averaged nearly forty-one per cent.

"The oil industry makes the Mafia look like a pushcart operation," Representative Bertram Podell, New York Democrat, charged recently in a letter to Chairman Wilbur Mills of the House Ways and Means Committee requesting abolition of the special tax benefits for oil companies. Podell released figures which he said showed that thirteen major oil companies, whose net incomes ranged as high as $2.3 billion last year, have been paying Federal taxes *at a rate lower than a taxpayer earning $4,000*. A man with that income is taxed at a twenty-two per cent rate on the average, Podell said; the thirteen oil firms had effective tax rates on net income of no more than twenty per cent in 1968 and twenty-one per cent in 1967.

Among these thirteen super-prosperous oil companies cited by the Congressman, Sinclair paid no Federal taxes at all last year—in fact it received a $2.7 million tax credit toward future taxes; Atlantic-Richfield paid no taxes for 1967; Gulf paid less than one per cent of its 1968 net income in Federal taxes; Standard Oil of New Jersey had a $2.3 billion net income last year and paid $224 million or 9.7 per cent in Federal income taxes. The oil industry's "passionate devotion to old fashioned virtues such as greed," said Podell, "is amazing."

When the hearings opened, Senator Hart said one of his chief concerns was whether the higher cost of oil in the United States because of import barriers was hurting other

industries which depend on oil, petrochemicals being the chief example. Chewing on his cigar, the free-speaking economist, Walter Adams, said high oil prices here were "hopelessly disadvantaging" the U.S. petrochemical industry competing in world markets against producers in Japan and Germany, for example, who paid far less for their petroleum feedstocks.

In March, the chemical industry itself—which contributes $1.1 billion in overseas sales to reduce the balance of payments deficit—put out a handsome glossy booklet complaining that oil import controls threaten its competitive position. It was sponsored by DuPont, Celanese, Monsanto, Union Carbide, and other chemical giants. There are those who relish the picture of the chemical corporate giants clashing head-on with Standard Oil, Gulf, and other oil industry mammonths.

Adams told the Hart Subcommittee that the political power of the oil industry, rather than national security needs, had brought the system of oil industry props into being. The power of the oil lobby is legendary. The industry has immense financial resources. It supports some highly effective trade organizations to represent it in the nation's capital.

Oilmen are generally numbered among the prime contributors to the two national parties, though precise statistics are hard to come by. To give a few examples, Shell and Union Oil each bought $15,000 advertisements in the 1964 Democratic National Convention program book. Gulf bought a similar one in a 1965 Democratic program book, and Humble, Shell, American, and Union Oil all bought advertisements in the 1964 Republican convention book. At a recent $500 a plate Democratic dinner in Washington, I spotted lobbyists representing three of the top seven oil firms in the country.

Texas is the biggest oil-producing state, which helps explain why Lyndon B. Johnson, while he was in the Senate (and on the House side Speaker Sam Rayburn), helped defeat all attempts to reduce the oil depletion allowance. The oil industry's benefits still have a powerful and effective defender: Senator Russell B. Long of Louisiana, another large oil producing state, who is chairman of the tax-writing Senate Finance Committee and who has repeatedly defended the industry in floor speeches this year. Long undoubtedly will work to block any substantial reduction in the depletion allowance. The depletion allowance has another friend in high places: President Nixon. During the campaign, he asserted outright that he supports the allowance.

In spite of this powerful support for the current depletion allowance, which was enacted forty-three years ago, the chances that Congress will reduce it are brighter this term than ever. There is a strong movement in both houses for tax reform, and the House of Representatives has even voted a reduction of the oil depletion allowance from 27.5 per cent to twenty per cent and to prohibit its application to foreign production. The reduction faces rough sailing in the Senate, whose Finance Committee is dominated by men who like the present allowance.

The oil industry's response to all the cries of "subsidy" levelled against it is that the whole system is justified by national security needs. Unless the United States is capable of producing some three-quarters or four-fifths of its annual needs, the argument runs, the nation will be at the mercy of foreign suppliers and subject to diplomatic blackmail and manipulation. If import barriers were removed and $2 foreign oil allowed to enter, the industry claims there would be a massive drop in U.S. production as less efficient operations failed to meet the competition and went out of business.

Worse still, the oil men argue, incentives to discover new oil here, at high cost, would disappear. Reserves, already known to an eight-year supply, would drop still further. Wright of Humble Oil estimated that with import barriers removed, growing consumption coupled with declining discovery would leave the United States capable, at best, of producing only forty-six per cent of its needs by 1985, and therefore heavily dependent on imports.

The economists who testified at the first round of Senator Hart's hearings expressed considerable doubt about these assertions. To begin with, why national security requires that the United States must maintain domestic capacity at four-fifths of annual consumption is not clear. The figures, when originally set, were based more or less on the existing import levels; the computation smelled suspiciously like a simple hold-the-line device dressed up in national security clothing. The economists suggested that careful economic studies—none has ever been made, several claimed—might establish some lower figure as quite adequate.

In addition, it was pointed out that it is not necessary to maintain such a huge price differential to protect most U.S. oil production. Several witnesses argued that only a small proportion of U.S. oil production—perhaps as little as ten to fifteen per cent, or even less—needed the massive price protection established by the import quota system. The rest, it was emphasized, could compete quite well at a much lower price if inducements to waste and inefficiency which are built into the system were ended.

Senator Hart repeatedly advanced the position that if new U.S. deposits of oil are getting harder to find, while at the same time domestic needs are rising, the current system of limiting low-price imports not only raises the cost to consumers but also uses up our scarce domestic supplies faster and thereby undermines our national security position.

Would it not be cheaper, as well as more conducive to national security, Hart kept asking, to import more foreign oil now while it is available and save our liquid reserves for a crisis? Oilmen responded that for technical reasons it is difficult to save oil underground once a well has been opened. If the inefficient wells were put on a standby basis, many would never be able to produce again and the oil would be lost forever.

Hart also advanced the proposal that it might be possible, and much cheaper than the current expensive system, to develop new ways to tap oil-reserves that would permit low-cost imports while maintaining a strong national security position. For example, referring to the 600 billion barrels of good-grade potentially recoverable oil to be found in shale deposits in Colorado (that would be 100 years' supply at current consumption rates), Hart asked whether an all-out research effort to reduce the cost of getting oil from shale would not be worthwhile. At present, shale oil is too costly for commercial use, and the industry says it would be economically impossible to count on it as an oil reserve. But the Government is spending only $13 million a year for all research on the development of oil from shale and from our immense reserves of coal. Even if it ultimately cost a billion dollars—or even two or three billion—to crack the problem of producing low-cost oil from shale, coal, and tar sands, that would still be less than a single year's added costs to buyers which results from the oil import quota system. In addition, the new sources would provide an enormous reserve of oil for national security purposes.

One Senator notably unimpressed by the national security argument was Edward M. Kennedy. He challenged industry witnesses to say what proportion of U.S. oil was helping to fuel our forces in Vietnam. They did not supply the answer. Former Assistant Secretary of Interior J. Cordell Moore, who was in the audience waiting to be called as an expert witness, told me that only a fifth, or a quarter, of Vietnam petroleum supplies comes from the United States.

Kennedy—arguing that oil from Canada, Venezuela, and other Western Hemisphere sources could be depended on in a crisis—also brought out that two-thirds of current U.S. oil imports do not come from the Middle East but from Canada and Venezuela. So the oft-cited threat that Middle Eastern nations could endanger the United States by cutting off supplies was pretty much a bogeyman, he implied.

The industry's national security argument is not entirely implausible. But it is not at all convincing without detailed economic studies to back up assertions of disaster. The President's Cabinet Committee Task Force on Oil Imports, which is headed by Secretary of Labor George Schultz, is to report in the fall or winter. It should take a really hard look at the security argument rather than swallow it whole as an excuse for handing more subsidies to an already enormously rich industry.

In the meanwhile, Senator Hart and his staff have done the public a great service in making clear, as Adams of Michigan State put it in quoting the conservative economist Milton Friedman, that: "Few industries sing the praises of the free enterprise system more loudly than the oil industry. Yet few industries rely so heavily on Government favors." These are favors that cost the U.S. Treasury billions in taxes which the oil industry does not pay and billions in higher prices paid for gas and oil by American consumers.

THE BIG THICKET IS VANISHING

Mr. YARBOROUGH. Mr. President, in a penetrating and thoughtful article published in the Texas Observer of August 29, 1969, Mr. Pete Gunter states that the Big Thicket area is in danger of being destroyed.

This unique and beautiful wilderness, which is widely known for its rich and diversified plant and animal life, is vanishing at the rate of 50 acres a day. Unless action is taken immediately, the bulldozer and chainsaw will deprive future generations of the wonders of the Big Thicket.

To save the Big Thicket, I have introduced S. 4, which would create a 100,000-acre Big Thicket National Park. The bill is being supported by civil and conservation groups throughout the Nation. If America's last great wilderness is to be preserved, we must act now.

Mr. President, I ask unanimous consent that the article be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A CERTAIN TREASURE

BEAUMONT.—We pulled over to the side of the road, under the shadow of the pine trees. Ahead of us a hawk circled through the calm afternoon. Beside us stood a billboard.

"But, Lance, I thought this was supposed to be part of the Big Thicket Park."

Lance Rosier nodded sadly.

"It was. Right in the middle of it."

"You mean the Department of the Interior decided it wasn't good enough to be part of the park?"

"Oh, it's plenty good enough. It's a beautiful woods. But they're cutting it up for vacation homes, weekend places," he grimaced. "The U.S. government won't do anything about it."

The billboard (ten feet high, twenty feet long) proclaimed that this was Hoop 'n'

Holler Estates, and listed financial arrangements through which the urban tourist could participate in "life in a real wilderness." I had hoped that the announcement of plans for a Big Thicket National Park would put an end to the needless bulldozing. So much for hope.

"Drive on in," Lance grinned. "Take some snapshots. Take all you want."

A quarter-mile from the entrance sign was an air conditioned frame shack, decked out in fluttering orange plastic streamers. A sign on its roof stated, once more, the attractions of life in a "real wilderness." Behind the shack, roads had been cut, subdivision-style, through what biologists have specified as a uniquely rich botanical area. Massive brush-heaps, two to three times the height of the car, rotted beside the road. Gum trees, magnolias, yaupon trees were piled up like matchsticks.

"The man who did this is from Livingston," Lance offered. "He says he's helping the Big Thicket by bringing in jobs and people here. A month ago a man from the Audubon Society came out here and begged them not to wreck this part of the woods. The man who owns this got on a bulldozer and knocked down some more trees, just to show us. He said it was his land, bought and paid for. He even let us take a picture of him next to the bulldozer."

"Did he smile?"

"And there's another thing," Lance pointed. "Those signs all around here say No Hunting. And they hunt in here all the time."

Sure enough, a man carrying a shotgun walked across the road ahead of us. He disappeared into the brush on the other side of the road, passing under a No Hunting sign. Behind him the foundations of a new house rose incongruously.

"If the law was halfway straight, they'd all be in jail," Lance snapped.

Lance had grown up in the Big Thicket, exploring its sloughs and remote backwoods, collecting and calssifying its plants and animals at a time when few realized the area's unique value. The people of Saratoga classed him as a harmless sort of eccentric. ("Why he don't do nothin' but prowl the woods around here," one of them told me, in consternation.) Now that politicians and conservationists had come to know the frail, self-educated naturalist, and his name had appeared in countless books and articles, the folks around Saratoga were nonplussed. How do you classify a man like Lance? Why do all those folks pay him so much attention?

"There was nine units that was going to be in the park. This one—you can see what they did to it. Cuts the middle right out of the Profile Unit. Cuts it right in two. And that's the heart of the park."

Beginning in the rolling piney hills near the Alabama-Coushatta Indian Reservation, sloping southward towards sluggish Pine Island Bayou, the Profile Unit takes in every kind of topography and plant life in the Thicket. It is certainly the most inclusive, and to my mind, the most interesting, component of the proposed park.

"They timbered the Beech Creek Unit. Soon as we set it aside for the park. And they want to cut the Loblolly Unit. You know, that's the last big stand of virgin pine in Texas. Four hundred years old. Here: you want to take a picture?"

He climbed onto a toppled tree trunk and started glumly around. The Thicket was getting its publicity now. People were getting to know about it. But it was getting destroyed even faster than it was getting known.

We spent an hour taking pictures, then headed back to Saratoga. On a table on Lance's front porch lay a copy of the *Pineywoods Press* (Promoting Recreational and Industrial Growth in East Texas), which Lance was glad to loan out. Headlines in the six-sheet tabloid enthusiastically proclaimed the opening of the Hoop 'n' Holler Estates. I said goodbye to Lance and headed back to the urban sprawl of Houston. Only later was there time and inclination to read the *Pineywoods Press*. Towards the end of the article on the opening of the Estates was one lone passage which struck the imagination:

"This was a camping site of the early Spaniards. . . . They camped on the banks of Menard Creek and it was rumored that they buried treasure there near the creek which has been sought after for the last hundred years. . . . Botanists and people seeking nature in the raw, where semitropical plants grow, have long wanted to reserve some of this land for a park. There is a book on the Big Thicket which we hope to get several copies of and leave at the office."

The book referred is to Dempsie Henley's *The Big Thicket Story*, which condemns irresponsible land, oil, and lumber interests in the region. Henley's book is, temporarily, out of print, but, just for the record, I am willing to lend my copy to the Hoop 'n' Holler Estates. I am even willing to add a detailed explanation of just what priceless treasure once existed along the banks of Menard Creek, and what has recently become of it. P.G.

PENTAGON ASSISTS ITS HILL ALLIES

Mr. HATFIELD. Mr. President, an article which appeared in the Friday, September 5 edition of the Washington Post brings to mind the problem confronting the current debate on the position of the military-industrial complex in our society. Indeed, as some have suggested, perhaps the question at hand should include the military-congressional-academic-industrial complex. I commend this article to my colleagues' attention, and ask unanimous consent that it be included in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PENTAGON ASSISTS ITS HILL ALLIES

(By Bernard D. Nossiter and George C. Wilson)

The Pentagon has created a special task force headed by a key aide of Defense Secretary Melvin R. Laird to assist Sen. John Stennis (D-Miss.) and other Congressional allies in their battle against military budget cutters.

The lobbying unit is led by William Baroody, special assistant to Laird. A brief description of its work and other Defense Department plans to ward off spending reductions is given in an Aug. 26 Air Force memorandum.

The paper is signed by Joseph J. F. Clark, Air Force Deputy Director for Legislation and Investigation, Legislative Liaison.

ACTIONS UNDERWAY

The memo begins by saying that "several actions are under way" in the Pentagon to meet requests from the House and Senate Armed Services Committees "for additional materials to be utilized during floor debates" on the bill authorizing procurement of weapons systems. This $20-billion measure is now on the Senate floor under the stewardship of Stennis.

The Clark memo, directed to Air Force Secretary Robert Seamans, says that Baroody "heads up one task force to provide material to Chairman Stennis to refute statements and arguments being made by various senators in their efforts to reduce or eliminate (Defense Department) programs. The C–5, AMSA, and F–15 Air Force programs are all involved in this effort."

The C–5A is the controversial cargo plane, AMSA is the newly proposed manned bomber and the F–15 is a new fighter.

The memo continues:

"In addition, we have been asked to submit a point-by-point analysis of the statements made by Sen. (William) Proxmire (D-Wis.) in support of his amendment to eliminate money in (Fiscal Year) 1970 for the fourth squadron of C–5 aircraft. This analysis will serve as a basis for response by Chairman Stennis or other Armed Services Committee members during the floor debate which will resume next week."

Baroody and an Air Force colonel visited Proxmire on Wednesday in an effort to explain two Pentagon studies suggesting that more C–5As would waste money.

The Clark report then notes that T. Edward Braswell, chief of staff of Stennis' Armed Services Committee, has asked for a "detailed breakout" of the finances involved in the A–7D program. This is an attack plane made by Ling-Temco-Vought that is costing more than expected.

The memo reports that Lt. Gen. George S. Boylan, Jr., Air Force deputy chief of staff for programs and resources, is preparing this material and it "will be utilized by the Committee in determining its future course of action on the issue."

Clark also describes requests for rebuttal material from the House Armed Services Committee. A staff member, Earl Morgan, "has asked for a detailed analysis and rebuttal" to several documents, including the report on military spending prepared by Members of Congress for Peace Through Law, a bipartisan group led by Sen. Mark Hatfield (R-Ore.), and the "Fact Book" of the Democratic Study Group, a caucus of House liberals, the memo says.

Clark concludes that this rebuttal material "is to be provided to the House Armed Services Committee for use during floor discussion of the procurement bill in that body."

FUEL FOR REBELLION

The hard evidence of such a close link between Stennis and the Pentagon, which his committee is supposed to ride herd on, is expected to freshen the Senate rebellion on military issues.

Stennis, recognizing the military money bill was in for trouble this year, tried to preempt the opposition by making cuts in the Armed Service Committee. But neither this move nor the recent cuts made by Laird knocked out the Senators trying to revamp the Pentagon Fiscal 1971 budget.

Often during the military debates this year, Stennis has been taking on the opposition alone. Seldom has the ailing Sen. Richard B. Russell (D-Ga.), former chairman of the Senate Armed Services Committee, taken the floor to help.

STENNIS' WEAKNESS

Also, Stennis this year is without the services of the long time director of the Armed Services Committee, William H. Darden, appointed as a judge in the military appeals court. His departure, according to the Senate insiders, has contributed to Stennis' weakened condition as committee chairman.

Baroody, who worked with Laird in the House on military matters, said last night he does not consider his help to Stennis as a task force operation.

Baroody said Stennis had asked Laird for his views on the questions posed by the Senate amendments. As a special assistant, Baroody said the job of supplying the information came to him.

"It's perfectly legitimate," Baroody said, for a Senator to ask the views of the defense secretary on military questions, adding that he had briefed critics like Proxmire as well as supplied information to Stennis.

To respond to the requests for military information, Baroody said he has added an Air Force colonel and a Navy commander to

his original staff of one Army colonel special assistant, a civilian aide and two secretaries.

Baroody said he has not written any speeches for senators to give the Pentagon's side of the story.

Outside the Pentagon itself, military contractors are helping their allies in Congress with speeches. At least one contractor has helped answer the questions one senator posed to the Air Force on the AMSA bomber, for example.

CONCLUSION OF MORNING BUSINESS

Mr. BYRD of West Virginia. Mr. President, is there further morning business?

The PRESIDING OFFICER. Is there further morning business? If not, morning business is closed.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent that the Senate proceed to the consideration of Calendar No. 281, S. 2546, the unfinished business.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and research, development, test, and evaluation for the Armed Forces, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

The PRESIDING OFFICER. Is there objection to the request of the Senator from West Virginia?

There being no objection, the Senate proceeded to consider the bill.

Mr. BYRD of West Virginia. Mr. President, under the order of yesterday, the able senior Senator from Indiana (Mr. HARTKE) was to be recognized for a period not to exceed 30 minutes immediately upon the laying down of the unfinished business. I ask unanimous consent that, notwithstanding that order, we have a brief quorum call.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. HARTKE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE F-14, THE EDSEL OF THE SKY

Mr. HARTKE. Mr. President, more than 2 weeks ago, on August 13, I asked the Secretary of Defense to release a study which challenges some of the assumptions behind the Navy's request for a new fighter plane, the $25 billion F-14. That study, a cost comparison between land- and sea-based airpower, has not yet been released: I have been advised only that the matter is "receiving attention."

The fact is, of course, that doubts and questions surrounding the F-14 have been receiving a considerable amount of attention lately, especially inside the Pentagon. Despite the efforts of top Navy officials to stifle dissent, objections to the F-14 continue to be heard from the Office of the Secretary of Defense and from inside the Navy itself. As the Senate prepares to pass judgment on a new authorization request for the F-14, we should not be misled by official statements which try to hide or obscure these internal objections. In keeping with my promise to continue discussion of the F-14 until all relevant information has been made available, I will list some of these internal objections, and renew my request that they be made a part of the public debate.

First, I believe that the Senate should be given free access to a development concept paper, known as DCP 19, which clarifies the limitations of the F-14 as an air superiority fighter. This document, a study of the options for improving our air combat strength, apparently makes the candid judgment that the early models of the F-14 will be generally comparable in air combat performance to the F-4, a much older and much cheaper plane which the Navy is using today.

Former Secretary of the Navy Paul Ignatius also used the word "comparable" in judging the fighter capabilities of these two aircraft, in his testimony before the Mahon committee last year. Before we accept the claim that the F-14 will be, as alleged, a superior fighter, I believe that this revealing development concept paper should be made availabe to the Senate.

Second, I am requesting release of cost estimates on the F-14 which were recently made in the Office of Systems Analysis in the Department of Defense, and which were contained in a recent letter from that Office to the Secretary of Defense. These estimates, as I understand, range high above official Navy estimates, and even exceed some of the highest unofficial estimates which we have seen. Steadily rising costs, of course, have characterized the F-14 program since its inception. When the F-111B was canceled in favor of the F-14 in 1968, because of rising costs, Secretary of the Navy Ignatius said that the costs of the new plane "are expected to be essentially the same as those required to complete the F-111B program." Since that time the Navy has admitted to unit costs for the F-14 that range from $4 to $6 million higher than those for the F-111B. More recently, two of my Senate colleagues, the distinguished chairman of the Armed Services Committee, the Senator from Mississippi (Mr. STENNIS) and the Senator from Nevada (Mr. CANNON), have judged that the unit cost of the F-14 will go as high as $15 million per copy. The Office of Systems Analysis letter to which I have referred puts the total cost per plane even higher—closer to the $19 million range. In light of the fact that the F-4 costs us only about $3 million per copy, I find it incredible that the Navy plans to replace the F-4 with a "comparable" fighter which will cost at least five times as much.

Third, I feel that the Senate should be told about a major programs memorandum, dated June 4, 1969, from the Secretary of Defense to the Navy and the Air Force. This internal document, known as the MPM on Tactical Air, directs the Air Force and the Navy to assume a constant budget for tactical air and within that constraint, to develop aircraft force mixes which will emphasize the capability to perform two missions: Air-to-air close combat under visual conditions and air-to-ground close support against armor. Since the F-14 is designed for none of these purposes, but instead to counter a dubious Soviet bomber threat with radar missiles, it is not surprising that top Navy officials have objected to the MPM and have tried to exclude it from the public debate over the F-14. Since I believe that both economy and mission requirements are important aspects of our debate, I ask that the MPM on Tactical Air be made available to the Members of the U.S. Senate.

Fourth, and along the same lines, I feel that the Senate should know more about another aircraft design which would be better suited to perform these important tactical airpower missions. Accordingly, I am asking that a study conducted in the Office of the Secretary of Defense, known as the FX-X study, be made available to the Senate. The title of this study, "Feasibility Study of Alternative High-Performance/Low-Cost Fighter Designs—FX-X and VFX-X," tells us something about its content. It suggests building a genuine air superiority fighter—cheaper with high performance, and better suited to the needs of the Navy than the high cost, lower performance, hybrid design F-14. The unit cost of the proposed FX-X, according to this study, would be a mere $3.2 million. Since this study presents important options and discusses serious alternatives to the F-14 program, and since those options and alternatives have not been adequately discussed in public until now, I ask that this feasibility study be released to the U.S. Senate.

Fifth, and again with reference to the need for alternative design to the F-14, I believe that the Senate debate on tactical airpower should not ignore the expressed desires of the fighter pilots themselves, who are uniquely qualified to evaluate aircraft capabilities from a practical perspective. Accordingly, I am requesting that the proceedings of the Navy Fighter Pilot's Symposium, held for the last three summers in Coronado, Calif., be released to the Senate. At these meetings, dissatisfaction among Navy pilots with the F-14 became such an embarrassment to the top Navy brass that tight restrictions were placed on all public comment with regard to the substance of the discussions that took place. But such widespread dissatisfaction at the operational level cannot be completely suppressed, and strong evidence of internal dissent continues to be heard. An unsigned letter from a Navy

combat pilot in a recent issue of Aviation Week magazine typifies this dissent. This concerned Navy pilot likens the F–14 to the disastrous F–111B, as "another obese aircraft with a multimillion-dollar price tag, flapping wings, and a back seat driver." The same letter goes on to list all of the qualities of a superior fighter plane and finds them to be incompatible with those of a fleet air defense interceptor, concluding that "the defensive role of the interceptor is almost completely disassociated from the offensive role of a tactical fighter."

Sixth, I am asking that the Department of Defense make available an internal study of one compromise alternative to blanket approval of the F–14 program.

Press reports indicate that the Office of Systems Analysis in the Office of the Secretary of Defense has recommended that the early "A" version of the F–14 be scrapped and that the remainder of the program be stretched out approximately 18 months. These recommendations apparently have the partial backing of the Deputy Secretary of Defense, Mr. David Packard. This alternative is of particular interest to the Senate because it represents a compromise position between scrapping the F–14 concept altogether and blank-check approval. In my remarks on August 13, I mentioned that such a restriction on the procurement of "A" model F–14's might be a balanced approach for the Senate to take. And these Office of Systems Analysis recommendations will be invaluable to our consideration of the matter. Accordingly, I request release of the terms of this compromise proposal to the Members of the U.S. Senate.

Seventh, and last, I would like made available to the Senate the "Air-to-Air Combat Simulation Computer Analysis" performed by work unit three of the Anti-Air Warfare Branch of the Naval Air Development Center at Johnsville. That is document No. FO 180203.

Some of these documents which I have listed have been seen by Members of the Senate. Indeed, most of them are familiar to the small community of Senators who have taken an interest in the problems surrounding the F–14. But I feel that the Senate at large deserves free access to all of this information, as a supplement to the incomplete and somewhat misleading testimony which we have heard so far. For this reason, I have written a letter to the Secretary of Defense, Melvin Laird, requesting that all of this material be made available, upon request, to Members of the Senate.

My own doubts about the F–14 have only been intensified by the heavy secrecy which surrounds most of these internal documents. What is the Navy trying to hide? Perhaps the Pentagon will be more forthcoming if it can be persuaded that my purpose is not hostile to naval airpower as such.

I fully recognize the Navy's need for a new fighter plane: The F–4 is now 15 years old. In addition, I fully recognize the disadvantages of commonality: The special requirements of naval airpower cannot be met through simple modifications of Air Force designs. Furthermore, I recognize the significance of large numbers of aircraft—the combat situation affords the opportunity to overwhelm as well as to outdesign the enemy. But I feel that none of these requirements are adequately met by the proposed F–14, or at least not by the heavy-engine "A" model of the F–14. The Navy needs a new fighter—not another cumbersome platform for an ill-conceived missile system. The F–14 was designed primarily to carry six 1,000-pound Phoenix missiles—and the resulting size, weight, and configuration of the aircraft have clearly compromised its capabilities as a fighter plane. The problem of numbers, of course, is related to size and cost. If the Navy wants to build and fly a large number of carrier-based fighters, it should be thinking more seriously about smaller planes with lower unit costs. At $15 million a plane, the cost of simply replacing all of our Navy and Marine F–4's with F–14's will be about $12 billion, and if the cost of weapons, maintenance, and operations are added in, the program will go to an astonishing $25 billion mark in the next 10 years. The Soviets have been able to produce large numbers of fighters because they have managed to keep unit costs down—it has been estimated that the Mig–23, the new hot Soviet fighter, will cost little more than $3 million a copy. The Mirage–III, the French fighter which performed so well in the 6-day war in the Mideast, costs under $2 million. Only because we insist upon loading expensive missile and avionics systems onto our planes—"gold plating" them, as it is called—do we find it hard to afford a superior tactical air capability.

Goldplating is hard on performance as well as on budgets. A secret Pentagon study—one which I did not list above because it has already been well publicized—has indicated that our country has wasted billions of dollars on complicated electronic gadgets which actually impair the combat effectiveness of our aircraft. The original cost of these gadgets is exorbitant, and operating costs can run more than 12 times as high as procurement costs over a 10-year period. Overall, the costs for modern fighter avionics can generally be estimated at an incredible $7,600 per pound.

Actual performance, as well as economy, is sacrificed on this altar of technological sophistication. The Pentagon report to which I refer indicates that air-to-air missiles costing as much as $50,000 apiece are actually less effective than 100 rounds of ammunition, costing a mere $56, fired from the fixed-sight guns of an old Korean-war vintage F–86. Airborne radar systems have been notoriously overrated, as well as overpriced. Experience in Vietnam has confirmed the limited value of radar detection. There has not been, to date, a single nonvisual kill in all the years of air-to-air combat over Vietnam. And ironically, these radar detection systems which have trouble locating enemy planes send out powerful signals which often give away the location of the plane using the radar.

The Phoenix, a radar missile originally developed to counter a nonvisual bomber threat, suffers from all of these ills and more. It is five times as complicated as any radar missile in operation today, much heavier, far more difficult to accommodate on a high performance aircraft, and preposterously expensive—$400,000 per missile. The Navy tells us that these missiles can easily be jettisoned from an F–14 in flight if high combat performance is desired in an emergency but the thought of casually dropping six $400,000 missiles into the sea offers me very little comfort.

In fact, most of the shortcomings of the F–14 can be traced to its primary armament—the Phoenix missile. Carrying these heavy missiles, the F–14 is an ugly hybrid weapon—the speckled progeny of a marriage between two incompatible ideas. As a multimillion dollar aircraft, the F–14 will be capable of doing many things, but none of them very well.

The seeds of this mismatch between fighter and missile were sown in the mid-1950's when our Defense Department sought to develop aircraft capable of intercepting enemy nuclear bombers intent upon the destruction of our continental bases and our carrier task forces at sea. To meet this projected Soviet bomber threat we designed a very large, radar-equipped, missile-armed airplane. This plane was designed to hover above the ocean and protect the fleet by sending a long-range missile over the horizon to kill the intruders before visual contact had been made. This system was named the Eagle-Missileer.

A fresh look at the problem by a new administration in 1960 brought a reorientation of our strategic thinking, and a change in the primary mission of naval airpower. The vulnerability of the carrier task force to the submarine threat and a new emphasis on nonnuclear warfare capabilities led to abandonment of the premise that the carrier task force against the mainland of Europe in a nuclear war. These changing circumstances, plus a cost-effectiveness examination, were more than enough to kill the Eagle-Missileer program in 1960.

But advocates of this missile system inside the Navy waited in the wings for an opportunity to hang a modification of the Eagle missile on another airplane, and their opportunity came with the TFX. A fleet air defense missile system was quickly built onto the Navy version of the TFX, the F–111B. When this new weapon system arose from the ashes of the Eagle-Missileer, it was only appropriate that it should be named "Phoenix."

With the demise of the F–111B, the already outdated advocates of nuclear war fleet air defense again needed a new plane on which to hang their Phoenix missile. By overdrawing the Soviet bomber threat that has never really materialized, these people were able to launch their new missile platform in the guise of the F–14.

The primary role of tactical airpower in the 1960's and the 1970's bears little relation to the vision of nuclear bomber war which grew out of the 1950's. Vietnam and the new realities of the balance of terror have combined to demonstrate the importance of conventional close-

combat fighter capabilities, and such capabilities are compromised when an airplane is forced to carry heavy radar missiles such as Phoenix. To the degree that the F–14 can perform both the fighter and the Missileer role, it will experience all of the difficulties and the confusions which plagued the multipurpose F–111B.

Perhaps the most eloquent critique of this confused F–14 concept comes from a Navy man who spoke his mind before the plane became a sensitive political issue. Writing in the Naval Review, Capt. C. O. Holmquist, of the Naval Air Systems Command, addressed himself to the problem of building a multipurpose aircraft:

Modern technology and the wonders of avionics will certainly allow us to combine all of the functions and weapons of an all-weather attack aircraft, a fighter, and an interceptor into one aircraft. However, such an airplane would be expensive, complicated, difficult to maintain, and training pilot and crew would present formidable problems. More important, if we allow the enemy the same technology, he can build single-purpose aircraft which would be superior to our multi-purpose aircraft in each of the missions it performs.

Captain Holmquist concludes his article by listing some of the things he would like to see in the Navy's future aircraft fighter plane; and he hints at the reason why we might not get them:

Our experience tells us that simplicity, reliability, maintain-ability, light weight, small size, and low cost are the guide-lines we should follow in the future. Our expanding technology is a strong force to drive us away from most of these objectives.

In conclusion, the F–14 may deserve our consideration as a flying laboratory. A $15 million plaything for the R. & D. men in the Pentagon and the technical dilettantes in private industry. But as a weapon, it deserves more critical review.

Our critical review of the F–14 will be aided by release of the seven documents which I have listed above. I am glad that responsible officials and officers inside the Pentagon are objecting to the folly of the F–14. And I hope that their objections will be heard and heeded by the U.S. Senate.

THE C–5A

Mr. GOLDWATER. Mr. President, during the debate on the provisions of this bill for the funding of the C–5A airplanes, I have several times raised the question of the leakage of important and classified information to unauthorized persons outside of the Department of Defense.

A major instance of this appeared in print on August 31 of this year in an article entitled "C–5A Limitations Data Withheld by Pentagon" in the Washington Post. This newsstory charged that the Pentagon was withholding from Congress two internal memorandums that suggested the Government would waste money buying any more C–5A airplanes.

This newsstory, written by Mr. Bernard D. Nossiter, said the documents in question were prepared by the Defense Department Systems Analysis Division. The article goes on to say:

Both, prepared by the Systems Analysis for the Secretary of Defense, *are classified*. However, their principal finding, stripped of any security matters, have become available to the Washington Post.

Now, Mr. President, I find this a very disturbing state of affairs. I want to make it clear that while I am not accusing the Washington Post nor Mr. Nossiter of any kind of a security breach, I am directing the attention of the Senate to the fact that there is a systematic leakage of classified documents from persons inside the Department of Defense.

I am willing to acknowledge the Washton Post's assertion that the reports referred to in this August 31 newsstory were "stripped" of any security matters; however, I must also acknowledge the fact that we have only the writer's word for the state of affairs. Even so, this does not alter in my mind the gravity of a situation in which a city newspaper is provided with Defense documents of a classified nature. The Washington Post states flatly that both reports were classified. This being the case, I would have hoped that the newspaper would have confided in its readers who, either in the newspaper office or in the Pentagon, decided what parts of those documents were or were not of a security nature. I, for one, am not willing to accept any such casual published assurances that no serious breach of security has been committed. It stands to reason that if classified material can be leaked to the Washington Post, it can also be leaked to other persons. I submit that any Defense Department official who would leak a document marked classified, or any part thereof, for purposes of publication certainly would not hesitate to leak the same information for other purposes.

Mr. President, I have outlined here my concern over this situation, and I now wish to formally urge the proper authorities in the Department of Defense to ferret out the person or persons responsible for leaking classified documents and dismiss him from Government service immediately. And, I might say, I do not believe that any prolonged investigation will be required to find the fountainhead of this classified material. I believe the source of it is perhaps fairly well known to the Department officials, and I further believe that action could and should be taken immediately

Now, Mr. President, I should like to return to the substance of the Washington Post article and the contention that the Government would waste money buying more C–5A airplanes. I ask unanimous consent to have printed in the RECORD the full text of the Washington Post article, together with a point-by-point commentary of my own.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

C–5A LIMITATIONS DATA WITHHELD BY PENTAGON

(By Bernard D. Nossiter)

The Pentagon is withholding from Congress two internal memoranda that suggest the government would waste money buying any more C–5A airplanes.

The documents, prepared by the Defense Department's Systems Analysis Division, could, if released, have a major impact on this week's Senate debate on the big cargo planes.

When senators return from their vacation on Wednesday, the pending order of business is an amendment by Sen. William Proxmire (D-Wis.) to the bill authorizing funds for the military in the budget year that began on July 1. The Proxmire amendment would knock out $533 million that the Pentagon wants to begin purchasing another squadron of 23 C–5A's.

It would also require the General Accounting Office to determine whether additional purchases are the cheapest way of obtaining the airlift capability that the Pentagon seeks.

A vote could come at the end of the week, climaxing a strong challenge by Proxmire and others to the ballooning costs of the big Lockheed craft.

The two documents that Proxmire has been requesting to no avail since Aug. 22 are the "Major Program Memorandum for Strategic Mobility Forces, June, 1969" and another memo dealing exclusively with the C–5A that is dated Nov. 7, 1968.

Both, prepared by Systems Analysis for the Secretary of Defense, are classified. However, their principal findings, stripped of any security matter, have become available to The Washington Post.

BROAD STUDY

The June paper discusses a wide array of transport along with the C-5A. It was prepared as part of an annual survey, a procedure inaugurated by former Defense Secretary Robert S. McNamara, over the Pentagon's force levels for the next five years.

The document's central conclusion is that the most efficient, least costly transportation network to support the two major and one brushfire wars for which the military wants to be prepared consists of the existing three squadrons (58) C-5As plus smaller carriers like the C-141 and modern freighters.

The conclusion rests on this argument: The C-5A is so costly to build and operate that it can be justified only if it is used in the first 10 days of a conflict. Thereafter, the smaller C-141s and sea transport can do the job far more cheaply. However, the Army's ability to mobilize divisions and their equipment is so limited that it probably could not fill more than the 58 existing C-5As and the C-141s inside of 10 days.

CHEAPER BY SEA

In other words, by the time additional C-5As were loaded, more than 10 days would most likely have elapsed, and by then ships could do the job as effectively and for much less.

A parallel finding holds that the C-5A is no longer an economic replacement for the C-141, despite its larger size. The paper contends that if costs had been held to the level originally estimated, this would not be true. But the escalation in costs has wiped out the bigger carrier's advantage.

Finally, the document argues that four squadrons of C-5As would give the United States a lifting capability over and above the Pentagon's requirements.

The paper, written last June, does not directly attack the fourth squadron, the issue before the Congress, although its logic indicates that this extra force is unneeded as are the fifth and sixth squadrons the military ultimately wants.

PART OF INVENTORY

According to those in a position to know, Systems Analysis was directed this spring to assume that the fourth squadron was already part of the Pentagon's inventory.

A contract to buy the fourth squadron was signed last January, a few days before the Nixon administration took office and seven months before the Senate debate on the money for this agreement began.

Last fall, however, Systems Analysis was not under such an inhibition and prepared a paper dealing directly with the wisdom of procuring a fourth squadron. The Nov. 7 document observed that costs had risen far

above original estimates and questioned whether it was wise to go forward.

The paper concluded that the military could get the same airlift ability—and save vast amounts—by employing its existing three C–5A squadrons more intensively.

USE LIMITED

The memo observed that the Air Force intends to fly its planes only a limited number of hours each day, but if extra crews were called up from the Air National Guard or the Air Force Reserve, the carriers could be used more productively.

Over 10 years, the cost of extra crews was calculated at one-seventh the cost of building and operating a fourth squadron.

Moreover, if the military wanted the capability of six squadrons, it could achieve this with extra crews to operate both C–141s and the existing three squadrons of C–5As more intensively. Over 10 years, this technique would be more than $2 billion cheaper than buying and running three more C–5A squadrons.

The June document also brought out some limitations on the C–5A. It calculated that one squadron of the big carriers could deploy and support half an Army division for from 10 to 25 days, depending on the distance the squadron must travel. After that, the food, equipment and other supporting requirements would limit a squadron to less than half a division.

TWICE THE CAPACITY

The paper pointed out that over a period of 20 days, and for the same capital and operating expense, ships could carry twice as much to Europe as C–5As. Over 50 days, at equal cost, the ship advantage is five times as much.

To Asia, at equal cost, ships could carry 1.5 times as much as the planes in 30 days and four times as much in 40 days.

On the Europe run, the point at which ship transport becomes cheaper than planes is 14 days; for Asia, 28 days.

If Congress cuts off the C–5A program at 58 planes, the outcome would severely hurt Lockheed profits. Costs have risen so fast that the Air Force estimates the company would lose $671 million on the deal. Thanks to the repricing or "golden handshake" clause, Lockheed would appear to recover most if not all of this sum only if the three additional squadrons are purchased and the Pentagon generously prices the needed spare parts.

Testimony before Congress indicates that the cost of six C–5A squadrons totaling 120 planes and their spare parts has risen more than $1.9 billion, from an original estimate of $3.4 billion to $5.3 billion. The Pentagon, however, acknowledges only an overrun of $1.5 billion.

COMMENTS ON A WASHINGTON POST ARTICLE OF AUGUST 31, 1969, ENTITLED "C–5A LIMITATIONS DATA WITHHELD BY PENTAGON"

Point: "The June paper discusses a wide array of transport along with the C–5A. It was prepared as part of an annual survey, a procedure inaugurated by former Defense Secretary Robert S. McNamara, over the Pentagon's force levels for the next five years.

"The document's central conclusion is that the most efficient, least costly transportation network to support the two major and one brushfire wars for which the military wants to be prepared consists of the existing three squadrons (58) C–5As plus smaller carriers like the C–141 and modern freighters."

Comment: The June paper referenced is the Major Program Memorandum (MPM) on Mobility Forces, June 11, 1969. The MPM does not discuss supporting two major wars and a contingency simultaneously and does not conclude that the least cost mobility force to meet our deployment objectives is three C–5A squadrons plus the C–141s and modern freighters.

The mobility forces are designed to support reinforcement of Europe and the Pacific. A minor contingency is not considered during this deployment period. This is not even a two *major* war strategy. The European reinforcement is a response to a crisis created by Warsaw Pact forces. In this scenario the 4⅓ divisions in Europe would be reinforced by (a) flying in troops to marry up with the 2⅔ division sets of prepositioned equipment, (b) deploying additional ground forces and their equipment from the U.S. and (c) filling out the support units and opening the resupply pipeline. Additional tactical fighter/attack squadrons would also be deployed. If we had to deploy these additional ground forces to Europe in a reasonably short time, this would require the use of 4 C–5A squadrons.

For the Pacific we plan to be able to deploy a significant ground force and fighter/attack squadrons.

By designing and sizing the mobility force to support these deployments we build in the ability to react to larger than expected threats in either area singly. The MPM concluded that the military airlift force needed to support these deployment objectives was 4 C–5A and 14 S–141 squadrons.

Unrelated to detailed plans which involve many different force options and assumptions, the airlift capability produced by the MPM recommended force of 4 C–5A and 14 C–141 squadrons can be illustrated by the fact that we will be able to rapidly deploy from the U.S. ground forces to Europe and to Korea.

Point: ". . . the Army's ability to mobilize divisions and their equipment is so limited that it probably could not fill more than the 58 existing C–5As and the C–141s inside of 10 days."

Comment: At the outbreak of hostilities in Korea, we began deploying Army forces within 10 to 15 days from Japan and the U.S. These units were deployed even though they were understrength and underequipped. Further, we plan to maintain General Purpose Forces in a readiness condition to use the improved deployment capabilities which we have been building.

To date, all of our deployments of General Purpose Forces have been constrained by our airlift capability, even though the only ground forces eligible for airlift were the "light" divisions, i.e., the airborne and infantry divisions. With the C–5A in the airlift force, *all* Army divisions can be airlifted. Therefore, we expect that future deployments will also be constrained by our airlift capability.

Point: ". . . the C–5A is no longer an economic replacement for the C–141, despite its larger size."

Comment: In providing the recommended airlift force of 4 C–5A and 14 C–141 squadrons, the C–5As are not being procured as a replacement for the C–141 but to provide an outsize capability and other special characteristics now lacking in our strategic airlift force. With the current projected costs of the C–5A, it would not be economically attractive to replace *existing* C–141 squadrons with additional C–5As on an equal ton-mile basis.

If we wanted to *increase* the airlift capability beyond 4 C–5A and 14 C–141 squadrons by either buying C–5As or C–141s, the least cost way of getting this increase would be by adding C–5As. This is true because one C–5A squadron is about 4 times as productive as one C–141 squadron and is less than 2 times as expensive to operate.

Point: "According to those in a position to know, Systems Analysis was directed this spring to assume that the fourth squadron was already a part of the Pentagon's inventory."

Comment: This is simply not true. The Secretary of Defense directed Systems Analysis to make a complete review of the C–5A program. The conclusion from this critical review, was that 4 C–5A squadrons were adequate to meet our deployment objectives but raised doubts about the need for the 5th and 6th Squadrons.

Point: "Last fall, however, Systems Analysis was not under such an inhibition and prepared a paper dealing directly with the wisdom of procuring a fourth squadron. The Nov. 7 document observed that costs had risen far above original estimates and questioned whether it was wise to go forward.

"The paper concluded that the military could get the same airlift ability—and save vast amounts—by employing its existing three C–5A squadrons more intensively.

"USE LIMITED

"The memo observed that the Air Force intends to fly its planes only a limited number of hours each day, but if extra crews were called up from the Air National Guard or the Air Force Reserve, the carriers could be used more productively.

"Over 10 years, the cost of extra crews was calculated at one-seventh the cost of building and operating a fourth squadron.

"Moreover, if the military wanted the capability of six squadrons, it could achieve this with extra crews to operate both C–141s and the existing three squadrons of C–5As more intensively. Over 10 years, this technique would be more than $2 billion cheaper than buying and running three more C–5A squadrons."

Comment: Last fall a review of the C–5A procurement level was made after it became quite clear that the costs were increasing well above the programmed ceiling costs. The central conclusion of that review was that by using the air crews and maintenance personnel of Reserve C–5A associate units we could increase the daily utilization rate from 10 flying hours per aircraft per day to 15. Obviously if this were possible we could accomplish a given deployment task with significantly fewer aircraft.

However, we recognized at that time that attainable utilization rates depended on factors other than the number of available aircrews and maintenance crews. Such factors as weather, the ability of enroute bases to support massive deployments, and the loading and unloading of the aircraft also impact attainable utilization rates but are difficult to analyze. Because of the uncertainty of the impact of the other factors on attainable utilization rates and required C–5A force size the Deputy Secretary of Defense decided not to change the program at that time. The Tentative Record of Decision DPM, issued in January 1969 kept the C–5A force at six squadrons.

To help in understanding the impact of these more complex factors, we asked in November 1968, the Special Assistant to the Chairman of JCS for Strategic Mobility (JCS–SASM) to work with us analyzing the problem. Specifically we asked that a computer simulation model (SOAR—Simulation of Airlift Resources) developed jointly by the JCS and the Air Forec to study the use of airlift aircraft in large scale deployments be used to study C–5A utilization roles. These studies have been in progress since January 1969 with active participation by OSD(SA), JCS(SASM) and the Air Staff.

The studies are not complete but preliminary results indicate that between 10 and 12 productive flying hours per day can be expected with the present enroute base structure. Even this utilization rate assumes a very efficient level of management which may be possible in a computer simulation but unattainable in actual practice. As a result of these studies the C–5A and C–141 utilization rate used in the overall analysis for the Mobility Forces MPM was 10 productive flying hours per aircraft per day. Using

this utilization rate our analysis showed that to meet our objectives in Asia and Europe we should have an airlift force of 14 C–141 and 4 C–5A squadrons.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The assistant legislative clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE C–5A

Mr. PROXMIRE. Mr. President, today, I want to clear up some of the misconceptions about my amendment to the military authorization bill on the C–5A.

FIRST 58 PLANES WILL BE BUILT

My amendment does not affect the first 58 C–5A planes to be built. They are authorized. They are funded. These 58 planes form the first three squadrons.

My amendment reaches only planes numbered 59 through 81, or the fourth squadron. My amendment would delete the $533 million in the bill—this year's downpayment for the fourth squadron—until a GAO study answered crucial questions of fact about its costs and its need. Armed with the facts, I believe that the Senate itself could then make a far better judgment than it now can with so many facts in dispute or unclear.

TIME NO PROBLEM

There is no reason to be rushed into authorizing the fourth squadron. Time is no great problem.

Only six planes have been built. All of these are research or test planes. Two more research and test planes are scheduled for delivery in the next 60 days.

But the first production planes are not due until December 1969. They are already 6 months late. Provided there is no further slippage, the remaining planes in the first 58 will be delivered at the rate of two to three per month over the next 2 years.

That is one reason to support my amendment to delete the funds and postpone authorization until the GAO has had 90 days to complete its findings of fact about the airplane.

NOT A TROOP-CARRYING PLANE

The C–5A is not a troop-carrying plane. Its purpose is to carry the "outsized" cargo for an armored division—the tanks, cannons, and helicopters which other planes cannot carry.

The idea that we need this plane to get troops to Europe or from Europe is just not true. They can and should be carried by existing or additional troop-carrying planes such as the C–141 or the 747.

For carrying troops, the 747 wins hands down. I hope no Senator intends to oppose this amendment on grounds that the C–5A is needed to carry troops. That is false. That is untrue.

ONLY 40 PLANES NEEDED FOR OUTSIZED EQUIPMENT

The single unique purpose for the plane is to carry the outsized equipment for an armored division, or approximately 35 percent of an armored division's equipment. The Pentagon planners have specific missions which these planes are to perform.

The facts are that only 40 C–5A's are needed to carry the outsized equipment for the various contingencies and missions for which this plane was authorized and developed.

That is not classified. It is a public fact. It is contained in the Whittaker report—page 3. That report makes clear that the outsize requirements necessitates the procurement of only 40 C–5A aircraft.

We have authorized 58. They will be built. Why do we need to rush into authorizing $533 million as a down payment on the $941 million these additional 23 planes will cost? I wish to make clear that these planes will not cost $533 million but almost a billion dollars. Why do we need 81 outsized planes when the Air Force study indicates that only 40 of the total number of C–5A the Air Force wants are needed to meet the "outsize" cargo requirements?

STUDIES OPPOSE FOURTH SQUADRON

Two major studies have been made by the Pentagon on the need for this plane. Each of them clearly questioned the need for the fourth squadron.

The first study, a November 1968 study on the economics of the plane, concluded that a more intensive use of the first 58 planes would make the additional planes unnecessary.

The second study, made in June 1969 concluded that the fourth and subsequent squadrons of the plane were cost ineffective. When the funds for the plane were discounted, it was found that the job could be done better and cheaper by other combinations of planes and ships than the additional capability the fourth squadron of the C–5A would provide.

These two studies aimed at the question of whether we need the fourth squadron were both "negative."

And, of course, the first planes of the fourth squadron are not scheduled for delivery until almost 2 years from now. Those are the facts.

FOURTH SQUADRON TRIGGERS REPRICING FORMULA

Apart from not needing the fourth squadron of the plane for the mission the planes were developed to perform, the purchase of the fourth squadron also triggers the unconscionable provisions of the C–5A contract. When the 59th plane is authorized, the scandalous "repricing formula" and "escalation clauses" and "reverse incentive" provisions of the contract go into effect.

They make it possible for the contractor to recoup the huge excess in costs we thought other provisions of the contract required the company to absorb.

The effects of the repricing provisions are that the unit costs of the additional planes will be almost precisely the same as the first 58 planes. That is an unheard of situation.

For Lockheed Aircraft's part of the production—General Electric provides the engines—the unit costs of the second run of 62 planes will actually cost more than the first production run of 53 planes.

That is a result unknown in industrial history. If these provisions take effect, all the textbooks on the theory of contracts or on industrial production will have to have a new chapter entitled "The C–5A Phenomenum."

This contract is a fiscal disaster.

When the fourth squadron is authorized, all the provisions which make it a fiscal disaster are triggered. Senators should know that.

GAO STUDY

I have asked for a GAO study and investigation of the facts because of these matters.

We will have 58 planes. At stake are only planes Nos. 59 to 81.

Provided there is no further slippage, plane No. 58 will not be delivered until the middle of 1971, or almost 2 years from now.

We will have the 40 planes needed to carry all the outsized equipment this plane was uniquely designed to move.

Troops can be carried more efficiently by other planes. No one denies that. Not even the Air Force denies that. The idea that we will need this plane if we withdraw troops from Europe or elsewhere is irrelevant.

The C–5A is not a troop-carrying plane. If we need fast deployment of troops, buy the 747. With respect to the question of carrying troops the C–5A is like the flowers that bloom in the spring. It has nothing to do with the case.

If we buy the fourth squadron, it triggers the scandalous clauses of the C–5A contract. Buying the fourth unneeded squadron triggers those clauses of the contract which make it a fiscal disaster.

The two studies of the Office of Systems Analysis both conclude that the fourth squadron is not needed.

In view of all of this, we should at least delay until the GAO can report to us on the detailed factual matters which my amendments call upon them to provide.

Then we can decide whether we really need the fourth squadron. Then we can determine whether we need more than the 58 C–5A airplanes now authorized and funded.

COST OF TRANSPORTING CARGO

One further matter in need of clarification concerns the relative costs of transporting cargo by airlift and sealift, or more specifically the costs of transporting cargo with the C–5A versus other carriers.

On Wednesday my distinguished friend, the Senator from Arizona (Mr. GOLDWATER) placed some figures in the CONGRESSIONAL RECORD purporting to show the costs of transporting cargo in a C–5A versus other means including ocean shipping. He stated that the cost per ton-mile for the C–5A is 2.9 cents. This figure was compared with the costs per ton-mile of railroad transportation, 1.31 cents; trucks, 6.6 cents; and ocean freight. The cost per ton-mile of ocean freight was divided into two categories, dry bulk, .07 cent, and the average for all international water carriers, 1.10 cents. The Senator from Arizona then compared the costs of cargo via the C–5A with the costs of water carriers and concluded:

I think the cost factors will more than balance the difference between 2.9 cents and 1.10 cents.

In an earlier statement on the same day the Senator from Arizona asserted that he intended "to introduce some rather startling figures into the RECORD to show that it can beat some shipping, beat trucking, and beat some railroading."

I could not disagree more with the Senator from Arizona on this point. It would indeed be startling to learn that the cost of shipping cargo by the C–5A compares favorably with ocean shipping. Even the figures used by the Senator from Arizona do not support such a contention. The startling fact, in my opinion, is that the figures themselves represent an inaccurate comparison, and I regret to say that the effect is to mislead the Congress and the public.

In this connection, it was of some interest to me that only yesterday, September 4, the senior Senator from California (Mr. MURPHY) also discussed the cost of transporting cargo with the C–5A. According to the Senator from California the costs would be 12 cents per ton-mile. This figure, of course, is vastly different from the figure put forth by the Senator from Arizona. The difference between 12 cents per ton-mile and 2.9 cents per ton-mile is a 400 percent difference. The Senator from California and the Senator from Arizona seem to have their wires crossed.

The fact is that the costs of transporting cargo by the C–5A is enormously higher than by ocean shipping, and is probably higher than the costs of utilizing commercial cargo carriers. Gen. Duward L. Crow, testifying before the Senate Armed Services Committee in June of this year, stated that the cost of shipping cargo on the C–5A is now estimated to be 12 cents per ton-mile. This apparently is the source of the figures used by the Senator from California. It is interesting, however, to note that earlier estimates by the Air Force for shipping cargo with the C–5A were 10 cents per ton-mile. How is it that the estimate increased from 10 cents per ton-mile to 12 cents per ton-mile, a very substantial increase? The reason for the increase is the procurement cost increase of the C–5A.

Of course, the transportation costs of any vehicle should include the costs of developing and procuring that vehicle. That is to say it is highly misleading to use only the operating costs of a vehicle while neglecting the capital investment costs of the vehicle in attempting to determine whether it is economical. General Crow himself testified that—

> The increased costs of the aircraft have escalated that per ton-mile figure that we have calculated here from 10 cents roughly to 12 cents roughly.

In other words, the huge multibillion-dollar cost overruns will have a long-term impact on its operations, specifically the costs of shipping cargo. As these overruns increase, as the C–5A continues to escalate, the cost of shipping cargo will also increase. And I should remind my colleagues here today that we have it on the authority of Secretary Whittaker of the Air Force that the cost of the C–5A will continue to escalate. We have not seen the end of the cost overruns and the cost escalation of the C–5A by any means.

More to the point, is the fact that the figures being used by the Air Force, 12 cents per ton-mile, are serious understatements of the true costs. As far as I am able to determine, the Air Force estimates include the cost of procurement but do not include the R. & D. costs or costs for the initial spare parts. The R. & D. costs for the C–5A are roughly $1 billion. The initial spare parts and other support items are roughly $660 million. If we use these two cost items as well as the procurement costs of $3.3 billion, the costs of transporting cargo on the C–5A turn out to be 14 cents per ton-mile. This figure assumes the use by the Air Force of 120 C–5A planes over a 10-year period. But, if we assume that the Air Force will use only 81 planes, that is, the first 58 which already have been authorized plus the 23 now in question, then the cost of transporting cargo will increase to 14.78 cents per ton-mile.

Now what happens to these figures if the procurement costs of the C–5A continue to escalate? Congress has already been put on notice that they will escalate. We have seen how the cost overruns so far have already increased the costs of transporting cargo from 10 cents to 12 cents per ton-mile. Obviously, the cargo costs will go up just as the procurement costs are going up.

The Senator from Arizona in comparing the C–5A cargo costs with ocean shipping costs asserted, as I have already stated, that the water carrier costs are 1.10 cents per ton-mile. It will be seen that this figure is considerably less than the 14 cents per ton-mile costs for the C–5A, or even the 12-cent figure used by General Crow and the Senator from California. However, I also take issue with the water carrier figures.

The figures being used by the Navy in estimating its costs of shipping cargo are vastly different and the figures used by the Senator from Arizona. The fact is that the costs in fiscal year 1969 for transporting dry cargo in water carriers was one-half cent per ton-mile. This figure includes the average of all types of shipping, both Government and privately owned.

Thus when we compare the costs of shipping cargo on a C–5A with the costs of ocean shipping, we ought to be aware that there is no economy involved in using the C–5A. It is far, far more expensive, many times more expensive.

The C–5A will be a most uneconomical way of transporting cargo compared to shipping. It will also be an uneconomical form of transportation compared to the costs of using commercial cargo carriers, in my opinion. The cost to the Government of transporting its cargo on commercial air carriers is 13.67 cents, according to General Crow. But as I have already demonstrated the C–5A will cost in excess of 14 cents and probably as high as 15 cents per ton-mile, even if there are no further overruns.

Mr. President, in connection with the first part of my remarks, I ask unanimous consent to have printed in the RECORD a table which shows the precise delivery schedule of the C–5A's, and the fact that the first run of C–5A's will not be completed until June of 1971.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

DELIVERY SCHEDULE FOR THE FIRST 58 C–5A PLANES

The first 58 planes have been authorized and funded. Eight of them are research or test planes. Five of the eight are Category 1 test planes provided to the contractor. Three are Category 2 test planes to be delivered to the Air Force for testing at places such as Edwards Air Force Base. The remaining 50 are the Production Run of the first three squadrons of the plane. This schedule is already six months behind. Provided there are no further slippages, the delivery schedule for the 58 planes is as follows:

1969:	
Category 1 test planes delivered	5
Category 2 test planes:	
August	1
September	1
October	1
Total test planes	8
PRODUCTION RUN	
1969:	
November	0
December	2
Subtotal	2
1970:	
January	2
February	2
March	2
April	3
May	3
June	3
July	3
August	3
September	3
October	2
November	3
December	3
Subtotal	32
1971:	
January	3
February	3
March	3
April	3
May	3
June	1
Subtotal	16
Total, run A	58

Mr. PROXMIRE. Mr. President, the point of the table is that there will be no slowdown in production if my amendment is adopted and there is no authorization of the fourth squadron until next year. This follows because present production, as I say, will take until the middle of 1971. The long-lead items are already forthcoming in part, and funds are available for the upcoming long-lead items for the fourth squadron.

So that my amendment would be an opportunity for us to get the information we should have, and which we have a duty to have, before we attempt to authorize the additional $530 million.

Mr. President, I yield the floor.

THE NEED FOR THE WORLD'S LARGEST PLANE

Mr. STEVENS. Mr. President, in the time since I came to the Senate, I have read as much as I could about the subject the Senator from Wisconsin (Mr. PROXMIRE) has just addressed himself to;

namely, the subject of the world's largest airplane, the C–5A.

I have been quite amazed that most of these words were about the contract and its procedure and very few words have been addressed to the airplane itself.

The evidence I have seen from the Armed Services Committee seems to indicate that the airplane is being procured at a fair price, in spite of inflationary pressures which have occurred in the aerospace industry. But all the outcries have certainly left one impression in the minds of many people—that is a "controversial" airplane. We cannot see a picture of the C–5 without a caption under it, describing it as that "controversial" airplane.

Mr. President, I do not speak often on this floor, but I do speak today with some personal feeling, as a former Air Force pilot, when I say that I am sure there will be nothing "controversial" about this airplane among the men who will fly it. It will be welcomed with open arms by Air Force pilots, and by the men on the ground who are so dependent on the supplies it will bring.

From all the evidence I find, the C–5A is a good airplane. So far as I can determine, the contract is a good deal so far as the American taxpayers are concerned.

The C–5A will respond to stringent requirements and will do an extremely important job for our military forces.

If we buy enough of them, the C–5A's will replace all the wornout C–133's and the C–124's at less than one quarter of the cost per ton-mile.

In addition to doing it much cheaper, the C–5A can carry many oversized military equipment items that none of the others can carry at all. It will fly almost anywhere, nonstop, quickly and with certainty—and when it gets there, it will land on short, unimproved fields, close to the men who need the items being carried on board.

This means a great deal in my State where we have a tremendous defense installation deployed around it, with very short fields. The C–5A will make rapid transportation, deployment and mobilization available to these remote sites in the State of Alaska.

I am unable to understand what is "controversial" about an airplane like that. It might bring envy, and even some second thoughts in some parts of the world, but to label it "controversial," as far as I am concerned, as a former Air Force pilot, is just plain bad caption writing.

There are some Air Force pilots I know, and some fighting men on the ground who receive its supplies, who will label it differently and very favorably. And well they might, for it is an awesome thing—its size so enormous you wonder that it can fly at all, it is so large.

It can carry over 130 tons of supplies; with lighter loads it can fly 5,500 nautical miles nonstop; its landing distance can be less than 3,600 feet on a wet, grass-covered runway. That means a great deal to areas such as mine.

And if you consider its usefulness, I asked my staff to get me a list of one typical load that can be carried in just one C–5: One M–48 bridge launcher, weighing more than 128,000 pounds; four M–151 quarter-ton trucks with trailers, weighing a total of more than 16,000 pounds; two M–170 ambulances, weighing more than 7,500 pounds; two UH–1D helicopters, with a combined weight of 9,000 pounds; two M–54 5-ton trucks with trailers, weighing over 70,000 pounds; two M–37 ¾-ton trucks with trailers, with a total weight of more than 20,000 pounds; plus 52 drivers, and support personnel, who with their equipment weigh more than 12,000 pounds.

This airplane really will put the Air Force in competition with the Navy. For the first time in air transportation, the Air Force will be able to carry its own helicopters along with it. This is a massive airplane and one which is designed to do a massive job for the Air Force.

The total for this typical load in one C–5 is 264,768 pounds. And that airplane, with that load, can fly 2,500 nautical miles nonstop and land on a wet, grass field in less than 5,000 feet.

Or, if you want another statistic, the C–5 can carry 16—yes, 16—¾-ton trucks at the same time.

It will truly be an astounding performer—this C–5A. not only in the sheer size of its capabilities, but also at a ton-mile rate lower by far than any other airplane in existence in the world today.

The statements I have just made about the C–5 cannot be made about any other aircraft in the world, and I am glad our Nation has it. Just imagine what a plane like this would have meant during the Berlin airlift.

In that connection, I was interested to read the comments of our colleague the Senator from Mississippi (Mr. STENNIS) which were made after I had departed for Alaska just prior to the recess. He told the Senate:

> With the C–5A's we will reduce the number of airlift aircraft in the force by one-half while providing more than three times the transport capability.

Commenting upon the remarks the Senator from Wisconsin just made, I think it is important to note what the Senator from Mississippi said in regard to operating costs. He said the C–5A operating costs per ton-mile will be lower than the entire airlift, which will be 2.9 cents for the C–5A, against 5.3 cents.

Mr. PROXMIRE. Mr. President, will the Senator yield on that point?

Mr. STEVENS. I yield.

Mr. PROXMIRE. There is not any question about the operating cost of the C–5A being low. The point I made was that when we compare the costs of transportation, we have to include the capital cost that is the procurement cost. That is what the vote is all about on this point—whether we should build this plane. In any kind of fair comparison, we have to consider how much the vehicle will cost to construct and build. When that is done, the officials in the Air Force initially testified that the cost of the C–5A per ton-mile would be about 10 cents. Because the overrun is so great they now estimate the per ton-mile cost at 12 cents on the basis of the full cost. I calculate that with full additional costs it will be very close to 15 cents per ton-mile. The average cost of airlift cargo is 13½ cents. So on the basis of the present full cost, the C–5A will cost more than the average cost of airlift cargo, and infinitely more than ocean shipping will cost.

I will concede to the Senator from Alaska that this plane performs a unique mission and that it carries much larger equipment, but only 40 planes are required for this unique purpose. The Air Force has said it will need only 40 to carry the outsized cargo. So the additional planes, the fourth squadron now under debate would have to be compared not as a uniquely necessary vehicle, but on a competitive basis with other air cargo carriers, and I submit that on a competitive basis the C–5A does not compare favorably.

As the Senator knows, we are going to get 58 C–5A's. They are already authorized and funded. The only question is whether we should get the fourth squadron.

Mr. STEVENS. I cannot help but reminisce, because I remember, when flying the C–47's over China, their operating cost or cost per ton-mile was considerably less than that of the C–46's. But when we got the C–46's, they moved twice as many people and twice as much equipment in the same amount of time as the C–47's, and we had a greater range.

I view this question from the standpoint of modernization. The C–46 in time of war was better for that purpose than the C–47, although the C–46's and C–47's are still being used.

Every man flying it and every man on the ground servicing it recognized that the C–46 was better than the C–47. It was faster, carried more people, and did a better job. That is how I look at the question of the C–5A.

The thought of dropping that much equipment in that time, landing in less than 5,000 feet, without an improved runway, astounds pilots.

The C–5A is a good airplane. It is a plane that will do the job that needs to be done. I do not see why we should oppose modernization. Modernization of aircraft is something that we should face, along with modernization of our aircraft carriers and our tanks. Total modernization of our military is something that we should face up to now, before we find ourselves, as a Senator said the other day, a fifth-rate power. I cannot see participating in any decision which would leave the military of this country, or leave this country, even as a second-rate power in the world.

Mr. PROXMIRE. May I say that the C–5A, except for its responsibility to carry outsized cargo, provides no advantage over the C–141 and other planes. The original Air Force intention was to get 20 squadrons of the C–141 and no C–5A's. Then the Air Force officials testified they wanted to have 13 squadrons of the C–141 and six squadrons of the C–5A. Now the question is whether we should go ahead with the additional fourth squadron of the C–5A. Here it

seems to me that the amendment has special strength because, as I said, we are not going to be in a position actually to produce the fourth squadron until the middle of 1971. That gives us ample time to get reports and to get information on whether the C–5A is the most efficient, the most effective, and the wisest and best military response to our problem.

The Defense Department's only studies of this plane have raised serious questions about it. Their November 7 study of last year and their June 11 study of this year both concluded that the fourth squadron of the C–5A is not cost effective; and it seems to me that, under these circumstances, the responsible position the Senate should take is that we should delay our decision, as long as that delay will not slow down the production of the C–5A, until we can get information from the GAO to determine whether this conclusion is correct or not correct.

Mr. STEVENS. I will say to my friend from Wisconsin again, it does not seem to me that we should compare the C–5A to the C–141, which I have flown in, and know it. It comes through our State quite often, as the Senator knows, on the Vietnam airlift. I think it is a wonderful airplane. But we should not compare the C–5A with it, because it is not going to replace the C–141; it is designed to replace the C–133 and the C–124.

Mr. PROXMIRE. I agree that it certainly is not going to replace the C–141. The question, however, is whether it is necessary to procure additional planes beyond the 58th plane. That is the question. I agree with the Senator wholeheartedly that we should have the three squadrons of C–5A's, and we are going to get them. The issue is whether or not we need more of them.

Mr. STEVENS. I disagree with my colleague. The issue is whether we are going to be able to retire as many of the C–133's and C–124's as contemplated. We can only do that if we buy the number of C–5A's contemplated by this bill.

The C–133 and the C–124, in their day, were good airplanes. Today, however, they are airplanes that operate at excessive cost, both in terms of cost of operation and cost per ton-mile. I think the Senator from Wisconsin will agree that they are not as efficient as the 141.

The issue to be decided has to be, what do we replace them with? I think we should replace them with the C–5A, because of its tremendous capability in terms of use of equipment, and particularly, I emphasize again as a pilot, the short field landing of which it is capable, with its tremendous load.

Mr. PROXMIRE. Of course, I think the Senator, as a former pilot, can speak with real authority, and there is a lot of sense in what he says.

But my argument is that we should make this decision with our eyes open. Our eyes are not open. We do not have the information. The fact that this matter has been considered by the Office of Systems Analysis twice, and both times they have concluded that the C–5A is not cost effective should, it seems to me, be a signal to the Senate that we should get more information. We have time to to do it; why not? What is the rush?

Mr. STEVENS. I have been informed by the staff that the Secretary of Defense has indicated that they require these funds in fiscal 1970 in order to have these planes into the inventory in fiscal 1972; and if the three C–133 squadrons are going to be retired, as they are programed to retire, we must have the C–5A's on the line at that time. The indication is, from the staff memorandums given to me here, that the operations of these C–133 squadrons are limited, and will continue to be limited, in terms of flying hours, because analysis indicates a life of 19,000 hours, and these squadrons are scheduled to reach this analysis limit by 1972. Modifications of this aircraft, at a cost of over a million dollars per aircraft, would be required to extend the life of the aircraft for an additional 1,500 hours, or a period of 10 months.

This goes back to what I was saying before: Modernization now, to me, is really a conservative approach, because we need to modify these aircraft or replace them now with more efficient aircraft; and to put more modifications into these old aircraft—while they were good airplanes in their day, this is no longer their day—would be like trying to equip the Air Force now with the C–47, which was a wonderful plane in its day, but would not make much sense in terms of present-day loads.

I am relying on information given to me. As the Senator knows, I am not on the committee. I am trying to address myself to this plane from the point of view of a pilot, and from the point of view of someone who knows the problems in country like Alaska.

If we can get this plane available and in production, and eventually the L–500 will come to my State, it will make a great deal of difference. If one wishes to talk about 15 cents per ton-mile, as compared with what industry is paying in my State now to move supplies from Fairbanks to the north slope, I venture to say the latter is more nearly $15 a ton-mile.

Mr. PROXMIRE. Mr. President, I know there are special problems with regard to Alaska, and I am sure that the Senator would be completely correct if it were a question of whether we were going to have any C–5A's. But research and development has been completed; five or six planes have been built, two more are going to be produced within the next 30 days, and a total of 58 before the middle of 1971. So it is not a question of getting the plane into production, so that similar planes can be developed for Alaskan use. That will happen anyway, whether we proceed with the fourth squadron or not.

But speaking of timing, what kind of systems analysis do we have in the Office of the Secretary of Defense? Certainly, when they put these problems to their experts, and when they make this kind of study, if they come up with a conclusion that the C–5A is not cost effective, it seems to me it is unbelievable that they would ignore the presence and availability of other aircraft.

As I say, the plan of modernization began with having 40 squadrons of the C–141. That plan was amended and changed so they could bring in greater firepower with larger equipment, which the C–5A makes possible. I believe that was a wise decision.

Mr. STEVENS. That is not my point. My point, based upon the staff analysis, is that the fourth squadron, which the Senator disputes and seeks to delete from the bill, will replace three C–133 squadrons that are scheduled to retire. If the Senator's amendment carries, and we delete these C–5A's, what is going to replace the three squadrons of C–133's? Or does the Senator think we should go into the business of putting a million dollars per unit into an obsolete aircraft, to keep our defense capability up? I say that if we are to maintain our defense capability, those three squadrons which are scheduled to retire must be replaced by this fourth squadron of C–5A's the Senator seeks to delete.

Mr. PROXMIRE. There is nothing in my amendment that would prevent the replacement of these other planes with the C–5A. My amendment would merely hold up the authorization until we can get more information. As I point out, they are not scheduled to finish the first run of 58 planes until mid-1971.

The Senator has stated that the Secretary has argued that they have to have authorization in the 1970 bill so that they can fund the 1972 requirements. That is very hard for me to accept. I have not heard that argument before; it has just arisen on the floor now. It is hard for me to understand why this kind of a long lead is needed. They already have the funds for the long lead items, why would they have to fund something 2 years in advance of production?

Mr. STEVENS. My information is that delay in the fourth squadron will resule in either the loss of the three C–133 squadrons or the necessity, between now and 1972, to modernize those three C–133 squadrons at an excessive cost.

Again I say I do not disagree with the Senator in terms of the fact that this airplane costs more. I think, as I have stated, there is no question but that, as aircraft get bigger, the cost is greater; and, also, the inflationary spiral hits military procurement the same as it does our automobiles. I am no longer able to drive an $800 Model B Ford. When you start to get into these costs, they are going to keep going up and up, until we beat the inflationary spiral, and I hope we can do that. I hope we can find some way to stop that spiral, for I think it is doing everybody a great deal of harm; and again, it does my State more harm than anyone else, because we pay 25 percent more for everything.

Mr. PROXMIRE. I say to the Senator from Alaska that as far as stopping the inflationary spiral is concerned, the one place we can do it more effectively than anywhere else is by cutting military spending. That is the most inflationary kind of spending, and it does not meet any economic need. When we appropriate funds to build houses, the money we spend tends to inflate the economy, but the houses we build increases the housing supply and tends to bring down the cost of housing.

There is some counterbalancing. But when we spend money on planes or tanks or ammunition, that money is strictly

inflationary. There is no counterbalancing increase in the supply or goods that affect our cost of living.

I agree that we should not cut military budgets with a meat ax. We should not make any cuts in weapons systems which are absolutely essential to our defense. But if we are going to slow down inflation, we have to cut military spending, space spending, public works spending, and spending in all areas.

This is in my mind by far the most incisive and effective way to slow down inflation. We do not do it by going ahead with the authorization and spending of money for planes and other weapons that we do not need. And when the Defense Department says that we do not need it, certainly it would be very wise for us to take a much harder look at the matter.

Mr. STEVENS. Mr. President, I can only disagree with the Senator from Wisconsin. We have to look down the road and see what the military costs will be in 1972, 1975, and 1980 and what we can do now to modernize the force and program it so that we will have a more efficient operation.

If an investment is required today to carry out this purpose, we should approach it from that light, go home, and tell our constituents that modernization is required, and we should cut back in other areas where that is required.

I am not concerned about that at all. We should look at modernization from the total concept. I can only say to my friend, the Senator from Wisconsin, that there is no question when we get into the total concept of the military today that I must join the Senator from Mississippi in being disturbed at the general overall attack being made on the defense posture of our country through the attempts to delete in the bill items looking toward the modernization of our defense capability. And if we are afraid to go ahead with the modernization—and I think that we must not be afraid to go ahead with it—if we start to cut out the fourth squadron and cut out a carrier here and a fighter plane here, we will be in the same position in 5 or 10 years that Britain was before World War II. And I have a deep feeling that is the case. We will find ourselves cutting back on the military and making the Defense Department the scapegoat in each case.

I think we are inclined to forget how much money the President cut out of the budget before we received it. More than $4 billion was cut from the budget submitted by the last administration. And we are sitting here attempting to cut each item.

I have only been here for a short time, but I am impressed with the fact that, from the security briefings I have had, we should not hesitate at all about replacing some of these items with modern equipment and scheduling the replacement soon rather than waiting for 18 months.

It is my understanding that 18 months' delay now would cause a renegotiation of the contract. And there is no question that if the Senator's amendment is agreed to, the three C–133 squadrons will be retired and we will lose that capability and be required to expend $1 billion to restore obsolete aircraft.

Mr. PROXMIRE. If ever there was a contract that needed renegotiation, this is it. This is the worst contract that the military has had in a long time.

Mr. STEVENS. I defend the aircraft and not the contract. I do not know anything about the contract. I do know something about the airplane.

Mr. PROXMIRE. Both sides in this debate have agreed that a number of these elements in the contract have to be renegotiated. If my amendment passes, we will then be in a far stronger position to renegotiate the contract. If my amendment is agreed to, it will lend some muscle to the Government in renegotiation.

In the second place, I think that the Senator from Alaska has made a very strong argument in favor of modernization, which I approve.

I do not know how the Senator can say that those who are for my amendment are against modernization. We should expend the money with our eyes open and know the facts.

I favor a more vigorous program to develop nuclear submarines. In many areas we can do a more vigorous and better job from the military standpoint. However, when we are convinced that a program is wasteful, not justified, and not cost effective, and that there is a more economical way to do it, we should vote against such an expenditure. That does not mean that we do not favor modernization.

We have to modernize the military force, of course, and that will cost money.

Mr. STEVENS. Mr. President, I close by saying that it is inconceivable to me that we would fail to recognize that the Air Force does have obsolete equipment that should be retired and that these costly old airplanes, costly, in terms of operation today, were airplanes that did a good job in their day, but that their day is past. We must modernize our equipment and the time to make the decision about modernization is now and not 2 years from now.

I am pleased that the Air Force will have a new working tool available to it in the form of the C–5A.

I feel that it should have a fourth squadron as contemplated by the bill.

The C–5A is not only a giant in size, but it is also a gigantic step forward in the state of the art. And it will serve an equally great need in the mobility and flexibility of our military forces in the perilous times we face ahead.

Mr. THURMOND. Mr. President, will the Senator yield?

Mr. STEVENS. I yield.

Mr. THURMOND. Mr. President, I take this opportunity to congratulate the able Senator from Alaska upon the excellent remarks he has made today in defense of the military procurement authorization bill. Although the Senator from Alaska has been here for only 1 year, his keen mind has been able to perceive the great dangers facing our Nation and the hazards with which we are confronted. Because of his knowledge of defense matters, he is able to give us the benefit of his experience. It should be very beneficial to us.

There has been an effort made here to eliminate one weapon after another from the military.

There was a move made to eliminate the ABM, which is a very vital weapon and purely a defensive missile which is not calculated to cross the ocean or to strike people in other lands. It is merely intended as a weapon against enemy missiles if the enemy should attempt to send them here.

There was a move made to eliminate the Army tank, the MBT–70, which is vitally needed. As long as we have armies fighting conventional wars, we will need the most modern tanks.

There is a move being made to delay the C–5A. I say this with no criticism of anyone's motives. However, I must question the judgment of some on these matters. We cannot just go out here now and stand up against the Soviet threat, and that threat involves a threat today to the freedom of the world, unless we are prepared.

There will be moves made, I understand, to eliminate and delay the F–14 and the F–15 planes.

Time is of the essence. In World War II, the oceans protected us. That war began in December 1941. We had time to build up our armies. We had time to build planes, tanks, and other equipment. That will not be the case if we have another war.

We now have supersonic planes, planes that fly faster than sound. These planes can cross oceans and endanger the people of this Nation.

We have the intercontinental ballistic missiles that can travel thousands of miles and can be sent here by enemy countries.

We must be prepared. Time is of the essense. We must be ready if an attack comes.

The research and development that we do today will determine what weapons we have 8, 10, or 12 years from now. Our weapons today are a result of the research undertaken that far back.

If we follow the plans of some of the people in this country today and some of the suggestions that have been made in the Senate, it will not be very long until our country will be disarmed. We will be unilaterally disarmed.

I think that in the face of the threat facing us today it would be incomprehensible if we were to pursue such a course.

I compliment the Senator from Alaska upon his wisdom and good judgment displayed in the remarks he has made today.

I hope that the Senate will heed the advice of a freshman Senator.

Mr. STEVENS. Mr. President, I thank the Senator.

Mr. GOLDWATER. Mr. President, will the Senator yield?

Mr. STEVENS. I yield to the Senator from Arizona.

Mr. GOLDWATER. Mr. President, I join in complimenting the Senator from Alaska for the remarks he has made in defense of the C–5A. I have known for a long time of his great interest in aviation, the fact that he has long been a pilot, the fact that he understands the operations of aircraft and fleets of air-

craft. So, coming from him, these words come from the mouth of an expert, a man who has had practical experience with what we are talking about.

I am glad to hear this, because we have had a great deal of theory expressed on the floor of the Senate from people who really do not know what they are talking about. I am happy that the Senator has made these remarks, and I wonder whether he would yield one moment longer.

Mr. STEVENS. I yield.

Mr. GOLDWATER. Mr. President, I invite the attention of the Senator from Wisconsin to this. I said yesterday that we had inquired of the Army as to their needs for the C–5A, and the question was asked, "Can the Army load four squadrons of C–5A's plus existing C–141's within 10 days?"

This is the answer:

In the post-Vietnam environment (when C–5A aircraft became available) present Army mobilization objectives will make forces available at a rate which will utilize fully all available C–5A and C–141 aircraft within a ten-day period. Realistically one should recognize that the Army would not expect to be allotted all of these aircraft because of requirements of the other Services.

In a situation where there was some advance notice prior to initiation of an airlift, availability of Army forces for a major deployment would exceed airlift availability. For example, if called upon to reinforce Europe (in a post VN environment) the Air Force, with 4 squadrons of C–5A's and 14 squadrons of C–141's could make available to the Army above essential Air Force requirements an estimated capability to airlift 115,000 troops and 23,000 S/T of cargo to Europe from CONUS in a ten-day period.

Within a ten-day period the Army would have available for loading an estimated 124,000 troops and 36,000 S/T of cargo. Therefore, the Army could generate a total lift requirement which exceeds—

I repeat—

which exceeds Air Force capability with four squadrons of C–5A's and 14 squadrons of C–141's. This example does not include concurrent requirements of the Navy or Marine Corps.

I thank the Senator from Alaska for yielding.

Mr. STEVENS. I am indebted to the Senator from Arizona.

Mr. STENNIS. Mr. President, has the Senator from Alaska completed his speech?

Mr. STEVENS. Yes, I have.

Mr. STENNIS. Mr. President, will the Senator yield to me briefly?

Mr. STEVENS. If there is no objection, Mr. President, I will yield the floor.

Mr. STENNIS. Mr. President, not only do I wish to thank the Senator from Alaska for coming here and taking part in this debate, but also, I want to say that he has made a splendid statement. He holds himself well in debate. I think he has made a very fine contribution to the problem of this amendment. He is a pilot in his own right, too, which gives a feel to his opinions and his beliefs, and that gives them an extra practical value.

I encourage the Senator from Alaska to take part in other phases of the debate on this bill—not only on this bill but also on other military bills. Of course, I hope that he and I will always be on the same side. But even if we are not, he is capable of making a fine contribution to this subject matter. I am most grateful to him.

Mr. PROXMIRE. I wish to add my commendation to the Senator from Alaska. I do not know whether or not he wants my commendation. I disagreed with him in the debate, but he is an able, astute, and effective debater, and I think this is useful and valuable in the Senate. As the Senator from Arizona, Mr. GOLDWATER, has said, one of the things we do not do enough in this body is to debate. He has called for it, properly.

I think the Senator from Alaska, on the basis of his speech today and previously, has indicated that he is the kind of man who will be most helpful to us in coming to reasonable conclusions based on the give-and-take of debate. I commend him, and join the other Senators in commending him, on his speech, although, again, I think he knows that I do not agree with the conclusions in the speech.

Mr. STEVENS. I am grateful to the Senator from Wisconsin, the Senator from Arizona, and the Senator from Mississippi.

I do think that those of us who are not on these committees at times do not get involved as much as we should. With due respect to the Senator from Wisconsin, I think we probably have more Air Force squadrons stationed in our State than any other State, and we look forward to many of them returning from Vietnam. I think we will be the supply center for the Air Force in future years. We are not a hostile environment for the Air Force in Alaska. We enjoy having them there. We have a great deal of space in which to roam around and train. I would like to see them have this kind of aircraft and the full capability envisioned by the bill. That is why I disagree with the Senator from Wisconsin.

Mr. PROXMIRE. The Senator from Arizona pointed out, as I understand it, that the Army would need the capability of the fourth squadron of the C–5A's. This may very well be the case. I am sure that if the Army said so, it is the case.

However, first, my amendment would not prevent our providing the C–5A on schedule and on the same production basis, because it is going to take until mid-1971 for the present run to be completed; and if, on the basis of the information we get from them, which my amendment calls for, the Senate next year decides to act and ask for more C–5A's, ask for the fourth squadron, Lockheed can continue right along on the same production basis, without losing time.

The second point I make to the Senator is that he stressed—and I thought he stressed with great force—the necessity for having this plane available for a 10-day period. Again and again in his remarks, he pointed out that this was for rapid mobilization, this 10-day period. This is why it seems to me that there might be some force behind the study that was made by the Office of Systems Analysis when they pointed out that the plane might be utilized for 15 hours a day. It, of course, would be inconceivable to use a plane for 15 hours a day over a long period. For 10 days, in an emergency situation, it is possible.

So perhaps the conclusion they reached, that the fourth squadron was unnecessary because you can use these planes intensively, might have had some logic behind it, although I think the Senator pointed out very well on the floor that you cannot do this for any prolonged period of time.

Mr. GOLDWATER. Mr. President, I should like to put this 10-day emergency matter in the proper perspective.

If you are going to hold three squadrons on the ground, waiting for a 10-day period, I will guarantee that you will not get them off the ground. Airplanes are no good unless they fly.

One of the big mistakes we in Congress make is that we think we can ground airplanes and pilots and save money.

These airplanes might be on training missions or on other airlift missions, when, all of a sudden, without any warning, the President might call a state of emergency and we would have to start deploying troops to Europe or South America or Korea or some other place, and then we would have to depend upon the normal operations of a fleet.

I dispute very violently the contention of Systems Analysis that you can fly airplanes 15 hours a day. You could not do it even if you had them in readiness. It cannot be done.

I invite the attention of the Senator from Wisconsin to the fact that Systems Analysis did come to the conclusion that four squadrons are needed.

Mr. PROXMIRE. And the Assistant Secretary did, because he rejected the study. But the study itself indicated that you would not need the fourth squadron if you could more intensively use the plane, and they made that assumption in the November 7 study. In the second study, in June, they made different assumptions, and still came back with the conclusion that you would not need the fourth squadron.

I say this is what the study showed.

Mr. GOLDWATER. The systems analysts themselves, in their language, concluded that the fourth squadron was needed. We have made this point time and time again. In fact, it is in the literature that the Senator from Wisconsin received from the Pentagon. That is where I got my information.

THE NATIONAL STUDENT ASSOCIATION

Mr. THURMOND. A striking editorial in the State newspaper last Wednesday calls attention to the result of the recent convention of the National Student Association. NSA, it will be recalled, is the left-wing radical group that was secretly financed by the CIA. It was the forerunner of the militant groups now disrupting college campuses across the Nation. As the State says:

No group was more zealous than NSA in promoting black militancy. With the CIA paying up to 80 percent of the tab, it financed much of the mischief in the field of civil rights, including the formation of the radical Student Nonviolent Coordinating Committee, headed by Stokely Carmichael and H. Rap Brown. By its own estimates, NSA diverted at least $1 million to such "civil rights" work.

Mr. President, the folly of Government support of such projects is now apparent, although it would seem to me that it should have been apparent to anyone with commonsense at the time the organization was secretly funded. I do not know who sold our leaders at that time on the theory that the best way to combat subversion is by encouraging and supporting radicals.

The State points out that the result, even for the NSA, is a continuing revolutionary situation, where last year's crop of revolutionaries is too mild for the new crop. At the NSA Convention, the black militants walked out. The State calls it "another case of the parent being devoured by its children."

Mr. President, I ask unanimous consent that this editorial from the State, September 3, 1969, entitled "Student Association Suffers Split in Ranks" be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER (Mr. ALLEN in the chair). Without objection, it is so ordered.

(See exhibit 1.)

Mr. THURMOND. Mr. President, I would also like to call attention to an article on the same page of the State, by the State's able associate editor, William P. Cheshire. Mr. Cheshire's article is entitled "Churchmen Finance Black Revolution," and he describes a situation that is analogous to the CIA's financing of NSA. Here we find that a coalition of churches, called Inter-religious Foundation for Community Organization—IFCO—has financed the outrageous blackmail program of James Forman. Most recently, the delegates to the Episcopal Church's general convention has agreed to recognize the self-appointed Forman as the bargaining agent for all black people. This is a completely irresponsible action, although it is not surprising, since Mr. Cheshire points out that the Episcopal Church took the lead in organizing IFCO.

Mr. President, I do not single out any particular church for criticism, especially since IFCO is a coalition of many churches. However, this action of the churchmen is as ill-advised as the CIA's action in financing the militants, and I have no doubt that the fault will be the same. Mr. Cheshire's article also proposes a remedy: He points out that many laymen "are cutting their pledges and turning to alternatives." One alternative that he mentions is the "Foundation for Christian Theology" which is working within the church to prevent politically oriented programs.

Mr. President, I also ask unanimous consent that the article by William E. Cheshire, "Churchmen Finance Black Revolution" be printed in the RECORD at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 2.)

EXHIBIT 1

[From the Columbia (S.C.) State, Sept. 3, 1969]

STUDENT ASSOCIATION SUFFERS SPLIT IN RANKS

The left-wing National Student Association, short of funds since losing its government subsidy in the aftermath of the Central Intelligence Agency scandal two years ago, may be short of members next. Black students stormed out of NSA's El Paso convention last week, charging that the student group had been using the race issue "for egotrips and to get foundation money."

The revolt began when Muhammed Kenyatta, a leader in the drive to extort $500 million in "reparations" from white churches, sought to take a voice vote of NSA delegates on the proposition that NSA is a "racist institution." NSA officials, unwilling to have the convention sentiment recorded, grabbed the microphone away from Kenyatta and hustled him off the platform.

A mass walkout followed. Negro students announced plans to form the 20 Negro colleges associated with NSA into a new National Association of Black Students, and black candidates were urged to take no part in NSA's election of officers. All obliged except Clinton Deveaux, running for president on a platform opposed to campus violence.

NSA delegates thus faced the necessity of choosing between two unpleasant alternatives. They could vote for Deveaux, thereby repudiating the organization's wishy-washy stand on college riots. Or they could repudiate Deveaux, thereby widening the breach between blacks and whites. (They voted against him.)

NSA's difficulties are another case of the parent being devoured by its children. In its flusher days, no group was more zealous than NSA in promoting black militancy. With the CIA paying up to 80 per cent of the tab, it financed much of the initial mischief in the field of civil rights, including the formation of the radical Student Nonviolent Coordinating Committee, headed by Stokely Carmichael and H. Rap Brown.

By its own estimates, NSA diverted at least $1 million to such "civil rights" work.

Then the cover blew. Revelations in *Ramparts*, a New Left scandal sheet out to discredit the CIA, ended by unmasking a whole network of undercover operations involving government subsidies to leftist foundations and political action groups, including NSA. To head off a full-scale congressional inquiry, the CIA had to repudiate these connections and promise to sin no more.

NSA had to shift for itself. With only 430 members out of 1,700 eligible schools and no Big Daddy in Washington, NSA's debts began to climb. It now owes an estimated $100,000, which helps explain why the NSA militants are losing interest in Whitey's help. Whitey needs theirs.

One surveys NSA's record over the past few years: repudiation of U.S. action in the Dominican Republic, the Panama Canal Zone, Vietnam; advocacy of a seat in the United Nations for Red China and a Communist-dominated coalition government in Saigon; endorsement of Fidel Castro's "educational reforms." It is a sad record indeed; and if the black militants can assist in bringing down this troublesome group, they will deserve to have at least one public service chalked up to their credit.

EXHIBIT 2

CHURCHMEN FINANCE BLACK REVOLUTION

(By William P. Cheshire)

No sooner had Episcopal delegates settled in their seats for the church's general convention in South Bend than the presiding Bishop gave them some unsettling news. The church's executive council, the Rt. Rev. John E. Hines announced last Saturday, had agreed to recognize as the bargaining agent for all black people James Forman's Black Economic Development Conference.

This is the group, it will be recalled, that met last April in Detroit and demanded $500 million from white churchmen as "reparations" for slavery. At least one Episcopal bishop, the Rt. Rev. C. Kilmer Myers of San Francisco, thought the figure "too low." Forman obliged him by raising the demand to $3 billion, where it stands at the moment.

Endorsement of Forman's blackmail-for-blacks by the executive council of the Episcopal church came as no surprise. Three years ago, at the urging of Bishop Hines, the executive council took the lead in establishing what is known as the Inter-religious Foundation for Community Organization. Though initial funding came from the Episcopal Church treasury, IFCO is now an interfaith agency* that finances a variety of black community projects.

One of these was last April's Black Economic Development Conference, whose chairman (the Rev. Lucius Walker Jr.) is likewise IFCO's executive director. IFCO paid out $50,000 to the Walker-Forman group, all of it originating, in the form of donations, at the very churches the militants intend to shake down for $3 billion more.

This was not the first time IFCO had bankrolled black militants. In Chicago, IFCO gave $20,000 to the Garfield organization, several of whose officiers were arrested and charged with conspiracy to commit arson and burglary during race riots in Chicago last year. Another $5,800 went to the Los Angeles Black Congress, a Negro extremist group. The United Black Community Organization in Cincinnati received $44,000. Of $885,800 dispersed so far, IFCO has spent $774,500 on these and similar incendiary groups.

Apart from IFCO, the executive council of the Episcopal Church (one of the more radical church councils) has several special projects of its own that are being financed through a $9 million "urban crisis" program. Examples of its work: $15,000 to support boycotting Chicago high school students in their demands for an expanded Afro-American history course, $7,000 to produce 60 new copies of the Black Panther film "Huey" for nationwide distribution, and $30,000 for the "Drum and Spear Book Store" in Washington, D.C.

These efforts and others like them tend to confirm the opinion of Gus Hall, general secretary of the U.S. Communist Party. In an interview last year with editors of the Presbyterian magazine "Approach," Hall said: "Communist goals are almost identical to those espoused by the liberal church. We can—we should—work together for the same things."

Some will be disposed to think that Hall's plan for Christian-Communist cooperation has already been put into effect, intentionally or not. But a counter-force has come into being as well: the Foundation for Christian Theology (1501 North Glass St., Victoria, Tex., 77901), an Episcopal-oriented group headed by the Rev. Paul H. Kratzig, D.D.

"We oppose the National Council of Churches of Christ in the U.S.A. when it declares positions on political issues, presuming to speak for 40 million Christians," Dr. Kratzig says. "We oppose church support of politically oriented groups and their programs . . . The division in the church was not created by us. The Foundation is here to prevent this division from developing into a schism, if possible."

Many laymen, unwilling to go on financing IFCO and similar groups, are cutting their pledges and turning to alternatives like Dr.

* In addition to the executive council of the Episcopal Church, these groups also contribute to IFCO's financial support: the American Baptist Home Missions Society, the Board of Homeland Ministries of the Church of Christ, the Board of Missions of the United Methodist Church, the General Board of Christian Social Concern of the Methodist Church, the Board of National Missions of the United Presbyterian Church, the American Jewish Committee, the Catholic Committee for Urban Ministry, the National Catholic Conference for inter-racial Justice, and the Foundation for Voluntary Service.

Kratzig's foundation, which supports missions, seminary students and the other traditional work of the church. If the trend continues, who knows what may happen? The radicals of the cloth may promote James Forman's extortion plan only to discover, too late, that a rebellious laity has balked at paying tribute even if the clergy hasn't.

THE KIDNAPING OF U.S. AMBASSADOR CHARLES BURKE ELBRICK

Mr. COOPER. Mr. President, I am very much concerned and I am sure the people of our country are very much concerned about the kidnaping of Ambassador Charles Burke Elbrick in Rio de Janeiro.

A condition for the release of Ambassador Elbrick imposed by his kidnapers is that the Government of Brazil release 15 political prisoners with the assurance that they will be able to seek asylum.

I have talked with officials of the State Department and I have been assured that the Department is in constant communication with the Government of Brazil and is urging that Government to take every step to secure his safe release.

I have just heard that the Government of Brazil has acceded to the efforts of the Department of State and has announced that it will agree to the release of the political prisoners which are held by the Government of Brazil.

Mr. President, I know that it may be argued by some that the release of the political prisoners under such conditions will establish a precedent which may be used by dissident groups in other countries to secure the release of political prisoners and perhaps to impose other conditions which are unfavorable to those countries.

This may be true, but it does not meet the problem that confronts our own country when our diplomatic representatives are kidnaped, as occurred to Ambassador Burke Elbrick or in the case, not long ago, when our ambassador to Guatemala, Gordon Mein, was kidnaped and killed.

It is the duty of the Government of Brazil, under international agreements, to provide protection to Ambassador Elbrick. Failing to do so, it is its duty to take every step, including the release of political prisoners, if necessary, to secure the prompt release of Ambassador Elbrick. I am sure that this is the position of the people of our country.

If, as has been reported, the Government of Brazil has taken this step to insure Ambassador Elbrick's safety and will release the men held as political prisoners, I am glad. But in the future, our country must require adequate assurance that our diplomats in other countries will be protected. Also, our country on its part must provide more effective protection for its representatives.

Mr. STENNIS. Mr. President, will the Senator yield?

Mr. COOPER. I am glad to yield.

Mr. STENNIS. I deeply appreciate the Senator's remarks. I do not think any Senator is in a better position to make them and give them added meaning. I am pleased that the Senator from Kentucky has spoken out at this particular time.

We do not mean to be belligerent, but we are being pushed around in many ways, as our ships are captured, our planes shot down, and our ambassadors kidnaped. Many incidents such as this have happened. We must draw the line rigidly and let our position be known in advance.

I thank the Senator from Kentucky for his excellent speech.

Mr. COOPER. I appreciate the statement of the Senator from Mississippi.

I feel rather strongly about this, because Ambassador Elbrick, who was kidnaped—and we hope he is safe—is a native of my State, as was our ambassador to Guatemala, who was killed. That is a personal concern, but it is not so important as the reason which the Senator from Mississippi has just stated; that is, that we must be firm with other countries concerning the protection of our people, to make certain that they are given adequate protection as required by international law.

I believe these incidents call for stronger efforts on our part to secure greater protection for our diplomatic representatives and to provide more effective means of protection for ourselves.

Mr. YARBOROUGH. Mr. President, I, too, wish to associate myself with the remarks of the distinguished Senator from Kentucky (Mr. COOPER). I share his concern over Ambassador Elbrick's fate.

Last year, as a member of the Interparliamentary Union delegation from this body, I visited Yugoslavia. Ambassador Elbrick did a fantastic job for this country there. Today, we see the Yugoslavs are striving to obtain independence from Russian domination. Much of the credit for this must go to Ambassador Elbrick who is one of our most able diplomats.

The kidnaping and holding for ransom of Ambassador Elbrick requires us to consider whether the contingents of marines which guard our embassies in foreign countries should be strengthened so as to protect the residences of our ambassadors and insure their safety as they travel to and from the embassies.

The murder of Ambassador Gordon Mein in Guatemala is another tragic case. Another such incident, which fortunately did not end so tragically, occurred in Japan during Secretary of State Rogers' visit when Ambassador Meyer was attacked and injured.

I know Ambassador Meyer. I visited with him when he was in Lebanon, again when I was a member of the Interparliamentary Union delegation which went to Iran during the time he was our Ambassador there.

Ambassador Meyer was in the OSS during World War II, serving in the northwest corner of Iran, in Azerbaijan, where he helped prevent the Russians from tearing that province away from Iran, as they tried to do after World War II.

Ambassador Meyer is a brilliant man. He is an intellectually gifted man and is also an agile man physically. Those qualities combined to prevent the attack from being more serious than it was.

Mr. President, this all points up that our people in the Foreign Service, who are often criticized and frequently denounced, encounter great risks of physical violence when our embassies are attacked, bricks thrown through the windows, and information centers burned. It is very risky for those who serve in our diplomatic service, because our diplomatic service is essentially nonmilitary. They are not supposed to be armed as are our military personnel.

Regardless of what kind of protection we ultimately provide our civilian representatives abroad, it will call for very serious thought and attention on the part of our Government to provide protection to our able ambassadors and those who serve with him.

We have many able men serving this country abroad. I think that Ambassador Elbrick certainly has proved he is a man of great ability. So has Ambassador Meyer and many others.

THE NIXON TAX PROPOSAL FAILS THE AVERAGE TAXPAYER

Mr. YARBOROUGH. Mr. President, I was shocked by the testimony of Secretary of the Treasury, David Kennedy, before the Finance Committee in which he outlined the Nixon administration's so-called tax reform program. Instead of presenting to the Senate and the American people a tax program which would provide meaningful relief to the "forgotten American"—the overtaxed lower- and middle-income citizens—as was repeatedly promised during the 1968 presidential campaign, Secretary Kennedy proposed a tax program that could well have been devised in a big business boardroom.

One of the most amazing features of the Nixon tax program is its treatment of the standard deduction. The House of Representatives recognized that the present standard deduction of 10 percent with a ceiling of $1,000 is totally out of line with today's cost of living; therefore, the House sought to remedy this unjust situation by raising the standard deduction to 15 percent with a ceiling of $2,000. By doing so, the House was responding in an effective manner to urgent need for tax relief. The Nixon administration, however, did not endorse this significant change in the tax law, but rather proposed that the standard deduction be cut to 14 percent with a ceiling of $1,400—a loss to the average taxpayer of $600 of deductions.

To further compound this situation, Secretary Kennedy asks for a 1-percent reduction in corporate taxes. What this all boils down to, in the final analysis, is that the President's tax program gives relief to big business and does so by reducing tax benefits for individuals. In other words "the forgotten American," according to the Nixon administration, is not the overburdened taxpayer, but really the large business powers.

The average taxpayer of America is tired of being shortchanged. He is tired of bearing a disproportionate share of the cost of the Vietnam war, while war

contractors reap excessive profits from this cruel conflict, with no tax or excess war profits. He is tired of inflation and high interest rates which rob him of his hard earned wages. Most of all, he is tired of coming out second best to big business in tax matters. The average taxpayer is crying out for tax relief and has challenged the Congress to provide it. He is in no mood to accept a watered-down program.

Mr. President, during the recent recess of Congress, I had the opportunity to make about 55 public appearances in my State during a 3-week period, and also several appearances in two or three other States during the same period. Approximately 35 of those public appearances were the town hall-type meetings, held in many towns of large and small populations. Many people express their views as to the inequities and discrimination in the tax structure as it affects them, the individual taxpayers. They think that the present tax structure favors big business interests. This is burning itself into the minds, consciences, and thoughts of the American people to the point that I think that if there is no tax relief for them, they are going to change things at the next election so that they will get such relief. There is no doubt about that.

In the past in Texas we had only one major medium of news. Now there are three, and they are educating the American taxpayer as to what is happening to him. The public has learned that 40 percent of the total support of our Government by means of all kinds of taxes, especially on income, is being paid by the individual taxpayer alone, and only 19 percent is being paid by corporations. In addition, they have learned that the individual pays a share of 23 percent of the funds contributed to social security. Thus, the individual taxpayers, those in the lower and middle income brackets, are bearing the brunt of this heavy burden.

Mr. President, there are 21 individuals in this country with an income of over $1 million per year who pay no income taxes at all. There are approximately 30 individuals with income of half a million dollars to one million dollars who also pay no taxes. There are approximately 150 people with a net income of over $200,000 a year who pay no income taxes.

The people of this country know this, Mr. President.

There are several methods of providing this much needed tax relief. One is to raise the personal exemption from the pitifully low figure of $600 to a figure that is more in step with today's cost of living. I have introduced a bill which would raise the personal exemption to $1,200 which certainly is more realistic than the $600 figure that was adopted nearly a quarter of a century ago. I am very disappointed that the Nixon administration did not see fit to incorporate this idea in its tax program.

Another way of raising the revenue needed to meet the high cost of the Vietnam war and still give our people relief from high taxes would be to tax the excessive profits that are being made by war contractors. This country had an excess war profits tax in World War I, World War II, and the Korean conflict, and it proved to be a just and effective means of financing those wars. That is why I am proud to be a cosponsor of a bill to establish such an excess war profits tax bill.

Mr. President, a tax on excess war profits raised 31 percent of all the revenue necessary to finance World War I. This tax provided 30 percent of the funds to finance World War II. A very substantial part of the cost of financing the Korean conflict also came from the excess war profits tax.

Yet, we have no tax today on excess war profits.

I am cosponsor of a bill to levy a tax on excess war profits which it is estimated would raise $9½ to $10 billion. The present surtax also raises $9½ to $10 billion. That is the reason why I voted against an extension of the surtax when it came before the Senate just before the recess.

I think it is rather symbolic that the surtax, which falls heaviest on the lower and middle income taxpayers, raises the same amount of money that a tax on excess war profits would. Where is the conscience of a Congress that would lay such taxes on the backs of the people and to say to the profiteers, "You go ahead," even though we taxed them in World War I, World War II, and the Korean conflict? It worked well in three wars. The Vietnam war is going to cost the taxpayers more than any other war, except World War II, and yet we will not put the burden of the cost on the backs of the war contractors where it belongs, but will put it on the backs of the oridnary taxpayers, especially those with low income.

I submit that increasing the personal exemption and enacting an excess war profits tax is a much more effective means of helping the forgotten Americans than raising taxes for individuals by cutting the standard deduction, while lowering big business taxes at the same time.

Mr. BYRD of West Virginia. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The bill clerk proceeded to call the roll.

Mr. KENNEDY. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

AUTHORIZATION OF APPROPRIATIONS FOR FISCAL YEAR 1970 FOR MILITARY PROCUREMENT, RESEARCH AND DEVELOPMENT, AND FOR THE CONSTRUCTION OF MISSILE TEST FACILITIES AT KWAJALEIN MISSILE RANGE, AND RESERVE COMPONENT STRENGTH

The Senate resumed the consideration of the bill (S. 2546) to authorize appropriations during the fiscal year 1970 for procurement of aircraft, missiles, naval vessels, and tracked combat vehicles, and to authorize the construction of test facilities at Kwajalein Missile Range, and to prescribe the authorized personnel strength of the Selected Reserve of each Reserve component of the Armed Forces, and for other purposes.

Mr. STENNIS. Mr. President, it appears that we are nearing the end of the session for today. I know it is not necessary to remind any Senator, or even for the record to state, that we have a unanimous-consent agreement to vote Monday on the C–5A amendment and that that vote will come in the neighborhood of 3 o'clock.

Mr. President, looking forward to the rest of next week, subject to the disposition of some other amendments by the Senator from Wisconsin which do not relate directly to weapons, but are, more or less, regulations with reference to certain matters, after disposition of the amendment on the C–5A—and I hope that will not take a great deal of time—I believe the next amendment to be taken up will be the one with reference to the Navy aircraft carrier, an amendment sponsored by the Senator from Minnesota (Mr. MONDALE) and the Senator from New Jersey (Mr. CASE).

They have authorized me to say that they hope to get their amendment up next, after the C–5A and whatever may happen toward giving consideration to the amendments of the Senator from Wisconsin that I have already mentioned.

I make that announcement for the benefit of the membership and also with the hope that once the wheels start turning here on Monday in disposing of those amendments, we will continue, without slackening pace, for the rest of the week, or at least until we get through with the bill. I believe if we stay here and work hard, we can finish action on this bill next week. There has been no agreement or understanding about a time limitation with reference to the carrier amendment, but I do not think the authors will be disposed to prolong the matter, and we understand that, after some reasonable debate, they will be interested in a limitation of time.

I thank the Chair, and I yield the floor.

ADJOURNMENT TO 11 A.M. MONDAY, SEPTEMBER 8, 1969

Mr. KENNEDY. Mr. President, if there be no further business to come before the Senate, I move that, in accordance with the order of yesterday, the Senate stand in adjournment until 11 a.m. Monday.

The motion was agreed to; and (at 2 o'clock and 38 minutes p.m.), the Senate adjourned until Monday, September 8, 1969, at 11 a.m.

NOMINATIONS

Executive nominations received by the Senate September 5, 1969:

IN THE NAVY

Having designated Rear Adm. Walter L. Curtis, Jr., U.S. Navy, for commands and other duties determined by the President to be within the contemplation of title 10, United States Code, section 5231, I nominate him for appointment to the grade of vice admiral while so serving.

EXTENSIONS OF REMARKS

SENATOR RANDOLPH URGES THAT WE FACE THE FACTS OF ENVIRONMENTAL CHANGE—ADDRESSES NATIONAL PARK SERVICE SEMINAR—GROUP DISCUSSIONS HELPFUL IN UNDERSTANDING PROBLEMS AND APPROACHES TO SOLUTIONS

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, September 5, 1969

Mr. RANDOLPH. Mr. President, throughout the Nation there is a growing awareness of the relationships between the natural and manmade worlds. As our population grows so do the demands made on our natural environment increase. Consequently, the need to maintain a proper and useful balance between man and his surroundings takes on new importance.

The National Park Service is fully aware of these contemporary problems and has dedicated itself to environmental conservation.

To aid in keeping its personnel abreast of the problems and the tools for solving them, the National Park Service regularly conducts a variety of training programs.

It was my privilege on September 4 to address the executive environmental management seminar conducted by the Park Service at its Stephen T. Mather Training Center at Harper's Ferry, W. Va. Sixteen high level Park Service managers participated in the 3-day seminar at this national training facility under the capable direction of Raymond L. Nelson, supervisor of the center.

Following my remarks I engaged for more than 2 hours in a question and answer discussion with the seminar participants. I was impressed with their concern over environmental problems, not only as they relate to the Park Service but to the economy in general.

Mr. President, the critical problems currently facing our environment are of great importance to every citizen and to every Member of Congress. I ask unanimous consent that my remarks at the Park Service environmental management seminar be printed in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR JENNINGS RANDOLPH AT THE NATIONAL PARK SERVICE SEMINAR, STEPHEN T. MATHER TRAINING CENTER, HARPERS FERRY, W. VA., SEPTEMBER 4, 1969

FACING THE FACTS OF ENVIRONMENTAL CHANGE

In this Training Center, named for a forward thinking leader, we gather to exchange views on a vital issue inherent in our times. Stephen T. Mather was concerned with "Environmental Management." Seminars such as this are excellent opportunities to really nail the pieces together. I expect to leave this meeting with more knowledge of your problems than you will of mine.

There is the current ferment in Washington and across the Nation which is aimed at establishing a national policy for environmental quality.

At a time when man can finally reach out and explore the moon in person, too many Americans find themselves wallowing in an environment which is becoming almost as hostile as the surface of the moon.

Astronauts Armstrong, Aldrin, and Collins were protected from the harsh conditions of outer space, safe inside expensive total environment chambers called space suits.

The tens of millions of us who watched their fascinating space adventures through the marvels of live television across 250,000 miles were at the same time breathing fouled air, drinking water of doubtful purity, walking over some of the billions of tons of solid waste discarded each year by our society.

It is gratifying that we express concern over the conditions of this environment. It is an important first step to realize that a problem does exist. It is necessary to recognize that pollution can degrade the environment to the point where man, as we know him, cannot survive. And it is vital to realize that man's social activities have a direct bearing on the condition of the environment.

The National Park Service has been charged with a broad responsibility to insure against environmental pollution. A key section of the Act passed by Congress in 1916 succinctly set forth the mission of the Service:

". . . to conserve the scenery and the natural and historic objectives and the wildlife and to provide for the enjoyment of the same in such manner and by such means as will leave them unimpaired for the enjoyment of future generations."

The Act specifically implied that this responsibility extended to the vast National Park System. But it is significant that the System has expanded six fold since that time, from less than 5 million acres to more than 29 million acres today.

Congress intended that the National Park Service not only be concerned with the original parklands, but that it apply its talents and knowledge to insuring that future Federal parklands and contiguous areas remain unimpaired. Indeed, who has better reason or facility to watch over the natural beauty of our land or to monitor the quality of the environment than the men and women who have devoted their lives to that task?

Secretary of the Interior Walter J. Hickel, on June 18, recognized this fact in a statement of management philosophy which concluded that one of the most challenging jobs of the Service is "to patricipate actively with organizations of this and other nations in conserving, improving, and renewing the total environment."

The National Park idea began with the establishment of Yellowstone National Park in 1872. At that time, Congress wanted to preserve the outstanding natural features and scientific wonders found there.

Congress expanded the National Park Service role to the field of recreation in 1936. The Park, Parkway and Recreation Area Study Act authorized studies of recreational areas for inclusion in the System. A decade later Congress authorized the Service to administer recreation areas under jurisdiction of other Government agencies.

Other legislation greatly expanded the Service's role in environmental quality. For example, the Cape Cod National Seashore Act authorized for the first time the use of appropriated funds at the outset to buy parklands, and in 1964 the Congress established a Land and Water Conservation Fund and passed the Wilderness Act. We broke tradition in 1966 with the Historical Preservation Act by extending support to state and local historic preservation efforts.

As you know, the Senate Committee on Public Works, which I chair, has substantive jurisdiction over the Federal highway programs. Recently the Committee authorized $41 million for the construction and improvement of highways within (and some highways approaching) national parks, monuments and recreational areas, and of National parkways, parks, and monument roads. These funds are administered jointly by the Secretary of the Interior and the Secretary of Commerce.

We are pleased that the National Park Service is actively engaged in planning these highways with a view toward scenic and environmental preservation.

What all of this connotes is the fact that Congressional concern with the quality of the environment has placed a large burden of responsibility on the National Park Service. We have felt that the Service is a logical administrator of these large and important programs because of the resources and talents within your ranks.

You know of the 1963 report by the Advisory Committee to the National Park Service on Research, issued by the National Academy of Sciences—National Research Coucil. The report points out that the National Park Service has the responsibility of administering the national parks in accordance with the purposes for which they are or may be set aside by specific Acts of Congress. It emphasizes that knowledge about the parks and their problems is needed to discharge this responsibility. Such knowledge comes from research, especially research in natural history and the physical and biological systems of nature.

The report indicates that research in natural history by the Service has been "only incipient, consisting of many reports, numerous recommendations, vacillations in policy, and little action." Research by the Service, the report said, "has lacked continuity, coordination, and depth. It has been marked by expediency rather than long-term considerations. It has in general lacked direction, has been fragmented between divisions and branches, has been applied piecemeal, has suffered because of a failure to recognize the distinctions between research and administrative decision-making, and had failed to insure the implementation of the results of research in operational management."

This indictment, slightly outdated, underscores problems experienced not only by the National Park Service but by many branches of government to whom the quality of our environment is entrusted. There is a general lack of over-all direction and coordination not only within agencies but between them. There are too many examples of agencies working at cross-purpose with other agencies, often within the same Department.

The Committee on Public Works has recognized this problem and is attempting to rectify it.

In June, I cosponsored with 40 of my colleagues a new bill, the "environmental Quality Improvement Act of 1969," to establish a national policy for the environment. This bill was appended to the Water Quality Improvement Act of 1969 (S. 7) as Title II of that legislation.

Title II provides for more effective coordination of Federal air quality, water quality, and solid waste disposal programs, and for the consideration of environmental quality in all public works programs and projects. More importantly, it calls for the coordination of all Federal research programs

which improve knowledge of environmental modifications resulting from increased population, urban concentration, industrial development, and other activities of our society.

Lest it be forgotten, S. 7, the Water Quality Improvement Act itself, goes a long way in providing for better quality of the environment. Senator Edmund S. Muskie, Chairman of our Subcommittee on Air and Water Pollution, worked to give us a vehicle which will prevent catastrophies like the Santa Barbara oil spill that dumped millions of barrels of black, sticky oil on the beaches along the West Coast.

The Committee on Public Works has also recently approved a bill extending and amending the Appalachian Regional Development Act of 1965 to provide for continuing programs for mine land reclamation and pollution control. This legislation will give new emphasis to health projects for early childhood health, nutrition and education, and to research and action programs to eliminate "black lung" and other occupational hazards to miners' health. The acid mine drainage section of the bill is aimed at cleaning the nation's streams and impoundments of the Appalachian region.

It is difficult to measure the effect of this bill, but perhaps some examples of the problem in economic terms would help.

It is estimated that over 3 millions tons of acid are discharged annually from active and abandoned underground and strip mines in Appalachia. The commercial value of this acid—if recovered and used in the processing of steel, rayon, and so forth—would be approximately $90 million. In addition, some 150,000 tons of aluminum, worth $12 million is washed away—enough to make 6,000 Boeing 707 airplanes. And 500,000 tons of iron, worth about $50 million, are washed down the nation's rivers every year.

The cost of this blight is staggering in terms of losses and damage to waterworks, bridges, boats, culverts, and other structures, and the higher water treatment costs for industries and municipalities. The loss of recreational areas for swimming, boating and fishing is even worse.

Yes, the Committee on Public Works has acted to halt the flow of acid waters from the mines, particularly those in West Virginia and other coal producing states. The reversal of water conditions in the area should provide for many useful parks and recreation areas in this beautiful mountainous stretch of the country so near the major population centers of the East Coast.

The new legislation also authorizes the Secretary of the Interior to assist in the sealing and filling of voids in abandoned coal mines, the planning and execution of projects to control mine fires, the sealing of abandoned oil and gas wells, and the reclamation and rehabilitation of strip and surface mined lands in areas with potential for future growth. This, too, will provide for the reclamation and development of areas which have been scared and degraded.

Erosion and sediment control and reclamation of land which has been misused by poor farming and forestry practices is another area for which the legislation provides. The Act authorizes contracts of up to 10 years for assistance to landowners or operators in the Appalachian region to establish measures for the conservation and development of the region's soil, water, woodland, wildlife, and recreation resources.

Late in July, I introduced a bill to establish the first regional interstate compact to control this nation's air pollution. Pursuant to the intent of the Clean Air Act of 1963 and in accordance with provisions of the Air Quality Act of 1967, the measure gives approval to an Interstate Compact on Air Pollution between West Virginia and Ohio, with provision that the States of Pennsylvania and Kentucky may join at some future date.

Congress has become increasingly aware of the dire consequences of dirty air. Beginning with the Clean Air Act of 1963, we have made it clear that our mandate from the people is to turn the tide against the creeping contamination of our citizens, particularly the young and the elderly, and fouls our property at costs ranging into the billions of dollars each year.

The Compact was passed by the separate State legislatures twice in order to meet the intent of Congress as revised in the 1967 Act. This is proof that the states are concerned over the quality of the environment just as we in Washington are concerned.

Now we turn to another problem which faces us—solid waste. Americans waste billions of tons of solid materials each year. From our homes and offices, each person contributes almost five and one-half pounds of garbage and miscellaneous trash every day to our over-strained refuse system. The cost is more than $4.5 billion a year. And the figure will reach eight pounds per person a day by 1980.

Added to that, industrial wastes contribute another 3.2 pounds per person per day; agricultural wastes from animal feedlots, packing houses, lumbering operations, and other related industries produce another 30 pounds per person; and 7 million automobiles are junked each year, many to rust along the roadside or decay in auto graveyards.

Natural resources—the raw minerals and biologicals from which all of our products come—are the reservoir from which society draws its material sustenance. Although there is a growing awareness of the need for aesthetic resources such as space for recreation and natural beauty, the basic resources are soil, air, water, and minerals, including fuel. Minerals and all sources of energy gain in relative importance with advancing technology and expanding industrialization.

Throughout history, those nations with access to minerals, and the technology for using them, have gained ascendency. Before World War II, the leading powers also were leading coal producers. In order of declining rank, the five leading coal producers were: the United States, the United Kingdom, Germany, the USSR, and Japan.

That the military victory went to the side with the greater capacity to convert iron and coal into tools of industry, and weapons, is more than coincidence. It is a fundamental fact. And it is axiomatic that the United States must have a continually increasing supply of minerals if we are to meet the needs of our burgeoning population for a comfortable standard of living and for national security.

At the same time, other natural resources must be preserved and protected. Purely industrial and economic considerations must be weighed against their impact on the environment.

Industrial wastes and municipal sewage pollute our streams. So does sediment from agricultural activities, highway and urban construction, and burned-over forest lands. Automobiles pollute the air. Beer cans defile the countryside. Although water pollution is reaching intolerable levels, the loss of soil by erosion is at least as serious, and is inextricably involved with many water pollution problems, especially those resulting from surface mining and construction activities.

Man now has the power to control many of the elements of nature. He can destroy the soil, render air and water unusable through pollution, kill every form of life—himself included. He now can manipulate genetics and create life in a test tube.

If he has this power to destroy, he also has the means to conserve and protect. Whether he has the wisdom and self-restraint to take effective action in the remainder of this century may well determine the course of man's future years on Earth.

Earlier this year I cosponsored with Senator Muskie and nine other colleagues a new bill—S. 2005—the "Resources Recovery Act of 1969," aimed at cleaning this Nation's solid waste problem and turning those used resources back into grist for our industrial mill. This legislation is keyed around research and demonstration of effective ways of collecting, transporting, and recycling or disposing of the billions of tons of solid wastes which we as a Nation generate.

We have held field hearings in Boston and Jacksonville. We are planning more in other regions of the country, including Washington. We hope to get at the heart of the problems and develop meaningful solutions for handling them.

The American public is not strictly to be blamed for the problems of solid waste which are pushing dangerously near the crisis stage. It can, in fact, be documented that we are not a nation of slobs who go about scattering the remains of the last picnic over the landscape.

The majority of Americans keep their homes and lawns neat and clean. They are proud of the appearances of their cities and parks. They generally look for places to deposit their trash to prevent the ugliness of litter.

Nowhere is this preoccupation with cleanliness more evident than in the National Parks. The parks around the nation's capital are visited by more than 15 million persons each year. Almost all of these visitors use the National Capital Parks, administered by the National Park Service. Park service officials report that a great deal of effort is spent just cleaning up. More than 300,000 cans of trash were picked up and disposed of last year, at a cost of about $500,000.

But there is a conscious effort on the part of the general public to keep their parks clean, despite indications to the contrary. One of your colleagues reports that on particularly heavy weekends—long weekends like the Fourth of July and Labor Day—the trash baskets in the parks are filled to overflowing, but the excess litter is usually piled around the baskets and not scattered over the landscape.

Studies show that a big part of the problem is a lack of facilities for disposal of trash. Municipalities with long experience in the field have found that more trashbaskets spaced at frequent intervals along the streets are an inducement to citizens to keep the cities clean. No one minds carrying a small handful of Polaroid film backing or an empty soft drink bottle a few yards to drop it into a receptacle. But when the pockets begin to bulge and the hike down the trail is still long, it is easier to toss the trash into a nearby bush than to make the extra effort.

The President's Science Advisory Committee, in "Restoring the Quality of Our Environment," reported that the nation annually must dispose of 48 billion metal cans a year (250 per person) 26 billion bottles and jars (135 per person), 65 billion metal and plastic caps and crowns (338 per person), plus more than a half billion dollars a year of miscellaneous packaging material. A new report by the Midwest Research Institute shows that packaging consumption will increase more than 40 per cent by 1976.

The number of visits to National Park areas increased by 90 per cent during the past eight years, according to your Director, Mr. George B. Hartzog, Jr. During the next 10 years, the forecast is for a further increase of 125 million—to more than 276 million by 1979. Outdoor recreation activities are growing twice as fast as the population, and the National Park System visitations are increasing several times faster than outdoor recreation activities generally.

With these figures in mind, and with the

knowledge that ever more and newer disposable packaging materials and other products of modern industry will be greatly expanding, it might be well to plan for easier, better, and quicker disposal and collection systems for the National Park System to cope with what promises to be a tremendous problem. The easier it is for Americans to dispose of waste, the easier the total job of solid waste management and the cleaner our parks and playgrounds will be.

Insurance of environmental quality, not only in our parks but throughout the entire nation, is becoming increasingly important as our population expands and the demands on our resources increase. Yesterday's conservation battles were for the establishment of the parklands you now administer. Today's conservation battles are for beautiful cities, clean water and air, better, safer, cleaner highways, and the preservation of open space.

The problems of environmental quality are becoming too great for any one agency or any one group to encompass. Despite the considerable competence of the staff of the Committee on Public Works, we, too, are finding it difficult to keep abreast of the many areas over which we have jurisdiction.

To cope with this situation, we are now embarking on a new venture, unique to the Congress, which will involve scientists and engineers and other experts directly in the policy-making operation before it begins. We are creating a panel of experts which will meet with the members and staff of the Committee informally to discuss problems before they are generally recognized. The members of the panel are appointed on a rotating basis, selected because of their expertise and because they can generate fresh new ideas about problems relating to environmental quality. Many of them will be young men and women who have not had much opportunity to participate in the process.

With this Panel, we intend to bridge the gap between the laboratory scientists who are first to come to recognize these problems and the legislators who must deal with them—too often after much damage has been done. We hope to be able to come up with constructive, preventative legislation which will guarantee future Americans the right to quality of living, as expressed by the absence of pollution, freedom from crowding, noise and other deleterious byproducts of our rapidly growing society.

I have told you much of what we are doing in Congress to insure environmental quality.

For the last few minutes let me digress and give you some thoughts about the National Park Service. As Mr. Hartzog has said, and I agree, parks do not exist in a vacuum. It is important in planning, he says, that you consider the total environment in which the park exists.

For the Service has taken some steps in the right direction. For instance, I understand that in order to avoid overcrowding, traffic congestion, and pollution from automobiles, at least two major parks, including Yosemite, are using new shuttle services to take visitors around the grounds.

I have also suggested that some planning be undertaken to alleviate the trash problem in the parks.

Beyond this, however, a number of interesting suggestions have been made by various people to increase the Park Service's activities in other areas of environmental quality.

In its Advisory Committee report, the National Academy of Sciences-National Research Council provided a number of recommendations which, if followed, could bring greater understanding of the total environment, as well as providing baselines for environmental quality. For example, the report suggested that the natural history resources of each national park should be inventoried and mapped. And research, both by Park Service naturalists at each park and by interested visiting scientists, should be organized to provide a complete record of the biota and the physical properties of the parks. Universities, private research institutions, and qualified independent investigators should be encouraged to use the national parks in teaching and research. In fact, organized research programs should be developed to involve these experts on a long-range basis.

For us to come to grips with the problems of pollution and environmental degradation, knowledge about the natural biological and physical systems is extremely important. To set standards for air and water pollution, it is imperative that scientists have baselines of purity for our rivers and lakes and the unpolluted wilderness areas available almost exclusively in the national parks.

If Congress is to pass meaningful legislation, and if the government—all agencies—is to carry it out, it will require the talents of dedicated men and women who have extensive training in the sciences, who interact with nature, who appreciate the needs of society, who understand the problems of industry, and at the same time are knowledgeable about the limits of our environment. Thus it is important for National Park Service people to seek to make even greater contributions to the over-all quality of our environment. I have confidence in your creative and constructive efforts in the achievement of workable and worthwhile programs.

THE LATE HONORABLE BARRATT O'HARA

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. SIKES. Mr. Speaker, I wish to join my colleagues in paying tribute to an outstanding and beloved American. All of us have been saddened by the death of the distinguished former Congressman of Illinois' Second District, Barratt O'Hara. If proof were necessary, Representative O'Hara's career in Congress demonstrated beyond a shadow of a doubt that energy, creativity and the pursuit of justice are not solely the property of youth.

At a time when most men would be ready to retire, "Battling Barratt," as we affectionately knew him, won his first House seat at the age of 66, and was for many years our oldest Member. At the time he came to Congress, Representative O'Hara had already won outstanding success in enough careers for several active men. At the age of 13, he accompanied his father on a diplomatic mission to Nicaragua and stayed on to join a Smithsonian Institution party exploring Central American jungles. At 15, he ran away from home to join the volunteers fighting in the Spanish-American War. He served as a corporal at the seige of Santiago, became chief scout for his brigade, and was awarded the Cuban Order of Military Merit.

After attending the University of Missouri, he became sports editor of the St. Louis Chronicle at the age of 20, then moved to Chicago where he was sports editor of the American, and later Sunday editor of the Examiner. Meanwhile, he won a law degree from Kent College of Law in Chicago, edited and published Chicago magazine, wrote a history of boxing, entitled "From Figg to Johnson," and at 30 became the youngest Lieutenant Governor in the history of Illinois. A brief stint as president of a movie company followed, then Army service as Judge Advocate General of his division in World War I, and finally law practice. As a defense attorney who obtained acquittals for more than 90 percent of his clients, he won the public admiration of Clarence Darrow.

Elected to the House in 1948, he was defeated for reelection, but came back in 1952 and stayed through the 90th Congress. With a zest for debate and new ideas unexcelled by many younger Members, he was a champion of liberal causes and the emergence of new African nations. As chairman of the House Foreign Affairs Subcommittee on Africa, he made an outstanding contribution to American understanding of emerging nations and the forces of anticolonialism. During the fear-plagued McCarthy years, he fought to abolish the House Un-American Activities Committee.

Soldier, journalist, Lieutenant Governor, motion picture executive, radio commentator, lawyer, and Congressman, Barratt O'Hara was indeed one of our Nation's outstanding citizens. We mourn his passing, for he will be sorely missed. His life was as full and rich and varied as any man's might be, and it spanned the period of America's development into the world's greatest power. This Nation will never forget him.

CIVIL RIGHTS NOT DEAD

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, September 5, 1969

Mr. SCOTT. Mr. President, last month Mr. Robert J. Brown, special assistant to the President, who is Civil Rights Coordinator in the White House, addressed the National Dental Association. I ask unanimous consent that his excellent speech, in which he outlines the various civil rights activities underway in this administration, be printed in the RECORD.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS OF ROBERT J. BROWN, SPECIAL ASSISTANT TO THE PRESIDENT TO THE 56TH ANNUAL CONVENTION OF THE NATIONAL DENTAL ASSOCIATION

Mr. President, President-elect, Speaker of the House of Delegates, other officers, delegates and friends.

It is a privilege and pleasure to have a part in the program of such a distinguished organization. The National Dental Association has a proud history of accomplishments. Opening the doors for Black dentists has not been easy.

In these difficult and critical times, things are not going to get easier—they are going to get tougher. The burning issues of today are no longer whether you can eat at a

Southern lunchcounter but rather to develop and initiate effective programs to feed the poor of our nation, rural and uban. They are:

Developing and initiating the best possible health care programs for the young and needy.

Making sure that every man can practice his profession or vocation with all of the available tools in any hospital, on any building, in any office in this country.

Making sure that all of the restrictive covenants against the sale of land to Black people and other minorities are voided by the law of the land.

Making every effort to see to it that this nation is a nation of peace. They are:

Ridding our nation of the basic causes of the riots which trouble our cities, large and small.

Making justice an essential part of any and all law and order efforts.

Initiating and bringing into being a meaningful family security plan to replace an outworn, outdated and demeaning welfare system.

Giving hope to those who have lost it.

Inclusive in all that I have said thus far and all that I have not said is the prime issue of *bridging the gap between young and old, black and white, rich and poor.* This must be done if our country is to move ahead in a creative, constructive and peaceful manner.

We do not have all of the answers. No one does. Contrary to what you may have heard, we in the Nixon Administration solicit your ideas, suggestions, constructive criticism: and above all, your support.

The normal question today, among Black people in particular, is to ask "support for what?" I want to take this opportunity to set a few records straight. Until this Administration:

No Black man had ever served as a general counsel of any major department of government. James Washington, a former Howard University Law School Dean now serves in this capacity in the important Department of Transportation.

For several decades, the National Dental Association along with the NAACP, the Urban League and other major black groups protested to the White House that a black man should sit on the three man U.S. Civil Service Commission which regulates more than 3 million Federal jobs. James E. Johnson, a black man, now serves on this powerful Commission. I might add that he is also the Vice Chairman.

There has never been a black assistant postmaster general; Assistant Surgeon General or Director of the Women's Bureau in the U.S. Labor Department. There is now.

At no time did the U.S. Department of Justice file a suit against the restrictive convenants which have kept black people and other minorities out of decent homes for generations until this Administration.

They say we softened the school desegregation guidelines, and yet numerous suits have been filed and millions of dollars cut off from segregating school districts. In fact, for the first time in our history a suit has been filed against an entire state school system. And the Chicago Board of Education has been given two weeks to take corrective steps in desegregating its faculty.

Until this Administration:

No free food stamps were given to the poor and no comprehensive program had ever been advanced to feed our hungry. We have submitted to the Congress a 2.5 billion dollar program. Even my good friend, Dr. Ralph Abernathy admitted publicly that this program went further than any other Administration has dared to go. However, I must add that he also did not think it to be enough. Nonetheless, our program is designed so as to spend wisely and diligently whatever is necessary to do an effective job. Our goal in this area of concern is to eliminate hunger from our land.

There were no proposals to take the poor off of the Federal tax rolls. We have proposed a program to do just that.

We have proposed a general strengthening of the unemployment insurance system. We are asking each state to cover at least 50% of a workers wages and permit workers to receive benefits while enrolled in training programs designed to increase their employability.

In our first seven months, we have moved steadily and effectively ahead. I ask all of you to keep an open mind and heart. Toss away that age old so-called black anti-Republican attitude. All we ask of you and all we ask of all Americans is to be judged on what we are able to accomplish. As Carl Rowan put it the other day in his Washington commentary: "For where Mr. Nixon is entitled to the applause of the black community he ought to get it."

There are many of us who believe that black and white leadership must present the kind of courage to the people of this country to praise as well as criticize—to stand up and be counted for what is right and denounce what is wrong. America is searching for this kind of leadership. I am sure that much of it can be found in this distinguished group.

The people, black and white, are asking for and demanding results. The time for beautiful rhetoric has run out. In the words of the street, "no more shucking and jiving." We must concentrate more on producing meaningful results in our local communities for the masses of this country. At the same time, we must say to all of those who would let emotion rule, "to fight a Sherman tank with rocks, sticks and 22 rifles—is not only ridiculous, but very stupid."

So that there be no mistake about where I stand. I think the right of peaceful protest is vital to our way of life. *I endorse it fully.* The neglected area of Black studies is important to all of America. And I have been black and proud for 34 years now (and beautiful too). Just in case somebody doesn't know, I am a bona fide, first hand living witness and victim to the experiences of hunger, poverty and violence.

In other words, I know about most of the hang-ups which one might have who happens to be black. Some months ago, I picked up a little book by Turner Brown, Jr. (no relation) which many of you may have read. It gives an overview about the author's conception of what being black is all about. He says

Black is—not having to get in the mood to sing the blues.

Black is—suffering the ultimate blow of being automated out of the Sanitation Department.

Black is—being accused of causing trouble but always winding up as the casualties.

Black is—when you meet the devil to sell him your soul he gets embarrassed and says, "I can't give you quite as much as I offered you over the phone."

Black is—when you're playing "eeny, meeny, miney, moe" and the thing you catch by the toe is a tiger.

Black is—when you're bringing your suit home from the cleaners and you get busted for stealing it.

Black is—being told you ran down a neighborhood that was fifty-years old when you finally got to move in.

Black is being issued a credit card by a pawn shop.

In addition to my recently assigned responsibility as Civil Rights Coordinator in the White House for the Administration, I have been working in the area of minority business enterprise.

On March 5th, the President created an Office of Minority Business Enterprise. This office in the Department of Commerce is designed to spur the growth of minority-owned business across the country. OMBE is the coordinating body in the Government's efforts to give minority group members a larger piece of the mainstream economic action.

This office now has a staff and it is operational. Within a few days, the President will appoint a "blue ribbon" advisory committee to work in this area.

Let me make it clear that OMBE is no substitute for other efforts that are underway in the national program to bring minority citizens into full participation in the American society and economy. Jobs are the first essential; we all recognize that. Minority enterprise will not replace any existing program; it is a supplementary program, not a conflicting one.

I would also like to stress that this program is a "no-strings" program. It is intended to help persons operate businesses both inside and outside the ghettoes—wherever their interests, talents and activities take them.

In the short time that OMBE has been in existence, Secretary of Commerce Maurice H. Stans has announced several programs of great aid to minority business enterprise.

The following test programs already announced are:

a. *A National Institute for Minority Business Education* at Howard University, and subsequent university management assistance centers (with HEW).

b. *A Voluntary Credit Corporation* to provide loan guarantees through the (Negro) National Bankers Association (with OEO and SBA).

c. A Shopping Center Development Program with the Reverend Leon Sullivan of Philadelphia who will send trained developers to establish centers in 13 cities (with SBA, and EDA of Commerce).

Other examples of programs under development include:

a. Active efforts to stimulate more Small Business Investment Corporations, owned and directed by major corporations, to operate in minority areas.

b. Negotiations and meetings with franchisers to bring about more minority automobile dealerships, gasoline stations, and other retail franchises. Chrysler has agreed, for example, to give the first 25 automobile dealerships to minority members.

c. The enlistment of accountants and management consultants on a national voluntary basis to provide direct assistance to new minority entrepreneurs.

d. Examination of ways in which minority business enterprise can participate in the life insurance industry's second billion dollar commitment for urban action.

I want to reiterate that civil rights is not dead in this Administration. It has not been put on the backburner. It is on the front burner and "We are going to take care of business."

In the immediate days ahead we ask you to take a good long hard look at our civil rights and general domestic thrust. Our commitment in this area is forward.

We believe that it will be deeds, not words that will bring us together. With the help of the National Dental Association and other groups across this nation, we intend to perform and deliver.

Let us seek to broaden our perspective and move ahead together. This Administration is going to be about helping people and making America better for *all* people.

In bringing the disadvantaged blacks, the poor whites, Mexican-Americans, Puerto Ricans and any other groups into the mainstream of American life, most of you might want to consider yourselves as drum majors—the kind of drum major Martin Luther King, Jr. said he wanted to be in his last sermon, and I quote him here:

"I want you to say that day that I tried

to be right and to walk with them. I want you to be able to say that day that I did try to feed the hungry. I want you to be able to say that day that I did try in my life to clothe the naked. I want you to say on that day that I did try in my life to visit those who were in prison. And I want you to say that I tried to love and serve humanity.

"Yes, if you want to, say that I was a drum major. Say that I was a drum major for justice. Say that I was a drum major for peace. I was a drum major for righteouness.

"And all of the other shallow things will not matter. I won't have any money to leave behind. But I just want to leave a committed life behind.

"And that is all I want to say. If I can help somebody as I pass along, if I can cheer somebody with a well song, if I can show somebody he's traveling wrong, then my living will not be in vain.

"If I can do my duty as a Christian ought. If I can bring salvation to a world once wrought.

"If I can spread the message as the master taught. Then my living will not be in vain."

At the close of life the question will be not, how much have you got, but how much have you given; not how much have you won, but how much have you done; not how much have you saved, but how much have you sacrificed; how much have you loved and served, not how much were you honored.

Thank you.

HEARING HIGHLIGHTS

HON. GEORGE BUSH

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. BUSH. Mr. Speaker, the weeks before recess our Republican Task Force on Earth Resources and Population held three hearings.

The subjects discussed at these hearings were: the hereditary aspects of human quality, the activities of the Earth Resources Survey Program Review Committee, and the environmental problems created by our rapid rate of population growth.

So that all Members of the House can share the information we heard, I offer our hearing highlights for the RECORD:

HEARING HIGHLIGHTS, TUESDAY, AUGUST 5, 1969

Dr. William Shockley, Professor, Stanford University.

Dr. Arthur Jensen, Professor, University of California at Berkeley.

Dr. Shockley stated that he feels the National Academy of Sciences has an intellectual obligation to make a clear and relevant presentation of the facts about hereditary aspects of human quality. Furthermore, he claimed our well-intentioned social welfare programs may be unwittingly producing a down breeding of the quality of the U.S. population.

Specifically, Dr. Shockley feels the National Academy of Sciences should answer the following question: "Is or is not your 1967 statement on *Human Genetics and Urban Slums* now clearly out of date and unsound as a result of the analysis published in the Winter, 1969 issue of the Harvard Educational Review by Dr. Jensen and its subsequent review by Dr. Crow?"

Dr. Shockley believes that such a question is partially justified on the basis that one of 3 authors of that 1967 statement, Dr. James Crow, now seems to feel that the statement fails to adequately consider new theories of genetic quality.

On the basis of studies completed by Dr. Arthur Jensen, Dr. Shockley claimed: "I believe that the voting citizens of the United States can and should endeavor to make their government seek objectivity to formulate programs so that every baby born has high probability of leading a dignified, rewarding and satisfying life. Letters from government organizations show that hereditary factors are essentially excluded from present studies of our social problems.

HEARING HIGHLIGHTS, THURSDAY, AUGUST 7, 1969

Dr. John Naugle, National Aeronautics and Space Administration, Chairman of Earth Resources Survey Program Review Committee.

Mr. Leonard Jaffee, NASA.

Dr. William T. Pecora, Department of Interior.

Dr. T. C. Byerly, Department of Agriculture.

Dr. Robert M. White, Department of Commerce.

Dr. William MacDonald, Department of the Navy.

Mr. J. Robert Porter, NASA.

Dr. Naugle explained the organizational structure of the Earth Resources Survey Program Review Committee, of which he is chairman. The committee is divided into three separate subcommittees: The Status of Benefits Subcommittee, the Status of International Affairs Subcommittee, and the Status of Oceanography Subcommittee.

Thus far the ERSPRC has taken up the following items:

Status of Congressional and Budgetary issues;

Approval of Earth Resources Technology Satellites A and B;

Progress report on Benefits study;

Proposal to establish subcommittees;

Review of BOB and Congressional activity;

Discussion of Program Memoranda on ERTS;

Interagency transfer of funds;

Schedule for NASA aircraft;

FY '70 plans of ERS related efforts in different agencies;

Discussion of means to disseminate ERS program research information.

Earth Resources Technology Satellites A and B are scheduled to become operative in the first quarters of 1972 and 1973. The design lifetime of these satellites is one year. It will cost approximately $70 million to design, build and launch ERTS A and B, but if we can then use them as prototypes, it will cost us only $15 million to make operational repeats.

The ERSPRC has a preliminary study which estimates Earth Resources Satellite gains. In the area of water and agricultural systems management, it would cost $1–1.5 billion to maintain an ERTS program for 10 years. It is estimated that in this country we would benefit by $9–10 billion from such a program. Other countries would receive information worth $10–11 billion. Dr. Naugle feels that once data is received from these satellites, the gains we will enjoy may be much greater than we can possibly estimate.

HEARING HIGHLIGHTS, TUESDAY, AUGUST 12, 1969

Dr. Paul R. Ehrlich, Stanford University.

Dr. Ehrlich described some of the most crucial environmental problems in this country and in the world. Before any progress can be expected in these areas, however, we must first deal with population control problems. Dr. Ehrlich suggested that strong bipartisan support of the President's proposal to establish a commission on Population Growth and the American Future would be the most constructive initial step of the Congress.

One-half of the world's population is not properly fed. By the year 2000, our present population will have doubled and yet the people will expect to be living and eating better than they do today. Dr. Ehrlich explained that the most optimistic experts claim that the best we can hope for is only to maintain the present per capita food supply and standard of living.

Dr. Ehrlich explained that our own government must realize that all of our environmental problems are directly related to our population growth. He hopes that the Presidential commission will clearly relate the United States to the total world situation. In the year 2000, the United States will constitute 6% of the world's population, and will use at least ½ of the world's unrenewable resources.

The populations of the lesser-developed countries will double in 20–25 years. It would be naive to assume that those countries will be able to double their exports, imports, number of lawyers and doctors, or food production. History has proven that similar situations breed national instability and international conflicts. Dr. Ehrlich explained that because biological warfare gives every country a "poor man's hydrogen bomb," we must plan to avoid unnecessary instability. Even now unrest is growing over water supplies which are agriculturally so necessary.

The sea produces 20% of the world's animal protein. It is estimated that the sea could potentially yield 5 times the present amount without damaging the seas's own reproductive processes. Dr. Ehrlich explained that without proper legislative control we are now ruining many of our most productive fisheries by allowing fishermen to bring in as large a catch as possible.

SOVIET NAVAL POWER

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, September 5, 1969

Mr. THURMOND. Mr. President, America's supremacy of the sea has never been in greater jeopardy. The Soviet seapower has never been greater, and it is growing at a rapid rate while the United States is cutting back. The Soviets boast that their navy is second to none.

The U.S.S.R. celebrated their Navy Day this year on all the oceans of the world. Their warships were off the Florida coast during the Apollo launch; a missile-carrying cruiser with escorts appeared off Zanzibar; another cruiser stood off the coast of Finland; scores of nuclear subs prowled the Atlantic, the Pacific, and the Indian Oceans; and about 65 Soviet ships patrolled in the Mediterranean. This armada outnumbered the powerful U.S. 6th Fleet. It included subs, a missile-carrying cruiser, and a helicopter carrier. It is reported that the Soviets intend to station their missile submarines along our Atlantic seaboard, in the Gulf of Mexico, and off San Diego, Los Angeles, San Francisco, and Seattle.

Mr. President, this is the threat and the challenge to our declining seapower. Before some of my disinguished colleagues seek to reduce funds for maintaining a modern Navy, I suggest they make a comprehensive review of the Soviet naval threat. As a start, I recommend they examine the intelligence supporting the address made by Adm. T. H. Moorer, Chief of Naval Operations, to

the Veterans of Foreign Wars in Philadelphia on August 19, 1969.

His remarks present a clear analysis of the threat and the critical situation we face in the Soviet's growing seapower. Any further cuts in our naval power will contribute to the Soviet goal of supremacy of the sea. Adm. Sergei G. Gorshkov told the Soviet people and the world that:

The USSR today has a naval fleet and aviation equipped with nuclear rockets equal to any strategic tasks of an offensive nature on all seas and oceans of the world.

Mr. President, I ask unanimous consent that Admiral Moorer's address be printed in the Extensions of Remarks.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY ADM. T. H. MOORER

My remarks this morning will take two directions:

I have been invited to discuss the nature and portents of a Soviet bear who has demonstrated a new fondness for deep salt water—and the opportunity to do so is as welcome as it is timely.

Secondly, I want to address our National maritime posture in terms of its ability to meet the Kremlin sea-based challenge—now and in the future.

It has been said repeatedly that, in the last few years, the Soviets have "discovered the meaning of sea power."

In some respects, as I will point out later, this seems to be the case; but there is much evidence which shows that the Kremlin is not really a newcomer to the scene of major naval enterprise.

A most likely but forgotten example is her shipbuilding history—particularly as it relates to men-of-war.

We know that from the end of the 1920's to the start of World War II, the Soviets laid down something on the order of 500 warships. These included 4 cruisers, 37 destroyers and 206 submarines delivered to the fleet prior to the war.

We know, also that at the start of that war, Stalin had 219 ships under construction in shipyards which were able to give him promise of rather amazing combatant ship production: 2 or 3 battleships, 10 cruisers, 45 destroyers and 91 submarines.

Even today, it is significant to consider that in mid-1941 almost 300 of a planned 325 submarines were either completed or building; that the keels of battleships had been laid; and that more were planned.

What we can take from this is the fact that Russian expertise in new ship construction—in quantity production of combatants of all types—is a long-established capability.

Therefore, it is obvious their talents in naval design, production and seamanship are not as new as we sometimes tend to believe.

What is new, however, is the maritime strategy of what had been a land-oriented, geography-bound Kremlin. This new strategy, in my opinion, represents both a major shift in concept and the first signs of a real and substantial challenge to free world maritime supremacy.

In my opinion, we may fix the first indications of this shift in strategy in 1956—about the time of the Suez crisis—when the Soviets clearly changed their maritime posture from one defensive in nature, to an offensive one featuring world-wide interests and capabilities. At the same time they have continued to surge ahead on new ship construction, making full use of their considerable background to which I referred earlier.

If we were to regard the impact of the Soviet shipbuilding effort from the standpoint of numbers, it must be credited as being the most significant employable challenge appearing on the world stage since the end of World War II.

One of my main concerns as a navyman—and, as a Member of the Joint Chiefs of Staff—focuses on the buildup and potential of their much-heralded submarine force.

There is no doubt in our minds—or theirs—that their submarine force today represents the main threat to free world control of the seas in the event of hostilities.

Consisting of more than 350 units, their force differs from western submarine forces in many important respects—beyond that of sheer numbers:

It is entirely of post-World War II vintage; no longer operating even one of the old ships such as comprise a large portion of western forces.

It is a three-dimensional threat: complementing torpedoes and ballistic missiles, which we have, with the guided cruise missile, now unique to the Soviet inventory.

About 12 per cent of their increasingly potent force can launch strategic missiles without warning.

More than 16 per cent carry 400 nautical mile cruise missiles designed primarily for use against land or sea targets.

The remaining 72 per cent, armed with torpedoes or mines, can be deployed to sever western lines of communications and to contest command of the seas. We are aware, too, that certain significant developments by the Soviets, presage even greater strength and operational versatility in the underseas area.

A tremendous capital investment has given them what experts term the most modern submarine yards in the world. As one result we estimate that by 1970, Soviet nuclear construction capacity may reach 20 units a year—and that a "crash" program with no constraints on manpower or materials would allow a considerably higher number to be produced.

There is, for example, one Soviet submarine yard that has several times the area and facilities of all United States submarine yards combined.

We know several new types of Soviet submarines have come into being—most are nuclear; all are capable of increased speeds and higher performance. One new class, which emerged in 1968, is comparable to our Polaris submarine.

Their new ability to operate independently—over long distances from home—occasionally under the ice—and for extended periods of time—must be marked well.

As recently as 1963, their submarines rarely left local waters.

You may have read that the Soviet force, which steamed into our back yard not long ago, included four submarines in addition to a cruiser, destroyers, a tender and oilers.

This was typical of the new practice of making themselves "visible" almost anywhere there is deep water. In my opinion, this practice is the heart of the Kremlin effort to exert their influence wherever and whenever it will serve short or long range political, economic or military objectives.

Paradoxically, one of our own precepts has been that there is no better instrument of foreign policy or a means of establishing presence in a strategic area than by use of sea power. Evidently, the Soviets have watched us do this over the years and they know that in this century, the oceans have enabled us on many occasions to extend our power overseas and to project it ashore in defense of other free nations.

Therefore, I think it is safe to conclude that they are keen observers who have profited as a result of our experiences, tactics and developments—perhaps, even more than we have in some respects.

In other areas of their race for naval supremacy, they give unmistakable indications that they are determined to succeed.

One of these areas is their merchant marine—and the facts and figures connected with this Kremlin lunge seaward—plus a new modus operandi should be—and is—a cause for increasing concern.

Let me interject at this point that a nation's total sea power cannot be viewed in terms of warships alone.

Sea power, inescapably, derives from the quality and quantity of a nation's merchant marine, shipyards, fishing fleet, and oceanographic enterprise—as well as its combatant forces, i.e., the sum of its maritime potential.

If we can be said to have demonstrated a lack of appreciation for this definition, the Kremlin, on the other hand, seems not only to fully appreciate it, but is actively applying it.

In this context, the rise of their merchant marine has been phenomenal.

In 1950, they had only 525 ships totalling 2.5 million tons.

Today, we place the figures at over 1400 ships and over 11 million tons with a prediction that they may reach 20–23 million tons by 1980. Their potential is rising.

On the other hand, in 1950, we had 1900 ships or 22 million tons. Since then, we have suffered a decrease of 800 ships amounting to 7 million tons of sealift capability. Today, we have 1,100 ships or 15 million tons and while our quality is far greater, the quantity of our merchant marine is declining rapidly.

What these statistics mean to us economically overshadows equally important political and militay considerations.

Our merchant ships, today, carry only about 5.6 per cent of this Nation's total foreign trade. Our national goal, which has been pronounced, is an increase to 30 per cent.

The State-owned and controlled Soviet merchantmen—in noteworthy contrast—today carry 50 per cent of the USSR's international seaborne trade, and they predict an increase to 75 per cent by 1980.

Another factor to be considered is that we are an insular nation and one having to import 66 commodities classed as strategic and critical. It is indeed a sobering fact that we must rely on foreign flag ships to carry 95 per cent of these imports.

It is also sobering to look at this from a dollars and cents standpoint. Dependence on foreign shipping obviously can add to our balance of payments deficit.

One maritime industry study showed that if the percentage of U.S. trade carried in American ships from 1960 to 1967 had been as high as existed before World War II—somthing like 35 per cent—our nation would have been able to count a positive balance of some 5 billion dollars instead of a deficit of about 23 billion dollars.

All told, there have been something like 35 studies of our merchant marine—its problems and its future—over the past three years alone! Typical of the several conclusions was this one from the Senate Commerce Committee:

"The clear lesson gleaned from our committee's study is beyond dispute: The U.S. merchant fleet is in critical condition, its future is in doubt, and remedial action of a major nature is essential if the United States is to remain a leading sea-faring nation."

Underscoring the criticality mentioned in this particular conclusion is age or obsolescence—and this problem affects more than one element of the American total sea power package:

80 per cent of our merchant ships have observed twentieth birthdays whereas 80 percent of the Soviet merchant fleet is less than 10 years old.

Nearly 60 per cent of our warships, upon which our forward defense strategy depends, are 20 years old or more. But, in the Soviet navy, of the 1000 or more surface combatants and submarines currently boasted by the Kremlin, less than one-fourth of one per cent are past the 20-year mark.

Their growing maritime strength gives the Soviets the capability of projecting their presence into countries where they formerly had no appreciable influence. My most recent information shows that their ships visit nearly 900 ports in about 100 countries on an annual basis.

Thus in ports of developing countries, this is a major way they are giving credence to their claims to scientific and technological supremacy. Moreover, such visibility certainly enhances the appeal of the Soviet system as one to imitate in the case of national development.

We, in the Navy, continue to remind ourselves that the Soviets introduced missiles into Cuba by their merchant marine we must never forget, also, that the bulk of support for the war economy of North Vietnam is being taken there by Soviet merchant ships.

In the same category, two other elements of Soviet sea power are engaged in fishing and ocean research.

Their fishing fleet of over 4,000 vessels and their hydrographic-oceanographic survey and research fleet of about 130 ships is the largest and most modern in the world.

And they are deployed all over the world—off both our coasts and to all major fishing grounds, including the polar regions.

Aside from these inherent capabilities to support military and political purposes, the Soviet fishing fleet is of great economic import; it provides about 25 per cent of the protein for the Soviet diet.

Since 1954, some four billion dollars has been invested in this fleet and facilities ashore, and many trawlers costing more than two million dollars each have been constructed.

I know you have heard of the Soviet intelligence collection ships. These are mostly trawler hulls equipped with modern electronic surveillance gear and used for intelligence collection against U.S. and NATO forces, particularly naval forces. They station these ships off polaris bases. They attempt to monitor fleet exercises and tests, and they observe our space activities.

As with the other elements of their sea power, the Soviets are telling us by deeds that they are challenging us in all the oceans and that they are building sea power which can project their political and economic power as well as their military power.

I might pause to point out here that where it regards their sea-based posture, Kremlin boasting has kept pace with the step-up in their oceanic activities.

Their principal spokesman is a gentleman named Gorshkov who has the title of "Admiral of the Fleet of the Soviet Union." In reality, he is my counterpart—or other chief of naval operations.

The Soviet admiral's volubility has covered almost all aspects of their oceanic resurgence.

A statement of his a few years ago went like this:

"The flag of the Soviet navy," he said, "now proudly flies over the oceans of the world. Sooner or later, the United States will have to understand that it no longer has mastery of the seas."

On their last navy day observance, he was quoted as saying:

"The USSR today has a naval fleet and aviation equipped with nuclear rockets equal to any strategic tasks, including tasks of an offensive nature, on all the seas and oceans of the world."

Admiral Gorshkov also said in a radio broadcast to the Russian people last July:

"For the first time in its history the Soviet nation has acquired a powerful ocean-going navy. It has become the world's greatest naval power, capable of taking its line of defense out into the ocean."

These pronouncements are not without some substance; to paraphrase an old adage, it might be said that, by their words, as well as their deeds, we shall or have come to know them.

These words take on more significance when we look at what Gorshkov was doing with his "new" navy as the Kremlin celebrated Navy Day, 1969:

In addition to those we saw off Key West, a missile-carrying cruiser with escorts appeared off Zanzibar.

Another cruiser stood off the coast of Finland.

A Soviet helicopter carrier maneuvered in the Eastern Mediterranean.

Scores of nuclear subs prowled the Atlantic, the Pacific, and the Indian Oceans.

Visits to Chile and Peru were being planned.

And units of his Pacific Fleet returned from a six months cruise in the Indian and Pacific Oceans covering more than 30,000 miles and visiting 30 states. This then, broadly, is the challenge.

During interviews, after speeches, while testifying on the "hill"—and elsewhere—I have been repeatedly asked the question:

"What are we doing about it?"

My answer is that we are trying to keep things in proper perspective.

From the standpoint of the two potentially hostile fleets, it is sometimes alleged that we the U.S. Navy are espousing what might be called a "numbers game."

This is far from the truth of the matter.

The fact that Soviet submarines total out to more than 350 doesn't cause us to reach for the same number or more—nor have we ever entertained a reaction of this nature.

We don't attempt—nor should we ever attempt—to match ship for ship.

This would be foolish—in our Navy we have entirely different missions from what the Soviets see for their navy; consequently we do not think in terms of counterparts.

We have formed our Navy—and I hope we continue to form it—so that we have the capability to conduct operations commensurate with our mission.

In this regard, our capability at present—and I mean as I stand here—is adequate.

Because of our Polaris force—and that highly mobile weapons system known as the aircraft carrier—we can meet any challenge mounted against this nation on, over, or under the high seas; which as a navyman I must point out cover 70 percent of earth's surface.

That we can is based on superb people, conventional convictions and the curious habit history has of repeating itself.

Today's navyman and marine are superb. They are:

The best educated;

The most responsible;

The hardest working; and

The most ingenious and imaginative young people we have ever had in the naval service.

My tribute is well-founded. Your Navy today is all-out; ships are involved in an unprecedentedly high number of diversified and difficult operations—in Southeast Asia, the western world Antarctica—or, as you saw on television recently, recovering our great space team.

Whatever the national requirements, they have been met—in spite of circumstances occasionally which might have stymied navymen of earlier days.

Our ability to meet the challenge has certainly been extended and enhanced by our conviction in the conventional weapons, weapons systems, crisis—or was as we see it in Southeast Asia.

To a large degree, the "heavyweight" of this conviction has been—and should remain—the aircraft carrier—which, as all of you undoubtedly know, is currently undergoing one of its periodic reevaluations as to our Nation's continued need for them.

I use the word "periodic" because we have been through this before and the principles have not changed; namely:

The aircraft carrier is an extremely effective system we have to serve either a strategic or technical need for air combat forces.

With its air wing, it is a positive means by which we can control the sea or air, if required in most vital areas. We saw this at Suez, Lebanon, Cuba, Vietnam and off North Korea.

It is a logical substitute for the fast-diminishing number of U.S. air bases located at critical points worldwide. U.S. overseas air installations have dropped from nearly 150 in 1954 to around 45 in 1968.

Except for Polaris, there is probably no item of U.S. sea power the Soviets would prefer us to cut back more than our aircraft carriers.

The last point is one to restress. I believe our aircraft carriers are the key to our present superiority. With too few, or none, the Soviets would probably be the leading naval power.

It is axiomatic to note that we have been "caught with our carriers down" on the eve of two major wars.

At the start of WW II we had 8 carriers. The two-ocean war required us to surge to 111—24 of which were large attack carriers, mostly of the *Essex* class.

Prior to Korea, cutbacks left us with 7 carriers active; 20 in mothballs.

Again a surge became necessary from 7 to 18 at enormous cost and with severe strain on manpower and already over-burdened facilities.

At the start of Vietnam we had 15 attack carriers; later adding one more which we had to borrow from our anti-submarine warfare force—for a total of 16 which we are operating today.

Unlike our Korean war situation, we no longer have a surge capability. None are in mothballs—all the attack carriers we own are in service or being built.

These varying carrier force levels reflect the fact that there never has been a set or magic number of carriers—nor is such a number realistic. National requirements for positioning employable air strength is the sole determinant. It has been as high as 111, as we saw in WW II—what the future dictates is to be seen, but I would not be surprised if we find that 16 gave way to a national need for a greater number based on current trends and possible circumstances—particularly the need to balance the loss of forward landbases.

How we arrive at carrier force level figures is often misunderstood. Actually, it is the American people who determine the so-called "magic number."

Attack carrier force levels are determined by the national strategy.

During times of peace, our national objectives and our foreign policy determine the national strategy and the peacetime military posture required by that strategy.

During time of war, the number of carriers is directly related to the strategy of that particular conflict. For example, during WW II the nature of the campaign in the Pacific caused us to rely heavily upon carriers, and, as I pointed out, the U.S. Navy had well over 100 carriers of all kinds in its operating forces during WW II.

Today, our national strategy relies heavily upon the concept of forward deployed general purpose forces capable of responding to a range of contingencies in overseas areas of primary national interest. These forward deployed general purpose forces provide this country with a flexibility of response.

An effective tactical air capability is an essential element of these general purpose forces. Both sea-based and land-based tactical air are required in order to provide support for the forward deployed concept of our planned national strategy, across the range of contingencies.

There are those who say that the carrier is vulnerable, exorbitantly expensive and has outlived its usefulness—and support their contention by pointing out that the Soviets would have had them if they were a wise investment.

Taking last things first, geography, more than any other reason, has kept the Soviets out of the aircraft carrier business. The routes of egress from Soviet naval bases to the open oceans are, by way of choke points, controlled by other powers. For an aircraft carrier such a situation could spell disaster in a shooting war. If the Soviets were to gain control of the points, however, the situation might change.

Where questions of carrier vulnerability, high cost and continued usefulness arise—as they have, consider these key points:

In some 50 wars or near-wars since 1946, we have not lost a carrier or had one damaged owing to hostile action. Even counting WW II, no carrier of Essex, or later design has been lost.

None has ever been captured or used against us.

Even when damaged, such as *Enterprise* was by several of her own bombs exploding, she could have been back in full action in a few hours if necessary.

We believe the carrier is less vulnerable than a land base—the record shows that carriers are no more vulnerable than any alternative.

Cost-wise, the overall price of a carrier air wing, including carrier escorts and support, is no greater than land based air wings and their base support. We are in the same "ballpark" here.

As to continued usefulness, I believe I have covered this aspect—the nuclear carrier, *Nimitz*, has a predicted operating lifespan of 30 years, and there is no doubt in my mind we are going to need her until she reaches mandatory retirement.

As I conclude, let me say that the cost of our military programs is being debated and that we are on the threshold of far-reaching decisions.

I know that all of us—you veterans of many wars we have had to fight—and those of us on duty today, welcome such debate as long as things are kept in a reasonable perspective.

We have heard, seen and read:

That our Nation is overly-concerned with militarism;

That a military-industrial complex exists which is an evil entity;

That congressional indulgence of the military man and machine has put us where we are today;

I say such indulgence, if it existed, has been fortuitous.

The enlightened Congressmen who have fully recognized the Nation's needs can be thanked for where we are today—and they will put us where we need to be tomorrow, next year, and anytime thereafter.

I wish our critics would tell us what's wrong with being number one—the richest, healthiest, happiest, most progressive Nation of all time—

And for the time being, one that can exercise that most precious of our national attributes: freedom of action on the oceans.

Thank you.

RAILROADS

HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. COHELAN. Mr. Speaker, it seems as though passenger railroad service is fast becoming a thing of the past.

The arguments for discontinuance are many and complex, running from financial disaster on the part of the railroad companies to obsolescence of the system.

The pressure for discontinuance is great and is put forth in such a way that one would almost think that there is only one side to the story.

The Washington Post recently ran a two-part series on passenger trains by James E. Clayton. Mr. Clayton's story is a fair and informative analysis of the situation, and deserves the attention of my colleagues. I submit it at this time for the RECORD:

PASSENGER TRAINS ON GRIM TIMETABLE

(By James E. Clayton)

For a decade or so, the railroads have been telling anyone who would listen that railroad passenger service in the United States is dying. Now the moment of death is almost predictable. It will come, except for commuter trains and perhaps those in two or three densely populated corridors, certainly within ten years, probably within five years, unless the railroads or the federal government change present policies.

In retrospect, it is possible to pick the time at which passenger trains went into this their final throes. It was December, 1966, when the Stanford Research Institute reported to the Southern Pacific that it could not find an economically sound base for railroad passenger service in the West. The institute recommended that those Western railroads which had not already given up on passenger service adopt a "deficit reduction policy," a policy which would lead inevitably to death.

The railroads took that report to heart. Confronted with it, those railroad executives who had contended that there was a future for the intercity passenger train found the task of justifying passenger traffic deficits to their stockholders almost impossible. Added to it was the decision of the Post Office Department to remove railways post office cars from service. As a result, many railroads began programs of passenger train curtailment.

In 1966, for example, passenger trains traveled 164.3 million miles. In 1968, the total was 124.6—a drop of 24 per cent. In the same period, the miles traveled by noncommuter passengers fell about a third as did the revenues attributed to passenger trains. The decrease in revenues for hauling mail on passenger trains accounted for half of this drop. As could be expected, the deficits of passenger service, as reported to the Interstate Commerce Commission, jumped by more than 20 per cent in two years to a total of $486 million in 1968.

During the last 12 months alone, the number of intercity trains has dropped 20 per cent. There are less than 500 remaining in the entire nation and petitions to discontinue about 50 of those are pending before the ICC. Dallas now has no passenger service. The last train on the St. Louis-Detroit, once the home of the famed Wabash Cannonball, is threatened with replacement by a bus. Even the California Zephyr, which provides the finest ride in the country as it cuts through the Colorado Rockies and the Feather River Canyon in California, may not live until next summer.

Railroad executives claim that the death of the long-distance passenger train is inevitable. The airplane has stripped it of passengers who are in a hurry and the private automobile, with the interstate highway system opening up the countryside, has taken away the rest. Only in places like the East Coast corridor, where millions of people live, where distances between major cities are relatively short, and where the highways are still jammed, is there any chance of survival for noncommuter trains.

The argument has now been bolstered by a study conducted by the ICC into the actual costs of railroad operation. The study claims that eight major railroads—the C & O-B & O in the East, the Southern and Seaboard Coast Line in the South, the Illinois Central in the Midwest, and the Santa Fe, Great Northern, Missouri Pacific, and Union Pacific in the West—lost $118 million in 1968 by operating passenger trains. None of these made money the ICC says, with the loss ranging from $3.5 million on the Missouri Pacific which carried only 300,000 passengers to $26.6 million on the Santa Fe which carried 1.5 million passengers.

The ICC calculates that for every dollar the Santa Fe took in for passenger service it spent $1.80. The figures for the other railroads are similar, ranging from $1.45 spent for each dollar received by the Illinois Central to $2.43 spent for each dollar of revenue by the Southern. Add to this the fact that the average age of the railroad coaches now owned by the eight railroads is 19 years and that replacement of them must soon begin and you get a feeling for the size of the railroad problem. The ICC estimates that within 10 years about 40 per cent of the existing cars should be replaced at a cost of $132 million.

It is possible to argue with those figures or to contend that bad management, not the preferences of the traveling public, is the reason for them. But it is impossible to argue with what the ICC told Congress: "Significant segments of the remaining intercity service, except for rail service in high density population corridors . . . will not survive the next few years without a major change in federal and carrier policies."

Only one of the railroads studied by the ICC has shown an increase in passengers during the last decade. That was the Illinois Central which carries heavy traffic between the Southern states and Chicago and from two large universities. Its financial loss in 1968, according to the new study, was $5.4 million.

The case of the California Zephyr illustrates the industry's view of its problem. In a speech a year and a half ago, the president of the Burlington Lines which operates it compared its costs between Chicago and Denver with those of a 727 jet airplane. Average revenue for the train was $5,000 per trip, for the airplane, $3,400. Costs were $5,400 per train trip and $2,500 per plane trip. Result: a loss on every run for the railroad and a profit for the airline.

Of course, passenger trains are only a small fraction of railroad operations in the country today. Only about 5 per cent of railroad revenues come from passenger service and the profit on freight more than wipes out the passenger deficit.

Nevertheless, the facts of the situation today raise two serious questions that only Congress can answer. Is railroad passenger service worth continuing outside of corridors like Washington-New York? If it is, how can it be saved from imminent death?

SHOULD GOVERNMENT RUN THE RAILROADS?

(By James E. Clayton)

The easy way to explain the current death throes of intercity passenger train service is to blame it all on stupid management. Passenger trains would still be popular and profitable, the argument goes, if only the men who run the railroads had the foresight, imagination and daring of those who run the airlines.

There is just enough truth in that argument to make it sound plausible. No one has any idea how many potential passengers have forsworn train travel forever because of bad service encountered in the past. Dirty trains, surly crewmen, outdated policies, and the refusal of most railroads to attempt any modernization of such processes as the making of reservations or the buying of tickets has

undoubtedly helped the airlines and the automobiles take passengers away.

But it is not the whole story. There are still some fine long-haul passenger trains in operation—from Washington to Florida and Atlanta, from Chicago to Florida, New Orleans, Los Angeles, San Francisco, Portland, and Seattle. And on many of those runs the railroads still lose money.

Their inability (or refusal, as you like) to modernize trains and crew requirements have run up costs. So have the mausoleum-like stations that sprinkle the landscape and the refusal of state regulatory agencies to let them abandon many unproductive local stops. Strangely enough, while all other forms of transportation have been speeding up in recent years, railroads have been slowing down. Between 1953 and 1965, airlines cut their travel time from Chicago to San Francisco in half, bus lines cut theirs by 10 per cent, and the railroad travel time lengthened by 12 per cent. The Denver Zephyr made the run from Chicago to Denver in a little more than 12 hours in 1936 but the best train on the same line now takes almost 17 hours for the trip. The reasons are speed limits imposed for safety by the Interstate Commerce Commission, and the fact that in 1936 the run was non-stop while the train makes a dozen or so stops today to serve small towns once served by now non-existent trains.

The Interstate Commerce Commission's recent report on the out-of-pocket deficits on passenger service did not attempt to study whether passenger trains can be operated profitably. There are steps that could be taken which would certainly reduce the deficits—eliminating stops, speeding up and improving service, cutting station overhead, changing crew requirements, and so on—but these would require a complete revolution in railroad management and practices as well as a high degree of cooperation between management and labor and between the railroads and various state regulatory bodies.

Given the current posture of the railroads, no such revolution is on the horizon. What the railroads now have in mind is quite clear: either to get out of the passenger business entirely except for commuter lines and a tiny handful of trains in densely populated corridors or to have the federal government subsidize them and provide low-cost financing for the replacement of worn-out equipment.

Such a program might make sense if the railroads had a reputation for competing with other modes of transportation for passengers. But given the history of the last two decades, there is no guarantee that anything would change except the size of the subsidy.

One frequently mentioned alternative is for Congress to create a national railroad agency, perhaps along the lines of Comsat, to operate passenger trains by leasing them from the railroads. It would determine where and when passenger trains should be operated, promote railroad travel, and perhaps take over the entire business except for the actual manning and operation of the trains.

The ICC asked several groups what they thought of this idea and got a flat rejection from the Association of American Railroads. However, it got an endorsement for that kind of approach from the railway labor unions, from a majority of the state public utility commissioners and from the membership of the National Association of Railroad Passengers.

But even the creation of such an agency would not answer the basic question of whether the passenger trains make any sense in the nation's transportation scheme of the 1970s.

Perhaps the major reason that passenger service is now facing an imminent death is its inability during the last two decades to compete with automobiles and airplanes. For the business traveler, who wants to get there and back as rapidly as possible, the airplane is hard to beat. For the family traveling on vacation or otherwise, the interstate highway system has made automobile travel easy.

It may be that the airways and the new highways will be so crowded in a few years that people will return to the trains. In that case, the overnight runs such as New York or Washington to Chicago or Atlanta and Chicago to New Orleans or Denver might attract businessmen who get tired of circling airports. Or the vacation traffic might boom with the families of an affluent society deciding that the easiest way to see the country is to take a train and rent a car.

But that kind of situation may not develop. A whole generation has now grown up regarding the railroads as a method of getting somewhere only if all other methods fail. This factor alone has convinced some railroad men that there is no future at all in passenger trains except for commuters and in short corridors—New York to Washington or Boston, Chicago to Cleveland, and San Diego to San Francisco.

Given the large sums of tax money poured into highways and airports by all levels of government, the railroads believe that governmental policies have knocked all the props out from under their passenger business. They are now in the process of telling the federal government that it must either prop them back up, take over, or consign the long-haul passenger trains to the Smithsonian.

MEDAL OF DISTINGUISHED PUBLIC SERVICE AWARDED TO DR. RALPH E. GIBSON

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, September 5, 1969

Mr. MATHIAS. Mr. President, Dr. Ralph E. Gibson, of Chevy Chase, Md., recently retired after 22 years as director of the Applied Physics Laboratory of the Johns Hopkins University.

On July 9, 1969, Dr. Gibson's contributions were recognized by award of the Medal for Distinguished Public Service, highest honor bestowed by the Department of Defense on a civilian.

Robert A. Frosch, Assistant Secretary of the Navy for Research and Development, made the presentation in ceremonies at the laboratory. The citation accompanying the Medal lauded Dr. Gibson for "distinguished public service and exceptionally outstanding contributions to the Department of Defense in areas of fleet ballistic missile systems, military and scientific satellites and supporting research and exploratory development."

During the quarter century Dr. Gibson has headed the laboratory, it has grown into one of the Nation's leading scientific institutions. In recent years it has broadened its work to seek improvements in biomedical engineering, urban transportation, and other civilian problems. For example, an automatic motor once used to actuate the wing of a missile now operates an experimental artificial hand.

Born in England, Dr. Gibson is a graduate of the University of Edinburgh where he received his Ph. D. in physical chemistry. He came to the United States in 1924 on a Carnegie research fellowship and later served as an adjunct professor of chemistry at the George Washington University.

During World War II, he served as the first director of research of the Allegany Ballistics Laboratory, Cumberland, Md.

This latest accolade for Dr. Gibson is a well-deserved tribute upon his retirement.

LETTER INDICATES TONE OF THE TIMES

HON. GEORGE E. BROWN, JR.

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. BROWN of California. Mr. Speaker, beneath the seemingly quiet surface of events which has characterized these past summer months, I am beginning to sense more and more restlessness by the people of our Nation.

I believe much of the tension is created by the continually growing alienation between individual citizens and the institutions which surround them. And it is not just the troubles in our slums and ghettos and the insurgence arising on our campuses which stand as powerful testimony to this gap. At an increasing rate, the anger and the fury comes from what President Nixon likes to term "the forgotten Americans"—the guy with a couple of kids who owns his home, has a car or two, and considers himself a happy member of the great middle class.

We see this anger vented often now. And the topics covered range over a wide subject area—from tax reform and Federal spending levels to continued concern and bewilderment over this country's military and foreign policies.

Over the past months, the degree of this sentiment has noticeably stepped up. I saw it in the responses made by many constituents to my annual questionnaire; I see it in the tone of letters sent daily to my office.

Just before the recent recess, I received a letter from one of my constiutents, Mr. Robert Snell, who lives in my hometown of Monterey Park, Calif. Although I certainly do not agree with all its points, I would like to share this letter with the rest of my colleagues because I think it aptly represents, in a concise manner, the emotions and frustrations typical of so many Americans.

The letter follows:

MONTEREY PARK, CALIF.,
August 8, 1969.

DEAR SIR: Today my son left for Vietnam; not by choice, but due to the bungling, incapable and irresponsible type of leadership we have been faced with the past few years, including the past seven months. His mother and I spent 21 years teaching him a sense of pride, right from wrong, and the true meaning of law and order, and we can truthfully say he has always been a first class American citizen. I guess that is the reason he accepted his notice to report for induction with never a thought of being a draft dodger or trying to avoid it in any way.

Actually, he or any of the rest of the draftees fighting in Vietnam should not

even be in the service; it is strictly unconstitutional. Of course the Constitution of the U.S. hasn't meant anything as far as the rights of we law abiding citizens of the country have been concerned for several years. It seems to me that when I was studying the history of the United States during my high school days, there was an article, number thirteen, of the constitution, that made the following statement:

"Neither slavery, *nor involuntary servitude,* except as a punishment for crime whereof the Party shall have been duly convicted, shall exist within the United States, or any place subject to their jurisdiction."

I really can't make any claims to brilliancy but my interpretation of the foregoing statement definitely concludes that the drafting of men comes under the classification of involuntary servitude.

Up until the past few years I have always been proud to say that I was an American citizen. I always considered myself a law-abiding person, was patriotic enough to volunteer during World War II, spending two years in the South Pacific. However, during the past five years my way of thinking has certainly changed and I blame it all on the way our so-called representatives, senators, judges and leaders in government have let this country become what it is today. I have always been registered as a Democrat, but never voted a straight ticket; always tried to vote for the better man, regardless of party. From now on, I can sincerely say that I'm going to be even more careful to check the qualifications, and just what he really stands for before casting my vote.

President Nixon made the statement while campaigning: "That it was time for new leadership when a fourth-rate nation, like Korea, could push a powerful nation, like the United States, around". Well, as far as I'm concerned we still don't have that leadership; it's still the same old game of politics that we had before he took office. Sure, he leads the people to believe that he is doing something in Vietnam with all of his baloney about troop withdrawal. He doesn't say anything about all of the men that are being sent over there to replace those coming back; most of whom had spent eleven or twelve months there anyway and were due to come home. Naturally, he chose prime television time to show the boys getting off of the planes at McChord Field, in Washington State. Our television station gave full coverage to the happy occasion; however, a few minutes later the commentator said: "Now we'll show you another occasion, not so happy". This contained scenes of, as many or more, servicemen boarding planes leaving for Vietnam, from McChord Field. Mr. Nixon no doubt didn't plan on having that part of McChord Field included in his little political scene. During his four month training period at Fort Ord, Calif., my son said that there were from four to five hundred combat troops sent out *weekly,* to Vietnam. This didn't include the support units, mechanics, cooks, clerks, etc., that also had orders for Vietnam. No doubt there are the same percentages of men being sent out from Fort Lewis, Wash. and various other forts throughout the country; so just who is Mr. Nixon trying to fool with his withdrawal farce?

I also might take the liberty of using Mr. Nixon's campaign statement, with a little different phrasing. It also seems to me that it's time for new leadership in this country, when fourth-class citizens, criminals, rioters, looters and other types of undeniably undesirable people can get away with causing so much chaos, disorder, disruption of schools and fear in this country. What about the businessmen, who have their stores burned and looted? And we decent people who aren't even safe on the streets anymore, day or night; don't we have any rights? What about all of these dope peddlers who are infesting our schools like rats? Might as well be bringing Bubonic Plague. Why isn't something being done about that situation?

Give me back the good old days when we had some law and order in this country; dope peddlers and criminals were taken care of properly and looters were shot on sight. If I were just newly married I would make sure I didn't have any children as this country isn't a fit place to raise children anymore.

Although all of our so-called leaders deny it, this country is definitely sick, and I'm sick right along with it. I'm sick of seeing my tax money going to foreign aid, welfare payments, government waste, the billions of dollars spent on space programs, protection of the criminal element, the asinine decisions of the courts, the inequity of the tax structure and the lack of law and order in this country.

Despite all of the foreign aid, just show me one country that has shown any friendship or appreciation as a result of receiving these billions of dollars in loans and materials. Just talk to anyone that has travelled in Europe, or anywhere else in the world and they will all tell you that the people and governments of those countries hate our guts and everything the United States stands for. Some of them no doubt have reason to; our wealthy citizens and big companies exploit them, on the pretense of improving their countries, building factories, mining, drilling for oil, etc. While all of the time they are only making millions of dollars for themselves. Then, when the people get fed up with the situation, and uprise against them; our government, at our expense, has to protect the interests of these big companies. I say let these parasitic companies invest their money, build factories, etc. at their own risk.

As to the welfare situation, I'm entirely against giving able-bodied people something for nothing, at my expense. I'm fifty years old; have worked ever since my first year in high school and have never expected to get something for nothing as long as I could do a day's work. I'll go along with taking care of the handicapped or people who are sickly or too old to work, but as for the rest of them, I say if they don't work, they don't eat and to hell with them. The W.P.A. might have not been the best thing in the world but at least the people had to get out and do something constructive for their money. Why bring farm laborers into this country from Mexico and other places? Put these able-bodied parasites, who are on welfare, out there and make them work for a living for a change. If the wages they make doing that isn't enough for a decent existence, then make up the difference out of the welfare money; but at least make them get out and work.

The space program and putting a man on the moon is no doubt a wonderful achievement, but the money that has been spent could certainly do a lot of good right here on earth. There are too many problems right down here to be solved, making this a better place to live, to be spending all of that money on some bleak, barren and lifeless planet. At the rate taxes and the cost of living continues to spiral upward I just don't think I can afford the trip to Mars.

Sure would be nice to know that there was some law and order again; be able to take a family to the park, without being set upon by a gang of hoodlums; or have to have the children watching a sex orgy or pot party in progress. It's quite a shame and disgrace when decent citizens can't even walk the streets of the nation's capital at night, for fear of being robbed, raped, beaten or even killed. Sure, Mr. Nixon was going to take care of that situation also, but I've yet to hear any reports of any improvement.

So, in conclusion I'll go along with the statement that it's time for new leadership. Let's either go all out with all of the forces we have to win the war in Vietnam, or get the hell out of there entirely. Let's forget about the result of the elections in 1970, or even the future, which is what Mr. Nixon seems to be worrying about, more so than lives of our Sons' and relatives.

This is just one of the many letters I'm writing various representatives, senators, the President and anyone else I think might help bring this country back to normal. Since you are the Representative from our district, I wanted you to be the first to know just how I feel about the present state of affairs. I might repeat again that from now on, I'll be very careful in making my decision as to just who I will cast my vote for, and try to influence everybody I talk to, to do the same.

Sincerely yours,

ROBERT I. SNELL.

SOUTHERN WEST VIRGINIA REGIONAL HEALTH COUNCIL IS BECOMING COUNTRY DOC'S DREAM COME TRUE

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, September 5, 1969

Mr. RANDOLPH. Mr. President, on the hills and in the valleys of a nine-county area of southern West Virginia a vision is coming true. It is the dream, shared by many, of a country doctor to provide adequate medical care, preventive and corrective, to the residents of this rural area in the heart of Appalachia. The Southern West Virginia Regional Health Council, under the guidance of its chairman, Dr. Daniel Hale, began in August its second year of medical service to the people of Fayette, Logan, McDowell, Mercer, Mingo, Monroe, Raleigh, Summers, and Wyoming Counties. The program was initiated and is being carried forward under the Appalachian Regional Development Act. It has been my privilege and responsibility to sponsor this measure.

Dr. Hale, with the assistance and cooperation of many colleagues and interested persons, both public officials and private citizens, has initiated a comprehensive and innovative attack on the health problems in these nine counties.

An article in the Raleigh Register, Beckley, W. Va., of July 29, 1969, describes the goals, accomplishments, and excitement of this program which is tangible evidence of progress which can be achieved through the cooperation of citizens and their government.

Mr. President, I ask unanimous consent that the article, "Southern West Virginia Regional Health Council is Becoming Country Doc's Dream Come True," by Niles Jackson, be printed in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SOUTHERN WEST VIRGINIA REGIONAL HEALTH COUNCIL IS BECOMING COUNTRY DOC'S DREAM COME TRUE

(By Niles Jackson)

PRINCETON.—The dream of a country doctor is being turned into a massive assault on disease, ignorance and the destitute economy that plagues these craggy Appalachian hills.

In a land where "toothaches are an accepted thing," Dr. Daniel Hale has molded

his dream into an imaginative regional health program that is approaching a concept of total planning—housing, health and economy.

Those working with Hale's Southern West Virginia Regional Health Council believe if the idea is successful here, it can offer a new life for similarly troubled areas elsewhere in the world.

The far-reaching plan to revitalize this mountainous, nine-county region and its 500,000 residents was turned into reality last August with $5 million in federal funding.

The council, under the guidance of Hale and Dr. Allen Dyer, intends to scatter satellite health centers throughout the area. Programs in the planning stages include use of a medical helicopter and a six-car traveling railroad clinic.

Projected plans for the next five years would put the council to work in the fields of housing, stream and air pollution control, sewage disposal, recreation, industrial expansion and manpower training.

The aura surrounding the council has caught the imagination of the area's professional people and several have moved back from more lucrative urban practices to work with the council.

The current staff numbers 115. Of these, 75 are professional people—doctors, nurses and others. Dr. Hale and the council's 300 board members donate their time and services on a part-time basis.

The council has requested another $5 million in federal aid and $6 million for new projects for the present fiscal year, Dyer said this week.

He said the council expects to be self-sufficient within five years because its programs are geared to a fee basis. It also intends to train its own personnel, drawing 200 yearly from the region's unemployed.

When possible, Dyer said, the services will be paid for by the recipients, or the costs will be absorbed by the council. The council is getting more and more of its money from local and private sources, he said.

The wide array of medical services, with the addition of psychiatrists, psychologists and physicians expert in public health, nutrition, dentistry and family planning, will prove more comprehensive than those found in many cities "when looking at the overall, general picture," Dyer said.

Hale, a native of Princeton, and his associates chose this medical no man's land to test their theory because it is one of the country's hard-pressed areas—some of the worst in Appalachia, they said.

Dyer, who worked in the area for 10 years with the U.S. Public Health Service before joining the council, said the region has "very high rates of typhoid, infectious hepatitus, heart disease, chronic dysentry, tuberculosis and just about any communicable disease you can name."

For example, hypertension heart disease occurs at the rate of 65.3 per 100,000 persons in Raleigh County, while the national average is 37, Dyer said. The incidence of infant mortality is 33 compared with 24.8 nationally.

"The children run a course of health hazards more acute than anywhere in the United States," a council booklet says.

Hale said "the need for a regional health program here hit me several years ago when I visited a public school and saw most of the second and third graders with mouths full of cavities."

"I talked to the principal and he said toothaches are an accepted thing. Many people accept illness as a way of life and never see a doctor until they are critically ill," the general practitioner said.

The region had several health centers before the program got under way, Hale said, but a fierce mountain pride kept many of the poor from using them.

Despite handicaps and the size of the job, much has been done during the first year.

A heart screening service examined more than 15,000 children in seven months and found 13 serious heart defects. Several hundred other cases were isolated for additional examinations.

More than 400 women were examined in a cancer clinic and six were diagnosed as having the disease. Five have undergone surgery and the sixth is receiving cobalt treatments.

A family planning clinic in one county drew 400 women and a clinic for diabetes examined 100 persons. Students are being treated for tuberculosis and mental health services now are available in all nine counties.

Within a few months, construction will begin on a solid waste disposal project in Logan County, a public health center in Fayette County, and health centers in Mercer and Raleigh counties will be expanded, the council said.

Longer-range projects include a 24-hour referral service and poison control project, satellite health centers in five counties and extended care facilities in six more counties.

The council plans to lease telephone lines and radio facilities, establish a data management system, build up to 100 housing units and devise an emergency care system.

The council currently is using the nation's first computer analysis of heart conditions through telephone hookups to Mt. Sinai Hospital in New York.

Dr. Hale, who describes himself as "just a country doctor," said he has talked with representatives of several industries who, having heard of the council's work, are considering locating new plants in the region.

"This can be a new beginning for southern West Virginia," he said, "a renaissance, if you like."

THE MOON AND 1976

HON. JOHN O. MARSH, JR.

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. MARSH. Mr. Speaker, increasing attention is being given to the bicentennial of the American Revolution. The National Commission recently met to discuss ways and means of observing our 200th anniversary, and later this month, the Commission will meet again to conduct hearings on selection of a city for the principal national observance.

James Reston, in a column appearing in the New York Times, summed up the importance of the bicentennial, and I would like to bring to the attention of other Members his remarks which appeared in the July 18 addition of the New York Times entitled "The Moon and 1976":

THE MOON AND 1976

(By James Reston)

One of the lessons of the present spectacular voyage to the moon is that the American mind and the American political system seem to need great challenges and clear goals to work at their best.

Humiliations and disasters help, too. The American people are watching this flight with their uttermost pride, but it was the hurt to their pride—first in the Soviet Sputnik 1 flight of 1957 and then in Yuri Gagorin's first human venture into space in 1960—that created the psychological and political conditions for the United States decision to go to the moon.

Even then, President Kennedy might not have aimed so high as the moon if it had not been for his disastrous gamble at the Bay of Pigs. After that it was clear that something had to be done. Thus the formula for success: disaster, challenge, and a vivid objective to be achieved by a date certain.

THE NEW GOAL

Fortunately, these same ingredients exist for another great adventure in the seventies. It would be hard to describe our race relations as anything but a disgrace, and Vietnam makes the Bay of Pigs look like a regrettable incident. The challenge to the American pride, imagination and organized intelligence of these stains on the national record is clear and the two hundredth anniversary of 1776 is just close enough and yet far enough away to give us a definite target in time.

THE COMPLICATED JOURNEY

It is, to be sure, a more complicated journey, it is harder to concentrate the mind on creating a just and decent society than it is to mobilize the intelligence and machinery to rocket to the moon. Human nature is more volatile and less predictable than the chemicals, fuels, and measurable mathematics of rockets and electronics. Still, the challenge is clear and the anniversary of the nation's birth has emotional and political possibilities that should not be underestimated.

In July of 1969, we are just seven years away from the 200th year since the Declaration of Independence. That is two years less than the time between the decision to go to the moon and the present culmination of that decision, but it is a goal of great historical significance, and it provides an opportunity to channel the energies and talents of the American people toward the national purpose and ideal.

That is not a new idea. President Kennedy, Johnson, and Nixon have all talked occasionally about it. The citizens of Philadelphia actually led the parade, and committees of distinguished citizens have been formed all over the country to prepare for the great celebration.

But it has not yet become a central point and aim of national policy and is not part of the conscious public mind. The funds, the brains, the organization that went into the objective of going to the moon have not been mobilized and directed toward achieving certain definite social and economic objectives, and this is a missed opportunity.

THE PRESIDENT'S OPPORTUNITY

There is an enormous difference between appointing committees for a celebration seven years away and setting a goal for achieving definite national, state, and community goals. It takes leadership from the White House, organization and funds to create a national awareness of problems to be solved in thousands of communities by July of 1976, but this could be done.

It is much more difficult than persuading the Congress to appropriate funds to beat the Russians to the moon and then organizing the scientists, engineers and industry to produce the machines and train a limited number of brave men.

THE EDUCATIONAL PROBLEM

Landing successfully on 1976 involves making the voyage and the goal, or at least the question, clear to the leaders of every community of the nation, but the thing could be done. Not with the precision of the astronauts, to be sure, but greatly to the achievement and redemption of the ideals of the American Declaration.

If done, this might be more important to the Republic in the end than landing on the moon. But the moon project may have given us the key. It had imagination. It mobilized intelligence. It had a specific goal within a specific time, and the goal was to do something no man had ever done before.

Maybe the analogy is wrong. Space science and political science could not be more different. But the whole idea of America was to create a society nobody had ever created before, and it could be that the moon-men, with their concentration, purpose and time schedule have shown us the way.

THE HARRIMAN ENIGMA

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. UTT. Mr. Speaker, under unanimous consent, I would like to include in the RECORD an article by William Randolph Hearst, Jr., which appeared in the August 24, 1969, issue of the Hearst newspapers, entitled "The Harriman Enigma."

What Mr. Hearst says about "Honest Ave, the hair splitter," is true of much of the Democrat leadership. As Mr. Harriman criticizes Mr. Lodge for failing to do what he, Mr. Harriman, could not do in much greater time, so also are the Democrats castigating the Nixon administration because it is not doing many things which the Democrats, with full control of Congress and the White House, did not do when it would have been easy for them to take such actions.

The editorial follows:

THE HARRIMAN ENIGMA

(By William Randolph Hearst, Jr.)

SAN FRANCISCO.—For some months I have been increasingly puzzled by public statements from Averell Harriman, our former chief negotiator at the Paris peace talks, in which he seemed to suggest that continuation of the Vietnam conflict is all this country's fault.

What amounted to sniping at the Nixon war policies hit a new low this week when Harriman took a shot at the integrity of the President and—indirectly—at that of our present chief negotiator in Paris, Cabot Lodge.

"We've been talking peace in Paris," he said, "but we haven't really been making an effort to stop the fighting."

Harriman declared further that he is convinced the White House is still seeking a military solution in Vietnam and added that the United States keeps muffing opportunities to de-escalate the fighting.

These latest remarks by a man so long regarded as an elder statesman are more than puzzling. They—and the attitude they reveal—are downright amazing.

I have known the former New York governor well for many years, both socially and professionally, and always have considered him as a friend. I remember kidding him when he tried unsuccessfully to snag the Democratic presidential nomination back in 1956, by calling him "Honest Ave, the hair splitter."

It grieves me to have to say that, in my estimation, his latest attack is neither fair nor statesmanlike. It grieves me, but in a matter of this kind the welfare of my country comes first.

Just what Averell thinks he might be accomplishing is beyond me. He certainly is not helping the President or Cabot Lodge in their attempts to achieve peace. And if he thinks he is helping the Democrats of his party politically, his reasoning sounds senile.

The only half-way sensible explanation is that he is suffering from a bad case of sour grapes—that he is somehow trying to prove that his own failure in Paris would have turned out differently if he had stayed there instead of being replaced.

Even this fails to hold water much better than a sieve. Harriman has spent a great portion of his mature life in diplomatic missions. He should be among the last to criticize those engaged in the most delicate diplomacy of all—trying to end an incredibly complex war.

Furthermore, he knows from bitter personal experience in Paris just how unyielding and uncompromising the Communists are. For him to suggest that the enemy might have responded more favorably if we had been more cooperative is sheer nonsense.

Harriman knows darn well that it is the United States and our South Vietnamese allies which have made every single move toward ending the war; that the enemy has offered not a single compromise whatever.

He also knows, just as everyone knows, that the Nixon administration has gone even further than that of Lyndon Johnson. Not only has the Johnson bombing halt been continued, American troops are being withdrawn.

As Secretary of State William Rogers declared on Wednesday, this country has taken every sensible risk to end the war and intends to continue the policy, apparently by withdrawing even more of our troops in the months immediately ahead.

You simply don't win a war by withdrawing your troops, yet Harriman says President Nixon is still looking for a military victory. Not even the Fulbrights and McGoverns have said anything as wierd as that.

So the Nixon administration hasn't stepped up anything except possibly to increase our willingness to run military risks to further de-escalate the fighting.

All this seems so obvious. And that is why the Harriman statements, coming from one as informed as he is, as experienced as he is, are so puzzling and so astonishing.

Instead of putting the blame for lack of progress in Paris where it belongs—on the unyielding enemy—Harriman blames his own country and its leadership.

I can no longer call Averill Harriman "Honest Ave." I won't call him dishonest, either, but there definitely is a kind of intellectual dishonesty involved in his behavior.

At the very least he is not sticking to the record; to what he knows is true. For he knows that both the Johnson and Nixon administrations have made the most amazing concessions in the hope of peace.

It is simply not in accord with the spirit of truth to suggest, as Harriman suggests, that we might have had peace now by some mysterious means, other than what we already have tried, and are trying.

Sure, you could get peace tomorrow just by pulling all our troops out of Vietnam; by abandoning our allies and our commitments. Everybody knows that, and Harriman in particular.

If he wants us to lay down our arms and quit, why doesn't he come right out and say so?

And if he doesn't, why does he belittle the motives of his own countrymen who are doing their best to end the war?

You tell me. I can't figure it out. My old friend has become an enigma to me.

The final record will show that this dreadful war was stretched out for unnecessary years—and that thousands of American men died unnecessarily—because of the prattlings of soft-headed people who would take peace at any price.

These people range from beatniks all the way up to our lawmakers and even to our statesmen.

All are guilty of giving aid and comfort and encouragement to the enemy by their chattering.

And that's the truth.

SEX EDUCATION—HEADSTART

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. RARICK. Mr. Speaker, the American Psychological Association is holding a convention in Washington, D.C.

While one group of the psychologists were doing their thing by marching on the White House to stage an antiwar protest, another group on a panel at the same convention discussed sex education guidelines for infants by recommending that parents should "get together to encourage, help, and foster sexual play in their preadolescent children,"—and envisioned "sexual playpens" in nurseries.

The psychologists may sound really "hung up"—but consider that Robert Finch and James Farmer, of HEW, are already talking about the education of infants 14 to 21 months of age and projecting programs for unborn children.

Is this what "Headstart" implies?

Mr. Speaker, I include several news articles:

[From the Washington Post, Sept. 4, 1969]

SEXUAL ANXIETY BEGINS WITH THE DIAPER

Psychologists offered unorthodox views of sexual anxiety, puritanism and the sex revolution at today's sessions of the American Psychological Association.

Dr. Robert A. Harper, a Washington psychologist, told one group that parents should get together "to encourage, help and foster sexual play in their pre-adolescent children."

This approach, he said including such devices as parent-supervised "plan pens" for nursery school children, could prevent "sexual hangups" caused by America's "prudish culture."

Dr. Harold Greenwald, a New York psychologist appearing on the same panel, blamed the first signs of sexual anxiety on the mother diapering her child. He said films show the mother always removes children's hands from their sex organs.

Greenwald complained that even enlightened parents, who tell their children all about sex, forget one thing—"that it's fun. They almost never explain that sex is exquisitely pleasurable."

To make sex fun, Harper's program calls for a more open attitude on contraception and abortion. Population control—even going as far as taking away most persons' right to produce—is also part of his plan.

"Fear of pregnancy and venereal disease still has strong puritanical force in preventing many young people from achieving constructive sex attitudes and actions," said Harper.

Referring to his "play pen" proposal, Harper said "Vigorous and joyful sex play in the nursery school is obviously shocking and abhorrent only to those who still think sex is a basically undesirable activity."

His plan for sexual play pens is but one part of a "revolutionary program to demolish certain cherished myths in our social morality" that keep Americans from enjoying the "full and fullfilling experience of our sexuality."

"I think we need block-buster intensive therapeutic efforts, financed by the Federal government and run independently of the schools," said Harper.

By the time children reach school, he said, they have developed anxiety and guilt feelings that can't be changed by sex education courses "taught by a beesy and birdsy adherent to the basically puritanical mores."

PSYCHOLOGISTS STAGE ANTIWAR PROTEST

(By Gordon Pettey)

Braving intermittent rain and isolated sneers from bystanders, some members of the American Psychological Association and their students and sympathizers demonstrated in front of the White House yesterday to protest the war in Vietnam.

The demonstration was arranged by Psychologists for Social Action as an offshoot of the APA convention currently under way here.

To one cab driver on the street, the sight of the men and women padding through the rain confirmed his suspicions: "They're crazy," he said.

A young man who had joined the marchers agreed with the cab driver's diagnosis, but he cited different symptoms. He resented the energetic marshals trying to keep the rambling psychologists in line. "They're neurotic," he said, "telling us to speed it up, get in close and not to block the traffic."

But the psychologists were in dead earnest. Many carried placards saying, "Sanity and War Don't Mix", "War is Insane, Psychology for Peace Now".

Weary radicals, tired of demonstrations, threw good natured barbs at the marchers as they passed Dupont Circle.

At the White House, Jack Sawyer, co-chairman of the action group read a copy of a letter sent to Robert Finch, secretary of health, education and welfare, saying in part:

"We cannot do the work we are trained to do because of the brutalizing effects of mass murder in Vietnam."

The psychologists also sent three books to President Nixon to aid him in his foreign policy decisions. They were: Ralph K. White's "Nobody Wanted War: Misperception in Vietnam and Other Wars"; Herbert C. Kelman's "International Behavior: A Social-Psychological Analysis," and Joseph H. de Rivera's "The Psychological Dimension of Foreign Policy."

The march began with 88 of the psychologists and their students at the Sheraton Park Hotel on Connecticut Avenue. At the Washington Hilton, another 71 joined the group, but, by the time they reached the White House, the straggling line had been filled out to 219 by recruits along the way.

AS SECRETARY BOB FINCH SEES IT: SERVE THE YOUNG FIRST

WASHINGTON, D.C.—The Nixon Administration, in its search for solutions to our domestic ills, will put new emphasis "on working with the family unit and especially the mother." This is the inside word from Robert Hutchinson Finch, Presidential confidant, self-avowed "political animal" and pragmatist-in-residence of the Nixon Administration. For America's future will be shaped in the home, he said, "with the schools playing only a secondary role."

PRENATAL CARE

If Finch has his way, the federal government will start looking out for children even before they are born. "We must take care of pregnant mothers," he said, "to insure that children are well born." He cited the relationship between poverty and prematurity. "In the ghetto," he said, "prematurity is about three times the national average." He pointed out that premature children are more likely to be mentally deficient or physically disabled.

Finch also believes the government must start taking care of deprived children immediately after birth. "The relationship between the mother and child is perhaps the most important development factor," he said, "and that relationship is pretty well set within the first three years." He would rather spend the taxpayers' money to give children a chance in life than to rehabilitate them afterward.

HAS NIXON'S EAR

One of the most certain results of last November's election was that Bob Finch would be a power in the new Administration. Indeed, Nixon wanted him for a running mate, but Finch had no interest in the Vice Presidency. He was given his choice of Cabinet posts and he picked the department that is considered the most difficult to administer and the least likely to win him political plaudits—the Health, Education, and Welfare Department, known within the government as "the sprawling mess."

With more than 250 programs to administer—from air pollution control to the American Printing House for the Blind—Finch presides over a Balkanized empire whose 100,000 employees have never been fully united. His $50 billion budget is under constant attack on Capitol Hill. At least three former HEW secretaries, Abe Ribicoff, John Gardner and Wilbur Cohen, warned him that the department was almost impossible to manage and that it would probably hurt his political career.

But Finch chose to be where the action is. "HEW deals with the crucial issues of our times," he said. "Once the Vietnam War is settled, this government must turn its chief attention to fighting the wars against poverty, ignorance and disease." The decisions he makes will touch the lives of some 200 million Americans.

Finch is not waiting, however, for the Vietnam War to end. Already he has plunged into the domestic battles, keeping his emphasis on the family and the young. He has merged the moribund Children's Bureau and the floundering Head Start program into a new Office of Child Development. His hope is "that the flexibility and family focus of Head Start will help infuse new force into our traditional approaches."

Because the first five years of a child's life largely determine his future, Finch will try to reach into the ghettos with nursery programs. "We know," he said, "that intelligence differences show up between different socio-economic groups of children as early as as we can measure things like language and cognitive skills." This occurs, he said, as early as 14 to 21 months. "We have got to reach these kids," he declared.

GEARED TO TODAY

By starting with the young, Finch reasons, we can build a better nation from the ground up. He has some positive ideas on how to go about it. The elementary and secondary schools, he points out, haven't changed their basic teaching methods in the past 30 years. Yet today's kindergarten children, conditioned by television, require a more imaginative approach. "Dick-and-Jane textbooks can't hold a candle to Captain Kangaroo," he said, "let alone the Mod Squad."

To cope with the TV generation, Finch would like to see a quiet revolution in the classroom. Indeed, he intends to lead the revolution by establishing a network of experimental schools in partnership with state and local governments.

SACRAMENTO REPORT

(By State Senator John G. Schmitz)

EDUCATIONAL TOTALITARIANS

At a time when public schools throughout the nation, and especially in the large states such as California and New York, have already become storm centers to a greater degree than ever before in our history, leaders in the field of public education are calling for almost total control over the child by the school, beginning at *the age of two.*

In the January 1969 issue of Today's Education, the journal of the National Education Association, an article by two professors of education at Indiana University outlines "drastic changes" which may be expected in the schools of the 1970's, on the basis of more than 400 books and articles already published. The authors predict that when these changes are complete, "educators will assume a formal responsibility for children when they reach the age of two."

Regular school attendance will then begin at age three with "experiences deliberately devised to increase the sensory input from which the children derive their intelligence"—a statement which blandly ignores the fact that children derive their intelligence, along with their life, from their parents.

What about parents who prefer to keep "formal responsibility" for their own children? The authors of this article caution their readers that "there could be a tinderbox quality to the introduction of mandatory foster homes and 'boarding schools' for children between the ages of two and three whose home environment was felt to have a malignant influence." They add that "the application of biochemical research findings, heretofore centered in infra-human subjects such as fish, could be a source of conspicuous controversy when children become the objects of experimentation."

Let us hope there will be more than simply a "controversy," for if American parents ever submit their children to mass drug experimentation in the schools, we will have entered upon a totalitarian age more terrible than any the world has ever known.

Already it has become standard totalitarian practice, demonstrated in both the Nazi and Communist states, to take children away from their parents very early and indoctrinate them with the ideology of the state. This same strategy is echoed very clearly in the Today's Education article when it refers to the schools of the 1970's as " 'clinics' whose purpose is to provide individualized psychosocial 'treatment' for the student." If that is not brainwashing, what is?

Already parents and children are being separated when the state disapproves of their "home environment." My staff and I have been working for more than six months with one such case in Orange County, in which a little boy was taken from his parents by the State on a legal pretext and sent nearly a hundred miles away to a foster home, where his parents were very rarely permitted to see him, because the juvenile authorities felt that they could do a better job of raising the boy.

Earlier this month the Senate Education Committee approved Senate Bill 982 to create a special credential for pre-school teaching. At the time I could not understand why such a credential was needed, since teacher credentialling in California has always been associated with the administration of schools for pupils in the age range subject to the compulsory education laws. (The only exception is the junior colleges, which were at first organized like high schools but their credentialling requirement is likely to be eliminated soon).

Now, in light of the article quoted above, I can see that this bill to create a special credential for pre-school teaching might well be a step toward compulsory education for children younger than six, whether deliberately intended as such or not.

The would-be educational totalitarians have already turned many of our schools into boiling cauldrons of crisis and strife. We dare not let them extend their turmoil into the lives of two- and three-year-old children utterly defenseless against it. With every passing day it becomes more urgent to develop good educational alternatives to the present school establishment.

OBSERVATIONS ON OVERSEAS TRIP

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. SIKES. Mr. Speaker, it has been my privilege to visit in recent weeks a number of countries, some of them well off the beaten track insofar as congressional interest generally is shown. I had noted many times that a large part of the world, extending from Greece to Indonesia, is not well known in congressional circles, yet it comprises an area in which history is being made and in which conflicting ideologies are seeking dominance. The courts of history may well be affected by events which are occuring in these emerging and developing nations of the world. I am glad to report high morale and dedication of U.S. personnel in these areas—a stimulating and encouraging thing in view of the comparative isolation which many of them must endure. The trip was a most interesting experience which I propose to touch upon briefly here and to discuss in detail later.

I went at a time when U.S. prestige was at one of its highest points in years—largely as a result of the success of the man-on-the-moon program. There was no country that I visited whose people had not followed in some way the progress of the moon shot, and all of them were excited and thrilled at its outcome. Regretfully, we have not taken full advantage of the opportunities offered by the moon landing. In some areas, lack of planning or lack of publicity material has held back the showing of effective exhibits. In fact, only in Burma did U.S. representatives make what I considered full use of the opportunity. There, despite the fact that U.S. activities generally are curbed, an effective display was prepared in an unoccupied building. Photographs were displayed showing various stages in the space program.

There were models of a rocket and of the lunar landing craft, and a large and impressive model of the surface of the moon complete with landing craft, astronauts, and footprints. In another room, a movie was run continuously during the hours the exhibit was open. This outstanding exhibit was fully tailored to take advantage of the opportunity, and the U.S. team is to be highly commended for its work. It is disappointing that comparable efforts have not been made elsewhere.

I am very glad to state also that in South Vietnam the picture is much brighter for allied forces. The enemy has been hurt and hurt badly, and a continuation of military pressure will in time bring realistic negotiations in Paris. This I commented on in detail in Thursday's CONGRESSIONAL RECORD. The allied military team has the combat situation well in hand, and our fighting forces are prepared to meet any new initiative the enemy may attempt. The Vietnamese have strengthened their government and their economy and they are steadily assuming a strengthened and more effective combat role. More and more hamlets are being brought under government security. A total of 17 million people live in South Vietnam; 15 million of them live in areas of Government security. This security continues to gain ground and a strong pacification program is in progress despite a reversion by enemy forces to guerrilla-type assassination, coercion, extortion, and terrorism. The enemy has not won a single major engagement or captured an important city. Despite the cessation of the bombing, which greatly eased his supply problem, the allied forces by redoubled efforts have kept him off balance and seriously decimated his numbers. Nevertheless, the Communist is a stubborn enemy and he continues to fight. However objective our efforts may be at the Paris peace talks, we have no recourse but to maintain pressure on the enemy in Vietnam until those talks bear fruit. Thus far, realism at the peace talks has not been forthcoming because antiwar publicity in the United States and stress on troop withdrawals have convinced the enemy further concessions are forthcoming.

These favorable developments are offset at least in official circles in some areas by serious concern over future U.S. intentions regarding our commitments abroad. There is also the obvious fact that U.S. influence among most Mediterranean nations is largely gone and that Communists have made gains among some Southeast Asian nations. Russian missions are nearly everywhere offering credits and arms and taking in payment food or other products. One thing, however, is to be learned from the Russians. They offer hard rather than soft loans, and they give nothing free. They are better traders than we.

Talk of troop withdrawals and defense cutbacks in the United States have stimulated Communist activity in other parts of the world and may result in adjustments in policy by nations directly under Communist pressure. It would not take much at this stage to encourage defections of some of our friends to the other side.

For instance, Burma's socialistic Government may not now have reason to steer a more independent course. India's march toward socialism is more likely to continue. Nationalism of the banks there is a straw in the wind, and Russian influence is being exerted to obtain a naval base with which to enhance Communist activities in the Indian Ocean area. This is not a happy situation when one considers that India is the second largest nation in the world. Cambodia's slight shift away from the Communist embrace is more likely to remain an accommodation only, in preparation for the eventuality of an allied victory in Vietnam when that comes. Sihanouk does not want an unfriendly Thailand and South Vietnam on either flank. The Communists maintain constant pressure on the Government of Laos, a country where they hold as much territory as they want for a buffer zone despite a valiant fight by Government forces.

I was disappointed to note what I must interpret as a wait-and-see attitude by our representatives in Indonesia. As a result of a shift in government which occurred only because the Communists were in too big a hurry to assume control, there is now a favorable picture for Western interests in Indonesia. Many of that country's present leaders are friendly toward the United States. We should be moving actively to encourage stronger alliances with the West. Indonesia is one of the largest nations in the world, and it has definite ambitions for leadership in its area.

In this complex and sometimes confusing picture of developing nations, there are some bright spots. For instance, Singapore which, although rejected for membership in the Federation of Malaysia, is the brightest star in the area. Its progressive Government has made phenomenal progress in building homes to replace slums, in providing clean government, and in exercising and encouraging leadership in trade and industry. The Government pays cash for its needs and has a favorable credit balance. United States, take heed.

Now let me comment on what I regretfully must term a lack of enterprise and initiative by U.S. representatives abroad. I am puzzled to find reasons for this.

State Department forces certainly cannot be held accountable to isolationist or leftist efforts which may be influencing U.S. policies for different reasons but with the same effect at home. Their job is to represent the U.S. Government abroad, and I hasten to state that the United States has many able and dedicated public servants in its foreign missions and many who perform their duties in an outstanding manner. Nevertheless, I cannot escape the apprehension that State Department policies generally are not as vigorous in support of U.S. interests as they could be. I find many in our own service who agree that we give up too easily in confrontation or discussion with representatives of foreign governments. The hard-sell aggressiveness required for implementation of U.S. policies too often seems to be lacking. The power and prestige of the United States do not suggest a hat-in-hand approach or obeisance in our dealings abroad; nor do we need bluff and bluster. We have shown our good intentions time and again to nearly every country in the world; we should combine this background with strong implementation of U.S. policy in support of democratic ideals, and we should be sufficiently practical to limit our help abroad to those who help us.

An example of what I mean is shown in discussions now in progress on the return of Okinawa to Japanese rule. A number of years ago a commitment in principle was made to return Okinawa to Japanese jurisdiction, but no date was specified. Now, unaccountably, 1972 has become the year to accomplish this and the Japs are insisting that they spell out the terms under which the United States will continue to have base rights. Neither the date nor the conditions are justified

by the facts. Nevertheless, I find some U.S. representatives in Tokyo who accept the Japanese case as irrefutable and even argue for it; this despite the fact that we have poured $3.6 billion into the rebuilding of Japan, that we provide military defense for Japan at our own expense, and that the Japs enjoy a billion-dollar-a-year trade advantage here.

It is hard to imagine Russia yielding on a question of territorial jurisdiction in this manner. They would simply say that the matter is not open for discussion at this time and that would be the end of it. Nor would the world get excited about it. We tend to lead ourselves into traps when it is not necessary.

It would be interesting to speculate also on the effect of an all-out effort by U.S. diplomatic personnel to bring about a settlement of the Kashmir dispute between India and Pakistan. After conversations with nationals of both countries, I am convinced that however bold a front is presented on the question, that both countries would like very much to find a solution by partition and end this primary cause of dissent between them of the controversial area.

A matter of paramount interest is that of modernization of weapons for our own forces as well as for nearly all of our allies. The battle for modernization for our own forces is now being fought in the Senate. It is shocking to me that there should be any question about the requirement for modernization when it is obvious that many of our important weapons systems are now a generation behind their Russian counterparts. It has been well stated that if we are to draft men to fight we should at least give them adequate weapons with which to fight.

If the situation of weapons modernization is serious at home, it is much worse abroad. The weapons in the hands of our friends average two generations behind those in the hands of the Communists, whose countries they border. Take Turkey as an illustration. The Turks have rifles, tanks, and naval vessels including submarines which are World War II vintage. The Turks are well-trained and effective fighting men. There is realism and confidence in their ranks. Yet it seems inexcusable to expect Turkish fighting men to effectively repel superior numbers plus superior weapons in the hands of equally well trained and effective Russian forces at the Turkish borders or on the Bosporus.

Taiwan is perhaps an even more impressive example, for this little country by its location and the temper of its government and its people, exercises the same restraint on Communist aggression that South Vietnam and South Korea are doing. Taiwan's defense forces serve to counter direct aggression from colossal Red China. Yet the Taiwanese forces, which cannot begin to match those of Red China in numbers, are not even making comparable progress in modernization. Each day their weapons are falling further behind those of Red China in effectiveness. Taiwan needs F–4's to replace aging and obsolescent F–86's. Red China is building Mig–19's and has Mig–21's in inventory. Taiwan has no submarines, yet Red China has 33, including one guided missile submarine, and is building more.

One of the gravest omissions to me is the lack of shelters for aircraft protection in Taiwan. A loss of control of the air over Taiwan could be a prelude to disaster in the event of conflict between Taiwan and Red China. The memory of the wholesale destruction of Arab aircraft caught on the ground by Israel planes during the 6-day war brings a chill of apprehension when one considers the overwhelming superiority in numbers of the Communist Chinese Air Force. It appears essential that the aircraft of the Republic of China be protected from similar destruction by wave after wave of assault from Red aircraft.

I returned with the strong conviction that we are not giving sufficient stress to the various personnel exchange programs. Almost without exception, foreign nationals who train in our country return to their homelands to exercise influence which is favorable to the United States. This, I believe, is true for all types of exchange programs. However, there is a particular need to encourage additional foreign military personnel to take advantage of training in military missions and colleges in the United States. A very good example is Indonesia where the attitudes of U.S.-trained individuals who now have strong influence in Government have substantially reversed the strongly anti-U.S. policies of the previous administration.

I anticipate that considerable effort will be required to properly untangle the information which I have accumulated under pressure of time and distance in many parts of the world. In this I shall try to avoid the sensational, and I am genuinely anxious to present information to my colleagues in the Congress and to departments in the Government which will be of value and which will be constructive rather than destructive. The experiences gained are valuable to me, and it is my hope that the information which I have brought back will be useful. I shall make it available as rapidly as possible.

CONCERN ABOUT PROBLEMS IN HOUSING

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. FULTON of Pennsylvania. Mr. Speaker, in the September 1969 issue of Better Homes and Gardens magazine there is a section entitled "Six Men Who Share Our Concern About the Problems in Housing Today." One of the six men expressing concern about these housing problems is my friend, and distinguished colleague, JAMES A. BURKE of the State of Massachusetts.

It is a pleasure for me to place in the RECORD this excellent statement by Congressman BURKE regarding the continuing rise in home mortgage interest rates.

For those interested in reading the views of the other five men, the article can be found on pages 88 and 89 of the September 1969 issue of Better Homes and Gardens.

The article follows:

THE PROBLEMS IN HOUSING TODAY

(By JAMES A. BURKE, Congressman, Massachusetts)

This continuing rise in home mortgage interest rates is an intolerable situation. The housing shortage today is as bad as it was in the years right after World War II. Yet the increase in interest rates by banks is drying up the supply of money that is so essential for building an adequate number of houses.

Even today, it has become practically impossible for a family of four earning $10,000 to $12,000 to buy a home. First of all, they'll be hard pressed even to find a new house because—in too many areas—builders are concentrating on large-budget houses. Then, added to the principal, taxes, and insurance, the high interest rates being charged make the monthly payment prohibitive.

If a family earning this amount of income can't afford to purchase a home, then what chance is there for the poorer families living in overcrowded conditions in all of our cities? The current situation is very alarming and must not be allowed to continue.

Unless the banking industry can meet its obligation to provide adequate home financing at a reasonable cost, then Congress and government are going to have to interfere.

Social consciousness clearly demands that we make funds available to build better homes for more families, and governmental intervention may be the only way. We must find the means to give the total housing industry a shot in the arm that will compare to the original impact of FHA and VA guarantees on mortgages in the '40s and '50s.

We have a responsibility to see to it that money is not dried up in a sector as vital to our economy as housing.

DREW PEARSON

HON. RICHARD D. McCARTHY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, September 5, 1969

Mr. McCARTHY. Mr. Speaker, the entire Nation has suffered a great loss in the death of Columnist Drew Pearson. While we might not always have agreed with everything he wrote, I think it is safe to say that he performed a vital function for our democracy. He performed in a unique way the function that a free press must always play in any democracy. He was indeed the conscience of the Capitol.

At his funeral yesterday, which Mrs. McCarthy and I attended, former Senator Wayne Morse of Oregon eulogized Mr. Pearson as a citizen-statesman dedicated to the service of mankind.

Senator Morse cited Mr. Pearson's many acts of courage, Mr. Morse declared:

His innumerable clashes with dishonest and corrupt officials of all levels of government demonstrated a courage rooted in sincerity, conscience and conviction.

The Oregonian emphasized that while Mr. Pearson, of course, was aware of the

fact that the vast majority of public officials are honest and dedicated he exposed what he believed to be wrongdoing in the interest of sustaining our democracy and our form of government.

Mr. Morse also cataloged the list of humanitarian and patriotic projects which Drew Pearson spearheaded. These were less known than his newspaper columns and broadcasts but they told much of the man and his dedication and idealism.

Mrs. McCarthy and I were privileged to know Drew Pearson. In private life he was a kind, urbane gentleman. We will never forget the innumerable personal kindnesses which he lavished on us. We will miss him as a warm human being. We will miss his insights on the news of the day. Our deepest sympathies are extended to his lovely wife and to his entire family.

Mr. Speaker, I should like to insert in the RECORD at this time editorial obituaries which appeared in the Washington Post of Tuesday, September 2 and the Buffalo Courier Express of Wednesday, September 3:

DREW PEARSON

In the practice of his profession, Drew Pearson had the conscience of a Quaker and the touch of a stevedore. He was robust, free-swinging, sometimes very wild. But he was also strong in a muscular, purposeful, principled way, with the courage to be his own man always, and never mind what people said or thought of him. Rough and tough in public, in private he had the air of a gentleman farmer, which he was, and the manner of a gentle man, which he also was. Shy, self-effacing, detached, he was a moralist who was proud to be a muckraker in the strict dictionary sense—one who searches out and exposes publicly real or apparent misconduct of prominent individuals. Somewhere in these unlikely combinations lies the key to his extraordinary career as the most successful, in many ways the most effective, and certainly the most controversial journalist of his time.

He was controversial because his technique was scatter-shot, so that while he was often brilliantly or brutally on target, he sometimes hit the wrong target or missed altogether; it almost seemed as if this was conscious strategy, this readiness to risk being wrong now and again as the necessary price for being, more often, right. It was uniquely his own style and while his profession never had the grace or the guts to give him the big awards, tribute was paid in other ways; when Mr. Pearson printed the stories that others were too fastidious to be the first to print, the others suddenly had no compunction about printing them. It was also a style that exposed him to any number of lawsuits and any number of epithets and no end of criticism that he was careless with the facts; but it had the singular merit that when it paid off, it paid off big. And it also paid off, more often than not, on the side of good, which was something he saw in simple, moral terms; he was for honesty and against corruption, for the disadvantaged against the self-interest of the power elite, for peace and against war.

It is not necessary to chronicle here all his triumphs any more than it is necessary to catalogue the occasions where his fierce convictions and unique techniques may have combined to put him in the wrong. The simple truth is that he was more effective in his way than any man in his profession over the nearly 40 years that he was practicing it, and that at the time of his death at the age of 71, when other men might have begun to ease off a bit, he was still on top, with nearly twice the readership of his closest competitor. So his success was immense, and so was his impact on his profession and on the Capital. Most of the time he had the right targets and the right causes, and he brought to his crusades a powerful, innovative and relentless force.

DEATH SILENCES MERRY-GO-ROUND CONDUCTOR

Controversy could well have been Drew Pearson's middle name. It was a definite part of him. He thrived on it. He was forever on one side or the other of almost any issue that had two sides. He crusaded for what he thought was right and attacked what he thought was wrong. He published information many a public figure or government official sought to withhold. He did not hesitate to insist in the face of denials. Occasionally he made mistakes, for many of which he later apologized. Occasionally he committed inaccuracies, many of which he later corrected. Covering, as he did for years, broad aspects of the Washington scene, he made some enemies. He had them by the dozens.

One thing Drew Pearson was not was afraid. He dealt freely in scandal and personalities. Often his disclosures caused lawsuits to be brought against him, mostly without success. He himself said his chief motive was to make the government a little cleaner, a little more efficient. It cannot be denied that his exposures of malfeasance and wrongdoing in government achieved an impressive measure of success. He regarded his column as an institution. His death at 71 will not end it. It will be carried on in the same tradition by Jack Anderson, his colleague for many years.

U.S. PRISONERS OF WAR MISTREATED

HON. JOHN R. RARICK

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. RARICK. Mr. Speaker, now that our national leaders permit a full, open discussion of the savage and inhumane treatment suffered by American captives at the hands of Ho Chi Minh's Communist terrorists it becomes even more mandatory that we demand our captured servicemen be treated in accord with the Geneva Convention agreed to by North Vietnam in 1957. This agreement provided for identification of captives, humane treatment, inspection of prisoner of war camps, free exchange of mail between prisoners and their loved ones and release of wounded and sick prisoners.

The details of their detention related by recently released servicemen are so repugnant that they should be made known to every citizen. By awakening public opinion to the brutality of the Asian Communists we can unify our people and influence world public opinion to demand that Hanoi observe humanitarian treatment of our captured servicemen.

I have received a letter from the wife of Maj. Lawrence Barbay of my district who has been a prisoner of war in North Vietnam for 3 years. The Barbays have four children, the youngest having been born 10 days after her father's plane was shot down. The Communists have denied Mrs. Barbay even receiving one letter from her husband.

I have also received correspondence directed to all Congressmen from the National League of Families of American Prisoners in Southeast Asia. The Defense Department advises us there are 340 known prisoners in Vietnam but over some 1,200 servicemen listed as missing, who may be captives but their plight not confirmed by the Communists.

Immediate positive steps are necessary. We cannot wait for peace talks, propaganda, or withdrawal. Any cessation without plans for return of our prisoners could well leave them forgotten—living casualties continuing to suffer every known kind of inhumanity and torture—as we have witnessed in past conflicts with our military men who have fallen into Communist hands.

It is tragic to consider that it was necessary for the prisoners remaining in captivity—who would be in jeopardy of reprisals and further torture—to request that our people be told the truth of Communist mistreatment of military captives.

I include the letters from Mrs. Barbay and the National League of Families of Prisoners in Southeast Asia, a news clipping, and the Dan Smoot Report for August 25:

SEPTEMBER 3, 1969.

DEAR MR. RARICK: I will try to write this letter to you and ask your help.

I don't wish to bring up old memories. I thought to write this letter before calling so I was going to write anyway about my husband, Major Lawrence Barbay, who is a prisoner-of-war in North Vietnam. You know what I don't know about a prison-of-war camp. Maybe you are the best one, to go to Congress and speak for us or to President Nixon. Remind him and them of all the families worried sick over their loved ones somewhere in North Vietnam.

It's been three years for my husband and no word and I am sure not too pleasant one's either. His are a lot worse than mine.

We have four children, the last born 10 days after my husband's plane was shot down.

Don't you think suggesting before the bulk of our military pullout is completed they could ask for release of sick prisoners, exchange of prisoners, release names of prisoners, or pay ransom for prisoners?

This should be most important now as time seems to be dragging and nothing is being accomplished.

Let's don't forget them. *Let's get them home.* They thought nothing of leaving their families to go and fight in what they thought was right. I am so proud of my husband and all the men who have sacrificed their time and families and themselves for this cause.

Thank you for reading this letter. I know you will help if at all possible.

God love you and your family,

Sincerely,

MRS. LAWRENCE BARBAY.

NATIONAL LEAGUE OF FAMILIES OF AMERICAN PRISONERS IN SOUTHEAST ASIA,

Alexandria, La., July 25, 1969.

Re Inhuman Treatment of U.S. Prisoners Captured in North Vietnam.

DEAR SIR: I hope that the above caption will serve to penetrate the secretarial barrier and ensure that my letter reaches you.

The plight of our United States serviceman captured in Vietnam is extremely serious and Defense Secretary Laird outlined the situation in a recent news conference far better than I can.

However, as the wife of Captain Hayden J. Lockhart, shot down and captured March 2, 1965 (he has never seen our four-year-old

son) I intend to use every opportunity to publicize and expose the inhuman treatment being meted out to our husbands and sons, servicemen of the World's greatest nation today. The North Vietnamese react strongly to United States public opinion and I believe that this is a weapon which we have not used as effectively as we should.

Sir, I represent a national group of wives and parents who turn to you for help in our publicity campaign. We request that you use your considerable influence to trigger off a wave of public feeling sufficient to influence the North Vietnamese; not only to provide better treatment of our prisoners but to demand their release immediately and not to wait for the outcome of the perpetual peace talks.

I am sending copies of this letter to Senators and Congressmen and other political leaders in the hopes of real and active support from the leaders of our nation. Please give this matter the most urgent attention—surely these loyal and steadfast men have earned this right.

Yours sincerely,

Mrs. HAYDEN J. LOCKHART, Jr.,
Area Coordinator.

[From the Washington (D.C.) Evening Star, Sept. 3, 1969]

FREED NAVY FLIER DESCRIBES HANOI TORTURE OF PRISONERS

(By David Braaten)

The North Vietnamese torture their prisoners of war, but American bombing raids are "a big morale booster" to the captives, a recently released Navy flier has reported.

Lt. (jg) Robert Frishman, 28, of Santee, Calif., spoke to a score of newsmen yesterday at the Bethesda Naval Hospital, where he has been since his arrival here Aug. 7. He was captured Oct. 24, 1967, when the F4 jet fighter he was piloting was shot down by a surface-to-air missile.

Frishman told a press conference the torture administered to American prisoners included beatings, suspension from the ceiling by ropes, burning of flesh with cigarettes and ripping out of fingernails.

Asked to tell of maltreatment he suffered personally, Frishman said that when he was first shot down he was "taken around in a truck to missile sites," where North Vietnamese hit him and threw things at him.

He lost a filling in a tooth, he said, when one North Vietnamese slugged him, and even though he had a severe arm injury he was bound with ropes.

Eventually, Frishman said, he just passed out.

At their release last month, Frishman praised the treatment he had been given by North Vietnamese doctors, who removed his elbow instead of amputating his arm.

Asked to summarize the attitude and morale of the prisoners still left in North Vietnam—many of whom Frishman said he had talked with before he was released—the Navy flier said it was "pretty hard on the men" now that the bombing had stopped.

He said it raised the prisoners' morale when they looked out the windows of their cells during a raid and saw the North Vietnamese running around. The walls of his cell would "just shake," he said.

Appearing with the officer at the news conference was Seaman Apprentice Douglas B. Hegdahl, 22, of Clark, S.D., who was captured in April of 1967 when he fell overboard from the cruiser Canberra.

Hegdahl was asked about pictures taken of him on Christmas Eve, 1968, showing him reading a letter from his parents and a copy of Newsweek magazine. An enlargement of the photograph showed the letter he was reading was dated April 2, 1968.

"That's about average," said Hegdahl, with a grin. He said he was allowed to see the news magazine "just long enough for the picture to be taken," but that he was permitted to keep the letter from home.

Hegdahl said he never heard from the Red Cross while he was in captivity, and money his mother sent him never reached him. A Christmas package was also looted, he said.

Hegdahl, though thin, appeared in good health after his three weeks at the hospital. He said he had lost 60 pounds in captivity. Frishman, who was still pale and thin, said he lost 50 pounds.

The two Navy men were released in the custody of seven American pacifists, who went to Hanoi to pick them up.

THE DAN SMOOT REPORT

On July 3, 1969, the communist government of North Vietnam announced in Hanoi that three American prisoners would be released, "as a humanitarian gesture in observance of the United States Independence Day."[1]

On July 4, David Dellinger received a telegram from Hanoi officials, saying that a representative of "the American peace movement" must go to Paris for consultation with North Vietnamese representatives there, and that a delegation of "the American peace movement" must later go to Hanoi to pick up the three American prisoners and return them to the United States.[2]

The American peace movement is communist dialectics for American subversives who want a communist victory in Vietnam.

David Dellinger (a U.S.-hating, pro-Castroite, new-leftist) is chairman of the National Mobilization Committee to End the War in Vietnam (MOBES)—a coalition of some 250 "American peace movement" groups of hippies, Negro militants, and Vietcong sympathizers. Dellinger was an organizer of the communist-led attack on the Pentagon in the fall of 1967. He and his MOBES were also in the forefront of the mobs that tried to tear Chicago apart during the Democrat National Convention of 1968.

Under indictment by a federal grand jury for his 1968 Chicago activities, Dellinger is out on bail pending trial. His lawyer is the infamous William H. Kunstler of New York, who has represented dozens of subversive lawbreakers in the past decade.

Defendants in pending federal criminal cases, even though free on bail, may not travel outside their home districts without special permission. Nixon officials arranged such permission for Dellinger. The U.S. Attorney and federal judge Julius J. Hoffman in Chicago agreed to what Kunstler called an "unusual comprise." Travel restrictions against Dellinger were lifted.[3]

On July 7, Dellinger, acting in the capacity of a representative of the people of the United States, left for Paris to negotiate with North Vietnamese communist officials.

Eight days later, attorney Kunstler asked Judge Hoffman to give Rennard C. Davis a three-week release from travel restrictions so that Davis could go to Paris, get final instructions from the communists, and then proceed to Hanoi to accept release of American prisoners.[3]

Rennard C. Davis is a leader of Students for a Democratic Society (SDS) whose officials generally admit being communists, and whose chief aim is to destroy the United States by force and violence. Davis (like Dellinger) is under federal indictment for conspiracy to incite riots in Chicago last year.[3]

The assistant U.S. Attorney in Chicago said that releasing Davis from travel restrictions would permit him to go to a foreign country where the U.S. government would have no way to get him back for trial if he decided not to return. But, he said, the U.S. Attorney's office would make no objection.[3]

Judge Hoffman had yielded to State Department and Justice Department wheedling a week before when letting Dellinger go to Paris, but he refused to let Davis go. He said:

"I had grave misgivings of letting Dellinger go to Paris last week. It puts the court in the position of entering foreign relations.

"Now I'm asked to permit Davis to head his delegation to travel to an enemy country for the purpose of escorting back three American prisoners of war. I think it would be improper for the court to grant him permission for such a purpose; and, therefore, I deny the request."[3]

Attorney Kunstler immediately asked Judge Otto Kerner, U.S. Court of Appeals, for an emergency, closed-session hearing. After Justice Department lawyers gave assurance that the State Department wanted Davis released from travel restrictions, Judge Kerner overturned the decision of Judge Hoffman.

Rennard Davis left that night, July 15, for Hanoi, via Paris—taking six other representatives of "the American peace movement" with him as a "delegation," in compliance with communist instructions.[3]

On August 4, 1969, three American prisoners were released to Davis's seven-man "peace delegation" in Hanoi. On August 5, they arrived in Laos, aboard an International Control Commission plane. A U.S. military plane was waiting there to bring them back home. After a brief conference with U.S. diplomatic officials, the "peace delegation" said the released men would return to the U.S. by commercial plane, because Hanoi would be displeased if they traveled on a U.S. military aircraft.[4]

Pale, gaunt, badly undernourished, sick, and nervous, the three prisoners said they had received adequate food and medical attention, that they had not been indoctrinated, and that they got some exercise in prison camp when they "were allowed to sweep the grounds."

Four days later (August 9), U.S. Secretary of State William P. Rogers cited the physical condition of the three released Americans as proof that North Vietnamese communists are "as inhumane as you can be" in the treatment of American prisoners.[4]

The Vietcong and North Vietnamese will not exchange prisoners, or even give us any information on the identity and number of Americans they have in prison. The Pentagon calls this refusal to provide a prisoner list an "inhumane and clear violation of the Geneva Convention."[7]

The American communist sympathizers who constituted the "peace delegation" to Hanoi are just as inhumane as their communist idols are. Ten days after he had returned to the United States, Rennard Davis (SDS head of the "peace delegation") was still holding some 50 cards or letters which American prisoners in Vietnam had asked him to forward to their anxious relatives back home.[7]

James Johnson (a member of David Dellinger's pro-communist MOBES) was in Rennard Davis's seven-man "peace delegation" to Hanoi. Upon his return to the United States, Johnson was lyrical with happiness about what he had seen in North Vietnam. Speaking of the people there, he said:

"I've never seen such spirit anywhere. I feel they have defeated the United States".[5]

Johnson was right. North Vietnam, a backward, tenth-rate communist nation has defeated the United States, despite the magnificent valor, high morale, and awful sacrifices of our fighting men. They have defeated us because we do not have—and for a long time have not had—top political leadership worthy of respect.

We elect and re-elect such leadership because, apparently, we no longer respect ourselves. If the general American public did have proper respect for itself, for our nation, and for the glorious traditions of our Repub-

---

Footnotes at end of article.

lic, there would be such deep and wide indignation in this country that Richard Nixon would not have dared permit the shameful spectacle the world has just witnessed.

It is a violation of federal law and of a basic constitutional principle for private American citizens to engage in policy negotiations with foreign powers.[6] The Nixon State Department not only permitted but arranged for this violation of law and of constitutional principle.

* * * * *

The release of three prisoners was not a "humanitarian gesture." It was a propaganda trick to strengthen "the American peace movement," which has been an invaluable ally of the communists, inspiring them to persist, undermining the American will to win. Many American servicemen now dead would be alive but for the help and encouragement "the American peace movement" has given the communists. By conferring quasi-ambassadorial status on leaders of this movement, Nixon has further convinced the enemy that victory will be given him, if he just hangs on a while longer and kills several thousand more Americans.

* * * * *

In 1967, North Vietnamese communists released three American prisoners, and released three more in 1968, under the same circumstances and conditions as in the August, 1969, release.[1, 2] Communists called the 1967 and 1968 releases "humanitarian gestures." President Johnson accepted that propaganda lie, and permitted communist sympathizers to negotiate the releases.

* * * * *

President Johnson permitted communist sympathizers to conduct negotiations with the communist enemy. President Nixon did more than that: he actively intervened to free them from the jurisdiction of a federal court so that they could travel abroad for negotiations with the enemy. Thus, Nixon went further than Johnson did, in conferring respectability and official approval on treacherous subversives.

DONALD BRUCE

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mr. SPRINGER. Mr. Speaker, we have all suffered a grievous loss in the untimely death of our former colleague, Donald Bruce. During his two terms as a Representative from my native State of Indiana, he distinguished himself for his legislative ability and as a dedicated spokesman for the conservative philosophy of Government. He could undoubtedly have looked forward to a long and rewarding career in this body but he chose instead to seek his party's nomination for the U.S. Senate, a bid which he lost by a narrow margin in the 1964 Indiana State Republican Convention.

Outside the Halls of Congress, Don Bruce continued to be an eloquent spokesman for the views he held so deeply. He helped organize the American Conservative Union and employed his great talents in advancing the principles of Americanism. Few other platform orators of our day had his ability to move audiences. He will be greatly missed and I extend my deepest sympathy to his family in their time of sorrow.

THE BALANCED URBANIZATION POLICY AND PLANNING ACT

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, September 4, 1969

Mrs. DWYER. Mr. Speaker, shortly before our August recess, I introduced legislation entitled the "Balanced Urbanization Policy and Planning Act," in which I was joined by our distinguished colleague from North Carolina (Mr. FOUNTAIN). The design of the bill is to begin to chart a course of action through the overgrowth of urban congestion and the undergrowth of rural sparsity and decline.

In one sense, it picks up where the Intergovernmental Cooperation Act of 1968—Public Law 90–577—leaves off in coordinating intergovernmental policy and administration of development assistance programs. More directly, however, it represents a concerted effort to achieve a balanced growth policy in rural and urban areas. The measure specifically deals with the manifold problems created by the present course of urban growth as documented in the report of the Advisory Commission on Intergovernmental Relations on "Urban and Rural America: Policies for Future Growth" and incorporates major recommendations advanced in this report and in the Commission's earlier survey of "Fiscal Balance in the American Federal System."

The urban and rural America study indicates that rapid urbanization, swollen racial unrest, and deceptive decline in our rural areas constitute three separate but interrelated crises which must be surmounted if the American social and governmental systems are to remain viable. This problem lends itself to overstatement, but not without cause.

The complexities of these challenges are underscored by their separate, but related, causes. The emergence of an urban America, after all, is not a byproduct of black migration. The revolution in race relations has rural as well as urban dimensions. Admittedly, the difficulties of urban America are heightened by the dramatic examples of social and economic segregation and interjurisdictional racial disparities found in our metropolitan areas. But these areas still would be facing a tremendous task—administratively, fiscally and in terms of governmental services—even if all their citizenry were white, and the same obviously can be said of rural areas as well.

When the plight of rural America is added to the problems of race and urbanization, a potentially explosive situation exists. This is the situation that our Federal system today must deal with. The bill before us today begins to provide the tools for this task at the national level. The need for a national urbanization policy and the development of a more meaningful intergovernmental planning process are underscored by such recent trends as these:

Between 1960 and 1965, metropolitan areas experienced the most rapid population growth, with giant metropolitan complexes—1 million plus—accounting for more than half of the increase in total urban population and those in the 250,000 to 1 million bracket for nearly one-fourth.

Most of this urban growth was concentrated in suburban and outlying areas, not in central cities, and industry more frequently has been seeking location in these same jurisdictions.

Net migration gains were responsible for more than a fifth of the urban population growth and 75 percent of the influx occurred in nine metropolitan areas.

Contrary to some claims, smaller cities and villages outside metropolitan areas have had much slower rates of growth and usually have been bypassed by the mainstream of economic development.

Most black Americans now reside in core cities, with larger jurisdictions having the fastest growth rate and largest proportions; practically all of the remainder live in the rural areas, and the bulk of the white population is suburban.

The total population of rural America has remained nearly static since 1950, but its farming sector has dropped significantly.

In terms of employment, public services and finance, the large central cities and the smaller rural communities and counties share an increasingly tougher task of maintaining healthy levels of economic activity, providing jobs and adequately educating their residents.

Governmental policies involving highway and air transportation facilities, housing and community development, industrial climate and tax levels have influenced industrial location decisions, but not always with beneficial results in terms of the overall public interest.

Present suburban and urban fringe development, in all but a few instances, has tended to follow a mushrooming, meandering or molecular pattern, with an accompanying disorderly, distasteful and destructive use of land.

Estimates of future growth indicate that, with a continuation of present trends, national population will increase about 73 percent by the year 2000, practically all of it urban.

Finally, coordinated and planned development is not aided greatly by the planning requirements that now exist in over 135 Federal grant-in-aid programs and by the 37 or more planning assistance programs that Congress has established.

Mr. Speaker, the facts clearly indicate that there is an ever-widening gap between our national aspirations and actual policy returns. The trends cited above attest to the pressing need for a national urbanization policy, for drawing together the strings of conflicting

purpose. To deny the necessity for such a policy is to ignore the consequences these trends predict:

The prospect of even greater densities in our large metropolitan areas and the attendant higher cost of public and private consumption.

The prospect of more—not less—social and emotional tensions which heavy congestion seems to generate.

The prospect of complicating the already chaotic conditions in our central city ghettos.

The prospect of widening the economic gap between most central cities and most of their surrounding suburbs.

The prospect of even greater economic, educational, and health gaps between rural and urban America.

If these prospects materialize, we will bind future generations of Americans to the same style of urban life that currently prevails. Can we risk this kind of bequest?

Mr. Speaker, I believe we must not permit this. Instead, we must begin now to establish the ways and means of facilitating the development of a sensible, yet bold and balanced, urbanization policy.

Let it be clearly understood, however, that the measure I introduce today is not designed to stem the tide of urbanization. The overriding objective here is a more balanced distribution of urban dwellers and economic opportunity, not a balancing of rural and urban populations. Moreover, the policy envisioned presupposes a broad decisionmaking and planning process—one that is multilevel and multiparticipant. The grant design for future urban growth sought here would establish the priorities and provide the focus that the existing network of intergovernmental relations needs in the areas of improved programing, improved planning, and improved public management. This policy also must deal simultaneously with the problems of central cities in metropolitan areas, while planning for a more balanced geographic distribution of our future urban population.

To hammer out concerted and comprehensive policies in economic, demographic, social, and physical development areas initially requires that new machinery and new methods for policymaking and execution be established in the political branches of national, State and local governments. Both the executive and legislative branches must be involved—given the ramifications of this assignment. Existing mechanisms for interbranch, interagency, and interlevel cooperation must be revitalized.

At the national level, title IV of the Intergovernmental Cooperation Act of 1968 will, in effect, help establish some of these new procedures, especially as they relate to interagency coordination and interlocal planning endeavors. The bill that I am introducing today will institutionalize further this ongoing concern.

Under title II, the President is required to submit annually to Congress a national urban growth report. Its format would include urban trend data and a survey of the progress and effectiveness of Federal efforts affecting the location and rate of population and economic growth. Health and educational programs; resettlement and rehabilitation; housing and large-scale urban development; vocational employment opportunity, and other related programs no doubt would be assessed. The relationship of Federal activities to regional, State, local, and private efforts in these interrelated areas would also be covered and the final portion of the message would set forth the President's recommendations for promoting a more effective urbanization policy. The message would be referred to a new Joint Urbanization Committee.

Responsibility for assembling this report is left wholly to the President, on grounds that no existing unit in the executive branch possesses all the requisite skills to develop the draft. Some would argue that a revamped Council of Economic Advisers, Budget Bureau, or Office of Emergency Planning in the Executive Office of the President should be singled out for the job. The view of this legislation is that the President should have complete discretion—at least at the outset—to devise his own administrative strategy for initiating this massive job of policy development, coordination, and implementation.

Titles III and IV of this legislation complement title II by seeking to systematize planning assistance and to standardize certain of the planning requirements in Federal grant programs. Development planning to date has tended to be narrow, fragmented, and inadequately coordinated with the efforts of other jurisdictions. It ought to be comprehensive, covering human and economic as well as physical resource development, and encompassing rural as well as urban areas. Since major urbanization policy and planning efforts will have to occur at the State and local levels, the Federal Government clearly has a direct concern in helping these governments to develop comprehensive, policy-based, planning procedures.

Title III of this bill establishes a revamped assistance program for such planning at the interstate, State, areawide, and local levels. In effect, it revitalizes the existing 701 program by seeking to strengthen the State's role—if they wish to assume it—of coordinating all planning efforts within their respective borders and by structuring the agencies eligible for receiving comprehensive planning grants in a fashion that eliminates much of the overlap and confusion among planning jurisdictions at the local and areawide levels. Equally significant, the title recognizes only one set of planning agencies at the substate regional level.

The final title in the proposed legislation comes to grips with the lack of uniformity in planning requirements under grant programs, the frequent fuzziness in planning definitions used, and the failure to clearly identify the jurisdiction responsible for or affected by the planning requirement. It does this by standardizing the definitions of comprehensive planning and standardizing the functional planning conformance requirements in five program areas—water, sewer, and other public works facilities; public health services; transportation; open space and recreation; and water resources.

Mr. Speaker, the Balanced Urbanization Policy and Planning Act advances some dramatically new approaches to the broad and controversial issues in the urban development, planning assistance, and planning requirement areas. The nature of the challenges that face us on the urban, rural, and social frontiers convince me that such approaches are not only desirable but they are desperately needed—if we are again to reach a point where we have some sense of mastery over our physical environment and the problems that beset us in the realm of human relationships.

Mr. Speaker, I include as a part of my remarks the text of our bill and a section-by-section analysis, as follows:

H.R. 13217

A bill to provide for the balanced urban development and growth of the United States

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Balanced Urbanization Policy and Planning Act".

TITLE I—GENERAL PROVISIONS

DECLARATION OF PURPOSE

SEC. 101. The purpose of this Act is to establish within the United States Government procedures—

(1) for analyzing urban growth and developing a national urbanization policy and reporting to the Congress on such growth and policy;

(2) to provide greater coordination in the administration of Federal urban and economic development grants and programs by placing within the Executive Office of the President sole responsibility for policy development, coordination, and planning;

(3) to provide assistance to State and local governments for developing comprehensive coordination, programing, and planning agencies and activities;

(4) to consolidate comprehensive planning requirements for grant-in-aid programs; and

(5) to systematize other planning requirements.

DEFINITIONS

SEC. 102. As used in this Act—

(1) "Secretary" means the Secretary of Housing and Urban Development;

(2) "comprehensive planning" means planning which—

(A) consists of the continuing process of assessing needs, resources, and development opportunities; formulating goals, objectives, policies, and standards to guide long-range physical, economic, and human resources development; and preparing plans and programs for such assessment and formulation;

(B) is not inconsistent with comprehensive planning undertaken by any other Federal or State governmental body and, when undertaken by a political subdivision, also is not inconsistent with comprehensive planning by the next larger jurisdiction; and

(C) meets criteria established by the Secretary; and includes—

(i) preparation of comprehensive plans, as guides for governmental policies and action, which identify and evaluate alternative courses of action and the relationships among the activities to be carried out under such plans, including the effective utilization of

resources, the pattern and intensity of land use, and the provision of public facilities, and other government services;

(ii) programing of expenditures of major activities, including capital improvements, in the order in which they are to be commenced, together with definite plans for financing such activities;

(iii) coordination of all related plans and activities of the State and political subdivisions and agencies concerned;

(iv) provisions for a general guide for functional and project or agency program planning; and

(v) preparation of appropriate regulatory and administrative measures in support of the foregoing.

(3) "functional planning" means the preparation of a functional plan which—

(A) provides coordination of services, activities, and facilities, furnished by a State or political subdivision within the same functional area, including housing, public works, water and sewage facilities, transportation, recreation, open space, public health services and facilities, and pollution control; and

(B) is consistent with comprehensive planning;

(4) "State" means any of the several States of the United States, the District of Columbia, and the Commonwealth of Puerto Rico;

(5) "State comprehensive planning agency" means a State agency, or agencies, designated by the Governor of the State (or in the case of the District of Columbia, designated by the Commissioner), to conduct overall comprehensive planning for the State;

(6) "political subdivision" or "unit of general local government" means any city, county, town, parish, village, or other general-purpose political subdivision of a State;

(7) "planning and development district" means any area that—

(A) is established under State laws, or in the absence of such laws, under a plan approved by the Governor of the State or States;

(B) is composed of two or more political subdivisions of a State, including metropolitan areas;

(C) has common or related problems of development requiring cooperative, comprehensive planning and concerted action for the effective solution of such development problems; and

(D) is composed only of political subdivision and interstate compact areas not included within any other such district.

(8) "planning and development district agency" means the agency responsible for a planning and development district and which is, to the greatest extent feasible, composed of or responsible to the elected officials of a unit of areawide government or of the political subdivisions located partially or completely within the planning and development district;

(9) "areawide comprehensive planning" means comprehensive planning undertaken by a planning and development district agency;

(10) "metropolitan comprehensive planning" means areawide comprehensive planning undertaken by a planning and development district agency which includes within its borders a standard metropolitan statistical area as established by the Bureau of the Budget; and

(11) "city comprehensive planning" or "county comprehensive planning" means comprehensive planning undertaken by a city or county if the city or the county—

(A) has authority over planning, zoning, subdivision, and other land uses and which authority, in the case of a city, extends beyond the boundaries of the city; and

(B) is not included within the comprehensive planning of a State comprehensive planning agency or planning and development district agency.

PRESIDENTIAL RESPONSIBILITY

SEC. 103. In order to assure that the comprehensive planning and coordination assistance authorized by title III of this Act and the comprehensive and functional planning requirements of title IV are consistent with the purposes of title II of this Act and section 401 of the Intergovernmental Cooperation Act of 1968 (80 Stat. 1098; Public Law 90–577), the President shall be responsible for continuing policy guidance and continuing review of the administration of this Act, and for promulgating general rules and regulations, which shall be as uniform as practicable to carry out the provisions of this Act and section 401 of the Intergovernmental Cooperation Act of 1968. Such rules and regulations shall provide for full consideration of the concurrent achievement of the objectives specified in the statutory provisions cited in this section, and, to the extent authorized by law, reasoned choices shall be made between such objectives when they conflict.

TITLE II—DEVELOPMENT OF A NATIONAL URBANIZATION POLICY

FINDINGS AND DECLARATION OF POLICY

SEC. 201. (a) The Congress finds that the rapid growth of urban population and expanding urban development in the United States, together with a decline in farm population, slower growth in rural areas, and migration to the cities has created an imbalance between the Nation's needs and resources, and that the economic and social development of the Nation and the achievement of satisfactory living standards depend upon the sound, orderly, and more balanced development of all areas of the Nation.

(b) The Congress further finds that Federal programs already have a significant effect upon the location of population, economic growth, and on the character of urban development; that the purposes of such programs frequently conflict, thereby subsidizing undesirable and costly patterns of urban development; and that a concerted effort is necessary to interrelate and coordinate existing and future programs within a system of planned development and established priorities in accordance with a national urbanization policy.

(c) In order to promote the general welfare and to provide full and wise application of the resources of the Federal Government in strengthening the economic and social health of both rural and urban areas and of the Nation as a whole, the Congress declares that it is a continuing responsibility of the Federal Government, consistent with the responsibilities of State and local government and the private sector, to undertake the development of a national policy, to be known as the national urbanization policy, which shall incorporate social, economic, and other appropriate factors. Such policy shall serve as a guide in making specific decisions at the national level which affect the pattern of urban growth and shall provide a framework for development of interstate, State, and local policy.

(d) The Congress further declares that the national urbanization policy should—

(1) favor patterns of urbanization and economic development which offer a range of alternative locations and encourage the wise and balanced use of physical and human resources;

(2) foster the continued economic strength of all parts of the United States, including central cities, suburbs, smaller communities, and rural areas;

(3) reverse trends of migration and natural growth which create greater disparities among States, regions and cities;

(4) treat comprehensively the problems of poverty and employment associated with urbanization and rural decline;

(5) develop means to alleviate present trends which accentuate racial conflict;

(6) define the basis for fulfilling the role of the Federal Government in revitalizing existing communities and encouraging carefully planned, large-scale urban and new community development;

(7) assist general governmental institutions in achieving balanced urban growth; and

(8) facilitate increased coordination in the administration of Federal programs so as to encourage desirable patterns of urban growth.

URBANIZATION POLICY, PLANNING, AND COORDINATION

SEC. 202. In order to develop the national urbanization policy, the following functions shall be performed within the Executive Office of the President—

(1) the preparation of an annual report, to be known as the Annual Report on Urban Growth;

(2) the collection, analysis, and evaluation of timely and authoritative information, current and prospective, concerning population growth and movement, urbanization, economic growth, patterns of land use, natural resource conservation and development;

(3) a continuing assessment of the progress and effectiveness of Federal efforts to carry out the policy described in section 201 (c) and (d) and developed pursuant to this Act, with particular emphasis upon the manner in which efforts involving economic development, health, education and training, the location and pace of population growth, resettlement and rehabilitation, housing and large-scale urban development, and vocational and employment opportunities relate to and affect the pattern and quality of urban growth;

(4) a review and estimate of current and foreseeable needs of interstate, State, local and private plans, and programs affecting the policy described in section 201 (c) and (d) and developed pursuant to this Act;

(5) an evaluation of the relationship of Federal programs and policies to the plans, policies, and programs referred to in clause (4); and

(6) an estimate of current and foreseeable needs of Federal programs which affect the plans, policies, and programs referred to in clause (4).

URBAN GROWTH REPORT

SEC. 203. (a) The President shall transmit to the Congress, not later than February 20 of each year, the Annual Report on Urban Growth for the preceding year. The Report shall include—

(1) information and statistics describing characteristics of urban growth and identifying significant trends and developments;

(2) a summary of significant problems facing the United States as a result of urbanization trends and developments;

(3) an evaluation of the progress and effectiveness of Federal efforts designed to meet such problems and to carry out the policy described in section 201 (c) and (d) and developed pursuant to this Act;

(4) a reassessment of the policies and structure of existing and proposed interstate planning and developments, including interstate agencies, affecting such policy;

(5) a review of State, local, and private policies, plans, and programs designed to carry out such policy;

(6) current and foreseeable needs in the areas served by such policies, plans, and programs, and the steps being taken to meet such needs; and

(7) recommendations for programs and policies for carrying out such policy, including such legislation as may be deemed necessary and desirable.

(b) The President may transmit from time to time to the Congress supplementary re-

ports on urban growth which shall include such supplementary and revised recommendations as may be appropriate.

(c) The Annual Report on Urban Growth and all supplementary reports shall, when transmitted to the Congress, be referred to the Committee on Government Operations of each House, the Committees on Banking and Currency of each House, the Joint Urbanization Committee, the Joint Economic Committee, and such other standing committees as the presiding officer of each House may designate.

AUTHORIZATION

SEC. 204. Not to exceed $500,000 per fiscal year for the fiscal year ending June 30, 1970, and for each fiscal year thereafter is hereby authorized to be appropriated to the Executive Office of the President for expenses necessary to carry out the purposes of sections 202 and 203.

JOINT URBANIZATION COMMITTEE

SEC. 205. (a) (1) There is established a joint congressional committee which shall be known as the Joint Urbanization Committee. The joint committee shall be composed of eight Members of the Senate appointed by the President of the Senate, three of whom shall be members of the minority party, and eight Members of the House of Representatives, three of whom shall be members of the minority party.

(2) The joint committee shall select a chairman and vice chairman from among its members.

(b) It shall be the function of the joint committee—

(1) to make a continuing study of the information and recommendations contained in the Annual Report on Urban Growth and supplementary reports on urban growth; and

(2) to study means of coordinating programs in order to further the national urbanization policy.

(c) The joint committee shall file a report with the Senate and House of Representatives of the Congress not later than April 20 of each year. The report shall contain the joint committee's findings and comments with respect to the recommendations made by the President in the Annual Report on Urban Growth. The joint committee may from time to time make such other reports and recommendations to the Senate and House of Representatives as it deems advisable.

(d) In carrying out its duties under this section, the joint committee or any duly authorized subcommittee thereof, is authorized to hold such hearings; to sit and act within or outside the United States at such times and places; to require by subpena or otherwise the attendance of such witnesses and the production of such books, papers, and documents; to administer such oaths; to take such testimony; to procure such printing and binding; and to make such expenditures as it deems advisable. The joint committee may make such rules respecting its organization and procedure as it deems necessary.

(e) Subpenas may be issued over the signature of the chairman of the committee or by any member designated by him or the committee, and may be served by such person as may be designated by such chairman or member. The chairman of the joint committee or any member thereof may administer oaths to witnesses. The provisions of sections 102–104 of the Revised Statutes (2 U.S.C. 192–194) shall apply in the case of any failure of any witness to comply with a subpena or to testify when summoned under authority of this section.

(f) The joint committee is authorized to appoint and fix the compensation of such experts, consultants, and staff employees as it deems necessary and advisable.

(g) With the consent of any standing, select, or special committee of the Senate or House, or any subcommittee, the joint committee may utilize the services of any staff member of such House or Senate committee or subcommittee whenever the chairman of the joint committee determines that such services are necessary and appropriate.

(h) (1) The expenses of the joint committee shall be paid from the contingent fund of the Senate from funds appropriated for the joint committee, upon vouchers signed by the chairman of the joint committee or by any member of the joint committee duly authorized by the chairman.

(2) Members of the joint committee, and its employees, experts, and consultants, while traveling on official business for the joint committee within or outside the United States, may receive either the per diem allowance authorized to be paid to Members of the Congress or its employees, or their actual and necessary expenses provided an itemized statement of such expenses is attached to the voucher.

TITLE III—GRANTS FOR COMPREHENSIVE PLANNING AND COORDINATION

SHORT TITLE

SEC. 301. This title may be cited as the "Comprehensive Planning and Coordination Act".

FINDINGS AND DECLARATION OF PURPOSE

SEC. 302. (a) The Congress finds and declares that—

(1) an effective national urbanization policy is directly dependent upon the cooperative action of the Federal, State, and local levels of government in developing a system of comprehensive planning and coordination in order to achieve a more balanced use of the physical, economic, and human resources of the Nation;

(2) development planning has tended to be too narrow, fragmented, and inadequately coordinated; that to be fully effective, such planning must be comprehensive, embracing the full spectrum of human, economic, and physical resource development and encompassing urban and rural growth and development; and that there is a vital need for the development of comprehensive planning and coordination agencies, processes, and systems that will provide the framework within which functional, project, and agency program planning can be related for fully coordinated development;

(3) urban growth and rural development needs may be coordinated most efficiently and economically at the State and local government level, based on the capability of State and local governments to develop comprehensive, policy-based planning processes which can serve as a guide for functional, project, and agency program planning and can provide a systematic basis for effective coordination of Federal, State, and local development programs; and that such planning and coordination, in order to be effective, requires a governmental organization and structure and accompanying powers and authority capable of implementing planning through effective decisions and for accomplishing coordination through meaningful management; and

(4) improved coordination of programs of Federal assistance administered by various departments and agencies can best be achieved at the Federal level through the Executive Office of the President which can provide an effective focal point for the formulation of consistent planning, policies, standards, and procedures among such programs pursuant to section 202 of this Act and section 401 of the Intergovernmental Cooperation Act of 1968 (80 Stat. 1098; Public Law 90–577).

(b) It is the purpose of this title—

(1) to provide assistance for the development of comprehensive planning and coordination capabilities at the interstate, State, regional and local government levels;

(2) to encourage cooperation among local governments in solving mutual and areawide development problems by assisting them in developing or strengthening the comprehensive planning and coordination process;

(3) to foster intergovernmental cooperation in developing coordinated and concerted attacks on problems of national urban and rural development; and

(4) to establish a method for the exchange of development information among localities, the States, and the Federal Government, in order to assist development and implementation of the national urbanization policy described in section 201 (c) and (d), and to aid the States and their political subdivisions in the determination of their needs.

PLANNING AND COORDINATION GRANTS

SEC. 303. In order to carry out the purposes of section 302(b), the Secretary is authorized to make comprehensive planning grants in accordance with the provisions of this title—

(1) to collect systematically information concerning any public works, public capital improvements and capital acquisitions, and economic and human resources development programs, projects, and associated activities;

(2) to collect and analyze information related to—

(A) population characteristics, migrations, and densities;

(B) economic trends, location patterns, and projections;

(C) directions and extent of urban and rural growth and change;

(D) employment and unemployment trends and projections;

(E) social, educational, health, recreational, and cultural development trends and needs;

(F) governmental organization and financial resources available within the State and the political subdivisions thereof; and

(G) other information necessary to conduct comprehensive planning;

(3) to develop, use, and encourage common information and data bases for State, regional, and local comprehensive and functional planning;

(4) to establish arrangements for the exchange of planning information among State agencies, and among the various governments within each State and their agencies, including planning and development agencies and city comprehensive planning agencies; between such governments and agencies of neighboring States as appropriate; and with interstate compact agencies and regional commissions established pursuant to Federal law;

(5) to prepare and maintain a coordinated planning system and process including the formulation of long-range, comprehensive plans consistent with the national urbanization policy described in section 201 (c) and (d) and developed pursuant to this Act;

(6) to undertake studies, surveys, and other activities to facilitate the coordination of administration of similar and related programs;

(7) to provide technical assistance and training, and advice and consultation on comprehensive planning and coordination matters on an interagency, interprogram, and intergovernmental basis;

(8) to establish arrangements for the exchange of information with the Federal Government for use by the President in discharging his responsibilities under section 401 of the Intergovernmental Cooperation Act of 1968 and section 103 and title II of this Act; and

(9) to conduct such other related planning and coordination functions as may be approved by the Secretary.

ELIGIBLE AGENCIES

SEC. 304. The Secretary, pursuant to rules and regulations as provided in section 103, may make grants to—

(1) a State comprehensive planning agency to carry out the functions of section 303;

(2) a State agency, designated by the Governor, which has entered into an agreement with the Secretary in accordance with section 305(e) to provide assistance to planning and development district agencies, completely or partially within the State, and units of general local government, for carrying out the functions of section 303;

(3) a planning and development district agency, completely or partially within the State, in those States which have not entered into an agreement with the Secretary in accordance with section 305(e):

(A) for carrying out the functions of section 303; and

(B) to provide assistance to units of general local government, for carrying out the functions of section 303, when such district agency has entered into an agreement with the Secretary in accordance with section 305(f);

(4) the following local agencies, for carrying out the functions of section 303, in those States in which neither a State agency nor a planning and development district agency within which such local agencies have jurisdiction have entered into agreements with the Secretary in accordance with section 305 (e) or (f), respectively:

(A) a city or county comprehensive planning agency; and

(B) a government planning agency—

(i) for an area in which rapid urbanization has occurred or is expected to occur as the result of the establishment or rapid substantial expansion of a Federal installation; or

(ii) for an area in which rapid urbanization is expected to occur as the result of land developed, or to be developed, as a new community and approved under section 1004 of the National Housing Act or title IV of the Housing and Urban Development Act of 1968; or

(iii) for an area in which there has been a substantial reduction in employment opportunities as the result of the partial or complete closing of a Federal installation, or a decline in the volume of orders of the Federal Government for articles or materials produced or manufactured within such area;

(5) organizations of public officials eligible to receive grants pursuant to section 701(g) of the Housing Act of 1954, for carrying out the functions of section 303, when such organizations conduct comprehensive planning in parts of two or more States;

(6) the Appalachian Regional Development Commission to carry out the functions of section 303 for the area over which the Commission has jurisdiction;

(7) a regional commission established under the Public Works and Economic Development Act of 1965 to carry out the functions of section 303 for the area over which the commission has jurisdiction;

(8) a tribal planning council or other tribal body for comprehensive planning for an Indian reservation, as designated by the Secretary of the Interior; and

(9) political subdivisions which have suffered substantial damages as a result of a catastrophe which the President, pursuant to section 2(a) of the Act entitled "An Act to authorize Federal assistance to States and local governments in major disasters and for other purposes," approved September 30, 1950, as amended (42 U.S.C. 1855(a)), has determined to be a major disaster.

PROPOSALS FOR GRANTS

SEC. 305. (a) An agency desiring to receive a grant shall submit to the Secretary a proposal in such form, at such times, and in accordance with such procedures as the Secretary may specify, indicating the comprehensive planning and, where relevant, the program of planning assistance that it will undertake, the period during which such activities will be conducted, and their estimated costs, and designating those functions enumerated under section 303 which qualify for Federal assistance pursuant to this title.

(b) From the sum allocated pursuant to section 310, the Secretary is authorized to make a grant to the agency whose proposal is approved of an amount not to exceed two-thirds of the estimated cost of the planning and, where relevant, the program of planning assistance, except that a grant may be made in an amount not to exceed three-fourths of such estimated cost to an agency referred to in section 304(4)(B)(iii).

(c) A grant for comprehensive planning shall be made to a planning and development district agency pursuant to this title only if the comprehensive planning of such agency is not inconsistent with the comprehensive planning of any interstate or State agency assisted by funds granted under this title.

(d) A grant shall be made to a unit of general local government only if its comprehensive planning is not inconsistent with or duplicative of the comprehensive planning of any interstate, State, or district agency assisted by funds granted under this title.

(e) In order to be eligible for a plant for a program of planning assistance, a State agency referred to in section 304(2) shall enter into an agreement with the Secretary to provide comprehensive planning assistance for eligible agencies specified in section 304(2). The agreement shall provide for the following:

(1) a designation by the Governor that the State agency shall have primary authority and responsibility for the development and administration of the local comprehensive planning assistance program;

(2) the relationship that will be maintained between and among local, areawide, and State comprehensive planning agencies, and the techniques that will be used to foster coordination and planning;

(3) specific policies, procedures, and priorities to assure that assistance will be made available to meet the needs of large cities and urban concentrations as well as smaller cities, rapidly urbanizing areas, outlying communities, rural regions, and federally impacted and depressed areas;

(4) the methods that will be used to relate comprehensive planning to functional planning within and among individual jurisdictions;

(5) a reasonable distribution of cost sharing for the non-Federal portion of the planning conducted by the State, and eligible agencies specified in section 304(2), including staff assistance and cash payments;

(6) provisions for an adequate professional and trained staff for the designated State agency to assure a capability for offering technical training, educational assistance and consultants to eligible agencies specified in section 304(2);

(7) provisions for assistance to comprehensive planning agencies within the State to initiate surveys and to develop new program designs for acquiring basic data, information, survey results, and analysis; for establishing comprehensive planning and formulating implementing measures; for maintaining and updating plans and policies through comprehensive planning; and for meeting unusual or nonrecurring needs in existing programs;

(8) provisions that Federal funds made available for the purposes of this title shall increase, and not supplant, State or local funds available for such purposes; and

(9) provisions to establish such fiscal control and fund accounting procedures and administrative reports as may be necessary to assure proper disbursement of and accounting for funds received under this section.

(f) To be eligible for a grant for a program of planning assistance, a planning and development district agency referred to in section 304(3) shall enter into an agreement with the Secretary to provide comprehensive planning assistance for eligible agencies specified in section 304(3). The agreement shall include, to the maximum extent practicable, the same provisions as required by subsection (e) for an agreement with a State agency (except such provisions contained in clauses (1) and (5) of such subsection). The agreement with the district agency shall provide for a reasonable distribution of cost sharing for the non-Federal portion of assisted programs between the district and assisted eligible agencies specified in section 304(3).

(g) Planning assisted under this title shall, to the maximum extent feasible, cover entire areas having common or related development programs. The Secretary shall encourage cooperation in preparing and carrying out plans among all interested regions, States, political subdivisions, public agencies, and other parties in order to achieve coordinated development of entire areas. To the maximum extent feasible, pertinent plans, studies, information, and data already available for areas shall be utilized in order to avoid unnecessary repetition of effort and expense.

(h) Any grant made pursuant to this title shall be in addition to, and may be used jointly with, grants or other funds available for planning surveys, studies, and investigations under other federally assisted programs.

POWERS OF SECRETARY

SEC. 306. (a) In accordance with general rules and regulations promulgated by the President pursuant to section 103 of this Act, the Secretary shall promulgate rules and regulations to administer the provisions of this title, including the terms and conditions under which grants authorized by this title may be made.

(b) In order to carry out the provisions of this title, the Secretary—

(1) is authorized to make advance, progress, or other payments pursuant to any grant made under this title without regard to the provisions of section 3648 of the Revised Statutes, as amended (31 U.S.C. 529);

(2) is authorized to provide technical assistance to any State, local government, Indian tribal body, or any other eligible agency specified in section 304 undertaking comprehensive planning;

(3) is authorized, by contract or otherwise, to make studies and publish information on problems related to comprehensive planning;

(4) shall consult with other officials of the Federal Government responsible for the administration of Federal assistance programs to States, planning and development districts, political subdivisions, or other eligible agencies specified in section 304, in order to determine how such programs are affected by the provisions of this title;

(5) shall consult with the Secretary of Agriculture prior to approving any grant to be made pursuant to this Act to a planning and development district agency which does not include any portion of a metropolitan area; and

(6) shall consult with the Secretary of Commerce prior to approving any planning grant to a planning and development district which serves as an economic development district or includes any part of such a district as defined and designated under the Public Works and Economic Development Act of 1965 (42 U.S.C. 3121).

(c) The Secretary of Agriculture and the Secretary of Commerce, as appropriate, may provide technical assistance with or without reimbursement, in connection with the functions of such planning and development districts as may be assisted under this title.

INTERPROGRAM COORDINATION AND COMPREHENSIVE PLANNING SERVICE AGREEMENT

SEC. 307. (a) In order to achieve a high level of interprogram coordination and to eliminate duplication of effort in the devel-

opment of basic planning data and information, any State, regional or local governmental agency administering or receiving funds under any Federal assistance program may, notwithstanding any other provision of law, enter into agreements with comprehensive planning agencies for the provision of services thereby. Such agreements may provide for payments to a comprehensive planning agency (1) in support of comprehensive planning and coordination activities; (2) for planning review and advice, technical assistance, and consultation; (3) for the provision of basic and supporting planning and development information; and (4) for other similar services facilitating the efficient administration of such Federal assistance program.

(b) The head of any Federal department or agency administering a Federal assistance program under which an agreement is made as provided in subsection (a), may approve the expenditure of functional planning funds granted under the program for payments to a comprehensive planning agency for services under the agreement under such conditions as he may deem necessary and desirable.

INTERSTATE COMPACTS

SEC. 308. The consent of the Congress is hereby given to any two or more States to enter into agreements or compacts, not in conflict with any law of the United States, for cooperative efforts and mutual assistance in the comprehensive planning and development of interstate, metropolitan, or other development districts and to establish such agencies, joint or otherwise, as they may deem desirable for making effective such agreements and compacts.

APPROPRIATIONS AUTHORIZED

SEC. 309. For the purpose of making grants under this title, there are authorized to be appropriated not to exceed $75,000,000 for the fiscal year ending June 30, 1971; not to exceed $100,000,000 for each of the fiscal years ending June 30, 1972, and June 30, 1973; and for each of the two succeeding fiscal years, such sums as may be necessary to carry out the purposes of this title. Any amount appropriated hereunder shall remain available until expended.

ALLOCATIONS TO STATES

SEC. 310. (a) Fifteen per centum of the amount appropriated pursuant to section 309 for each fiscal year shall be allocated by the Secretary among the States for State comprehensive planning. From such 15 per centum, each State shall be allocated $50,000 for each such year. From the remainder of such 15 per centum, each State shall receive an amount which bears the same ratio to such remainder as the population of each State bears to the population of all States.

(b) Sixty per centum of the amount appropriated pursuant to section 309 for each fiscal year shall be allocated by the Secretary among the States for comprehensive planning assistance to eligible agencies specified in subsections 304 (2) and (3). From such 60 per centum, each State shall be allocated $30,000 for each such year. From the remainder of the 60 per centum, each State shall receive an amount which bears the same ratio to the total remainder as the population of each State bears to the population of all States. If a State does not enter into an agreement pursuant to section 305(e), each planning and development district agency within the State, which enters into an agreement pursuant to section 305(f), shall be allocated an amount which bears the same ratio to the total amount the State would be eligible for, if it had entered into an agreement, as the population of the planning and development district bears to the total population of the State.

(c) The remaining 25 per centum of the amount appropriated pursuant to section 309 for each fiscal year shall be expended, as the Secretary deems appropriate. as follows:

(i) for additional grants to eligible agencies referred to in section 304 to carry out the functions of section 303;

(ii) for research, technical assistance, publications, and demonstration projects conducted by the Secretary to advance the purposes of this title (which total expenditures shall not exceed 5 per centum of the amount appropriated for each fiscal year); and

(iii) for sums incurred by the Secretary in administering the provisions of this title.

(d) Any amount allocated to a State under subsection (a) or (b) and not used within such State may be reallocated by the Secretary and may be used for grants to any agencies referred to in section 304 except a State comprehensive planning agency.

(e) The population of a State, of all the States, and of any planning and development district shall be determined by the Secretary on the basis of the most recent satisfactory data available from the Bureau of the Census.

AMENDMENTS

SEC. 311. (a) Section 701 of the Housing Act of 1954 (40 U.S.C. 461) is amended as follows:

(1) Subsections (a)–(f) and (i)(4)–(6) are repealed.

(2) The first sentence of subsection (g) is amended to read as follows:

"(g) The Secretary is authorized to make grants to organizations composed of public officials representative of the political jurisdictions within the metropolitan area, region, or district for the purpose of assisting such organizations to undertake such activities, including implementation of metropolitan, regional, and district plans, as he finds necessary or desirable for the solution of the metropolitan, regional, or district problems in such areas, regions, or district."

(3) Subsection (h) is amended—

(A) by striking out the phrase "(h) In addition to the other grants authorized by this section, the Secretary" and inserting in lieu thereof "(h) The Secretary" and

(B) by striking out the last sentence and inserting in lieu thereof: "A grant under this subsection shall not exceed two-thirds of the cost of the survey for which it is made, and shall be made to the appropriate State, metropolitan, or regional planning agency, tribal planning council, regional commission established by the Appalachian Regional Development Act of 1965 or under the Public Works and Economic Development Act of 1965 for comprehensive planning for the regions established under such Acts, or local development districts certified under section 301 of the Appalachian Regional Development Act of 1965 for comprehensive planning or, if there is no such agency or entity which is qualified and willing to receive the grant and provide for its utilization in accordance with this subsection, directly to the city, other municipality, or county involved."

(4) Such section is further amended by adding at the end thereof the following new subsection:

"(j) There are authorized to be appropriated for the purposes of this section not to exceed $1,000,000 for the fiscal year ending June 30, 1971, and not to exceed $1,000,000 for the fiscal year ending June 30, 1972. Any amount appropriated under this section shall be subject to terms and conditions prescribed by the Secretary. No portion of any grant made under this section shall be used for the preparation of plans for specific public works. The Secretary is authorized to make advance, or progress, or other payments pursuant to any grant made under this section, without regard to the provisions of section 3648 of the Revised Statutes, as amended (31 U.S.C. 529)."

(5) The caption for such section is amended to read as follows: "ASSISTANCE FOR ORGANIZATIONS COMPOSED OF PUBLIC OFFICIALS AND FOR HISTORIC SURVEYS".

(b) Section 204 of the Demonstration Cities and Metropolitan Development Act of 1966 (42 U.S.C. 334) is amended by adding at the end thereof the following new sentence: "Such rules and regulations may identify the type of projects which may be exempted from coverage because of their relative lack of significance for State or areawide planning and development."

TITLE IV—UNIFORM PLANNING REQUIREMENTS FOR GRANT-IN-AID PROGRAMS

FINDINGS AND DECLARATION OF POLICY

SEC. 401. (a) (1) The Congress finds that the rapid increase in the number of Federal grant-in-aid programs has been accompanied by a comparable increase in planning requirements for such programs. These planning requirements lack uniformity, frequently fail to define clearly comprehensive or functional planning, or to identify the jurisdiction responsible for planning, and may result in a variety of overlapping and inconsistent activities related to the gathering and analysis of data.

(2) The Congress further finds that while sound, coordinated, and consistent comprehensive and functional planning is essential to the accomplishment of national objectives through grant-in-aid programs, the present overlapping and inconsistent requirements limit the accomplishment of this objective.

(3) The Congress further finds that Federal grants for comprehensive and functional planning should provide assistance for and encourage planning necessary to meet consistent and coordinated planning requirements in other Federal grant programs.

(b) It is the purpose of this title to eliminate inconsistent and overlapping grant requirements by standardizing the definitions of comprehensive planning and functional planning and to apply these definitions properly by providing a method of identifying planning jurisdictions and by establishing the basis for the development and use of common data and information bases.

USE OF COMMON PLANNING INFORMATION

SEC. 402. Federal agencies administering grant programs which require comprehensive or functional planning, or require conformity to existing planning as a condition in making the grants, shall require that such planning proceed from social, economic, demographic, and other base data, statistics, and projections that are common to or consistent with those being employed for planning related activities within the area. Such agencies shall assure that their data requirements for comprehensive and functional planning are common or consistent and shall assist in developing and expanding standard planning information bases.

COMPREHENSIVE AND FUNCTIONAL PLANNING REQUIREMENTS

SEC. 403. (a) Title II of the Demonstration Cities and Metropolitan Development Act of 1966 is amended as follows:

(1) Section 204(a)(1) (42 U.S.C. 3334(a)(1)) is amended to read as follows:

"(1) to any State comprehensive planning agency or planning and development district agency, which is designated to perform metropolitan or regional planning for the area within which the assistance is to be used, and".

(2) Section 204(b)(1)(A) (42 U.S.C. 3334(b)(1)(A)) is amended by striking out "areawide agency" and inserting in lieu thereof "State comprehensive planning agency or the planning and development district agency".

(3) Section 204(b)(2) (42 U.S.C. 3334(b)(2)) is amended by striking out "an appropriate areawide agency or instrumentality" and inserting in lieu thereof "the appropriate State comprehensive planning

agency or planning and development district agency,".

(4) Section 208 (42 U.S.C. 3338) is amended—

(A) by striking out paragraphs (5) and (7); and

(B) by adding at the end thereof the following new paragraph:

"(11) The terms 'State comprehensive planning agency', 'planning and development district agency', 'area-wide comprehensive planning', and 'comprehensive planning' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act.".

(b) The Public Works and Economic Development Act of 1965 is amended as follows:

(1) The second sentence of section 301(a) (42 U.S.C. 3151(a)) is amended by inserting before the period at the end thereof a comma and the following: "except that on or after July 1, 1973, such assistance for comprehensive planning shall be made available only to a State comprehensive planning agency, a planning and development district agency, or a unit of general local government".

(2) Section 403(a)(1) (42 U.S.C. 3171(a)(1)) is amended—

(A) by striking out "and" at the end of clause (C);

(B) by striking out clause (D) and inserting in lieu thereof the following:

"(D) the proposed district has an overall district economic development program which is part of area-wide comprehensive planning, includes adequate land use and transportation planning, and contains a specific program for district cooperation, self-help, and public investment and is approved by the State or States affected and by the Secretary; and"; and

(C) by adding at the end thereof the following new clause:

"(E) on or after July 1, 1973, the proposed district is a planning and development district;".

(3) Section 403(d) (42 U.S.C. 3171(d)) is amended by inserting before the period at the end thereof the following: "and which, on or after July 1, 1973, is a planning and development district".

(4) Section 706 (42 U.S.C. 3216) is amended by inserting before the period at the end thereof a comma and the following: "and the terms 'comprehensive planning', 'functional planning', 'areawide comprehensive planning', 'planning and development district agency', and 'unit of general local government' have the same meanings as given them in section 102 of the Balanced Urbanization and Planning Act.".

(c) The Housing Act of 1961 is amended as follows:

(1) Section 706(2) (42 U.S.C. 1500c–2) is amended to read as follows: "(2) is important to the development of the locality as provided for in comprehensive planning for the political subdivision within which the land is located.".

(2) The first sentence of section 709 (42 U.S.C. 1500d–1) is amended by striking out "the comprehensively planned development of the locality" and inserting in lieu thereof "comprehensive planning for the political subdivision within which the area, site, or structure is located".

(3) Section 710 (42 U.S.C. 1500e) is amended by adding at the end thereof the following new paragraph:

"(5) The terms 'comprehensive planning' and 'political subdivision' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(d) The National Housing Act is amended as follows:

(1) Section 1001 (12 U.S.C. 1749aa) is amended—

(A) by striking out "and" at the end of subsection (d);

(B) by striking out the period at the end of subsection (e) and inserting in lieu thereof a semicolon and the word "and"; and

(C) by adding at the end thereof the following new subsection:

"(f) the terms 'comprehensive planning', 'planning and development district agency', and 'unit of general local government' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(2) Section 1003(b)(3) (12 U.S.C. 1749cc(b)(3)) is amended to read as follows:

"(3) is consistent with comprehensive planning by the State, a planning and development district agency, or a unit of general local government for the area within which the land is located."

(e) The New Communities Act of 1968 is amended as follows:

(1) Section 404(4) (42 U.S.C. 3903(4)) is amended to read as follows:

"(4) the internal development plan is consistent with State or areawide comprehensive planning for the area in which the land is situated.".

(2) Section 415 (42 U.S.C. 3914) is amended by adding at the end thereof the following new subsection:

"(d) The terms 'State comprehensive planning' and 'areawide comprehensive planning' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(f) The Housing Act of 1949 is amended as follows:

(1) In the parenthetical matter in the last sentence of section 102(d) (42 U.S.C. 1452(d)), strike out "the general plan of the locality as a whole" and insert in lieu thereof "comprehensive planning by the unit of general local government for the area covered by the General Neighborhood Renewal Plan".

(2) The second sentence of section 103(d) (42 U.S.C. 1453(d)) is amended to read as follows: "Such programs shall conform, in the determination of the governing body of the locality, to comprehensive planning by the unit of general local government for the area covered by the community renewal program."

(3) Section 110 (42 U.S.C. 1460) is amended—

(A) by amending subsection (b)(1) to read as follows: "(1) shall conform to comprehensive planning by the unit of general local government for the urban renewal area and to the workable program referred to in section 101 hereof, and shall be consistent with definite local objectives respecting appropriate land uses, improved traffic, public transportation, public utilities, recreational and community facilities, and other public improvements, and"; and

(B) adding at the end thereof the following new subsection:

"(1) 'Comprehensive planning' and 'unit of general local government' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(g) The Housing and Urban Development Act of 1965 is amended as follows:

(1) Section 703(c)(2) (42 U.S.C. 3103(c)(2)) is amended to read as follows: "(2) consistent with comprehensive planning by the unit of general local government and with public health, recreation, and other functional planning for the development of the community within which the facilities will be located, and".

(2) The first sentence of section 704(c) (42 U.S.C. 3104(c)) is amended to read as follows:

"(c) No grant shall be made under this section unless the Secretary determines that the land will be utilized for a public purpose within a reasonable period of time and that such utilization will contribute to economy, efficiency, and the development of the area as provided for in areawide comprehensive planning or comprehensive planning by units of general local government, and public works and facilities, public health, transportation, recreation, or other relevant functional planning."

(3) Section 706 (42 U.S.C. 3106) is amended by adding at the end thereof the following new subsection:

"(d) The terms 'comprehensive planning', 'areawide comprehensive planning', 'functional planning', and 'unit of general local government' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(h) The Housing Act of 1954 is amended as follows:

(1) Section 702(b)(2) (40 U.S.C. 462(b)(2)) is amended to read as follows: "(2) it conforms to comprehensive planning by the State, a planning and development district agency, or a unit of general local government, and to functional planning for official State, areawide, and local water, sewer and other public works or facilities, public health facilities, recreational facilities, and".

(2) Section 703 (40 U.S.C. 460) is amended—

(A) by striking out "and" before clause (4);

(B) by striking out the period at the end thereof and inserting in lieu thereof a semicolon and the word "and"; and

(C) by adding at the end thereof the following new clause: "(5) the terms 'comprehensive planning', 'planning and development district agency', 'unit of general local government', and 'functional planning' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

WATER, SEWER, AND OTHER PUBLIC WORKS AND FACILITIES—FUNCTIONAL AND COMPREHENSIVE PLANNING REQUIREMENT AMENDMENTS

SEC. 404 (a) Section 702(c)(2) of the Housing and Urban Development Act of 1965 (42 U.S.C. 3102(c)(2)) is amended to read as follows: "(2) consistent with official areawide water and sewer functional planning, meeting criteria established by the Secretary, for a unified or officially coordinated areawide water and sewer facilities system as part of areawide comprehensive planning for the development of the area, except that prior to October 1, 1969, grants for projects may, in the discretion of the Secretary, be made under this section when such planning for an areawide water and sewer facilities system is under active preparation, although not yet completed, if the facility or facilities for which assistance is sought can reasonably be expected to be included as essential to such planning, and there is urgent need for the facility or facilities;".

(b) The Housing Amendments of 1955 are amended as follows:

(1) Section 202(b) (42 U.S.C. 1492(b)) is amended by adding at the end thereof the following new paragraph:

"(5) No financial assistance shall be extended under clause (1) of subsection (a) of this section unless the project is consistent with functional planning for official areawide water and sewer and other public works and facilities."

(2) Section 206 (42 U.S.C. 1496) is amended by inserting before the period at the end thereof a comma and the following: "and the term 'functional planning' has the same meaning as given it in section 102 of the Balanced Urbanization Policy and Planning Act."

(c) Section 306 of the Consolidated Farmers Home Administration Act of 1961 (7 U.S.C. 1926) is amended as follows:

(1) Subsection (a)(1) is amended by adding at the end thereof the following sentence: "No loans shall be made or insured under this paragraph unless the Secretary

determines that the project is consistent with functional planning for official areawide and local open space, recreation, and water and sewer and other public works and facilities."

(2) Strike out all the matter of paragraph (3) of subsection (a) following "(iii)" and insert in lieu thereof the following: "is necessary for orderly community development consistent with official areawide water and sewer functional planning and not inconsistent with any planned development under areawide comprehensive planning or comprehensive planning undertaken by the unit of general local government within which the project is located and the Secretary shall establish regulations requiring the submission of all applications for financial assistance under this Act to the city or county government in which the proposed project is to be located for review and comment by such agency within a designated period of time.".

(3) Subsection (a)(4) is amended by adding at the end thereof the following new subparagraph:

"(C) The terms 'comprehensive planning', 'areawide comprehensive planning', 'functional planning', and 'unit of general local government' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(4) Subsection (a)(6) is amended to read as follows:

"(6) The Secretary may make grants aggregating not to exceed $15,000,000 in any fiscal year to public bodies or such agencies as the Secretary may determine having authority to conduct official areawide water and sewer functional planning for the development of water and sewer systems in rural areas which do not have funds available for immediate undertaking of such planning."

(5) Subsection (c) is amended by inserting immediately after the word "section" the following: "but complying with the planning requirements of subsection (a) (1) and (3)".

(d) The Public Works and Economic Development Act of 1965 is amended as follows:

(1) Subsection 101(a)(1)(C) (42 U.S.C. 3131(a)(1)(C)) is amended to read as follows:

"(C) the area for which a project is to be undertaken has an approved overall economic development program, as provided in section 202(b)(10) and such project is consistent with such program and with functional planning for official areawide and local water and sewer and other public works and facilities;".

(2) Section 201(a)(5) (42 U.S.C. 3141(a)(5)) is amended to read as follows:

"(5) such area has an approved overall economic development program as provided in section 202(b)(10) and the project for which financial assistance is sought is consistent with such program and with functional planning for official areawide and local water and sewer and other public works and facilities."

(3) Section 202(b)(10) (42 U.S.C. 3142(b)(10)) is amended to read as follows:

"(10) No such assistance shall be extended unless there shall be submitted to and approved by the Secretary an overall economic development program for the area which is part of areawide comprehensive planning and a finding by the State, or any agency, instrumentality, or local political subdivision thereof, that the project for which financial assistance is sought is consistent with such program and, where applicable, with functional planning for official areawide and local open space, recreation, and water and sewer and other public works and facilities. On and after July 1, 1973, such finding shall be made only by the State comprehensive planning agency, a planning and development district agency, or a unit of general local government for the area within which the project is to be located. Nothing in this Act shall authorize financial assistance for any project prohibited by the laws of the State or political subdivision in which the project would be located, nor prevent the Secretary from requiring such periodic revisions of previously approved overall economic development programs as he may deem appropriate."

(e) The Federal Water Pollution Control Act is amended as follows:

(1) Section 8(b)(5) (33 U.S.C. 466e(b)(5)) is amended to read as follows: "(5) no grant shall be made for any project under this section unless such project is in conformity with the State water pollution control functional plan submitted pursuant to the provisions of section 7 and with official areawide water and sewer functional planning and has been certified by the appropriate State water pollution control agency as entitled to priority over other eligible projects on the basis of financial as well as water pollution control needs;".

(2) Section 8(f) (33 U.S.C. 466e(f)) is amended to read as follows:

"(f) Notwithstanding any other provisions of this section, the Secretary may increase the amount of a grant made under subsection (b) of this section by an additional 10 per centum of the amount of such grant for any project which has been certified to him by an official State planning agency or a planning and development district agency empowered under State or local laws or interstate compact to perform metropolitan comprehensive planning, as being in conformity with metropolitan comprehensive planning for a metropolitan area within which the assistance is to be used. The provisions of this subsection may be extended to any urban area, including those surrounding areas that form an economic and socially related region, taking into consideration such factors as present and future population trends and patterns of urban growth, location of transportation facilities and systems, and distribution of industrial, commercial, residential, governmental, institutional, and other activities, which in the opinion of the President lends itself as being appropriate for the purposes hereof for any project certified by an official State planning agency or planning and development district agency as being in conformity with State or areawide comprehensive planning."

(3) Section 10(j) (33 U.S.C. 466g(j)) is amended—

(A) by striking out "the term" in the matter preceding paragraph (1); and

(B) by striking out "and" at the end of paragraph (1);

(C) by striking out the period at the end of paragraph (2) and inserting in lieu thereof a comma and the word "and"; and

(D) by inserting at the end thereof the following: "(3) 'functional planning', 'functional plan', 'metropolitan comprehensive planning', 'State planning agency', and 'planning and development district agency' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

PUBLIC HEALTH SERVICES AND FACILITIES FUNCTIONAL PLANNING REQUIREMENT AMENDMENTS

SEC. 405. (a) The Public Health Service Act is amended as follows:

(1) Section 314(a)(1) (42 U.S.C. 246(a)(1)) is amended by striking out "comprehensive" wherever it appears and inserting in lieu thereof "coordinated".

(2) Section 314(a)(2) (42 U.S.C. 246(a)(2)) is amended by striking out all the matter preceding subparagraph (A) and inserting in lieu thereof the following:

"(2) In order to be approved for purposes of this subsection, a State functional plan for State public health services and facilities must—".

(3) The first sentence of section 314(b) (42 U.S.C. 246(b)) is amended by striking out "comprehensive regional, metropolitan area, or other local area plans for coordination of existing and planned health services" and inserting in lieu thereof the following: "functional planning to coordinate existing and planned regional, metropolitan area, or other local area public health services and facilities".

(4) The second sentence of section 314(d)(1) (42 U.S.C. 246(d)(1)) is amended by striking out "State plans for provision of public health services" and inserting in lieu thereof "functional plans for State public health services and facilities".

(5) All the matter preceding subparagraph (A) of 314(d)(2) (42 U.S.C. 246(d)(2)) is amended to read as follows:

"(2) In order to be approved under this subsection, a State public health services and facilities functional plan must—".

(6) Section 314(d)(2) (42 U.S.C. 246(d)(2)(D)) is amended by inserting before the semicolon at the end thereof the following: "and not inconsistent with official functional planning for regional, metropolitan area, or other local area public health services and facilities".

(7) The second sentence of section 314(e) (42 U.S.C. 246(e)) is amended by inserting before the period at the end thereof the following: "and are in accordance with functional planning for regional, metropolitan areawide, and other local area public health services and facilities".

(8) Section 314(g)(4) (42 U.S.C. 246(g)(4)) is amended—

(A) by striking out "and" at the end of subparagraph (A);

(B) by striking out the period at the end of subparagraph (B) and inserting in lieu thereof a semicolon and the word "and"; and

(C) by adding at the end thereof the following new subparagraph:

"(C) The terms 'functional planning' and 'functional plan' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act".

(9) The first sentence of section 604(a) (42 U.S.C. 291d(a)) is amended to read as follows: "Any State desiring to participate in this part may submit a State public health services and facilities functional plan."

(10) Section 391 (42 U.S.C. 280b–1) is amended—

(A) by striking out the period at the end of paragraph (4) and inserting in lieu thereof a semicolon and the word "and"; and

(B) by adding at the end thereof the following new paragraph:

"(5) the terms 'functional planning' and 'functional plan' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(11) Section 393(b) (42 U.S.C. 280b–3(b)) is amended—

(A) by striking out the period at the end of paragraph (3) and inserting in lieu thereof a semicolon and the word "and"; and

(B) by inserting at the end thereof the following new paragraph:

"(4) the facility will be in conformity with the State public health services and facilities functional plan and with functional planning for regional, metropolitan area, and other local area public health services and facilities."

(12) Section 604(a)(4) (42 U.S.C. 291d(a)(4)) is amended by striking out "community, area, or regional plans" and inserting in lieu thereof "functional planning for regional, metropolitan area, or other local area public health services and facilities".

(13) Section 605(b)(3) (42 U.S.C. 291e(b)(3)) is amended to read as follows: "(3) that the application is in conformity with the State plan approved under section 604 and with functional planning for regional, metropolitan, or other local area public health services and facilities and contains an assurance that in the operation

of the project there will be compliance with the applicable requirements of the regulations prescribed under section 603(e), and with State standards for operation and maintenance;".

(14) Section 625 (42 U.S.C. 291o) is amended by adding at the end thereof the following new subsection:

"(m) The terms 'functional planning' and 'functional plan' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(15) Section 702 (42 U.S.C. 292a) is amended—

(A) by striking out "and" at the end of paragraph (3);

(B) by striking out the period at the end of paragraph (4) and inserting in lieu thereof a semicolon and the word "and"; and

(C) by adding at the end thereof the following new paragraph:

"(5) the terms 'functional planning' and 'functional plan' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(16) Section 705(c) (42 U.S.C. 292(c)) is amended—

(A) by striking out "and" at the end of paragraph (3);

(B) by striking out the period at the end of paragraph (4) and inserting in lieu thereof a semicolon and the word "and"; and

(C) by adding at the end thereof the following new paragraph:

"(5) the facility for which assistance is sought is in conformity with the State public health services and facilities functional plan and with functional planning for regional, metropolitan area, and other local area public health and facilities.

(17) Section 721(c) (42 U.S.C. 293a (c)) is amended—

(A) by striking out "and" at the end of paragraph (5);

(B) by striking out the period at the end of paragraph (6) and inserting in lieu thereof a semicolon and the word "and"; and

(C) by adding at the end thereof the following new paragraph:

"(7) the facility for which assistance is sought is in conformity with the State public health services and facilities functional plan and with functional planning for regional, metropolitan area, or other local public health services and facilities."

(18) Section 724 (42 U.S.C. 293d) is amended—

(A) by striking out "and" at the end of paragraph (4);

(B) by striking out the period at the end of paragraph (5) and inserting in lieu thereof a semicolon and the word "and"; and

(C) by inserting at the end thereof the following new paragraph:

"(6) the terms 'functional planning' and 'functional plan' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(19) Section 762(a) (42 U.S.C. 295(a)) is amended—

(A) by striking out "and" at the end of paragraph (1);

(B) by striking out the period at the end of paragraph (2) and inserting in lieu thereof a semicolon and the word "and"; and

(C) by inserting at the end thereof the following new paragraph:

"(3) the facility for which assistance is sought is in conformity with the State public health services and facilities functional plan and with functional planning for regional, metropolitan area, or other local public health services and facilities."

(20) Section 766 (42 U.S.C. 295e) is amended—

(A) by striking out the period at the end of paragraph (2) and inserting in lieu thereof a semicolon and the word "and"; and

(B) by adding at the end thereof the following new paragraph:

"(3) the terms 'functional planning' and 'functional plan' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(21) Section 791(b)(2) (42 U.S.C. 295h(b)(2)) is amended—

(A) by striking out "and" at the end of clause (D);

(B) by striking out the period at the end of clause (E) and inserting in lieu thereof a semicolon and the word "and"; and

(C) by adding at the end thereof the following new clause:

"(F) the facility for which assistance is sought will be in conformity with the State public health services and facilities functional plan and with functional planning for regional, metropolitan area, and other local area public health services and facilities."

(22) Section 795 (42 U.S.C. 295h–4) is amended by adding at the end thereof the following new paragraph:

"(6) The terms 'functional planning' and 'functional plan' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(23) Section 807(c) (42 U.S.C. 296f(c)) is amended—

(A) by striking out "and" at the end of paragraph (3);

(B) by striking out the period at the end of paragraph (4) and inserting in lieu thereof a semicolon and the word "and"; and

(C) by adding at the end thereof the following new paragraph:

"(5) provides that the facility will be in conformity with the State public health services and facilities functional plan and with functional planning for regional, metropolitan area, and other local area public health services and facilities."

(24) Section 843 (42 U.S.C. 298b) is amended by adding at the end thereof the following new subsection:

"(j) The terms 'functional planning' and 'functional plan' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(b) The Mental Retardation Facilities and Community Mental Health Centers Construction Act of 1963 is amended as follows:

(1) Section 122 (42 U.S.C. 2662) is amended—

(A) by striking out "and" at the end of paragraph (4);

(B) by striking out the period at the end of paragraph (5) and inserting in lieu thereof a semicolon and the word "and"; and

(C) by adding at the end thereof the following new paragraph:

"(6) the facility will be in conformity with the State public health services and facilities functional plan and with functional planning for regional, metropolitan area, and other local area public health services and facilities."

(2) Section 134(a) (42 U.S.C. 2674(a)) is amended—

(A) by inserting in the first sentence between the words "State" and "plan" the following: "public health services and facilities functional"; and

(B) by striking out clause (A) of paragraph (4) and inserting in lieu thereof the following: "(A) which is based on a statewide inventory of existing facilities, a survey of need, and (except to the extent provided by or pursuant to regulations prescribed under section 133) is in conformity with functional planning for regional, metropolitan area, and other local area public health services and facilities;"

(3) Clause (C) in the next to last sentence of section 135(a) (42 U.S.C. 2675(a)) is amended by inserting immediately after "section 134" the following: "and with functional planning for regional, metropolitan area, and other local area public health services and facilities.".

(4) Section 142(a)(4) (42 U.S.C. 2678a(a)(4)) is amended to read as follows:

"(4) in case of an applicant which has in existence (A) a State public health services and facilities functional plan, including services for the mentally retarded, or (B) a State functional plan relating to the provision of services for the mentally retarded, the services to be provided by the facility are consistent with the plan and with relevant functional planning for the region, metropolitan area, and other area."

(5) Section 204(a) (42 U.S.C. 2684(a)) is amended—

(A) by inserting in the first sentence between the words "State" and "plan" the following: "public health services and facilities functional"; and

(B) by striking out paragraph (4)(A) and inserting in lieu thereof the following: "(A) which is based on a statewide inventory of existing facilities, a survey of need, and (except to the extent provided by or pursuant to regulations prescribed under section 203) functional planning for regional, metropolitan area, and other local area public health services;".

(6) Clause (C) in the next to last sentence of section 205(a) (42 U.S.C. 2685(a)) is amended by inserting immediately after "section 204" the following: "and with functional planning for regional, metropolitan area, and other local area public health services and facilities".

(7) Section 221(a)(5) (42 U.S.C. 2688a(a)(5)) is amended to read as follows:

"(5) the services to be provided by the center are included in the State public health services and facilities functional plan, including mental health services, or in a State mental health functional plan submitted to the Public Health Service by the State mental health authority in accordance with title III of the Public Health Service Act and are not inconsistent with relevant functional planning for regional, metropolitan area, and other local area public health services and facilities."

(8) Section 401 (42 U.S.C. 2691) is amended by adding the following new subsection:

"(1) The terms 'functional planning' and 'functional plan' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

COMPREHENSIVE AND TRANSPORTATION FUNCTIONAL PLANNING REQUIREMENT AMENDMENTS

SEC. 406. (a) Section 101(a) of title 23, United States Code, is amended by adding at the end thereof the following new paragraph:

"The term 'functional planning' has the same meaning as given it in section 102 of the Balanced Urbanization Policy and Planning Act."

(b) The last sentence of section 134 of title 23, United States Code, is amended by striking out "comprehensive transportation planning" and inserting in lieu thereof "coordinated transportation functional planning".

(c) Section 11(f) of the Federal-Aid Highway Act of 1965 (82 Stat. 820; Public Law 90–495) is amended by striking out "comprehensive transportation planning" and inserting in lieu thereof "coordinated transportation functioning planning".

(d) The Urban Mass Transportation Act of 1964 is amended as follows:

(1) Section 3(c)(1) (49 U.S.C. 1602(a)(1)) is amended to read as follows: "(1) the Secretary finds that such assistance is essential to a program, proposed or under active preparation, which conforms or will conform to official areawide transportation functional planning for a unified or officially coordinated urban transportation system as a part of areawide comprehensive planning for the development of the urban area,".

(2) The first sentence of section 4(a) (49 U.S.C. 1603 (a)) is amended by striking out

"for a unified or officially coordinated urban transportation system as a part of the comprehensively planned development of the urban area", and inserting in lieu thereof the following: "and which conforms to official areawide transportation functional planning for a unified or officially coordinated urban transportation system as a part of areawide comprehensive planning for the development of the urban area".

(3) Section 12(c) (49 U.S.C. 1608(c)) is amended—

(A) by striking out "and" at the end of paragraph (4);

(B) by striking out the period at the end of paragraph (5) and inserting in lieu thereof a semicolon; and

(C) by adding at the end thereof the following new paragraph:

"(6) the terms 'comprehensive planning' and 'functional planning' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(e) Section 202(d)(1) (42 U.S.C. 1492(d)(1)) of the Housing Amendments of 1955 is amended to read as follows: "(1) that there is being actively developed (or has been developed) for the urban or other metropolitan area served by the applicant a program, meeting criteria established by him and conforming to official transportation functional planning for the area, for the development of a comprehensive and cordinated mass transportation system;".

(f) The Federal Airport Act is amended as follows:

(1) Section 2(a) (49 U.S.C. 1101(a)) is amended by adding at the end thereof the following new paragraph:

"(13) 'Functional planning' has the same meaning as given it in section 102 of the Balanced Urbanization Policy and Planning Act."

(2) Section 9(a) (49 U.S.C. 1108(a)) is amended by adding at the end thereof the following new sentence: "No project may be inconsistent with State, areawide, or municipal transportation functional planning which is not in conflict with the national airport plan."

COMPREHENSIVE AND OPEN SPACE AND RECREATION FUNCTIONAL PLANNING REQUIREMENT AMENDMENTS

SEC. 407. (a) The Land and Water Conservation Fund Act of 1965 is amended as follows:

(1) Section 5(d) (16 U.S.C. 460 1–8(d)) is amended—

(A) by striking out the first sentence and inserting in lieu thereof the following: "A coordinated, statewide, open space and outdoor recreation functional plan shall be required prior to the consideration by the Secretary of financial assistance for acquisition or development projects and such acquisition or projects shall not be inconsistent with regional and local official open space and outdoor recreation functional planning."; and

(B) by striking out all the matter following clause (4) and inserting in lieu thereof the following:

"The plan shall take into account relevant Federal resources and programs and shall be correlated so far as practicable with other State, regional, and local comprehensive planning and official open space and outdoor recreation functional planning. Where there exists or is in preparation for any particular State a comprehensive plan prepared through comprehensive planning, financed in part with funds supplied by the Department of Housing and Urban Development, any statewide open space and outdoor recreation functional plan prepared for purposes of this Act shall be based upon the same population, growth, and other pertinent factors as used in formulating the Department of Housing and Urban Development financed plans.

"The Secretary may provide financial assistance to any State for projects for the preparation of a coordinated, statewide, open space and outdoor recreation functional plan when such plan is not otherwise available or for the maintenance of such plan.

"As used in this Act, the terms 'comprehensive planning', 'functional planning' and 'functional plan' have the same meanings as given them in section 102 of the Balanced Urbanization Policy and Planning Act."

(2) The second sentence in the third full paragraph of section 5(f) (16 U.S.C. 460 1–8(f)) is amended by striking out "comprehensive statewide outdoor recreation plan" and inserting in lieu thereof "coordinated, statewide, open space and outdoor recreation functional plan."

(b) Section 703(a) of the Housing Act of 1961 (42 U.S.C. 1500b(a)) is amended to read as follows:

"(a) The Secretary shall enter into contracts to make grants under sections 702 and 705 of this title only if he finds that such assistance is needed for carrying out a unified or officially coordinated program, meeting criteria established by him, and conforming to official areawide, open space and outdoor recreation functional planning for the provision of open space land as part of areawide comprehensive planning for the development of the urban area.".

(c) The Act entitled "An Act to authorize acquisition or use of public lands by States, counties, or municipalities for recreational purposes", approved June 14, 1926, as amended, is amended as follows:

(1) The second sentence of section 1(a) (43 U.S.C. 869(a)) is amended to read as follows: "Before the land may be disposed of under this Act, it must be shown to the satisfaction of the Secretary that the land is to be used for an established or definitely proposed project and that the project is not inconsistent with the open space and outdoor recreation functional plan for the State."

(2) Section 1 is amended by adding at the end thereof the following new subsection:

"(d) The term 'functional plan' has the same meaning as given it in section 102 of the Balanced Urbanization Policy and Planning Act."

(d) Section 31 of the Bankhead-Jones Farm Tenant Act (7 U.S.C. 1010) is amended by adding at the end thereof the following: "Any project undertaken under this authorization may not be inconsistent with State and areawide open space and outdoor recreation functional plans. The term 'functional plan' has the same meaning as given it in section 102 of the Balanced Urbanization Policy and Planning Act."

(e) Section 7(a) of the Small Business Act (15 U.S.C. 636) is amended by adding at the end thereof the following new paragraph:

"(8) Any loan extended to a small business concern for recreational development may not be inconsistent with areawide and local open space and outdoor recreation functional planning. The term 'functional planning' has the same meaning as given it in section 102 of the Balanced Urbanization Policy and Planning Act.'

WATER RESOURCES FUNCTIONAL PLANNING REQUIREMENT AMENDMENTS

SEC. 408. (a) The Watershed Protection and Flood Prevention Act is amended as follows:

(1) Section 2 (16 U.S.C. 1002) is amended by adding at the end thereof the following new paragraph:

" 'Functional Plan'—the same meaning as given it in section 102 of the Balanced Urbanization Policy and Planning Act."

(2) Insert after section 4 the following new section:

"SEC. 4A. Any planning or installation of works of improvement undertaken may not be inconsistent with the State and areawide water resources functional plans, and where the planning or installation includes recreational development, may not be inconsistent with the State and areawide open space and outdoor recreation functional plans."

(b) Section 104 of the River and Harbor Act of 1958 (33 U.S.C. 610) is amended as follows:

(1) Immediately after the first sentence in subsection (a) insert the following new sentence: "No such control operation may be inconsistent with the State or areawide water resources functional plan."

(2) Add at the end thereof the following new subsection:

"(c) The term 'functional plan' has the same meaning as given it in section 102 of the Balanced Urbanization Policy and Planning Act."

(c) The Act entitled "An Act authorizing Federal participation in the cost of protecting the shores of publicly owned property", approved August 13, 1946, as amended, is amended as follows:

(1) The first section (33 U.S.C. 426e) is amended by adding at the end thereof the following new subsection:

"(f) No project may be inconsistent with State and areawide water resources functional plans, and for those projects which include recreational beaches, they may not be inconsistent with State and areawide open space and outdoor recreation plans."

(2) Before the period at the end of section 4 (33 U.S.C. 426h) insert a comma and the following: "and the term 'functional plan' has the same meaning as given it in section 102 of the Balanced Urbanization Policy and Planning Act."

(d) The Small Reclamation Projects Act of 1956 is amended as follows:

(1) Section 2 (43 U.S.C. 422b) is amended by adding at the end thereof the following new subsection:

"(f) The term 'functional plan' has the same meaning as given it in section 102 of the Balanced Urbanization Policy and Planning Act."

(2) Section 8 (43 U.S.C. 422h) is amended by adding at the end thereof the following new sentence: "Projects shall be consistent with State and areawide water resources functional plans, and if they include recreational development, they shall be consistent with State and areawide open space and outdoor recreation functional plans."

SECTION-BY-SECTION ANALYSIS OF THE BALANCED URBANIZATION POLICY AND PLANNING ACT

TITLE I—GENERAL PROVISIONS

Declaration of purpose

Section 101 declares the purpose of the Act is to establish procedures for developing a national urbanization policy, to provide greater coordination in the administration of Federal urban and economic development grants, to provide assistance to States and localities for developing comprehensive coordination and planning agencies and activities, to consolidate comprehensive planning requirements for grant programs, and to systematize other planning requirements.

Definitions

Section 102 contains definitions of 11 terms, including "comprehensive planning," "functional planning," and "planning and development district."

Presidential responsibility

Section 103 makes the President responsible for providing policy guidance and review of the administration of the Act, and for promulgating implementing general rules and regulations, with particular regard to maintaining consistency among the comprehensive and functional planning requirements of this Act and similar requirements of Section 401 of the Intergovernmental Cooperation Act of 1968. The latter deals with "Coordinated Intergovernmental Policy and Administration of Development Assistance Programs."

TITLE II—DEVELOPMENT OF A NATIONAL URBANIZATION POLICY

Findings and declaration of policy

Section 201(a) finds that rapid urban population growth and urban development, together with a decline in farm population and migration to the cities, has created an imbalance between needs and resources which threatens the Nation's achievement of satisfactory living standards.

Section 201(b) further finds that Federal programs already have a significant effect on population distribution, economic growth, and urban development; that the purposes of separate programs often conflict; and that a concerted effort is needed to coordinate existing and future programs within a system of planned development and priorities in accordance with a national urbanization policy.

Section 201(c) declares that it is a continuing Federal responsibility, consistent with the responsibilities of State and local government and the private sector, to undertake the development of a national urbanization policy to serve as a guide for specific decisions at the national level which affect the pattern of urban growth and provide a framework for development of interstate, State, and local policy.

Section 201(d) further declares that the national urbanization policy should—

(1) favor patterns of urbanization and economic development which offer a range of alternative locations and encourage the wise and balanced use of physical and human resources;

(2) foster the economic strength of all parts of the nation;

(3) reverse migration and growth trends which increase disparities among States, regions, and cities;

(4) treat comprehensively poverty and employment problems associated with urbanization and rural decline;

(5) develop means to alleviate present trends which accentuate racial conflict;

(6) indicate how the Federal Government can help revitalize existing communities and encourage large-scale urban and new community development;

(7) assist general governmental institutions in achieving balanced urban growth; and

(8) facilitate better coordination of Federal programs so as to encourage desirable urban growth patterns.

Urbanization policy, planning, and coordination

Section 202 provides that, in order to develop the national urbanization policy, a number of functions shall be performed within the Executive Office of the President. These include the preparation of an Annual Report on Urban Growth; the collection and evaluation of information on population growth and movement, urbanization, economic growth, land use patterns, and natural resource conservation and development; a continuing assessment of Federal efforts to develop and implement a national urbanization policy; an estimate of the needs of interstate, State, local and private plans and programs affecting that policy; an evaluation of the relationship of Federal programs and policies to interstate, State, local and private plans, policies, and programs; and an estimate of needs of Federal programs which affect those nonfederal plans, policies, and programs.

Urban growth report

Section 203(a) requires the President to transmit the Annual Report on Urban Growth to Congress not later than February 20. This Section specifies what the report shall contain, including data describing urban growth characteristics and identifying trends, a summary of key problems arising from those trends, an evaluation of Federal progress in meeting the problems and carrying out the urbanization policy, a review of interstate, State, local, and private policies and needs affecting the policy, and recommendations for implemental steps, including legislation.

Section 203(b) authorizes the President to transmit to Congress such supplementary reports on urban growth as he deems appropriate.

Section 203(c) provides that the Annual Growth Report and supplements shall be referred to the two Congressional Committees on Government Operations and on Banking and Currency, the Joint Urbanization Committee, the Joint Economic Committee, and other standing committees as the presiding officer of each House designates.

Authorization

Section 204 authorizes funds to be appropriated to the Executive Office of the President to carry out the development of the urbanization policy and preparation of the Annual Report on Urban Growth.

Joint Urbanization Committee

Section 205(a) establishes the Joint Urbanization Committee, composed of eight members from each of the Houses, three of whom from each House shall be members of the minority party. The Committee is to select its chairman and vice chairman from among its members.

Section 205(b) provides that the Joint Committee shall make a continuing study of the Annual Report on Urban Growth and its supplements, and study ways of coordinating programs in order to further the national urbanization policy.

Section 205(c) requires the Committee to file a report with each House not later than April 20 of each year. The report is to contain the Committee's findings and recommendations on the President's recommendations in his Annual Report on Urban Growth. The Committee may make such other reports from time to time as it deems advisable.

Section 205(d) spells out the powers of the Joint Committee or its subcommittees. Section 205(e) prescribes how the subpena may be used and oaths to witnesses administered. Section 205(f) authorizes the Committee to appoint and fix the compensation of staff and consultants, and Section 205(g) authorizes the use of staff of other committees or subcommittees of either House. Section 205(h) establishes the method of payment of the Joint Committee's expenses.

TITLE III—GRANTS FOR COMPREHENSIVE PLANNING AND COORDINATION

Short title

Section 301 provides that this title may be cited as the "Comprehensive Planning and Coordination Act."

In Section 302(a) Congress finds that an effective national urbanization policy depends upon Federal, State, and local cooperation in developing a system of comprehensive planning and coordination. It finds that development planning has tended to be too narrow and inadequately coordinated rather than comprehensive, and that comprehensive planning and coordination agencies and processes are needed to coordinate functional, project and agency program planning. It further finds that development needs may best be coordinated at the State and local levels through State and local comprehensive, policy-based planning processes and adequate governmental structure to implement the planning and coordination. Finally, Section 302(a) finds that Federal assistance programs can best be coordinated through the Executive Office of the President, using the powers granted in Section 202 of this Act and Title IV (coordination of development assistance programs) of the Intergovernmental Cooperation Act of 1968.

Section 302(b) declares that the purpose of this title is to provide assistance for comprehensive planning at the interstate, State, regional, and local levels; to encourage local governments to cooperate in solving areawide problems through comprehensive planning and coordination; to foster intergovernmental attacks on problems of national urban and rural development; and to establish a method for exchange of development information among localities, the States, and the Federal Government.

Planning and coordination grants

Section 303 authorizes the Secretary of Housing and Urban Development to make comprehensive planning grants to carry out the purposes of Section 302(b). Activities comprising comprehensive planning include systematic collection of information on physical, economic, and human resource development programs and projects; collection and analysis of information related to population, economic trends, urban and rural growth and change, employment, human resource trends and needs, State and local governmental organization and fiscal resources; development and use of common data bases for State, regional, and local planning; arranging for exchange of planning information among agencies at all levels of government; preparation and maintenance of a coordinated planning system, including long-range, comprehensive plans consistent with the national urbanization policy; undertaking of studies and surveys to facilitate program coordination; provision of technical assistance and training on comprehensive planning and coordination matters on an interagency, interprogram, and intergovernmental basis; and arranging for exchange of information with the Federal Government for the President's use in discharging his responsibilities under this Act and Title IV of the Intergovernmental Cooperation Act of 1968.

Eligible agencies

Section 304 provides that the Secretary may make comprehensive planning grants directly to certain agencies and indirectly to others. The channel for making the indirect grants depends on whether a State agency or planning and development district (PDD) agencies administer the planning assistance funds from HUD.

Direct grants may be made to a State comprehensive planning agency, regional councils of government with jurisdiction in two or more States, the Appalachian Regional Development Commission, a regional commission established under the Public Works and Economic Development Act of 1965, an Indian tribal planning body, and political subdivisions in Presidentially designated disaster areas. In addition, where a State does not have a planning assistance program channeled through a State agency, direct grants for comprehensive planning may be made to PDD agencies. Finally, where neither a State agency nor planning and development districts administer planning assistance programs, direct grants may also be made to a city or county comprehensive planning agency and to governmental agencies planning for federally impacted areas, for areas undergoing rapid urbanization because of new community development aided by Federal housing programs, and for areas suffering substantial reduction of employment because of the closing of a Federal installation or the reduction of Federal procurement.

Where a State has an approved State agency administering comprehensive planning assistance to PDD agencies and local units, then the following agencies may obtain their Federal funds for comprehensive planning only through the State agency: PDD agencies, units of general local government, and governmental agencies planning for federally impacted areas, for areas undergoing rapid urbanization because of new community development aided by Federal housing programs, and for areas suffering substantial reduction of employment because of the closing of a Federal installation or the

reduction of Federal procurement. If the State does not have an approved State agency for administering the planning assistance program, PDD agencies may administer it. In that case, all planning moneys from the Secretary of Housing and Urban Development must channel through the PDD agencies to all the local agencies who would otherwise have to get their grants from the State agency.

Proposals for grants

Section 305(a) sets forth the conditions that grant applicants must meet in submitting applications.

Section 305(b) provides that planning or planning assistance grants shall not exceed two-thirds of the estimated cost, except that they may be up to three-fourths of the cost for agencies planning for areas suffering substantial reduction of employment because of the closing of a Federal installation or the reduction of Federal procurement.

Under Sections 305(c) and 305(d), a PDD agency may receive a grant only if its comprehensive planning is consistent with the comprehensive planning of any interstate or State agency assisted by funds granted under this title, and a local government's comprehensive planning must be consistent with that of any interstate, State, or PDD agency assisted by funds granted under this title.

In order to receive a grant for a planning assistance program, Section 305(e) provides that a State agency must enter into an agreement with the Secretary of HUD which:

Provides that the Governor designates the State agency as primarily responsible for the assistance program;

Establishes the relationship among local, areawide, and State comprehensive planning agencies;

Assures that assistance will be made available to all types of specified areas;

Sets forth methods for relating comprehensive and functional planning within and among recipient jurisdictions;

Prescribes a reasonable cost-sharing formula for the non-Federal portion of the planning conducted by the State and local assistance recipients;

Provides for an adequate State technical assistance staff and program;

Assures that the grant funds will not be used to supplant existing State or local funds; and

Provides necessary fiscal control and accounting procedures.

Section 305(f) required PDD agencies that apply for grants to conduct a planning assistance program to meet the same requirements as the State agency must meet under Section 305(e), except those relating to designation of the State agency, and cost-sharing of the non-Federal funds. For the PDD agencies, non-Federal costs must be shared between them and the assisted eligible agencies.

Section 305(g) states that planning assisted under the title must cover, to the maximum extent feasible, entire areas having common development problems. The Secretary must encourage cooperation among all parties to achieve coordinated development, and duplication of effort must be avoided. Section 305(h) requires grant funds to be used in addition to other funds available under federally assisted programs.

Powers of Secretary

Under Section 306, the Secretary is empowered to promulgate rules and regulations to carry out this title, in accordance with those promulgated by the President under Section 103. In addition, the Secretary specifically is authorized to make advance, progress, or other payments; provide technical assistance to eligible agencies; make studies and reports on comprehensive planning problems; consult with other Federal grant-administering agencies in order to determine how their programs are affected by this title; consult with the Secretary of Agriculture before making any planning grant to a nonmetropolitan PDD agency; and consult with the Secretary of Commerce before making such a grant to a PDD agency that serves as an economic development district. The Secretaries of Agriculture and Commerce may provide technical assistance to PDD agencies assisted under the title.

Interprogram coordination and comprehensive planning service agreements

Section 307 authorizes any State, regional, or local agency receiving any kind of Federal assistance funds to obtain certain services from comprehensive planning agencies, including planning review, advice, and information and technical assistance. Federal grant-administering agencies are authorized to allow grant recipients to spend functional planning grant funds to pay for such services.

Interstate compacts

Section 308 gives the advance consent of Congress to interstate compacts for comprehensive planning and development activities and to the formation of agencies to carry on such activities.

Appropriations authorized

Section 309 authorizes appropriations for the planning grants in the following amounts: up to $75 million for FY 1971; up to $100 million for FYs 1972 and 1973; and such sums as necessary for the following two fiscal years.

Allocations to States

Section 310(a) provides that 15 percent of each year's appropriation shall be allocated for State comprehensive planning, with each State getting a minimum of $50,000 and the remainder being allocated among the States on the basis of population.

Section 310(b) provides that 60 percent of the appropriation shall be allocated among the States for comprehensive planning assistance to eligible agencies, with each State getting a minimum of $30,000 and the remainder being allocated on the basis of State population. It provides further that if the State does not enter into an agreement to provide planning assistance, each PDD agency which enters into such an agreement will receive an allocation proportionate to its portion of the total State population.

Section 310(c) authorizes the Secretary to spend the remaining 25 percent of the appropriation as he deems appropriate for additional grants to eligible agencies; for research, technical assistance, publications, and demonstration projects (not to exceed 5 percent of the total appropriation); and for administration. He is further authorized under Section 310(d) to reallocate among eligible agencies any unspent State allocations.

Amendments

Section 311 repeals all sections of the existing 701 planning assistance statute except those authorizing nonplanning grants to councils of government and grants for historic surveys. It also appropriates $1 million for each of the fiscal years 1971 and 1972 for these two programs.

TITLE IV—UNIFORM PLANNING REQUIREMENTS FOR GRANT-IN-AID PROGRAMS

Findings and declaration of policy

Section 401(a) finds that there has been a rapid increase in grant programs and planning requirements for such programs; that these requirements lack uniformity and clear definitions of comprehensive or functional planning, and fail to identify the jurisdiction responsible for planning; that they produce a variety of overlapping and inconsistent activities in data gathering and analysis; and that they limit effectiveness of comprehensive and functional planning.

Section 401(b) states that the purpose of this title is to eliminate inconsistent and overlapping grant requirements by standardizing the definitions of comprehensive and functional planning and applying these definitions properly by providing a method of identifying planning jurisdictions and establishing the basis for developing and using common data and information bases.

Use of common planning information

Section 402 provides that Federal agencies administering grants that require comprehensive or functional planning, or require conformity to existing planning, shall require that such planning be based on social, economic, demographic and other data that are common to or consistent with those employed for planning related activities within the area.

Comprehensive and functional planning requirements

The remainder of this title amends the pertinent sections of existing Acts that deal with housing and urban development, water, sewer, and other public works and facilities, public health services, transportation, open space and recreation, and water resources, to make them conform with the definitions in this Act of planning agencies and comprehensive and functional planning.

BARRATT O'HARA

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. WIDNALL. Mr. Speaker, out late colleague, Barratt O'Hara, was a man who truly lived to be a Representative of the people. In his long and distinguished career as a Member of this House, from Chicago, he rendered great service to our Nation and outstanding service to his constituents. His perception made him a valuable senior member of the Foreign Affairs Committee, whose advice and counsel was sought by many.

And, of course, Barratt's Irish wit and charm made him a friend to all. As the senior Member of the House at his retirement, his experience was unmatched. From it came many bits of wisdom which his colleagues treasured. He will be missed.

BARRATT O'HARA

HON. JACK BRINKLEY

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, September 3, 1969

Mr. BRINKLEY. Mr. Speaker, the death of our gentle former colleague and friend, the Honorable Barratt O'Hara, from the land of Lincoln, was especially mourned in the peaceful town of my birth, Faceville, Ga. This is the home of my grandfather, Mr. M. H. Brinkley, who, like Barratt O'Hara, served with distinction in Cuba during the Spanish-American War. My granddad was with Company G, U.S. Volunteers.

The only—then living—Congressman who was his comrade in arms, meant much to my granddad when, during the 90th Congress, my first term, I would relay information between them.

The bonds of friendship ran deep and I particularly share the sorrow of the family, and also share the silent grief which an old soldier has for a fallen buddy.

HOUSE OF REPRESENTATIVES—*Monday, September 8, 1969*

The House met at 12 o'clock noon.

The Chaplain, Rev. Edward G. Latch, D.D., offered the following prayer:

And thou shalt do that which is right and good in the sight of the Lord, that it may be well with thee.—Deuteronomy 6: 18.

O God, our Father, the light of all that is true, the life of all that is good, and the love of all that is beautiful, we lift our hearts unto Thee that we may find wisdom, strength, and love sufficient for all our needs.

Help us to walk in the light of truth, to live the life of goodness, and to share the love of the beautiful that we may play our part and do our full duty in this high hour of our national life.

We pray that Thy spirit may enter the hearts of all people that our Nation, and all nations, may be free from malice and bitterness and be filled with goodness and good will. To this end and by Thy grace may we do justly, love mercy, and walk humbly with Thee.

Bless the family of our beloved Senate colleague with the comfort of Thy presence as they walk through the valley of the shadow of death.

In the spirit of Christ we pray. Amen.

THE JOURNAL

The Journal of the proceedings of Thursday, September 4, 1969, was read and approved.

MESSAGE FROM THE SENATE

A message from the Senate by Mr. Arrington, one of its clerks, announced that the Senate had passed bills of the following titles, in which the concurrence of the House is requested:

S. 719. An act to establish a national mining and minerals policy; and

S. 1499. An act to name the authorized lock and dam No. 17 on the Verdigris River in Oklahoma for the Chouteau family.

The message also announced that the Senate had passed the following resolutions:

S. RES. 253

Resolved, That the Senate has heard with profound sorrow and deep regret the announcement of the death of Hon. Everett McKinley Dirksen, late a Senator from the State of Illinois.

Resolved, That the President of the Senate appoint a committee, of which he shall be a member, to attend the funeral of the deceased Senator.

Resolved, That the Secretary communicate these resolutions to the House of Representatives and transmit a copy thereof to the family of the deceased.

Resolved, That, as a further mark of respect to the memory of the deceased, the Senate do now adjourn until 11 a.m. tomorrow.

S. RES. 254

Resolved, That the Secretary invite the Members of the House of Representatives to attend memorial services for the Honorable Everett McKinley Dirksen in the rotunda of the Capitol on Tuesday, September 9, 1969, at 12 o'clock noon; and be it further

Resolved, That invitations be extended to the President of the United States and the members of the Cabinet, the Chief Justice and Associate Justices of the Supreme Court of the United States, the diplomatic corps (through the Secretary of State), the Chief of Staff of the Army, the Chief of Naval Operations of the Navy, the Chief of Staff of the Air Force, the Major General Commandant of the Marine Corps, and the Commandant of the Coast Guard to attend the memorial services in the rotunda of the Capitol.

RESIGNATION AS A MEMBER OF THE HOUSE OF REPRESENTATIVES

The SPEAKER laid before the House the following communication, which was read:

SEPTEMBER 4, 1969.

Hon. JOHN W. MCCORMACK,
Speaker, House of Representatives,
Room H206, Capitol.

DEAR MR. SPEAKER: This will inform you that I have this day transmitted to the Governor of the State of New Jersey my resignation as a Representative in the Congress of the United States from the 8th District of New Jersey.

I am deeply grateful for your many courtesies.

Sincerely,

CHARLES S. JOELSON,
Member of Congress.

THE LATE HONORABLE SENATOR EVERETT MCKINLEY DIRKSEN

The SPEAKER. The Chair recognizes the gentleman from Illinois (Mr. ARENDS).

Mr. ARENDS. Mr. Speaker, of the many tasks I have been called upon to perform in the course of my many years in Congress, this is for me the most difficult.

It is with a heavy heart that I officially advise the House of the untimely passing of Senator EVERETT MCKINLEY DIRKSEN, the distinguished senior Senator from my State of Illinois, and the beloved minority leader of the U.S. Senate.

He was indeed, as President Nixon said yesterday, "a giant in the history of Congress." In the courage of his convictions and in his oratorical eloquence of their advocacy, Senator DIRKSEN will forever stand tall on the pages of the history of our day with the Clays, the Calhouns, and the Websters of yesterday. It is not whether he or they were right or wrong in what they did or said; it is that they were fearless in what he and they believed and eloquently persuasive in expressing their beliefs.

He is the last of the old school of orators. Among his contemporaries in the Senate while he was serving in the House, were Tom Connally, of Texas; Hiram Johnson, of California; and Bill Borah, of Idaho. With the passing of Senator DIRKSEN something has passed that was truly American in the history of the greatest deliberative body in the world. They distinguished themselves not only from the ideas they advanced but the persuasive manner in which they articulated them.

Senator DIRKSEN was such a man. He was endowed with a melodious voice and was unique among us with his rich oratorical style. Happily, the magic of tape recordings will preserve for history not only what he said but how he said it. His speeches sparkled with Biblical references and quotations from the classics of literature and history. All of which bespeaks the wealth of his knowledge and keenness of his intellect, as well as the richness of his voice. When he spoke he knew whereof he spoke.

It was while serving here in the House that the Senator established his reputation not only as an accomplished speaker but as one who knew every fact and facet of the subject on which he spoke. He did his homework, so to speak; and the extensive "burning of the midnight oil" in studying legislative matters contributed to his having to leave Congress that he might better insure recovery from an eye illness.

When I was considering being a candidate for Congress in 1934, I went to Ev DIRKSEN who had just concluded his first term in Congress to solicit his advice. His encouragement and the advice he gave me account in large measure for my being in Congress. He emphasized with me that as he saw it the secret of success in Congress was being a man of the people, and well known to the people as one who would speak for them. He pointed out that while it was important to respect their views, it was even more important, as their representative, to persuade them to your point of view.

It is hardly necessary to say that Senator DIRKSEN and I were close personal friends. Our friendship began even before he was elected to Congress. Both of us were active in the American Legion in Illinois.

While Senator DIRKSEN may be best known for his uniqueness as an orator, he will live in history as a man who placed country first and above all else. He served as our Republican leader in the Senate under both Republican and Democratic Presidents. He served them all, Republican and Democrat, because he saw that his largest obligation was not to the political party for which he spoke, but to the country as a whole. EVERETT DIRKSEN was a giant among men, a towering statesman.

Mr. Speaker, with the passing of Senator DIRKSEN, our country has lost a truly great leader and I have lost a very fine friend—the finest any man could possibly have.

Mr. Speaker, Mrs. Arends and I extend to his gracious and loving wife Louella and to his fine daughter and her husband Senator and Mrs. Baker, of Tennessee, and his wonderful grandchildren our sincere sympathy.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from Massachusetts, Speaker of the House of Representatives.

Mr. McCORMACK. Mr. Speaker, the death of Senator EVERETT M. DIRKSEN takes from our midst one of the most colorful Members of the Congress in the history of our country.

Senator DIRKSEN was a great American

and an outstanding legislator. In this trying period of our Nation's history, he was a bulwark of strength, always advocating and fighting for a strong national defense and a firm foreign policy, and he did this without regard to whether the President of the United States was a Democrat or a Republican. He placed the national interest and the national defense of our country above political considerations.

Throughout his years of public service, Senator DIRKSEN evidenced his dedication to his public trust by assuming and performing his duties and responsibilities with great ability, with vision, and with courage. His fine and refreshing outlook on life, and his broad and philosophical mind, and his colorful personality were an inspiration for all others to follow.

EVERETT DIRKSEN, as a Member of the House and of the Senate, has made marked contributions to the progress, the dignity, and the strength of our country. He has made his constructive imprint on the pages of our Nation's history.

Senator DIRKSEN will be missed. It will take a long while for someone to come across the political horizon to take his place.

I extend to Mrs. Dirksen and her loved ones my deep sympathy, and also the deep sympathy of the Members of the House of Representatives, in their great loss and sorrow.

Mr. ARENDS. Mr. Speaker, I yield to the minority leader, the gentleman from Michigan (Mr. GERALD R. FORD).

Mr. GERALD R. FORD. Mr. Speaker, it is with great sadness and a deep feeling of personal loss that I learned Sunday afternoon of the death of the much beloved Republican leader of the Senate, EVERETT MCKINLEY DIRKSEN, of Illinois.

Mr. Speaker, it is appropriate that the skies outside should be overcast today and should weep, for I think this reflects the mood of the Nation bereft of the services of the grand old man from Pekin. It is with a somber heart that I address this House today.

I was most fortunate. I knew EV DIRKSEN well—perhaps better than most. Even though I did not serve with him in this body, I have had many opportunities in the last 4-plus years to be closely associated with him. I will cherish all my life these many opportunities to have worked with him. Ours was a close personal relationship because of our respective positions. Yet, while I am proud to have been the junior half of the "Ev and Jerry Show," I must say that EV DIRKSEN never made me feel that I was junior to him. That was not his style. He was understanding, stimulating, and a friend under any and all circumstances.

Ev was a giant in American politics. He had no need to steal the show from others in order to feel his full stature. As a Republican legislator he wrote many memorable pages of American history, but, as has been said before by the gentleman from Illinois and by the distinguished Speaker, EV DIRKSEN was an American first and a partisan second.

Ev, as all know who worked with him, was a giant as a legislator. He left an indelible imprint on many major laws that will live in the statute books for many, many years.

Perhaps more than any other statesman in modern American history, Ev DIRKSEN was a master in the art of compromise. He captured the essence of American democracy in that he made democracy work. He made manifold and tremendous contributions to the legislative shelves of this Nation.

As we all know, Ev was a giant as a speaker. He was one of the greatest in the history of the Congress—probably the last of the old school. I know of no man who was more articulate than Senator EVERETT MCKINLEY DIRKSEN, whether he was speaking of landmark legislation or reminiscing about his days in the European Theater during World War I. When he was called the "Wizard of Ooze," it was a good-natured compliment. It was in fact the supreme compliment.

Mr. Speaker, the flag hangs at half-mast over the Capitol today. It tells what we all feel—the loss of a great American and the heavy sorrow for having lost a dear friend and a good friend. My wife Betty and I extend our deepest condolences to Mrs. Dirksen and the entire family. Words are inadequate to express our grief.

Mr. ARENDS. Mr. Speaker, I yield to the majority leader, the gentleman from Oklahoma, (Mr. ALBERT).

Mr. ALBERT. Mr. Speaker, the news report, which I, like many others, received while listening to television yesterday afternoon, that Senate minority leader EVERETT MCKINLEY DIRKSEN had died left me shocked and saddened.

I have had the privilege of knowing EVERETT DIRKSEN since the day I took my first oath of office in this House nearly 23 years ago. I have known him over the years as a remarkable man, an extraordinary legislator, and a personal friend.

Senator DIRKSEN was a man of many parts. He was among the last of the great orators of the old school to serve in the Congress. His flair for the dramatic, his knowledge of great literature, his uncanny memory, his rare imagination served to make him the most colorful speaker of our time.

If there was ever an institution in the Congress or the country it was EVERETT DIRKSEN. His name was a household word. He was truly a legend in his own time. With his death the Congress has lost perhaps its best known and most famous Member.

Senator DIRKSEN tenaciously pursued ideas in which he was interested. Sometimes these were in areas that caused many of his critics to consider him an obstructionist. Certainly I did not share all of his legislative interests, but I never ceased to admire his relentless pursuit of his goals.

Above all, when the chips were down, when the national interest was at stake, Senator DIRKSEN was always the patriot, always the towering statesman.

In him there was ever present an element of greatness which stood out in critical hours. His defense of the Marshall plan, the Test Ban Treaty, the Civil Rights Act of 1964, at crucial moments, made it clear that he was more than a skillful politician. He was, when great issues were at stake, not only a great legislator but also a fearless and indispensable leader. He was indeed one of the great statesmen of our time.

In the death of Senator DIRKSEN every Member of both Houses of Congress has lost a friend. The Congress has lost not only one of its most illustrious Members, but also one of its greatest champions. No Member of either House was more dedicated to the importance of the legislative department of Government. No one, either publicly or privately, was ever more determined in his defense of Congress as an institution or of the rights and prerogatives of its Members. In every bill designed to upgrade congressional service EVERETT DIRKSEN was a front rank leader. He loved congressional service. Even in his last years, though often haunted by illness, he worked tirelessly at his job. He believed in it, and he made no apologies for his support of the importance of congressional service.

This great and unique man who for decades has seemed almost as familiar and indispensable in this city as the Capitol dome has departed his friends and colleagues.

To paraphrase Edwin Markham, like the giant oak that falls on the hillside, the death of EVERETT DIRKSEN has left a lonesome place against the sky. It is a sad farewell when we say goodby to our friend, Ev DIRKSEN. May his soul rest in the arms of the Almighty and may the peace of God comfort Mrs. Dirksen and their daughter and all the family, as they, above all others, must bear the burdens of his loss.

Mr. ARENDS. Mr. Speaker, I yield to the gentleman from Illinois (Mr. MICHEL).

Mr. MICHEL. Mr. Speaker, my most famous constituent is gone. "My most famous constituent"—that is the phrase I have often used with pride and not a little amount of affection when referring to our beloved senior Senator, EVERETT DIRKSEN, who passed away yesterday at Walter Reed Hospital. It was my privilege on many occasions to have the honor of introducing the Senator when he spoke to official party rallies as well as to various public groups over the years.

I remember on one occasion I referred to him as one of the monuments of Washington and, indeed, with his distinctive appearance, his style of oratory, his deep, rolling voice, and his marvelous sense of humor, he had become truly a national figure.

I believe the shock of his death was so great because he had an air of indestructibility about him—you just had the feeling that he would live forever—and of course he will live forever in the hearts and minds of those of us who had the privilege of knowing him, working closely with him, learning from him, and witnessing at close hand his great legislative contributions to this wonderful country which he loved so dearly.

His whole life was wrapped up in our country's heritage and its institutions. When he returned from his volunteer service overseas in World War I he gave unstintingly of his time to all our veter-

ans organizations and all those who would listen to him speak so eloquently about these institutions, patriotism and Americanism. As a matter of fact he was at his best when these very institutions were under attack.

I can recall his even speaking to our small high school civics class in those early days of his political career. Some years later at the close of a Constitution Day speech in Peoria, I was prompted to send him a telegram saying: "Senator, again you moved us to tears in appreciation of our Constitution."

He was a student of the Bible and the classics before becoming one of the best-informed men in or out of the Government.

It was my good fortune to introduce the Senator on so many occasions and I was tempted at times to compare him with our most notable citizen from Illinois, Abraham Lincoln, but hesitated to do so because it would have embarrassed him. But certainly in terms of his impact on our party, on our State, and in this Congress, there were good grounds for making just such a comparison.

As a matter of fact, the Senator's personal life parallels to a remarkable degree that of Lincoln. The Senator's father died when he was only 5. He went to work at a very early age selling vegetables from door to door from his mother's garden and like Lincoln, he tried a number of occupations, ranging all the way from being a baker and driving a bakery truck in the family business to the manufacture of washing machines. He was proud of the fact that he carried a lunch pail and labored with his hands as a youth and it cannot be denied that these very rough and trying days of his early life played a significant role in forging his character and personality.

The Senator was given to quoting Biblical scripture and I am reminded of one he used from the prophet Job several years ago in a eulogy to a dear friend, which reads:

If a man die, shall he live again?

And the Senator's response was:

Surely he shall, as surely as day follows night, as surely as the stars follow their courses, as surely as the crest of every wave brings its trough.

This seemed to be the foundation of the Senator's philosophy of life and this was his firm conviction.

I shall sorely miss him, for he was such a good teacher. I shall always cherish the memories of both the serious and lighthearted get-togethers particularly with family and friends for this was where one got to know him best. To know him well was to love him for all his qualities.

There will never be one to take his place or fill the role as he played it. My heart is heavy for Louella, Joy, and the grandchildren, for they were his heart and soul and we try feebly to share the burden of their profound loss.

Mr. BOGGS. Mr. Speaker, will the distinguished minority whip yield?

Mr. ARENDS. I yield to the gentleman from Louisiana, the majority whip.

Mr. BOGGS. Mr. Speaker, there is little I can add to the beautiful tributes that have been paid to our late honorable and distinguished colleague, Senator EVERETT MCKINLEY DIRKSEN.

I had a relationship with him—an abiding one—which started in the House of Representatives 30 years ago. I had the greatest respect and admiration for him as a man, as an American, and as a leader.

I say, as a man, because he was a man who suffered much in his life but complained very little. I remember when as a young man he left the House of Representatives mainly because he suffered an attack of glaucoma which is a very disabling eye disease. For years he suffered chronically from sundry ailments, heart difficulties and lung complications. But, I never heard him complain. I wondered about the strength of this man.

Mr. Speaker, there were so many things that gave him strength. First, he has a wonderful wife and a fine family. He was a great scholar of the Bible, of the classics, of Shakespeare, and of history. He was also very close to nature. He loved to garden and in that diversion we had very much in common because I, too, love to plant things and watch them grow.

Many times when we were discussing matters of highly important affairs of state at joint leadership meetings dealing with these matters, the distinguished Senator from Illinois and I would discuss our respective crops, he some type of flower and me some type of vegetable.

He was a man that lived in the heart of all of us and of all humanity.

Mr. Speaker, as the poet was asked "For Whom The Bells Toll," they toll for all of us because each of us is lesser for his departure.

Mr. Speaker, Mrs. Boggs and I will miss him and we extend to his wonderful wife, children, and grandchildren our deepest sympathy.

Mr. SPRINGER. Mr. Speaker, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from Illinois.

Mr. SPRINGER. Mr. Speaker, in the death of EVERETT MCKINLEY DIRKSEN the country has suffered a great loss and the State of Illinois a distinguished son.

No man within my recollection has served more ably, more earnestly, or with greater distinction in the Congress of the United States than has Senator DIRKSEN.

For 16 years he was a Member of the House of Representatives and for 19 years a Member of the Senate. In those years history has been made, and EVERETT MCKINLEY DIRKSEN not only has been a part of that history, he has helped to create it. Senator DIRKSEN moved with the times. Some people and a portion of the press often alleged that he changed his mind. He once made the statement:

There is no more powerful force in the world than an idea whose time has arrived.

He was not one to put off the inevitable.

What I have thus far said does not mean that Senator DIRKSEN did not have positive ideas about fundamentals—and on fundamentals he never surrendered. He had great insight about history and where we were and what we were doing at this point in history. He had a strong feeling about the Constitution and its interpretation. He was a great believer that it meant certain things, and they could not be amended by judicial decision. He was a believer that this country was great because of its freedoms. One of his famous statements is:

I am going to leave this country for my grandchildren at least as good as it was handed to me. These are crucial times through which we are going. If the cause of freedom is lost in the future, I do not want those grandchildren to say to me, "But, Grandfather, you were there, and you could have done something about it."

One of EVERETT MCKINLEY DIRKSEN's favorite quotations was from Matthew:

Well done, thou good and faithful servant. Thou has been faithful over a few things, I will make thee ruler over many things: Enter thou into the joy of thy Lord.

It fits him especially well at this time.

Mr. ARENDS. Mr. Speaker, I yield to the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Speaker, last year we celebrated the 150th anniversary of the admission of the State of Illinois to the Union. In that period of a century and a half our State has produced a great many distinguished political leaders of truly national stature. Today we mourn the passing of EVERETT MCKINLEY DIRKSEN and add his name to that illustrious roster. None was more distinguished.

He enjoyed a career that enabled him to rise from very humble circumstances to the heights of public acclaim. Yet, through it all he carried the remembrance of a life of early struggle and perseverance to aid a widowed mother, to gain an education and still later to overcome the physical adversity that had threatened him with blindness.

He was rugged like the Illinois prairies under the scourge of the winter's north wind. At the same time he was a gentle man who loved nothing better than to work among his flowers. He was a man of sophisticated wit and wisdom. Yet for surcease from his arduous responsibilities as the leader of his party in the U.S. Senate he loved to retreat to the Virginia countryside and with his own talented hands construct the birdhouses which were then lodged in the trees surrounding his home where he could watch the arrival and departure of his favorite species.

I have so many vivid memories of Senator DIRKSEN. Among the first that I have is almost a score of years ago. He had come to the square of the courthouse in my own town in pursuit of the Senate seat then held by the late Scott W. Lucas who was also the Senate majority leader. We had heard of this man DIRKSEN before, of course, because for 16 years he had served in the Congress only to be forced into retirement when threatened by blindness. Now he had recovered and we heard that he had worn out two automobiles and traveled a quarter of a million miles up and down and back and forth across the State of Illinois in his effort to unseat the man who was then one of the most powerful and able men in the U.S. Senate. There in the pale of

half-light of an early evening in summer I heard him speak of the war in Korea that was then raging and how the sacrifice and treasure of our country was being expended in that conflict. He spoke then of the importance of finding a means to resolve that tragic episode in our history in a manner compatible with our national honor but also in a way to hasten the advent of a more peaceful world. I was thrilled that evening, as were the thousands who heard him over a public career that was to span almost four decades, at the rich imagery of his speech and his ability to intone a sincerity and conviction that held you literally in his thrall until the last sonorous words had been spoken.

Later, as a young Congressman I was to have the honor of sharing many platforms with him as we campaigned northern Illinois together. This year, with the advent of a Republican President, it has been my privilege to observe him each week at leadership meetings with the President of the United States. There I observed his mastery of legislative detail and saw the evidence of his prodigious memory for the facts surrounding the multitude of different tactical situations that confronted him as a Senate leader. He had a large mind which, although deeply immersed in these facts, could also see the broad sweep of events both domestic and international which had an impact upon those decisions which he and the Presidents he served obliged to make. Thus, out of the rich tapestry of his varied experiences he could distinguish the particular thread that would be helpful and relevant to a present crisis.

He was not a small or mean man. Even in confronting his political foes, and in so lengthy a career, there were many, he could not descend to the level of vituperation, but used the gentle balm of humor and good nature. It was he who practiced what he jocularly described as a political philosophy that "the oil can is mightier than the sword."

He was kindly and avuncular in his relations with those younger than he; he was the essence of patience in giving of his time and advice to those of us who often sought his advice and assistance on matters concerning our mutual constitutency in the State of Illinois.

He had a deep love for young people. His Christmas records of recent years were best sellers because children loved him. How many times I heard him pridefully tell the story of how he would talk to his grandchildren just as if he was the Chief Justice of the Supreme Court and how they would listen at his feet.

He was a warm and humorous man, accomplished as a raconteur and able to relish a story no matter how often he had repeated it to an audience which in turn never tired of hearing the Senator tell one of his favorites.

He was an effervescent part of authentic Americana who will be remembered as long as men gather to talk about the most colorful and effective political figures in the history of the American republic.

Yet, he contributed more than color. He stood in the breach at critical moments in our history and gave both his vote and his melliflous voice to those causes which periodically emerge on the tides of political, economic, and social changes. He was a conservative who thought it no crime to see the virtue of some flexibility when it would promote solutions to the needs of the Nation. Thus it was that the monumental civil rights legislation was enacted in this decade with his support, and the Nuclear Test Ban Treaty was ratified.

For more than a third of a century, EVERETT DIRKSEN participated in making some of the most momentous decisions of our times as first a Congressman and then as a Senator. We will proudly remember him as a distinguished son of Illinois, but the entire Nation will mourn his loss. He was a man of immense political stature because of his truly extraordinary gifts. He was also an orator who could and did delight thousands. It was once said of him that he was one of very few men who actually made votes when he spoke on important issues.

He was a warm and humorous man who enjoyed a rapport with virtually everyone whom he met. He was a political tactician of consummate skill. Yet above all, he was an American patriot in the deepest and most reverential sense who could and did subordinate partisianship to what he considered the overriding national interest.

We are all of us diminished by the loss of a great American. My wife and I wish to join millions in extending our deepest sympathy to Mrs. Dirksen and their daughter, Joy.

Mr. ARENDS. Mr. Speaker, I yield to the gentleman from Illinois (Mr. PRICE).

Mr. PRICE of Illinois. Mr. Speaker, I first met EVERETT MCKINLEY DIRKSEN on the first day that he came to Washington to take his oath of office as a Member of this House. I was beginning my service as a secretary to a Member. He was starting his distinguished career as a legislator.

Through all the years following, I enjoyed a close, personal friendship with him.

It has been said that he was a great man, and he truly was. He brought honor to the State he represented and he brought honor to all of us who had the pleasure of serving with him in the Congress of the United States.

I knew him well. When I became a Member in 1945 I had the opportunity morning after morning to have breakfast with him in the House restaurant. I knew his philosophy of government. We had disagreements in the political field, but never on the basic philosophy that he held.

He was, first of all, an American. He was a great servant to the people he represented in the House and in the Senate of the United States. Truly Illinois has lost a great citizen, but so has the United States of America lost a great citizen and a great statesman.

My wife, Garry, joins me in extending our deepest sympathy to his wife Louella. We enjoyed a fine friendship with the Senator.

The full Illinois Democratic delegation in the House joins me in expressing sympathy to Mrs. Dirksen and her family.

Mr. ARENDS. Mr. Speaker, I yield to the gentlewoman from Illinois (Mrs. REID).

Mrs. REID of Illinois. Mr. Speaker, in the death of EVERETT MCKINLEY DIRKSEN, all Americans—indeed, freedom-loving people everywhere—have lost a warm and wonderful friend. In life, as he remains in death, he had become a legend in his own time—truly a giant in our history. No chronicle of the 20th century can ever be complete without its chapter on the life and deeds of EVERETT M. DIRKSEN, who rose from a modest background in the land of Lincoln to become one of the most brilliant legislators and legislative leaders the Nation has ever known. Certainly in this he has no peer.

But for those of us who had the rare privilege of working with him closely in the Illinois congressional delegation, of visiting in his home, of knowing his charming and devoted wife, Luella, we will remember what no history book can ever capture. Historians will write about the role he perhaps liked best and in which he was greatest—that of statesman and patriot. They will recall for coming generations the impact of this colorful and courageous American on the social and political life of our Republic and the world, and here his contributions are immeasurable.

We who knew him so well will remember all of this, too, and we will be eternally grateful that he walked among us at this critical time in our history. But we will also remember that wonderfully curious and warmly human intellect—his infectious zest for living. He loved to sing and I remember many happy hours gathered around the piano with him and his family and close friends singing the old song he loved best. We will remember him both as an articulate and homespun philosopher of the American scene and his ability to bring humor and compassion to even the most trying affairs of state. We will remember as well the skill and deep understanding with which he was able on many dramatic occasions to bring harmony and unity to a divided party.

Yes, EVERETT DIRKSEN was unique in our time in many ways. An avid student of the world's finest literature and its history, he loved to share his inspirations with his fellow men, whether they be reflections on the world's great events or tender thoughts on Christmas. His voice was known everywhere, and few men in public life have been more loved or more admired. He stood tall in the Senate because he lived what this country stands for. He understood our heritage, and he had confidence in our future. People listened because they respected his ideals.

Senator DIRKSEN's seat in the Senate must necessarily be filled, but no one will ever be able to replace EVERETT MCKINLEY DIRKSEN in the hearts of his colleagues or his countrymen.

At this time, let me extend my heartfelt sympathy to his beloved wife Louella, his daughter Joy, his son-in-law Senator HOWARD BAKER and his grandchildren who adored him and whom he

adored. They have lost a loving and devoted husband, father, and grandfather.

The Nation has lost a brilliant leader and great patriot, and I have lost a dear friend.

Mr. ARENDS. Mr. Speaker, I yield to the gentleman from Illinois (Mr. PUCINSKI).

Mr. PUCINSKI. Mr. Speaker, I am sure all of my colleagues in the Illinois delegation on this side of the aisle would join me in stating that the loss of EVERETT MCKINLEY DIRKSEN is irreplaceable to the people of Illinois, to the people of America, and, yes, to the people of the world.

His vast experience in both the House and in the Senate had given him tremendous ability to develop, design, and construct compromises on important issues.

Jack Kennedy could not have achieved many of his programs without the help of EVERETT DIRKSEN, and Lyndon Johnson could not have achieved many of his successes without EVERETT DIRKSEN.

On the many major issues passed on by the Congress of the United States, EVERETT DIRKSEN'S brand is indelibly imprinted.

He did not hesitate to change his mind when he believed it would serve the best interest of the Nation.

He changed his mind on the Nuclear Test Ban Treaty.

He changed his mind on the Consular Treaty.

And he changed his mind on the 1968 Civil Rights Act. Without his help this act could not have been passed.

When a friend asked EVERETT, "Why did you change your mind on the civil rights act—something you felt so strongly against at one time?" EVERETT DIRKSEN said:

> We are living in a world of changing times. New circumstances require new thinking. I believe that the time has come when we ought to have this legislation.

EV DIRKSEN disagreed often, but he symbolized the highest tradition of this Congress by never being disagreeable. In debate he was a strong foe, but, above all, he was always a gentleman.

His homespun philosophy is a hallmark of Americana.

He was a fierce patriot. He used to tell a wonderful story that I think could be a lesson to all of us, particularly at this time when we are paying tribute to his memory and honoring him today.

One day EVERETT DIRKSEN prepared a speech on "The Frog and Patriotism." A friend said "EVERETT, how can you be talking about the frog and patriotism? What do the two have in common?"

In typical Dirksenonian homespun philosophy, the Senator drew a parallel. He said:

> My friends, the very sensitive nervous system of the frog will permit that frog, when thrown into a kettle of boiling water, to hop right out. But that same frog, if he is put into a kettle of cold water, and then the heat is turned up, will stay there, and when the water comes to a boil, he will be destroyed, because he does not realize the water is reaching the boiling point. That is the way it is with Americanism and with patriotism. We see our patriotism and our rights as Americans slowly being eroded here and there, and as individual circumstances that does not mean too much, until one day it will be too late, and, like the frog, we will not be able to jump out of the boiling water, and we will lose our freedom.

He had an uncanny ability to put ideas into a new sense of meaning and persuasiveness.

All of us are experiencing a great loss. Senator DIRKSEN was a great leader, he was a great patriot, and he was a great American. Mrs. Pucinski joins me in extending our condolences to his widow and his family. We shall all miss him deeply.

Mr. ARENDS. Mr. Speaker, I yield to the gentleman from Illinois (Mr. MCCLORY.)

Mr. MCCLORY. Mr. Speaker, in the passing of EVERETT MCKINLEY DIRKSEN, the Nation has lost a great leader, the U.S. Congress has surrendered its most honored lawmaker, and Illinois has given up her most famous citizen since Abraham Lincoln.

The privilege of an intimate relationship with Senator DIRKSEN and his family is an experience which I treasure almost reverently. To have known and worked with this great man on a first name basis is to have felt the warm breath and blood of history in the making.

For, Senator DIRKSEN was a maker of history whose deeds and acts and words will live as long as history is recorded.

Indeed, the historymaking of EVERETT DIRKSEN is recorded in sound, on film, and on longplaying records that preserve the sonorous and penetrating tones of his mighty voice. Those recordings are among the most eloquent expressions of faith and love for our Nation and our posterity which it seems possible to produce. Their meaning and importance to this and future generations of Americans cannot be overestimated.

Today as we reflect on the life and deeds of the great Senate minority leader, I am inclined to recall most vividly the hundreds of occasions when EVERETT DIRKSEN and I were together. These involved many and varied circumstances, in Illinois and Washington and elsewhere. I recall his visit to our home in Lake Bluff, as well as the occasions when he and his wife, Louella, were in our home in Washington. Most recently, I recall the afternoon at the Dirksen farm in Virginia where the marvels of nature dominated the conversation and he expressed a love for the simple and beautiful products of the soil as well as the birds and other wildlife which inhabited the farm.

Words were Senator DIRKSEN'S stock in trade. He selected words more carefully and uttered them more eloquently than any other man of our time. But words are utterly inadequate to express the deep and tender feelings of those who mourn his passing.

In addition to honoring his memory, it is entirely fitting that we should extol his humanity as well. Perhaps this word "humanity" characterizes best the rare qualities which EVERETT DIRKSEN possessed. He had respect and deep concern for every human being of every race, color, religion and position in life. To his family and friends, he was very down to earth, very easy to talk with, as well as engaging to listen to.

EVERETT DIRKSEN is gone but the virtues he possessed, the human progress he helped make possible, are indelibly interwoven in the fabric of mankind.

There are many thousands of citizens of the 12th District of Illinois who would want me on this occasion also to express their feelings of loss and compassion. In behalf of Mrs. McClory and myself and the citizens of the 12th District, I extend to Senator DIRKSEN'S wife, Louella, his daughter, Joy—Mrs. Howard Baker—his grandchildren, and all members of the family, our deepest sympathy and affection.

Mr. ARENDS. Mr. Speaker, I yield to the gentleman from Illinois (Mr. ERLENBORN).

Mr. ERLENBORN. I thank the gentleman for yielding.

Mr. Speaker, Illinois has given a number of great leaders to the Nation; and one of the greatest surely is EVERETT MCKINLEY DIRKSEN. He was a great man, more importantly, a good husband, a good father and grandfather.

His death means that the Republicans in Congress have lost a leader whose unique talents make him irreplaceable. He is dead, and Illinois has lost a spokesman of surpassing eloquence. His passing will deprive our Nation of a political leader whose patriotism showed through his every act.

Quite apart from our official relationships, it was my privilege to count him as a friend. I know all the Members of the U.S. Congress join me in mourning his death. Our sense of loss is a personal one.

Mr. ARENDS. Mr. Speaker, I yield to the gentleman from Illinois (Mr. FINDLEY).

Mr. FINDLEY. Mr. Speaker, I thank the gentleman for yielding. I share the sentiments expressed by my colleagues here today as we extend our sympathy to the widow of Senator DIRKSEN, to his daughter and his son-in-law and his grandchildren.

It would be an oversight, and a most unfortunate one, I believe, if we failed to include in the family circle Mr. and Mrs. John Gomien, the team that has loyally served the Senator here on Capitol Hill all through his years in the House and Senate, as well as his able and longtime assistant in Illinois, Harold Rainville.

The close association these people have had with Senator DIRKSEN and his wife through the years made them very much a part of the Dirksen family, and I am sure that my colleagues from Illinois join me in extending to them, as well as to the immediate members of the Dirksen family, our deepest sympathy.

As the Representative who serves a portion of the district Abraham Lincoln once served in this House, I feel most keenly the importance of the Lincoln heritage to the world, the Nation, and the State.

Senator DIRKSEN was in the great Lincoln tradition. I have had the occasion several times to introduce Senator DIRKSEN at public gatherings. At Springfield, Ill., 2 years ago, I chose to present him

with the words that he was the greatest citizen Illinois has produced since Abraham Lincoln, and that still sums up my estimate of his great contribution to this Nation.

Mr. ARENDS. Mr. Speaker, I yield to the gentleman from Arizona.

Mr. RHODES. Mr. Speaker, I thank my good friend for yielding to me.

It is with a very heavy heart that I rise to express my own personal sense of loss at the death of a great Senator from the State of Illinois, Hon. EVERETT MCKINLEY DIRKSEN.

Senator DIRKSEN was indeed a good friend to many of us who had the pleasure of knowing him both as an individual and as a great practitioner of the art of legislation. He was truly a legislator's legislator. This was a man who had the faculty of being able to put his legislative concepts into a workable form, and to get them enacted. I think his finest legislative efforts came when he was guiding legislation through the Senate which came from his own Committee on the Judiciary. This was because Ev DIRKSEN never ceased to remember that he was a lawyer. In fact, he was one of the fine lawyers of our country, and took great pride in his acknowledged legal prowess.

Senator DIRKSEN possessed a very unique ability to communicate with his fellow man by the use of the English language. He had a fine vocabulary and a lucid style of expression which was unsurpassed by anyone of my acquaintance. I think, Mr. Speaker, it is mainly because of this particular ability that his work will be remembered. This ability enabled him to influence people and to cause legislative occurrences to take place which might not otherwise have been possible. We who are also the practitioners of the art of legislating, I think, can appreciate beyond the abilities of most people the importance of this particular talent.

The gentleman from Illinois will indeed be long remembered as a man of character, a patriot, a father, a grandfather, a friend and, above all, will be remembered as an American.

Mrs. Rhodes and I extend to Mrs. Dirksen and to her family our deepest sympathy on the passing of a very dear friend, and a great citizen of the world in the 20th century.

Mr. ARENDS. Mr. Speaker, I yield to the gentleman from Missouri (Mr. HALL).

Mr. HALL. Mr. Speaker, the "gallant man" is gone. The senior Senator from Illinois—the land of Lincoln—has departed this earth, but his words and deeds will live forever.

A legend in his own time, Ev DIRKSEN played many roles, and played them all with equal verve.

The champion of the marigold.

A fearless antagonist.

A master politician, who journeyed to Joplin, Mo., and delivered one of his great speeches in my first election 1960.

A lovable rascal.

A scholar of the classics.

An authority on Lincoln.

A confidant of Presidents.

And a man who had a deep and abiding love affair with his country.

The passing on of EVERETT MCKINLEY DIRKSEN will leave a void in the Congress, a lump in the throat of America, the loss of a great statesman to the world, and thanksgiving on the part of this humble physician-legislator for his quick and easy passing.

In the words of William Shakespeare, a man he loved to quote:

His life was gentle, and the elements so mixed in him, that nature might stand up and say to all the world, "This was a man!"

Mr. FLYNT. Mr. Speaker, will the gentleman yield?

Mr. ARENDS. I yield to the gentleman from Georgia (Mr. FLYNT).

Mr. FLYNT. Mr. Speaker, I thank the gentleman from Illinois for yielding to me at this time.

Mr. Speaker, I associate myself with the remarks which have been made by the gentleman from Illinois and others as we join in paying tribute to the life and memory of EVERETT MCKINLEY DIRKSEN, late a Senator from Illinois and the Republican leader of the U.S. Senate.

Today is a day of sadness in the Capitol Building and in America. In my own State of Georgia I know of no one outside our State who was more beloved by Georgians than was the Senator from Illinois.

Mr. Speaker, a great deal of interest which has been manifested in the possible constitutional convention was due to the fact that if and when such a constitutional convention might be held, the Senator from Illinois might have been chosen to preside over the deliberations of the first constitutional convention held in the United States since 1787.

EVERETT DIRKSEN walked long and tall on the stage of American public life. His contributions to his State, the Nation, and to the people whom he devoutly loved will long be remembered. Those contributions caused America to be strong and to grow from strength to greater strength. He will be missed by those of us who have been privileged to serve with him in the United States Congress. He will be missed even more by his close circle of friends and by his colleagues in the Senate of which he was indeed an outstanding and effective leader.

Mr. Speaker, our country is a better place because of the work he has performed and the contributions he has made during his 73 years as a citizen, as a legislator, as a loyal and patriotic American.

I remember when he called upon the people of this country to reassess the fact that our resources are not unlimited and that in the reassessment and reappraisal of those resources he called Americans to establish priorities on the spending and distribution of those resources. He frequently called upon Americans in all walks of life for a return to a greater understanding of and respect for law and order.

I feel that EVERETT DIRKSEN practiced what he preached. He was one of the greatest orators that this country has produced and he spoke words of wisdom as well as words of eloquence. The Senate of the United States listened attentively when he spoke—and indeed, Mr. Speaker, the people of all America listened when EVERETT DIRKSEN spoke.

Mrs. Flynt and our family join me in the expression of our condolence and sympathy to Mrs. Dirksen, Senator and Mrs. Baker, his grandchildren, and other members of the family.

Mr. DERWINSKI. Mr. Speaker, will the gentleman yield?

Mr. ARENDS. I yield to the distinguished gentleman from Illinois.

Mr. DERWINSKI. Mr. Speaker, as a Member from the State of Illinois I, of course, feel especially saddened by the unfortunate loss of Senator DIRKSEN. I was close to him and appreciated his friendship, as well as recognizing his tremendous leadership. We all recognized that he was without a doubt a most outstanding Member of the Senate and an effective leader of his party. Throughout his career he demonstrated the most effective type of statesmanship that any Member of Congress can give to his country.

His loss is one the State of Illinois will feel deeply, as indeed will the whole Nation, and there will be a gap that will not be filled. It is proper that we stress his great contributions to the country, the statesmanship that he always exhibited, the very effective leadership that he provided and the cooperation that he gave to Presidents of both political parties. He truly was a giant in the history of the U.S. Congress.

Mrs. Derwinski joins with me in extending our deepest sympathy to Mrs. Dirksen and the members of their family.

Mr. ARENDS. Mr. Speaker, I yield to the gentleman from Tennessee (Mr. KUYKENDALL).

Mr. KUYKENDALL. Mr. Speaker, I would like to join my colleagues in expressing the sympathy of my family and myself to Mrs. Dirksen and to Senator and Mrs. HOWARD BAKER at this time of sadness to their entire family.

Mr. Speaker, in the days and years to come, we will hear and read much about this man whose passing we mourn today—the Dirksen wit, the Dirksen voice, the Dirksen leadership that has meant so much to his Nation and his constituents.

So for this moment, let me talk about something else—the Dirksen spirit.

Years ago, when he was a Member of the House of Representatives, he met an old friend, our colleague MENDEL RIVERS, in front of the Capitol. Mr. RIVERS noted that he looked tired and wan, and asked him if he felt well.

"No," that famous voice purred back. "I've just been to see the doctor, and they want to take my eye. They're not sure they can save the other one, and I'd be blind. And I'm so discouraged, I've let the qualification deadline slip past me back home, so I won't be back next year."

The official biography only says "retired voluntarily January 3, 1949." Then it says "nominated for United States Senate April 11, 1950, elected November 7, 1950."

Nowhere does it say, "refused to surrender his eye, 1949, refused to be finished, 1949, refused to knuckle under to

adversity, 1948, 1949, 1950 and all the years before and after."

And it will not say, though it should, "helpful and understanding to his colleagues, 1932–69."

I am grateful to Chairman RIVERS for the story of his discouragement in the postwar era. It helps me know him better, and feel closer to him. I admire his courage even more, just as I admire his ability, his courtesy, and his understanding.

And I am grateful that he extended to me the opportunity to call him my friend.

Mr. ROSTENKOWSKI. Mr. Speaker, I am deeply grieved as I join with my distinguished colleagues who eulogize today the life and accomplishments of one of America's greatest statesmen, EVERETT MCKINLEY DIRKSEN. Words alone cannot adequately express the contributions that this great man gave to his constituents in Illinois, as well as to all the people in our country.

Senator DIRKSEN was a man who possessed a keen intellect, coupled with a flair for colorful oratory. With these tools he became well known, not only in the hallowed halls of Congress where he lived for 35 years, but also in the highest counsels of the executive branch, as was evidenced by four Presidents who continuously sought his sagacious advice in legislative matters. He was not only a legend in his own time, but his was a reputation that will live on in the annals of American civilization. For whenever men assemble to discuss the history of politics in our Republic, they will not be able to escape the Dirksonian imprint as it was so astutely interwoven through the events of the first half of the 20th century.

On behalf of myself and of Mrs. Rostenkowski, I would like to extend my sincere condolences to Mrs. Dirksen and the entire Dirksen family.

Mr. MCMILLAN. Mr. Speaker, we were all saddened over the news of our colleague, the late EVERETT MCKINLEY DIRKSEN. I always considered Senator DIRKSEN one of my closest personal friends as we served together as members of the House District Committee for 7 years when I first came to Congress. In fact, he was my first Republican chairman during the 80th Congress and I was serving as ranking Democrat on the committee during his term as chairman of that committee. We experienced no difficulty in working out the legislation problems of the Nation's Capital and no one ever mentioned politics on that committee. He understood and I understood that we were members of the House District Committee to serve our Nation's Capital and it actually made no difference whether a member was a Republican or Democrat.

His only reason for being a member of that committee was to try to keep our Nation's Capital a safe and clean place to live and a place where the millions and millions of visitors who visited the Capitol could visit without any fear. I do not remember serving with any Member of Congress who had the full command of the English language as did Senator DIRKSEN. When I first came to Congress, I would listen to the Senator speak on several occasions for 1 hour and the time would only seem like 5 minutes.

I am certain that everyone privileged with Senator DIRKSEN's acquaintance knew that he was first at all times an American. He believed in the U.S. Constitution. He also believed in taking care of America first.

One of the outstanding memories I will have during my term of service in the Congress of the United States is the opportunity to serve very closely with the late Senator DIRKSEN and Mrs. McMillan joins me in expressing our deepest sympathy to Mrs. Dirksen and their daughter.

Mr. WILLIAMS. Mr. Speaker, I join with millions of Americans in grieving the loss of EVERETT DIRKSEN and extend my heartfelt sympathy to his family. Mr. DIRKSEN was a truly memorable spokesman and devoted workman for the people of this country. Even those who did not always agree with him, did always have to respect him.

As minority leader of the Senate, Mr. DIRKSEN has been a powerful spokesman for the Republican Party for better than a decade. The power that he wielded in that position has been the deciding factor in action upon more legislation than can ever be counted. His death creates a void which is felt not only by his colleagues in Congress, but by all America.

We have lost a great leader, a great patriot, a great Republican, and a great American. I join with my colleagues in expressing my dismay at his untimely death and in expressing my deep appreciation for Senator EVERETT DIRKSEN'S outstanding service to his country.

Mr. AYRES. Mr. Speaker, the mellifluent voice of EVERETT MCKINLEY DIRKSEN is stilled and this Nation mourns. However, his words shall live on to help us guide this country during the days of crisis that are before us.

We who were privileged to serve with him during his many terms in both bodies of the U.S. Congress felt a deep sense of gratitude to him for the hand of brotherhood that he extended to us all.

Senator DIRKSEN was a great man but more importantly for us he was a good great man—dedicated to service to God and his country.

He began his service to this Nation 52 years ago when he entered the service of the U.S. Army in World War I. Even this early in his life, we can see the pattern that was to follow him during all of his days for though he entered military service as a private he was commissioned in France as an officer. He served 17 months overseas during that conflict.

His service in our Armed Forces gave him great insight into the problems of the veteran and we who served on the House Veterans' Affairs Committee found that he supported our efforts on behalf of the veterans of our wars.

Like many of us serving in the U.S. Congress, EVERETT DIRKSEN used the hoe and the plow during his youth. He never lost his love for the soil and the men who tilled it. He understood full well the problems of agriculture and created legislation that benefited those that remained on the farm.

Again like many of us here, he worked his way through college. He left the university when our Nation called and returned to it when his service was completed.

Here we see his steps followed that of another great American from his State of Illinois, Abraham Lincoln. Lincoln, too, was a son of the soil who became first a fine lawyer and then a reputable statesman.

We Ohioans have long acknowledged the greatness of EVERETT MCKINLEY DIRKSEN. He was the most loyal friend and colleague of our own late great leader, U.S. Senator Robert A. Taft. We in my home city of Akron, Ohio, often welcomed him to our city.

During my 19 years in the U.S. Congress, I valued my friendship with this great spokesman for the people of our country. I am sorry at his passing.

The United States of America is a finer Nation because of his coming amongst us—for this we are grateful not only to him but also to his wonderful family who so unselfishly shared him with us.

Mr. EVINS of Tennessee. Mr. Speaker, I was deeply saddened to learn of the passing of Senator EVERETT DIRKSEN, of Illinois, who leaves as his legacy a brilliant and dedicated career of public service.

Senator DIRKSEN was a courageous, colorful, eloquent leader, a great American and a great statesman, a strong party man and yet a national leader who placed the national interest above party considerations.

When the chips were down on a bill in the public interest, Presidents leaned on EVERETT DIRKSEN to provide the needed margin of support. Senator DIRKSEN, beneath his dry wit and colorful eloquence, was a skilled legislative leader—he knew and understood the art of legislation.

I felt a personal affection and admiration for Senator DIRKSEN, as in recent years he was often referred to as the third Senator from Tennessee. His daughter is the wife of Senator HOWARD BAKER, of Tennessee, and Senator DIRKSEN frequently visited in Tennessee.

Mrs. Evins joins me in extending our deepest and most sincere sympathy to Mrs. Dirksen, Mrs. Baker, and other members of the family.

Mr. PELLY. Mr. Speaker, I share the shock and sorrow of our land today over the passing of Senator EVERETT DIRKSEN. This is a loss shared by all segments of our society, both personal and political.

And, as the voice of this leader is stilled, so is a long and colorful political leadership. EVERETT DIRKSEN was the last of a special brand of political strategists, and his leadership will be missed.

Mr. Speaker, I join all Americans today in expressing my sympathy to Senator DIRKSEN'S wife and family in this time of sorrow.

Mr. LANGEN. Mr. Speaker, EVERETT DIRKSEN would have been the first to stand to say something good about another legislator who had died. It seems almost presumptuous now to reflect on his life and his contribution to government by the people. Few must be the men today who do not feel a sense of inadequacy as they struggle to capture

in a few words the loss suffered by this Nation and this world.

Those of us so fortunate as to have been privileged to work closely with the Senator and who find it difficult to think of American Government without thinking of EVERETT DIRKSEN are perhaps the least able to measure his real accomplishments. We are too close to the man as a warm, compassionate, and singular human being to realize he was even more in the larger sense as an American institution. History is better suited to eulogize Senator DIRKSEN than are his contemporaries.

The Senator himself asked what he believed was his greatest contribution to Congress, said it was keeping many bad laws off the statute books. It might be better to say that Mr. DIRKSEN set a standard and a mood that worked to everyone's advantage as it made itself manifest throughout the whole fabric of lawmaking. His voice that became so distinctive grew to represent measured, conscientious consideration of issues on their own merit. That voice, described as the sound gravel makes in a jar of honey, will be missed. Missed too will be the "gallant man" behind it.

Perhaps the only man endowed with the gift of oratory equal to the task of eulogizing EVERETT DIRKSEN now lies dead. That may be the most we can say of him. I thank God for EVERETT DIRKSEN.

Mr. PICKLE. Mr. Speaker, Senator EVERETT MCKINLEY DIRKSEN, the most colorful Senator, statesman, and legislator of modern times, showed us there is still fun to be had while we grapple with the problems of the world. Our Nation—and especially the Members of Congress and the press—will always be grateful for the life and services of this lovable man.

Mr. BROTZMAN. Mr. Speaker, Colorado has lost a good friend, this Nation has lost a great statesman.

Senator DIRKSEN was a man of sharp wit, deep human compassion, and absolute dedication to his country.

Mrs. Brotzman and I extend our condolences to Mrs. Dirksen and the members of his family.

Mr. CRAMER. Mr. Speaker, it is with great sorrow that I join millions of Americans in paying high tribute to my beloved friend and leader, EVERETT MCKINLEY DIRKSEN.

Senator DIRKSEN's death ends an era in American politics. "Mr. Republican," a title he richly deserved, has passed away. Yet no one who remembers his melodic voice, watched his legislative craftsmanship, observed his forensic ability or was touched by his friendly good humor will soon forget this great Senator from Illinois. In the tradition of the great public figures of this era, he will live on in the hearts and minds of the American people, not only because of the command of his performance, but also because of what he said.

Senator DIRKSEN was a student of the English language and a true believer in the ability of the spoken word to communicate to his fellow man. His mastery of this talent always insured attention to his never frivolous messages.

Senator DIRKSEN was a great American, and a leader among Republicans. Yet his bipartisan approach to matters affecting the public weal coupled with his always eloquent presentations, contributed to the passage of landmark legislation under Democrat as well as Republican administrations.

I have had, for the last 7 years, the distinct privilege of serving with EVERETT DIRKSEN as a member of the joint House-Senate Republican leadership. I have observed in awe and admiration the continuing contributions he has made in our joint leadership meetings prior to the Nixon administration and since that time in joint leadership meetings with the President. His razor sharp mind and ability to grasp, dissect, and give direction to the solution of the most complex problems will be sorely missed.

I extend my condolences to Mrs. Dirksen and the other members of his family.

Mr. SMITH of California. Mr. Speaker, we mourn today the profound loss of a great American—Senator EVERETT MCKINLEY DIRKSEN. I feel a deep, personal loss in his passing because it had been my privilege to have a close friendship with this great man—a man great not only in his chosen profession, but great in every respect.

My association with him as a member of the Republican leadership brought admiration and respect for his ability and far-reaching foresight to make decisions in a level-headed way. He was direct with everyone. He had friends on both sides of the aisle, and certainly was a tremendous help to the Presidents under whose administrations he served.

The Tournament of Roses is in my congressional district and each January 1 the association honors an outstanding American by asking him to be grand marshal of the tournament. At the request of Mr. H. W. Bragg, the then president of the Tournament of Roses, I asked Senator DIRKSEN to honor my district on January 1, 1968, by serving as grand marshal. He said:

> Now, Allen, you know I couldn't ride a horse.

When I explained to him what the Tournament of Roses was, he agreed to be grand marshal.

He and Louella came to Pasadena and attended all of the festivities during the entire week, which few grand marshals have done. He endeared himself to all who were connected with the tournament and they are still talking about the fact that he was the greatest grand marshal we have ever had. I know he did this as a personal favor to me. It was strenuous for him, but in talking with him later, he said it was one of the greatest experiences of his life which makes me very happy and proud.

I had the privilege of working closely with Senator DIRKSEN during the 1968 Republican National Convention in Florida. I have never ceased to be amazed at the tremendous regard and respect everybody had for this great man at every place.

As an example of this respect and regard, even during the Tournament of Roses President Johnson called him to get his opinion on a decision that had to be made.

In my opinion, Senator DIRKSEN rates among the greatest men that I have ever known. Another great era in American politics has now been closed forever.

Elizabeth joins me in expressing our deepest sympathy to Louella and to their daughter, Joy, and family. To us there was, and only will be, one EVERETT DIRKSEN.

Mr. PATMAN. Mr. Speaker, it was not long after my arrival in Congress that the Honorable EVERETT MCKINLEY DIRKSEN came to the House, where he served with great distinction for eight consecutive terms. During this period, I knew him well and came to have great affection and respect for this man whose outstanding statesmanship and tremendous gift for universal friendship have so profoundly influenced the future of America. When he overcame the temporary physical handicap, which had led to his resignation from the House, it was a foregone conclusion that he would continue his fine career, as he then did in the Senate of the United States with rare distinction and epic success.

Mr. Speaker, I join today with the entire membership of the House and Senate, with our Government and our citizens, and with all the peoples of the world who respected and admired this titan among senatorial leaders, in expressing my deep sorrow and heartfelt sympathy for the family he cherished. Our prayers are offered in the knowledge that Senator DIRKSEN was a deeply devout and sincerely religious man, and that the God he worshiped has called him home from his years of unceasing and intrepid labors, labors he devoted to exalt the Master he humbly acknowledged, the country he proudly loved, and the wide world of constituents he unselfishly served.

Mr. SCHADEBERG. Mr. Speaker, I speak now not as a member of the leadership of my party; nor as a colleague of that great statesman, EVERETT DIRKSEN in the U.S. Congress; nor even as a personal friend, since I was not privileged to share in this honored relationship. I speak as an American citizen who in limited associations with the late Senator share with millions of citizens a profound respect for his ability; his leadership; his warmth of affection for others; his knowledge; his talent and his dedication to our constitutional institutions.

His death brings over the people of this Nation an impenetrable pall of sorrow which while difficult to push aside is not all loss, though at the moment there is bared a gaping hole in the legislative processes.

These words—the name of the author which at the moment escapes me—are most prophetic in these days:

> I walked a mile with Pleasure.
> She chatted all the way,
> But left me more the wiser
> For what she had to say.
>
> I walked a mile with Sorrow,
> And ne'er a word said she.
> But O, the things I learned from her
> When sorrow walked with me.

Today, Mr. Speaker, we walk in silent sorrow but because of the stature of the

man, whose death we mourn. We will learn in this sorrowful journey some of the most prized lessons that will serve us well in the critical times through which we pass.

I am grateful to Almighty God that I have been privileged to have shared this earth with such great and wonderful men like Senator EVERETT DIRKSEN who was to America what Winston Churchill was to Great Britain—one who in travail helped bring our Nation through some of its finest hours.

May his soul rest in peace, for his works bear continuing testimony to his indomitable spirit.

Mr. GRAY. Mr. Speaker, it was with deep sorrow and profound regret that I learned of the passing of our senior Senator, EVERETT MCKINLEY DIRKSEN. He was not just a Senator from our great State of Illinois. He was a tradition.

He had a style all his own. He brought great credit upon our State and our Nation.

Although we did not agree on all matters affecting our State in the legislative field, we could always disagree in a friendly manner. This was a great trait of Senator DIRKSEN.

I strongly supported his efforts to pass a constitutional amendment to allow prayers in public tax-supported schools and other public buildings.

His mark upon the legislative history of our country is indelible for all time to come. He will be sorely missed by his colleagues and the Nation.

I want to join the minority whip, Mr. ARENDS, the Speaker, and the Members of both bodies of Congress in expressing deepest sympathy to Mrs. Dirksen, Mrs. Baker, and the other members of the family. Our thoughts and prayers will be with them during this sad time of bereavement.

Mr. DELLENBACK. Mr. Speaker, the Nation has lost a legislator and a statesman of very considerable stature. EVERETT MCKINLEY DIRKSEN was a man of great ability, deeply committed to serving his country, his State, and his party. His loss will be felt by the Nation.

Much of the historymaking legislation passed in recent years would not have become law without Senator DIRKSEN'S efforts. The Civil Rights Act of 1964, which completely altered the social fabric of this Nation, owes its passage in great part to this one man.

In 1963 his decision to support ratification of the nuclear test ban treaty was of major significance in assuring its approval. He explained his decision in words that have a special poignancy today.

> One of my age thinks about his destiny a little. I should not like to have written on my tombstone, "He knew what happened at Hiroshima, but he did not take a first step."

EVERETT MCKINLEY DIRKSEN did not hesitate to take that step and many others in his long service. He is one of those few men of whom it may in truth be said, "He changed the path of history."

I join my colleagues in expressing deepest sympathy to the members of his family.

Mr. BROYHILL of North Carolina. Mr. Speaker, a great American has passed away. EVERETT MCKINLEY DIRKSEN has meant much to me and to my family. I first met him shortly after his election to the U.S. Senate. My father and he were friends through the years. On my election to the U.S. House of Representatives, Senator DIRKSEN was ever ready to counsel and advise a young Congressman. In every contact and meeting I had with him, he was constantly a fair, even-tempered gentleman.

Recently, Senator DIRKSEN paid a particular, personal tribute to my father on the occasion of a special award and recognition program honoring my father. For this I will be forever grateful.

We who knew him, who admired him, who worked with him, will remember him always. He was truly one of the great ones.

To Mrs. Dirksen, and his daughter, Mrs. Baker, I would like to extend on behalf of my entire family, our most sincere and heartfelt condolences.

Mr. ANNUNZIO. Mr. Speaker, I feel that I speak for the people of the State of Illinois as well as for myself, when I express profound sorrow over the death, on September 7, of the senior Senator from Illinois, the Honorable EVERETT MCKINLEY DIRKSEN.

Senator DIRKSEN was one of the most skilled legislators of our time, a great statesman, and a great American. Even those who disagreed with his thinking on the issues of the day could not help but admire and respect the eloquence, the wisdom, the showmanship, the strength and resolute commitment to our democracy that characterized the Senator from Illinois.

At the time of his death, Senator DIRKSEN was serving his 10th year as Senate minority leader, and had served over 18 years in the Senate and 16 years in the House of Representatives. He was an influential member of the Senate Finance Committee, the Senate Judiciary Committee, the Special Committee on Aging, and the Joint Committee on Immigration and Nationality.

He had a genius for finding the key to agreement on conflicting political issues, and because of his flair for bringing divergent views together, he served an invaluable role for President Nixon as minority leader, and for former President Johnson as leader of the "loyal opposition." In these roles, he had unequalled influence and accomplished much, as evidenced by the crucial part he played in the passage of the Civil Rights Act of 1964 and on the ratification of the Nuclear Test Ban Treaty in 1963.

When Senator DIRKSEN spoke, not only his colleagues, but all of our citizens across the Nation paused to listen. He could drop his voice to a whisper and have the people hang on his every word, or he could point a finger and thunder dramatically at his audience. He was at his best when he was drawing on his vast knowledge of the Bible, Shakespeare, and world literature. In turning the tide for the civil rights bill in the Senate, he borrowed a line from Victor Hugo and declared:

> Stronger than all the armies is the idea whose time has come. The time has come for equality in sharing in government and education, and in employment. It will not be stayed or denied. It is here.

And so, the civil rights bill was passed in the Senate, and Mr. DIRKSEN had again played a constructive role in shaping the ultimate outcome of another historic event in the development of our country.

Senator DIRKSEN was born in Pekin, Ill.—a small town of 22,000 inhabitants. He was one of twin sons and he was only 7 when his father died, so both he and his brother went to work on the small family farm. Young Ev DIRKSEN was industrious and by working, paid his own way through the University of Minnesota Law School, and subsequently, became a member of the bar of both Illinois and the District of Columbia.

He also served in the U.S. Army during World War I, from 1917 to 1919, fought in France with an artillery unit and won a field commission.

Senator DIRKSEN died in Walter Reed Army Hospital after undergoing lung surgery on September 2. Though he had been in ill health for several years, the Senator always maintained a rigorous daily schedule. His outstanding career of public service, which covered a span of almost 40 years, is testimonial indeed to his dedication and devotion to the cause of our Nation's strength and freedom. He was incomparable to any man who had served with or before him in the Senate, and it will be a long, long time indeed before we see someone come close to the legendary role he played in the service of our beloved America.

Senator DIRKSEN'S loss leaves a void in the Senate and in our country which will be difficult to fill, but his family and his friends can be proud of the tremendous contribution he made as one of the outstanding leaders of the American people. Those of us who had the privilege of knowing Ev DIRKSEN as a friend and colleague for so many years deeply mourn his passing, and our hearts go out to his bereaved family.

He is survived by his wife, Louella Carver, and his daughter, Joy, who is married to Senator HOWARD H. BAKER, JR., from Tennessee. Mrs. Annunzio joins me in extending heartfelt sympathy to Mrs. Dirksen and to Senator and Mrs. Baker on their great loss.

Mr. ADAIR. Mr. Speaker, several years ago Senator DIRKSEN made a record about the gallant men in American history. With the sudden passing of EVERETT MCKINLEY DIRKSEN, it can certainly be said that the United States has lost one of its most gallant men.

During his 10 difficult years as the Republican leader of the Senate, Senator DIRKSEN played a key role in preserving the two-party system which is so essential to the effective operation of a representative republic. In the months following the Republican debacle of 1964, it was to a great degree the leadership of Senator DIRKSEN that made the Republican opposition meaningful and not token.

Leaders and Presidents of both parties have long respected Senator DIRKSEN'S political acumen and his sense of what is right. As a team player, he worked for

and, indeed, was instrumental in the election or nomination of every recent Republican presidential candidate. He also campaigned actively for other Republican candidates, including myself.

However, Senator DIRKSEN was not dogmatic, and as a true statesman, he would at times differ with his Republican colleagues or attempt to lead the party in a new direction. He always abided by those principles which he felt were fundamental to a democratic and free people.

The legacy which he leaves will serve as a touchstone for future generations of American leaders. His mark will never be erased.

Mrs. Adair joins me in expressing sympathy to the widow and other members of the family.

Mr. ZABLOCKI. Mr. Speaker, with the death on Sunday of Senator EVERETT MCKINLEY DIRKSEN, this Nation lost one of its most skilled—and certainly most colorful—political leaders.

Although not of the same political party or conviction, I always respected the distinguished minority leader for his genuine human qualities. During the nearly four decades he served in Congress he was always a gentleman, ever friendly with a happy word for everybody.

Recognized as a controversial and often contradictory figure in American politics, Senator DIRKSEN made his mark on history. He will be remembered as the last of that old school of distinguished politicians who shaped history by the power and eloquence of their oratory, the sharpness of their wit, and the force of their personality.

By his own reckoning Senator DIRKSEN set aside partisan views to "do what was right for the country." What more noble principle could serve to guide all of us who remain to carry on.

My wife joins me in expressing our deep and heartfelt sympathies to his widow, daughter, and family.

Mr. SIKES. Mr. Speaker, the people of Illinois and of America have sustained a great loss in the passing of the Honorable EVERETT MCKINLEY DIRKSEN, minority leader of the U.S. Senate. With his death, the Nation has lost an elder statesman whose outstanding record of public service covered more than half a century.

He served in the House of Representatives from 1932 to 1949. He was elected to the U.S. Senate in 1950, and was serving as minority leader at the time of his death. The career of Senator DIRKSEN was exemplified by his devotion to duty and the best interests of his State and Nation. He was a kind, gentle, and able man. All those who had the privilege to share his friendship came to admire and respect his sterling virtues.

Senator DIRKSEN was a loyal party man but he believed in the two-party system and contributed to its strength. For this, he earned the respect of all Members on both sides of the aisle. He lived and labored through a great era in the history of our Nation and our country is a better place in which to live and work by reason of the dedicated service of EVERETT DIRKSEN. He has passed from the earthly scene of his many accomplishments, but he will long be remembered as one of the great Americans of his age. His personal example provides for all of us here, and those who will come after, a permanent inspiration for the type of patriotic service for which this Nation will never cease to be indebted to him.

In this time of great loss and sorrow, we extend our heartfelt sympathy to his bereaved wife and other family members.

Mr. TAFT. Mr. Speaker, the Congress, President Nixon, and the Nation have lost a valuable leader in the death of Senator EVERETT MCKINLEY DIRKSEN. The personal grief and sense of loss that so many of us feel as his friends and followers are overshadowed by the deprivation we suffer in no longer having his sound judgment, his boundless imagination, and his infinite experience upon which to draw. He was above all a legislator of great skill and wisdom. At times this led some, without justification, to question his consistency and his dedication to principle. It was rather that he knew and practiced well the necessary lubricant of the law-making process, the art of compromise.

Serving as Senate minority leader, he has been an invaluable assistant to the President in the formulation and initiation of the legislative program of the Nixon administration and deserves much credit for the progress made despite the numerical superiority of the other party. Never an unthinking partisan, he drew respect and support from differing quarters. But well he knew and frequently he noted, that in the process of legislating, it is often a question, as he might have said, of "whose quadruped is quartered."

Kindly in his demeanor and understanding in nature, he could be fiercely loyal to his friends, and that friendship and loyalty were the treasured gift of my father, with whom he worked so long and so closely. But he was forgiving, too, of his opponents, in the best of Christian tradition.

We shall miss him, but not forget him nor his great contributions as a full-game player on the American scene.

Mr. CLEVELAND. Mr. Speaker, a great tree in the political forest has fallen with the death of Senator EVERETT MCKINLEY DIRKSEN.

For many years he was a dominating feature on the landscape of American life.

EVERETT DIRKSEN was unique. His extraordinary voice, his utterly personal, individual use of the English language captivated and often inspired the Nation.

He brought rare gifts to his leadership role. He had a great understanding of human nature. He possessed an extraordinary sensitivity to differing personalities and the changing circumstances into which they were thrust and swirled by shifting fortunes. He understood and loved the drama of life, especially as it is found in the clash of strong men and women in our political system.

No man of his time in our country could so beautifully and dramatically sum up and set the tone of a great issue as could EVERETT DIRKSEN in the Chamber of the Senate.

A great craftsman, he was master of myriad details with the capacity to recall them all at will and on command. He was a virtuoso of the legislative art.

He withstood the tensions and pressures to which he was exposed by his prominence better than most men could. It is not a cause for wonder that they ground him down eventually; it is a wonder that he withstood them so well for so long.

His death has taken a unique, colorful figure from our national life. His work will long merit attention from students of our times and of our governmental processes. In this work they will find an almost limitless mine of patriotism and knowledge, welded to the service of his people. Such students, as they progress across the record of his life, will be entertained, enlightened, and frequently moved—as were we who were fortunate enough to live and work with EVERETT MCKINLEY DIRKSEN.

Mr. BROYHILL of Virginia. Mr. Speaker, Virginians have been proud that Senator EVERETT MCKINLEY DIRKSEN selected the Commonwealth as his home away from Illinois.

We honored his search for privacy as much as we admired the skill and quality of his oratory in his dealings with the wide-ranging interests that occupied his thoughts.

We reflect now, in this hour of sadness, on the great heart that beat so strongly in life and is now still in death.

He had time, always, for the little things, the common things of life; growing things, children, local concerns, individual ambitions and hopes. He was a great man in a lofty position in life, yet he never lost his personal concern nor his capacity for a kind or soft word for a distressed fellow man.

Senator EVERETT MCKINLEY DIRKSEN needs no marble monument to his memory, Mr. Speaker. His is engraved on the hearts of our people; the ordinary citizen who enjoyed his homespun humor, who enjoyed his full grasp of life; the men and women in government who felt the acid of his convictions but never the burn of his rancor.

He enjoyed verbal combat and found solace in a blossoming flower when it had ended; he spoke to the mighty and mulched the earth with his worn hands; he dealt with the greatest issues of his time, but was proudest of his poetic bent.

His favorite reading was the Bible; his greatest heroes were the man, the wife, next door who were raising the growing generation that would soon, he knew well, pick up the burden from his tired shoulders.

To all men Senator EVERETT MCKINLEY DIRKSEN was a leader. To many of us he was a hero of his age, a man of many parts, but most of all one who walked among us as equals.

He touched humanity with the deftness and sureness of a soul at peace with itself.

I admired him, as all men must; I shall miss him, as all men will.

He returns to the earth he loved, in the land he revered, Mr. Speaker, and we mourn his going, never to forget him, never to be lesser men because he passed our way.

Mr. MILLER of Ohio. Mr. Speaker, I

join with my colleagues today in paying tribute to that great Member of the other body, EVERETT MCKINLEY DIRKSEN, of Illinois.

Senator DIRKSEN will be remembered as a towering figure among the great men who have served in the Halls of Congress. During his 16 years in the House and 19 years in the Senate, he worked with tenacity and courage for the causes in which he believed. For the last 10 years, he performed with remarkable skill and intelligence as the Senate minority leader.

EVERETT DIRKSEN was a genuine patriot who fought for those causes that represent the best interests of the United States and the time-honored principles for which our great Nation stands. His recognition of the rightful role of our religious heritage has been an inspiration to millions of Americans. His eloquent advocacy of constitutional government and individual freedom underscored his deep interest in the preservation of democratic ideals.

We all mourn the loss of a great legislator and statesman—a man of monumental stature who spoke and worked for a freer, stronger, and wiser United States of America.

Mr. REID of New York. Mr. Speaker, Senator DIRKSEN, in his own right and as a Republican leader in the Senate, added zest and color to the American political scene. If at times he espoused flexibility more than constancy there were other moments when his leadership was decisive, notably in his support of the Civil Rights Act of 1964 and the Nuclear Test Ban Treaty of 1963. He will be missed by his many friends, by the great State of Illinois, and by his legislative colleagues who deeply respected his skill at bringing together opposing factions in the national interest.

Mr. BROWN of Ohio. Mr. Speaker, I rise to associate myself with the remarks of my distinguished colleague and longtime friend in the well, the gentleman from Illinois (Mr. ARENDS). We are all deeply saddened by the death of EVERETT MCKINLEY DIRKSEN, a great leader of his party and his Nation.

I feel a special loss because of the personal relationship two of my predecessors in the district I represent had with the late great minority leader of the other body. Ev DIRKSEN came into the House of Representatives 5 years before my own father, but the two of them served together in this body as intimate friends for 10 years from 1938 through Mr. DIRKSEN's temporary retirement in 1948. They enjoyed a fellowship of philosophy and an approach to the practicalities of politics which saw them working together in concert on common causes. They shared their fervor for the late Senator Robert A. Taft for President and exchanged and often confirmed each other's assessments of the well known and little known political personalities of a generation.

While my predecessor's career continued in the House and brought him into the joint leadership as ranking Republican on the House Rules Committee, the Representative from Illinois became the Senator from Illinois and, in time, the minority leader of that august body. He also became clearly one of the most colorful political figures of the day. They shared the joys and frustrations of party responsibility, taking delight in defeating their adversary colleagues for some partisan advantage and more delight yet in joining with their adversary colleagues to advance some program for the common good of the Nation.

This association in common causes and interests ended only with my late father's death in 1965.

An area recently added to the Seventh Ohio District I represent is Marion, which was the home of Dr. Frederick Smith, who represented the old Eighth Ohio District at the time Representative DIRKSEN was afflicted with problems that affected his eyesight. It was Congressman Smith who counseled his colleague medically to seek the treatment and care that saw him retire voluntarily from the House in 1948. This move ultimately led to the saving of his vision and his return to public life as a Senator and eventually as a national leader.

And what a leader the late Senator was. A persuasive counselor to his legislative colleagues and others in seats of power, he was also persuasive with his eloquence. So influential, in fact, was he that his former colleague and good friend, President Johnson, found him to be almost as powerful a leader of a heavily outnumbered Republican minority as had Senator Johnson been when he led a Democratic majority in the Senate with which President Eisenhower was obliged to deal.

There is a parallel between the Eisenhower-Johnson relationship and the Johnson-Dirksen relationship. But an even stranger coincidence is that between the loss President Eisenhower experienced within his first year in office because of the death of his leader in the Senate, Bob Taft, and the loss which President Nixon now faces because of Senator DIRKSEN's passing.

But it is not just the President and the Grand Old Party which have lost a champion. All Americans will feel the impact of his sudden passing. His leadership was influential because affection for him was almost universal. He was the idol of all ages and his voice was perhaps the best known since Franklin D. Roosevelt. He was a combination of many virtues, but high on the list must rank kindness and generosity. While politics may be a game of rancor and retribution for some, it was mostly love and kindness for Ev DIRKSEN. He liked to help his friends and he had few enemies. He enjoyed helping young people in politics and he made his assistance available to me as a new Member of Congress. He loved his profession and was proud of it; but he never took himself or the great moments with which he struggled during his career so seriously that he could not find joy or humor in them.

His sense of dedication to doing what he thought was right and to doing it within the framework of the system undoubtedly grew from his personal experience under the system—the experience of rising from humble origins to become the leader of humble men and a counselor to the great. And I feel sure that he knew that the system would see his various roles in Government filled by others in the days and years ahead. But that does not suggest that he can ever be replaced.

So while I sorrow at the loss of leadership he provided, I know that this void will be filled by the system. I mourn for the family who have lost a precious husband, father, and grandfather who can never be replaced. But I rejoice for the rest of us who had the joy of knowing him and who were benefited by his efforts in behalf of the Nation he loved literally more than life. For all of us who are Americans he has left an example, but particularly for those of us in public life.

He was flexible because politics is the art of compromise. But he was willing to stand in unpopular causes because politics is also the dedication of doing what one perceives to be ones duty. He filled his important role humbly because he knew the cause is greater than those who advance it. But he lived his life with confidence and joy because he knew the system in which he operated is the best possible one to meet the requirements of self government.

Our prayers should be to sustain the family and for those who must advance the causes without his aid or who will be chosen to replace him. But those prayers should also express our joy for having had the pleasure of knowing him and for living in a Nation that produced such a man from the rich earth of Illinois to which we must now return him.

Mr. MORTON. Mr. Speaker, EVERETT DIRKSEN was a unique institution in American politics whose life was a true profile of courage. His fierce sense of dedication was tempered by a deep sense of humor. His eloquence and style were unmatched in our time. His statesmanship and leadership of the loyal opposition during those years in which our party was out of power was unparalleled. Above all, EVERETT DIRKSEN was his own man.

I have lost a good friend. The Republican Party has lost one of its greatest leaders. The Nation has lost a dedicated servant.

Mr. ROONEY of Pennsylvania. Mr. Speaker, the Congress has lost one of its most prominent, most human and colorful leaders. EVERETT DIRKSEN was a man who could be firmly partisan when partisanship was appropriate but who could be thoroughly nonpartisan when the best interests of his Nation required it.

The Illinois Republican has been so much a part of the Senate and the American political scene that it is difficult to imagine either without him. Americans will always remember his many contributions to the Nation, such as his role in winning approval of the Nuclear Test Ban Treaty in 1963, his efforts to restore prayer in public schools, his famous reversal of position which insured passage of the Civil Rights Act of 1964 and his battle for the Voting Rights Act of 1965.

These are but a few of his contribu-

tions. Many of his greatest found him, the leader of the Republican Members of the Senate, joining hands with a Democratic administration to champion programs in which EV DIRKSEN believed.

Often, EV DIRKSEN hurdled party lines to assist Presidents Kennedy and Johnson when the distinguished Illinois Senator recognized that America would be the beneficiary. He has left a mark on this Nation that will not be soon forgotten.

I share the sorrow his family and friends feel, and extend to them my deepest sympathy.

Mr. KLUCZYNSKI. Mr. Speaker, we, who live in what is often described as an age of conformity, pay tribute today to the colorful life and dramatic career of one who was singularly nonconformist, a genuine original who prized the virtue of individuality and who exemplified it in his long and distinguished record of public service: EVERETT MCKINLEY DIRKSEN in whose untimely passing we all are the poorer. His passionate love of life and of the political process, allied with a deeply personal style, made him a legend in his lifetime. His comic spirit, nourished in the Lincolnian tradition of frontier humor and the anecdotal jest, embraced both the satirical and the sentimental, neither of which he feared; essentially unpompous, he delighted in the rhetorical flourishes of another age, and in this respect gave delight to millions.

Yet, it would be unjust to see him merely in terms of character, however striking and unique. He was first and last a politician in the best tradition of American life—one dedicated to that complex process of compromise, adjustment, and conciliation on which the survival of representative government depends. His often quoted aphorism, "The oil can is mightier than the sword," is a continuing commentary upon and rebuke to the so-called "politics of confrontation" which on the left and the right alike advocate violence in the pursuit of simplistic solutions to complex problems.

"A foolish consistency," wrote Emerson, "is the hobgoblin of little minds." It is the measure of EVERETT DIRKSEN'S mind and spirit that, while essentially conservative, he was never afraid to change. Politically speaking, he will be remembered for his crucial role in "the three great reversals," instances in which he demonstrated a sensitive responsiveness to the larger issues which transcended the merely partisan. In the United Nations Bond Bill in 1962, the Voting Rights Bill of 1965, and the Nuclear Test Ban Treaty of 1963, he gave genuine substance to his own words, "Change is an inherent way of life." Certainly, no one has ever spoken more movingly of the nuclear threat which encompasses all mankind in its grim embrace than did EVERETT DIRKSEN when he noted that he did not want written on his tombstone:

He knew what happened at Hiroshima, but he didn't take a first step.

We remember today his impressive words explaining his refusal to be bound by narrow, rigidly inflexible views on public policy, words fresh and pertinent in every age and perhaps his most significant memorial, and message to our Nation:

On the night Victor Hugo died, he wrote in his diary, "Stronger than all the armies is an idea whose time has come."

EVERETT DIRKSEN was a man of strong views, vigorously and eloquently upheld. Inevitably many of his special concerns were controversial. No man in his position of leadership could hope to escape criticism, just and unjust. Yet withal, he possessed unfailing good nature, especially impressive in light of the toll exacted by sickness and injury. A dislocated vertebra and a broken hip gave constant discomfort through the years. His brief retirement in 1948 was the direct result of an eye illness.

We remember that he served a full 16 years in this House from 1932 to 1948 through decades marked by depression, recovery, war, and the tasks of peace building and the cold war. Elected to the Senate in 1950, he served as minority leader from 1959 to the day of his passing.

Perhaps the key to EVERETT DIRKSEN'S life is to be found in the small farming community of Pekin, Ill., in which he was born in 1896. For it was here that he learned that respect for hard work and the related virtues of the American Midwest at the turn of the century. We recall that he worked his way through law school at the University of Minnesota and completed his degree by night courses during his service in this House. The personal, private dimension of his life reveals such things as his intense love of gardening and of flowers: he would have heartily endorsed the words of Henry Ward Beecher:

Flowers are the sweetest things that God ever made, and forgot to put a soul into.

His business experience in Pekin gave him practical insight into the problems of the business community. We are told that he wrote five novels and over 100 short stories which, though unpublished, witness to his fiercely creative impulse. His understanding of war derived from his service in 1917–19 with the American Expeditionary Force during which time he was made a second lieutenant in the field.

Especially at the time our sympathy goes out to his wife whom he wed in 1927 following a romantic stage-courtship in which she, the former Louella Carver, played the princess of Pekin, wooed by her future husband in Percy MacKaye's "A Thousand Years Ago," celebrating the centennial of Pekin. Such a romantic encounter is wholly in keeping with the life story we honor here today. Mrs. Kluczynski and I share the sense of loss felt by Mrs. Dirksen and by her daughter, Danice Joy Baker, wife of the distinguished Senator from Tennessee, the Honorable HOWARD BAKER. But beyond the grief which they feel, we share their deep sense of pride in the life and career of EVERETT DIRKSEN, a life of service to the people of Illinois and to the Nation at large and, thanks to the power and prestige of America in this century, to the whole world. He takes his special place with those illustrious few who, from the Halls of Congress, have given an enduring example of leadership in effecting significant change in days of crisis for this country and all mankind.

Mr. BROOKS. Mr. Speaker, I join my colleagues in paying tribute to the memory of the late EVERETT MCKINLEY DIRKSEN. The Senator from Illinois will long be remembered as a man of principle and dedication. He was dedicated to the service of his party, his State, and his Nation.

As minority leader, he was highly partisan without losing sight of the fine basic principles by which he was guided. Possibly the greatest contribution that Senator DIRKSEN made to his country was his demonstration that opposition did not mean obstruction.

The gentleman from Illinois was admired, respected, and genuinely liked by both the Democratic and Republican Presidents with whom he served. As minority leader, he elevated that position to new heights by making it a forum for diverse viewpoints and helpful criticisms rather than an irritant and regressive influence. This attribute was recognized and appreciated by all of us who had the pleasure of knowing and serving with him in the Congress.

I know that his wife and daughter are comforted in knowing that their loss is shared by all Americans.

Mr. GOODLING. Mr. Speaker, a bright light has left the American scene with the passing of Senator EVERETT MCKINLEY DIRKSEN.

History will record him as a giant in his time, for he had a blend of talents and personality that made him unique and distinctive in the eyes of his fellow men.

As a legislator, EVERETT DIRKSEN had the depths of understanding that comes only to those who have labored long and hard in the legislative vineyards. He had the rare ability to pinpoint the meaningful and, in effect, to separate the chaff from the wheat. His reputation as a prime cross-examiner in congressional committee proceedings was well established.

As an orator, writer, and dramatist, he had the facility to say the right thing and to pronounce it in such a way that it came thundering in upon you, or it touched your funny bone, or it stimulated your mental and psychological cores, or it lulled you into a deep quiet.

As a patriot, EVERETT DIRKSEN was dedicated to his country and to his congressional service. Although he was plagued with various illnesses, he had a heart stout enough to cast off the chains of pain and fatigue and perform nobly and effectively in the legislative chambers.

As a person, he had compassion and understanding, being more inclined to help than taunt. And his human superstructure rested on the firm foundation of a deep conviction that principle was an honored objective that must never be surrendered upon any altar.

In the wake of his departure, there is a multitude of bright reflections. We will always remember EVERETT MCKINLEY DIRKSEN, fondly and respectfully, for he

was of that substance that men never forget.

Mr. BURKE of Massachusetts. Mr. Speaker, I was deeply saddened to learn of the untimely passing of the senior Senator from Illinois and the distinguished minority leader in the U.S. Senate, EVERETT MCKINLEY DIRKSEN.

The Senate, and indeed the Nation at large, will miss this colorful figure. His eloquence has rarely been surpassed in either House and he holds a place on the pages of history with Webster and Clay. His oratorical style was colored with references to the Bible, the classics, and history. He quoted often, and flavored the issues of today with a continuity of lessons learned from the past and this was no mean indication of the man's intelligence and deep perspective.

Above all, EVERETT MCKINLEY DIRKSEN represented the people and as he traveled up the political ladder of success he never forgot this. As Senate minority leader he backed Republican and Democrat alike without regard to political consideration in matters of national interest and national defense.

EVERETT DIRKSEN was a politician of the old school. He viewed politics as an art and used his oratorical ability and gently persuasive powers to best advantage. Master of the compromise, he seemed to relish this role.

As the complex politician displayed his expertise on the Senate floor, so there was the simpler, homey philosophical man from Pekin, Ill., who was a devoted husband and delighted in the magic of his flowers and garden.

The Congress will deeply miss this distinguished gentleman and statesman, and to his wife and family go my most heartfelt condolences at their great loss.

Mr. COLLIER. Mr. Speaker, the passing of EVERETT MCKINLEY DIRKSEN from the American political scene is more than the loss of a great Senator. Indeed, the minority leader of the Senate was both an expert and an articulate technician in the complex field of lawmaking. He was a master in the art of legislative compromise which offers the only alternative to an insoluble stalemate. Because he possessed these qualities he became a symbol of the U.S. Congress in this generation and is now an integral part of its history and tradition.

Senator DIRKSEN was a great Constitutionalist and a man who cherished the fundamental principles of our great free enterprise system. He was unsurpassed in his ability to develop the basic issues from the conglomeration of the most difficult legislative measures. He was gifted with a sense of expression which allowed him to paint a masterpiece with words as the most accomplished artist does with his brush and oils.

Many of his speeches have been indelibly written into the history of the House of Representatives and the Senate.

To review his many political achievements of leadership in his long decades of public service would take more pages than any author would attempt to write. But one can say in summary that no man of our time has contributed more to the accomplishments of the Congress than the late illustrious Illinois Senator, and it is very improbable that anyone will in future generations.

Personally, he was a vibrant, compassionate and lovable human being. He possessed a rich and wry sense of humor which was a source of delight to all who participated in his intimate conversations. He had a million friends in every walk of life, and he had a quality of making everyone's presence felt even while he was the focal point of attention in both official and informal groups and gatherings.

To his loyal and gracious wife and lovely daughter, Mrs. Howard Baker, and to all other members of his distinguished family, I extend my condolences. But I do so knowing that they have been left with a rich heritage and the cherished memory of the works and achievements of one of the truly great American statesmen of the generations. Like my colleagues in this esteemed body and millions of others across this Nation, I shall miss him greatly.

Mr. HALPERN. Mr. Speaker, Senator EVERETT MCKINLEY DIRKSEN, our dear departed friend, was a leader held in highest esteem, respect, and admiration by his constituents and his colleagues.

In his devotion to providing a "more perfect union," EVERETT DIRKSEN excelled, because he was the moving spirit behind any cause which he championed. His eloquence and great ability as a statesman breathed life into often disagreeable endeavors. He constantly sought that middle ground on which all honorable men could agree.

We are, indeed, greatly saddened by the death of Senator DIRKSEN. Separation, sudden and unexpected, is always difficult for those left behind. And yet if quality be the real test of life, the life of EVERETT MCKINLEY DIRKSEN should in itself serve to mitigate our sadness as his friends and colleagues, and to afford a source of pride and inspiration to those closest to him.

To those of us who survive, he has tossed the torch, and ours is the duty to carry on. Let us rededicate ourselves to the patriotism and love of country he felt, emulating his virtues and his consecration to duty. In memory of a fine, upstanding American, let us resolve, in this dark and threatening period which menaces our Nation, to eschew all bitterness and strife, forget racial and religious differences, forego partisan politics, and unite as one great people, under one flag, and with one destiny—that of strengthening America.

The votes which Senator DIRKSEN cast and the speeches which he made are preserved in the CONGRESSIONAL RECORD and elsewhere, but their memory is enshrined forever in our hearts.

We shall remember best not his official record but our association with him, and the ties of lasting friendship which death cannot sever and which are among the compensating joys of our service in Congress.

The greatest comfort and consolation that can come to his family is not only the splendid record which he made as a faithful public servant, but also the heritage he has transmitted to his wife and daughter, and the love, loyalty, and generous devotion which he bestowed upon his friends and family.

EVERETT DIRKSEN has passed away, but he died as he would have wanted it—in service to his country.

Mr. CEDERBERG. Mr. Speaker, I rise to join my colleagues in expressing my feeling of a deep personal loss on the death of the great minority leader of the Senate, EVERETT MCKINLEY DIRKSEN.

Senator DIRKSEN will be remembered by all Americans as one of the great legislative leaders of our time. His service in both the House and Senate represents a lifetime of legislative achievement. He was not only a great leader of the Republican Party but he was also a party leader always ready to put his country ahead of partisanship. His masterful oratory will be missed and the Nation has suffered a great loss. The people of Illinois and the country have lost a great national leader.

Certainly an era has ended. With the passing of Ev DIRKSEN one of the last great practitioners of the art of "being a Senator" is no more. The tousled hair, the rise and fall of a commanding voice in debate on some of the great issues of our country will be no more.

In behalf of Mrs. Cederberg and myself, I want to express to Mrs. Dirksen and to Senator BAKER and his wife my deepest sympathy.

Mr. HELSTOSKI. Mr. Speaker, the eloquent oratorical voice of a great man was stilled last Sunday when Senator EVERETT MCKINLEY DIRKSEN passed away at Walter Reed Army Hospital.

With his death, the Nation lost one of the most skilled and certainly most colorful, political leaders of our time.

Senator DIRKSEN was a Member of this House of Representatives from 1932 to 1949. In 1950 he was elected to the U.S. Senate, and was serving as minority leader in that body at the time of his death.

Mr. Speaker, today we walk in silent sorrow to give our final respects to a man whose mark is written upon legislative history for all time.

He had the hidden genius for finding the key to agreement on conflicting proposals and political issues. This genius served him well, as evidenced by the crucial part he played in the passage of the Civil Rights Act of 1964 and on the ratification of the Nuclear Test Ban Treaty in 1963.

Many have heard his booming voice thundering dramatically through the Senate Chambers, then gradually lowering to a whisper which had his audience hanging on in silence lest they miss something of his speech as he made his point.

Mr. Speaker, I join all Americans today in expressing my condolences to Mrs. Dirksen and her family. May his soul rest in everlasting peace.

Mr. DON H. CLAUSEN. Mr. Speaker, when Senator EVERETT DIRKSEN passed away on Sunday, America lost one of its greatest and most talented legislators. In my judgment, Senator DIRKSEN was an institution, and of himself. He will long be remembered as the great mediator.

The senior Senator from Illinois had an

exceptional quality, personality, and character that made him stand tall in the minds of his colleagues, the American people, and people throughout the world. He will always stand as tall as the giant Redwoods from my native California in the minds of every American who was privileged to know or hear him.

The people from redwood country and I will be eternally grateful for his valuable assistance to me during the long and arduous debate that led to the creation of the Redwood National Park.

Certainly, his memory will endure as long as the life of those redwoods he fought to save for posterity.

Mr. VAN DEERLIN. Mr. Speaker, the death of EVERETT DIRKSEN has left a void that can never again be entirely filled; for Senator DIRKSEN was unique: in his parliamentary skills, his captivating personality, and his impact on our national life.

Overcoming debilitating illnesses that on numerous occasions would have forced lesser men to the sidelines, he continued to cut an enviable swath until the end.

With command of the language, his matchless eloquence, and his occasional flamboyance, he evoked an American past when the great orators whose words still ring through our history were also rugged individualists.

Although it was possible to disagree at times with Senator DIRKSEN, it was impossible to dislike him. I mourn his passing.

Mr. MAHON. Mr. Speaker, I wish to join in paying tribute to the memory of EVERETT DIRKSEN. I was privileged to serve with him as a fellow member of the House Appropriations Committee for many years. I can testify at first hand about the great job he did as a member of the committee.

He was brilliant, dedicated, always considerate of friend or foe. His distinguished career in the Senate must not be permitted to obscure his distinguished record of service in the House.

It has been my privilege to be present at many meetings in recent years when EVERETT DIRKSEN in his position of leadership was charged with major responsibility. He always measured up to the highest standards. Regardless of who occupied the position of President he strove to be helpful. He never sold the country short. It is fitting that we should honor him today.

Mr. HARVEY. Mr. Speaker, unfortunately, my personal association with Senator EVERETT DIRKSEN was very limited. Like other Members of the House, I would have the opportunity to greet and visit with him briefly on social occasions and then, of course, very rarely during conferences on legislation passed by the two legislative bodies.

It was through one of his most able and long-time aides, Oliver J. Dompierre, a Michiganite from my old territory—the Upper Peninsula—that I have long felt a close tie and association.

In the 9 years that I have served in Congress, I do not believe that I have ever been more proud or more frightened than I was over 7 years ago when I was asked to "fill in" for Senator DIRKSEN in a speaking role. I was just in my second year in Congress. It might have been said that I was just a sophomore. But I was smart enough to know that I would not be able to "fill in" for Senator DIRKSEN in a speaking role. I might be on the program; I might even deliver the main address; but I would never be able to fill in for him. I could not do that on March 30, 1962, in Chicago, Ill., at a fund-raising dinner for the Senator, nor will I or any one else reach that stature.

I would like at this time to repeat my opening comments at that dinner program over 7 years ago. My feelings have not changed over the years, as I got to know him better. My words were appropriate then and I feel they are now. I started by saying:

> Mr. Chairman and fellow Republicans, it is a real privilege and honor for me to join with you tonight in tribute to Senator Everett Dirksen. You may not have previously considered it, but we Republicans in Michigan are almost as proud and happy as you in the State of Illinois to have Senator Dirksen representing you in Congress. In many ways, we have adopted Senator Dirksen as our voice in the Senate Chamber. We have a real attachment to your beloved Senator.
>
> Actually, Senator Dirksen, during his 28 years as a Member of Congress, and now in his present role as Minority Leader in the Senate, has been warmly adopted by thousands of Americans throughout our land. When he speaks in the Senate Chamber, everyone listens. No greater respect or honor than that could be paid. Certainly, at no time in our nation's history has such leadership in the Senate been more sorely needed than now. You people rightly believe that the State of Illinois needs Everett Dirksen. I concur and quickly add that our nation needs him also.

Yes, it has been nearly 8 years since I uttered those words of praise. I repeat them now as all Americans bid farewell to one of the giants in our Nation's history. EVERETT MCKINLEY DIRKSEN shall always remain a giant in our Nation, for he truly was a grand flag bearer. He served his country as greatly as he loved it.

No one—in any fashion—can or will ever be able to "fill in" for him.

Mr. BELCHER. Mr. Speaker, the death of Senator EVERETT MCKINLEY DIRKSEN has come as a profound shock to all who knew him. Though our minds contained the fact that he had suffered from various illnesses over the past few years, they never grasped the implications of that fact. His tireless efforts as his party's leader in the Senate, his constant good humor, the "basso profundo" he brought to the support of those causes for which he crusaded—all combined to create a sense of indestructibility; to lull us with the impression that here was, not only a man for all seasons, but a man for all time.

I am deeply grieved at his untimely passing. I do not grieve for EVERETT DIRKSEN, for he has found surcease from the ills of the flesh and peace in the arms of the Creator he knew and loved so well. I grieve for all of us who still must cope with these troubled times without his wisdom, his insight, his strength, his sure sense of purpose and direction.

This Nation has produced its share of great statesmen and it has claimed many articulate and engaging personalities. But very, very rarely has there passed across the pages of our history a more remarkable and beloved combination of political skill and flamboyance—of statesmanship and charisma—than was found combined in the personality and career of EVERETT MCKINLEY DIRKSEN.

The Senate, the administration, the Republican Party, the State of Illinois—but most importantly, the Nation and its people—will miss his leadership and his zest for life. His record and his indomitable spirit are monuments to the qualities of leadership and character which he embodied and to which we all aspire.

I grieve for his wonderful wife and family who have lived in the joy of having this warm, strong, gentle and inspiring man as husband, father, and grandfather. His passing leaves a great empty space in a close family group, but a thousand cherished memories will help to ease the loss and fill the hollow in the heart his absence brings.

Finally, Mr. Speaker, I do not deem it selfish that I grieve for myself at the loss of a dear and beloved friend. Many are my recollections of happy experiences shared with Ev DIRKSEN. In years past, before his leadership responsibilities became so heavy, he was an indefatigable speaker on the political dinner circuit and he came to Oklahoma many times to lend his unique oratorical ability to my campaigns and to the party cause. Oklahomans loved him as much as if he were one of their own. And I was always proud and delighted to share his wonderful friendship.

Mrs. Belcher and I will miss him deeply, and we join in extending to his wife, Louella, and to his family our sincere sympathy and our prayers that they may know the fullest measure of God's strength and love in this time of sorrow.

Mr. LANDGREBE. Mr. Speaker, the passing of Senator EVERETT MCKINLEY DIRKSEN marks the end of an era. He was the last of a breed of giants who walked among us on Capitol Hill, combining showmanship and statesmanship, service with grandeur.

As a freshman, my contacts with Senator DIRKSEN were relatively few, but like most Americans I have many vivid memories of him. What I recall most is that, despite his importance he was accessible to all. I recall asking for appointments with lesser men and being put off 1 or 2 weeks. "Ev" DIRKSEN, despite his busy schedule and prominence as a national leader, was always available without such delays. Twice, I had occasion to seek an interview with this great man, and twice he received this freshman Congressman quickly and with genuine warmth.

The world will best remember his showmanship—the sonorous oratory, the silvery locks, the courtly, yet homely, manner. But we must also remember the statesmanship that lay beneath his grandness of manner. His leadership reached its peak during Democratic administrations. While he knew his role as leader of the loyal opposition was in partisan affairs to oppose—and oppose he did—he never lost sight of the re-

quirement to be loyal, as well. In those situations which called for a united front for the good of the country, EVERETT MCKINLEY DIRKSEN could and did work with Democratic Presidents as closely as with those of his own party. Our country owes him much for the unity he preserved.

We Republicans were proud of EVERETT DIRKSEN as a great leader of our party; we of the Midwest were proud of him as a personification of the ethics and ideals we hold especially dear back home. But all America can be proud of EVERETT MCKINLEY DIRKSEN as the embodiment of all that is great in American political life. He was a great Republican and Midwesterner, but he was first of all a great American.

Now the torch has been passed. Someone will assume the mantle of leadership laid down by this great warrior, and life will go on. I am confident that whoever becomes the Republican leader in the Senate will carry on well in the tradition set by EVERETT DIRKSEN. But no one, no matter how able or honorable, can ever really replace this singular man from Pekin, Ill., so beloved by all his countrymen.

I know I join all my colleagues, on both sides of the aisle, and indeed all Americans in extending deepest sympathy and condolences to Mrs. Dirksen and the Senator's family.

Mr. BETTS. Mr. Speaker, the passing of Senator DIRKSEN from the political scene leaves a void which may never be filled. Someone, of course, will take his place in the legislative halls but it will be a difficult task to measure up to the accomplishments and talents of the departed minority leader.

His background is one that appears time and again in the lives of successful men. A humble beginning, hard work, and dedication to ideals tell the story of his rise to the top. In the midst of his legislative career were all the ingredients which the American public looks for and expects to find in its public servants. He was a family man and loved his home. He was kind and considerate and even though he rose to the heights he never lost the common touch or lost sight of the friendships he had made along the way.

All of these enduring qualities made up the framework around which his career was built.

Sometime ago I asked for his autographed picture. When I received it, the Senator had written on it this inscription for me, "To my old and steadfast friend." I shall always cherish this token of friendship from a great man. And as one of his friends, I am saddened at his death and extend my sincere sympathy to Mrs. Dirksen and his family.

Mr. MICHEL. Mr. Speaker, the tributes to the late beloved Senator EVERETT DIRKSEN continue to roll in and included in that flood tide of respect and affection is an editorial written by Mr. Ray McHugh of the Copley News Service. The editorial really captures the essence of the Senator's life and career and his impact on our national life for so many years. I include the editorial in the RECORD at this point:

TRIBUTE TO SENATOR DIRKSEN

(By Ray McHugh)

"In God we trust."

The phrase was more than a motto to Senator Everett McKinley Dirksen.

It was a way of life.

Since his death Sunday afternoon, there have been many eulogies and many reminiscences. Not a few have lamented the passing of the Senate's last great orator of the old eloquent tradition.

We shared the joy of Sen. Dirksen's resonant speeches, full with the quotations from the bible, Shakespeare, and the classics and spiced with Spoon River humor, all honed when he was a young man in Pekin kneading bread dough in his brother's bakery and reciting classics in the rolling rhythm of the breadboard.

We shared the wonder at that cathedral organ voice that could thunder like the artillery he heard in World War I or whisper like a lover.

But the senior Senator from Illinois must be remembered for more than a great oratorical style.

Here was a man who believed fiercely in the basic difference between right and wrong. His words often sent well-educated reporters scurrying to their dictionaries, but his principles were as uncomplicated as the Illinois prairies from which he rose.

Everett McKinley Dirksen's priorities were simple. He owed his first allegiance to God, his second to the United States of America, his third to his family, his fourth to the Republican Party.

No President he ever served quarreled with those priorities. His wife Luella would not have cared the way she did if they had been different.

Without Sen. Dirksen, President John F. Kennedy would not have had the nuclear test ban treaty which is regarded as his tallest monument.

Dirksen's reasoning was simple:

"I should not like to have written on my tombstone, 'He Knew What Happened at Hiroshima, But He Did Not Take The First Step.'"

Without Sen. Dirksen, President Lyndon B. Johnson would not have had the civil rights legislation that he considers his greatest contribution to the Nation.

Without Sen. Dirksen, President Dwight D. Eisenhower's programs would have been emasculated in his last two years in office by a high-riding, newly elected Democrat majority. Those were the years when a Dirksen-Johnson friendship born in the House in the late 1930s began to bear the fruit of national responsibility.

Without Sen. Dirksen, President Nixon would not have won Senate approval of the Safeguard Anti Ballistic Missile System.

Without Sen. Dirksen, Mr. Nixon now faces trying days on Capitol Hill. No one since Sen. Robert A. Taft better deserved the title of "Mr. Republican" and it's hard to recall any Senator who had the man from Pekin's ability to lead a small band to decisive victories.

It is hard to forget how in the early 1960s, faced with overwhelming odds, Sen. Dirksen successfully defended the rights of working men against compulsory unionism; how only a year ago he directed the strategy that blocked Abe Fortas' nomination as Chief Justice of the United States; how he stood staunchly alongside President Johnson in the trying ordeal of Vietnam, privately leaning toward a "victory" policy, but publicly supporting his old friend on what to Dirksen was the best of all grounds:

"Because he is my President . . ."

Sen. Dirksen was not without his critics. They had grown in recent years, particularly in the ranks of liberal Republicans who complained that the Senator was out of step with the times, that his ideas were old-fashioned, that he did not understand the changing America.

Sen. Dirksen understood it. But he didn't like it.

It was only after grave soul-searching that he supported sweeping civil rights and educational changes.

"They are remaking America and you won't like it," he warned in the early stages of debate, but later in his final argument supporting President Johnson's proposals, he said:

"The time has come for equality in sharing government and education, and in employment. It will not be stayed or denied. It is here."

But the time had not come for other changes.

Sen. Dirksen died without realizing one of his fiercest convictions—the restoration of prayer to public schools.

Nothing shook the old lawmaker more than the Supreme Court ruling outlawing such prayers. In Dirksen's view, the Court had taken something basic away from America.

His memory could be served in no better way than to hasten passage of a constitutional amendment that puts prayer back in the classroom and reasserts the Nation's faith in the words Everett McKinley Dirksen lived by:

"In God we trust."

Mr. WHALLEY. Mr. Speaker, I wish to join my colleagues in paying tribute to one of the most outstanding and beloved figures of our time. Senator EVERETT MCKINLEY DIRKSEN filled the hearts of an entire nation but his passing now touches these hearts with sorrow and a profound sense of loss. No longer will the Senate Chamber echo with his eloquence. No longer will his deep stores of wit and wisdom enrich the debate of our most urgent national issues.

Senator DIRKSEN's first allegiance was to the protection and preservation of our American heritage of freedom. He had devoted his life to strengthening and defending the principles of our Constitution. His efforts to permit prayer and Bible reading in the Nation's schools demonstrated his faith in God and his deep love for America.

EVERETT DIRKSEN was one of the greatest statesmen of this century. Every President since Roosevelt consulted him for insight and judgment in foreign and domestic affairs. He was a trusted adviser to our Presidents regardless of the party in office because he always put the national interest ahead of partisan consideration.

Senator DIRKSEN was a unique figure in American history whose place can never be filled or duplicated. His integrity, his faith in America and God, the magnificent achievements of his statesmanship, his legislative leadership, his eloquence, his humanity and compassion will never be forgotten.

My most sincere sympathy goes to his family in their sorrow and loss.

Mr. WHITTEN. Mr. Speaker, I wish to join the many fine statements made with reference to the late Senator EVERETT MCKINLEY DIRKSEN. It was my privilege to serve with him in the House of Representatives for a number of years. In fact, after serving under his chairmanship I succeeded him as chairman of the Appropriations Subcommittee for Agriculture.

During this period of time, his charm, never-ending humor, and his ability

made it always easy to deal with him, even on those occasions when our viewpoints were different. I will not attempt to surpass the glowing attributes which have been made, the fine descriptions which have been given, but I do want to say his has been a wonderful service and within his own lights has been constructive. Certainly he has created a big place for himself in the Congress and in the Nation and it will take much time for the void to be filled.

To his family and his loved ones we extend our deepest sympathy in their loss. We all have lost a fine friend and the country an outstanding citizen.

Mr. WYMAN. Mr. Speaker, with the passing of EVERETT MCKINLEY DIRKSEN, the Members of this Congress and the people of this Nation are losing more than a great leader, more than an outstanding Senator and national image to whom we pay our respect because of his noticeable accomplishments. After his 35 years of unparalleled service in the House and Senate, his death marks the loss of an inspiration and color for American public life unequalled since the days of Daniel Webster.

Senator DIRKSEN was a friendly, warm, compassionate pillar of a man. He was a man who not only enjoyed his work and responsibility, but enjoyed and lived for the institutions within which he was able to function so well. He was outstandingly effective not only by virtue of his extraordinary capabilities but also because of the pleasure and feeling for life that he expressed in what he was doing. He was effective because he was conscious of the values of our way of life that depended so greatly upon what he did and said. He was not afraid to introduce a little humor into a grave situation, or to take issue on matters of great consequence which he felt demanded the positions he took.

None could deny the powerful effect of the Senator's manner or the beauty of his conduct. Add to his humor his skill as an orator and you have one of the most memorable figures ever to grace the floors of the House and Senate. The quality of his performance as a Thespian, his flair for the dramatic, his deep resounding voice and the control which he had over it, as well as his manner of delivery and there was given to the Senate and to America the closest link between our time and that of Webster, Clay and Calhoun.

But the brightness of his personality and the uniqueness of his behavior should not overshadow his skill as a legislative leader and statesman. The excellence of his rhetoric was not by any means his only method of being effective. As the Senate minority leader and the single most influential member of his party during two Democratic administrations, he enjoyed a power and influence of great proportion. He used this position well, for the benefit of his party, and performed the function of leader of the "loyal opposition" well, for the betterment of his country.

Yet, on those issues which were of such great consequence to the welfare and security of our Nation, he was able to avoid partisanship and withstand pressures from both inside and outside of his party. He held fast to his convictions and followed the course in which his judgment and good sense directed him.

In handling issues of the war in Vietnam, for example, the Senator cooperated closely with Presidents Kennedy and Johnson in response to his deep personal conviction that the essence of Government is the freedom of the people. He fought hard behind the scenes as well as in public to see that the freedom of which he spoke was preserved for all those who had become dependent upon the Government of the United States for that preservation.

His many accomplishments can only be looked upon with pride. He served during very troubled times in a capacity which required great leadership capabilities. Had his great knowledge of American politics and its legislative processes not been available to the Congress the consequences might have been immeasureably grave. He became to the Senate an entertaining leader, a man who looked to God and commonsense for his guidance and he gave direction to his colleagues as a master in his own right. We are grateful to him for his involvement, his conviction, his dedication and now his supreme sacrifice.

To paraphrase one of his favorite sayings, "There is only one debt greater than the Federal debt, and that is the debt that the Members of Congress and all Americans owe to EVERETT MCKINLEY DIRKSEN."

Mr. ROGERS of Florida. Mr. Speaker, I join with my colleagues in expressing my sorrow over the loss to the Congress and to the Nation of Senator EVERETT M. DIRKSEN.

The many facets of the Senator from Illinois have been seen by the Congress and the Nation over the past 35 years and those talents which he possessed will be truly missed.

He has left the Nation both legend and legacy.

Maybe most think of the legend, of the personality which was indeed unique. Unfortunately, I feel that this personality has in some part overshadowed the legislative achievements which he helped forge while in the House and the Senate.

Hardly any major legislation in the past three decades is void of his handiwork.

Senator DIRKSEN was counsel among Presidents. He was a leader and mentor among his peers in the Congress. But foremost, he was a servant of the American people.

My wife Becky and I offer our sincerest sympathy to Mrs. Dirksen and Senator and Mrs. Baker.

Mr. FINDLEY. Mr. Speaker, Mr. Ray McHugh, of the Copley News Service, is the author of the superb tribute to the late Senator DIRKSEN. The Copley Newspapers include the Illinois State Journal and Illinois State Register, in Springfield, Ill., as well as the Aurora Beacon-News. These newspapers have been prominent in giving coverage and encouragement to Senator DIRKSEN throughout his political career. The remarks prepared by Mr. McHugh are therefore of special interest. Here is the text:

TRIBUTE TO SENATOR DIRKSEN

(By Ray McHugh)

"In God we trust."

The phrase was more than a motto to Senator Everett McKinley Dirksen.

It was a way of life.

Since his death Sunday afternoon, there have been many eulogies and many reminiscences. Not a few have lamented the passing of the Senate's last great orator of the old eloquent tradition.

We shared the joy of Sen. Dirksen's resonant speeches, full with the quotations from the Bible, Shakespeare, and the classics and spiced with Spoon River humor, all honed when he was a young man in Pekin kneading bread dough in his brother's bakery and reciting classics in the rolling rhythm of the breadboard.

We shared the wonder at that cathedral organ voice that could thunder like the artillery he heard in World War I or whisper like a lover.

But the senior Senator from Illinois must be remembered for more than a great oratorical style.

Here was a man who believed fiercely in the basic difference between right and wrong. His words often sent well-educated reporters scurrying to their dictionaries, but his principles were as uncomplicated as the Illinois prairies from which he rose.

Everett McKinley Dirksen's priorities were simple. He owed his first allegiance to God, his second to the United States of America, his third to his family, his fourth to the Republican Party.

No President he ever served quarreled with those priorities. His wife Luella would not have cared the way she did if they had been different.

Without Sen. Dirksen, President John F. Kennedy would not have had the Nuclear Test Ban Treaty which is regarded as his tallest monument.

Dirksen's reasoning was simple:

"I should not like to have written on my tombstone, 'He knew what happened at Hiroshima, but he did not take the first step.'"

Without Sen. Dirksen, President Lyndon B. Johnson would not have had the civil rights legislation that he considers his greatest contribution to the nation.

Without Sen. Dirksen, President Dwight D. Eisenhower's programs would have been emasculated in his last two years in office by a high-riding, newly-elected Democrat majority. Those were the years when a Dirksen-Johnson friendship born in the house in the late 1930s began to bear the fruit of national responsibility.

Without Sen. Dirksen, President Nixon would not have won Senate approval of the Safeguard anti ballistic missile system.

Without Sen. Dirksen, Mr. Nixon now faces trying days on Capitol Hill. No one since Sen. Robert A. Taft better deserved the title of "Mr. Republican" and it's hard to recall any Senator who had the man from Pekin's ability to lead a small band to decisive victories.

It is hard to forget how in the early 1960s, faced with overwhelming odds, Sen. Dirksen successfully defended the rights of working men against compulsory unionism; how only a year ago he directed the strategy that blocked Abe Fortas' nomination as Chief Justice of the United States; how he stood staunchy alongside President Johnson in the trying ordeal of Vietnam, privately leaning toward a "victory" policy, but publicly supporting his old friend on what to Dirksen was the best of all grounds:

"Because he is my President . . ."

Sen. Dirksen was not without his critics. They had grown in recent years, particularly in the ranks of liberal Republicans who complained that the Senator was out of step with the times, that his ideas were old-fashioned, that he did not understand the changing America.

Sen. Dirksen understood it. But he didn't like it.

It was only after grave soul-searching that he supported sweeping civil rights and educational changes.

"They are remaking America and you won't like it." He warned in the early stages of debate, but later in his final argument supporting President Johnson's proposals, he said:

"The time has come for equality in sharing Government and education, and in employment. It will not be stayed or denied. It is here."

But the time had not come for other changes.

Sen. Dirksen died without realizing one of his fiercest convictions—the restoration of prayer to public schools.

Nothing shook the old lawmaker more than the Supreme Court ruling outlawing such prayers. In Dirksen's view, the Court had taken something basic away from America.

His memory could be served in no better way than to hasten passage of a constitutional amendment that puts prayer back in the classroom and reasserts the Nation's faith in the words Everett McKinley Dirksen lived by:

"In God We Trust."

Mr. SHRIVER. Mr. Speaker, I join with millions of Americans in expressing my personal sorrow over the loss of a great legislator and distinguished American, EVERETT DIRKSEN. On behalf of the people of the Fourth Congressional District of Kansas, I express heartfelt sympathy to Mrs. Dirksen and their daughter. As the President ably pointed out in his eulogy yesterday, Senator DIRKSEN belonged to all the people. He was as highly regarded in Kansas as he was in Illinois.

He was indeed "one of a kind," and he will be sorely missed. He exercised great influence on much of the significant legislation of our times. He was a powerful spokesman for the Republican Party, and he loved the United States of America. But to EVERETT DIRKSEN, America always ranked above partisan politics.

We who knew him, who respected him, who worked with him, will never forget him. He was truly one of the great ones.

Mrs. Shriver joins with me in this expression of sorrow and sympathy on the loss of a good friend and a great patriot.

Mr. CLANCY. Mr. Speaker, I rise today to join my colleagues in expressing sorrow over the loss of that great statesman, EVERETT MCKINLEY DIRKSEN. The Senator was truly a leader in every sense of the word. He was held in highest esteem by his constituents and his colleagues who looked to him as a source of pride and inspiration. His service in both the House and the Senate represent a lifetime of legislative achievement. His colorful life, dramatic career and oratorical style made him a striking, unique legend of our time.

I wish to extend my deepest sympathy to his beloved wife and family.

Mr. JONES of Tennessee. Mr. Speaker, EVERETT MCKINLEY DIRKSEN has left our midst in the Halls of Congress but he lives on in our hearts and minds. The pictures he has drawn on the pages of history will never fade but instead will become more vivid as each new generation brings them out and dusts them off in order to view the delicate art of leadership.

A leader is a trusted servant, and Senator DIRKSEN portrayed this so masterfully that future generations will have to do little if any retouching when they use his art as their example.

During his 36 years of service, he shared with his constituency, his party, and his Nation some of their highest and lowest points in history. Elected to the House of Representatives in 1933 with his party in power, he immediately experienced the depression and party change-over of the Presidency and the Congress which lasted through the war years of the 1940's. I feel it was during these years when others showed weakness that he gained the strength to carry on the business of his Nation and party which we saw him display to the very last moment of his life.

Senator DIRKSEN was an oratorical artist who could mold the thinking of both parties into a workable pattern from which a solution could be fashioned. He was a craftsman who never forced or pushed, but gently and firmly pressed the clay of the Nation's needs as he felt them into a statuesque presentation which all could look at and admire even though they might not agree with its message.

I personally am grateful to Senator DIRKSEN for showing me by his stalwart example how a dedicated leader of his party can also be a worthy and trusted servant of all the people of his Nation.

Mr. QUILLEN. Mr. Speaker, I was saddened at the passing of the Honorable EVERETT M. DIRKSEN. The Nation has lost one of her most illustrious sons.

He was a great American, a great statesman, and a great leader.

The Nixon administration depended on him, as did other administrations for more than a quarter of a century. He was a Lincoln to his party and a dedicated champion for a better way of life for all Americans.

We must not let his passing discourage us, but rather provide an impetus for all Americans to strive even more diligently toward attaining the goals and ideals which were so precious to him. His inspiration to his party and to all Members of Congress lives on as a challenge for us.

EVERETT DIRKSEN was a rare individual. He may well be characterized as "a man for all seasons," for he served his State, his party, and his country equally diligently and well. His infectuous personality had two facets—wit and charm as well as logic and pragmatism. These served to influence the age in which he lived. His loyalty to the Republican Party was overshadowed only by his unfailing love of his family and loyalty to his country—no matter the season. He served his country unfalteringly—not only in the summers of his time—but also when the going got rough. He could be counted on to put forth the added effort, travel the extra mile, and meet any situation with a fixed determination to get the job done.

EVERETT DIRKSEN'S views and ideas were perpetrated greatly through the influence of the news media. We were aware of his genius on a personal basis; however, the public depended on the news media to form its judgment.

The following editorial was broadcast on WCYB, a television station in Bristol, Tenn., in my district. I feel it merits repetition since it reflects the views of so many of my fellow Tennesseans and Americans. It is entitled "Dirksen Influence Was Tremendous":

DIRKSEN INFLUENCE WAS TREMENDOUS

America admires a winner and leader, especially if he has the ability and adroitness to create an aura of color around himself.

Senator Everett McKinley Dirksen of Illinois captured their admiration and fancy. So millions of Americans who knew Senator Dirksen only through television, radio and the printed word, regret his passing from life and the political scene.

Senator Dirksen was the most powerful figure in Congress for the past decade. He was by far the most colorful, with his rare skill for oratory and debate, and unusual personal appearance.

Politically, he generally mirrored the evolution of the American economy and thought.

He went to Congress in 1932 as an arch conservative. Within the past decade he gave vital support to civil rights legislation, a bond issue for the United Nations, and a treaty banning above-ground nuclear testing. From isolationist he became an internationalist.

Yet he retained his conservatism to the extent that he has sought a constitutional amendment to override the Supreme Court decision that population be the sole basis for apportioning seats in State legislatures.

Mr. Dirksen served either in the House or Senate for 35 years. He was highly intelligent.

During that more than a third of a century hundreds of people went to him for help. When he felt the justness of their positions he helped many hundreds. He also helped scores of other Members of Congress with their legislation.

Senator Dirksen had the ability to make use of those whom he had helped. That probably was the secret of his rare Congressional power in the final decade of his life.

It was the Dirksen off the floor of Congress that we liked best. He could put on a flamboyant show for newsmen. He could be bitingly satirical . . . he was a past-master as a conversationist.

The Senator's daughter married a Tennessean and he was a close friend of the late Rep. B. Carroll Reece of Johnson City. He developed rare familiarity with State politics in the South.

On one occasion he sympathized with our stateline problem of covering five States. He did it with a half-hour word-picture of the political situations in those States and some prophecies that became truth. We marveled at his detail.

We also marveled at his physical endurance. For years before his last illness Senator Dirksen suffered from a bleeding ulcer, a pinched nerve in his back and emphysema.

The Congress and the Nation have lost a rare figure. His death will have some deep visible effects on the Washington scene.

This editorial was picked at random. There were many other glowing tributes—tributes that will linger forever in the hearts and minds of Americans.

My wife joins me in extending deepest sympathy to his wife and members of his family.

Mr. WYLIE. Mr. Speaker, many people from my district have written and called expressing their feeling of profound loss due to the death of Senator EVERETT MCKINLEY DIRKSEN. One constituent called

at 1 a.m. Monday morning, after hearing of the tragedy on the late news, to inquire as to the address of Mrs. Dirksen so that he might send her a telegram of sympathy. People all across the Nation felt a personal loss when this great man passed away. I would be remiss if I did not take advantage of the opportunity afforded me as a Member of the U.S. House of Representatives to place in the CONGRESSIONAL RECORD for history some of the thoughts of my constituents and my own concerning this outstanding American.

Senator DIRKSEN was a very important and extremely busy public official. Yet he was kind and generous with his time and wise counsel, especially to new Members of the Congress. Many of my constituents had written to me asking that I support the Dirksen amendment to the Constitution which would permit prayer in public schools and buildings. I approved of the amendment but felt a need to do more than pay lipservice. So I called Senator DIRKSEN about his amendment. He said, "Come on over. We'll talk about it." When I arrived his waiting room was full of people. But because of his intense interest in his resolution, he wanted to give it first priority. He suggested that I introduce a similar resolution in the House, which I did. Most say that the possibility of such an amendment died with the Senator. I think it would be a fitting, lasting tribute to him if the Members of Congress would now adopt a resolution which would submit such an amendment to the people of the States for approval.

Yes, EVERETT MCKINLEY DIRKSEN has now passed into the pages of history but the contributions of this great statesman will never die. His memory will serve as an inspiration to all who follow. As many great Americans, Senator DIRKSEN began life as a smalltown boy and rose to the pinnacle of American politics. He has been termed by President Nixon "a giant in the history of Congress," an adviser and confidant to Presidents, a colorful and sparkling orator, a skilled parliamentarian, a loyal Republican, and—above all—a patriot and great American.

He possessed the courage of his conviction and his integrity, along with his many other qualities, endeared him to the Nation and created a legend in his own time.

All of us in this House can profit from his example as a dedicated public servant and as a kind and generous man. One of my constituents suggested we take his wise counsel regarding his prayer amendment. I would like to associate myself with the idea. While we are considering another amendment to the Constitution, relating to the selection of the President and Vice President, we should consider the possibility of a constitutional amendment to permit voluntary participation in prayer in public schools. Such an amendment would be an appropriate lasting monument to this great God-fearing man.

Mr. BYRNES of Wisconsin. Mr. Speaker, it is with a feeling of deep personal loss that I join in paying tribute the memory of EVERETT MCKINLEY DIRKSEN.

I was privileged to know and work with him as a Member of this body. His kindness and encouragements when I first came here will never be forgotten. During the years of his service in the Senate, when I was privileged to work closely with him on policy matters affecting our party and on legislation in which we were both involved, my respect for him, and my friendship with him, grew daily.

Senator DIRKSEN was a leader of men. He knew the demands of the legislative process in a representative government. While the Nation came to know him for his colorful personality and his inimitable gifts of humor and oratory, those of us who worked with him knew his other side—his grasp of the issues, his firmness in standing for what he believed right, his ability to achieve the kind of compromises necessary if a diverse society is to function.

Of EVERETT DIRKSEN, we can truly say that the Halls of Congress will not be the same now that he has been taken from us. He made his mark here and upon the Nation. He will be sorely missed. Mrs. Byrnes joins me in extending our deepest sympathy to Mrs. Dirksen and his family in their time of sorrow.

Mr. BROOMFIELD. Mr. Speaker, I join my colleagues in marking the passing of the distinguished Minority Leader of the Senate, EVERETT MCKINLEY DIRKSEN.

A wise and eloquent man once said:

Whom the gods love die young no matter how long they live.

At 73, Senator DIRKSEN died youthful, a favorite of the common people as well as the gods. He was, as President Nixon said, a politician in the finest sense and an extremely likeable man.

As in the case of other great men, he was personally a paradox.

He cultivated a public reputation for eloquence, affability, and as a champion of good-natured causes. His television appearances, his writing, and his speaking, his devotion to gardening and his quick wit gave vitality and substance to that image.

Yet, there was much more. The foundations of his life were laced with earnest determination, studious hard work, and a remarkable professionalism in achieving the goals he pursued. Despite an outward casualness, he was a man meticulously aware of history, fact, and the nuances of political life.

A clergyman and acquaintance recalled the other day that as a young man, the Senator became interested in the Bible, studied it with increasing intensity and finally committed whole passages to memory.

That same single-minded intensity and devotion to hard work were hallmarks of his work in this body.

He worked long hours in the House often taking home a bulging briefcase. He immersed himself in the issues that were his primary responsibility and became a respected and recognized authority. The price was failing eyesight which eventually forced him to withdraw for a time from public life.

When he returned a few years later, he brought to his work in the Senate the same energy and determination linked with that uniquely likable public personality.

The combination produced a distinguished and colorful career. In recent years, virtually every major piece of legislation passed by the Senate bore his personal mark, a fact which alone testifies to the importance of his life.

His impact often was equal to that of the Presidents of his time and he wielded power with wisdom and precision.

Like other great men, his life was a product of circumstance and timing more than an accurate reflection of his immense talents.

He was a man who very well might have been a President had time and circumstance been kinder. Yet, whatever personal slight fortune may have dealt him was propitious for his country and his party.

In a period in which his party was a distinct minority in Congress, his resonant eloquence was the single Republican voice uniformly recognized in every corner of the Nation.

It was a time when he wielded great influence but was denied many of the satisfactions that usually go with the formal mantle of authority.

Death came at a time when the party he had helped nurture through difficult years was again vital, in power and able to provide him some of those rewards.

As much as his wisdom, experience and leadership will be missed, we are fortunate to have had those colorfully packaged qualities as a vibrant bridge over difficult times.

The inflections of his life, like those in his voice, reassured and sustained us through a period when that is what his party and his country needed most.

Mr. REIFEL. Mr. Speaker, the death of EVERETT MCKINLEY DIRKSEN is a great loss to all of us. The late senior Senator from Illinois was a respected leader not only in his party and the U.S. Senate, but throughout the Nation.

He was a politician in the best sense of the concept. His life style, if not closely followed, should at least be carefully studied by all who seek influence and the wise use of it, who feel compassion for their fellow man, and who want to improve the entire world community.

Mr. STEIGER of Wisconsin. Mr. Speaker, the death of Senator EVERETT MCKINLEY DIRKSEN marks the end of an era. It will be a long time before the American political scene sees the likes of Senator DIRKSEN. The combination of his oratorical eloquence and his imprint on the laws of this Nation make him a unique American leader.

While it was not my privilege to know the Senator well, he stands out in my remembrances from the time of his 1952 speech to the Republican National Convention in Chicago. I am saddened by his passing personally, but more importantly the Nation loses when a man like Senator DIRKSEN leaves the governmental scene. There are few men who serve in public office who can truly be called giants, but in my judgment Senator DIRKSEN is one of them.

Mrs. Steiger joins in extending sympathy to Mrs. Dirksen, Senator and Mrs.

Baker, and to the rest of the Dirksen family.

Mr. ROBISON. Mr. Speaker, as others have noted, after Senator EVERETT M. DIRKSEN was made, God threw away the mold—for he was, truly unique.

His loss is a national loss, and at the same time a personal loss to each and every one of us, for this fierce patriot, this courtly personage, this great orator who was, perhaps, the last of his kind, and this skilled legislator who left his personal mark on nearly every major piece of legislation that has passed from Capitol Hill to the White House during his long years of service, simply cannot be replaced.

EVERETT M. DIRKSEN was the very epitome of a U.S. Senator. He looked like one; he acted like one—and enjoyed every dramatic moment of it—he spoke like one, loving words as much as he did the flowers he grew, cherishing the proper placement of each and nourishing both with the same tender, loving care; but, most of all, he served his Nation and his people in that effective, dedicated, and always-faithful manner that typifies the height of legislative service in which we believe to be the greatest legislative body in the world.

His wit, his patience, and his unfailing good humor in the midst of adversity, have become well known; but his uncanny ability to bring ideas and attitudes together without sacrifice of principle in that spirit of compromise which is the genesis of all legislative progress will be remembered longer—for it was in this latter fashion that he served both his calling and his beloved Nation.

Some have said he should have been a Shakespearian actor. I think, perhaps, he was—in a modern sense—much of the time. But, if so, it was an effective role, and one he enjoyed as well. Whatever the event, I have searched Shakespeare's works for the most appropriate lines to use in this tribute to our departed friend and colleague.

Though others with the same idea in mind may well already have used them, these lines from, first, "King Richard II" and, then, from "Julius Caesar" seem to me to best sum up the life of this most-estimable of all public servants:

"The purest treasure mortal times afford
Is spotless reputation. . . .
Mine honour is my life; both grow in one;
Take honour from me, and my life is done."

And then:

"His life was gentle, and the elements
So mix'd in him that Nature might stand up
And say to all the world, 'This was a man!' "

Mr. Speaker, I repeat: We have suffered a grievous loss, and one that will be almighty hard to overcome.

Mrs. Robison joins me in expressing our regrets to Mrs. Dirksen, to Senator and Mrs. Howard Baker, Jr., and to the people of the State of Illinois.

Mr. DANIELS of New Jersey. Mr. Speaker, I rise today to pay tribute to the late minority leader of the Senate, EVERETT DIRKSEN. The senior Senator from Illinois was a powerful influence on three and one-half decades of national legislative history. During his 16 years in the House and 18 years in the Senate, EVERETT DIRKSEN became the "politician's politician." He understood the art of compromise but knew well enough when he had to stand firm. When he was under intense pressure he was able to bring to his side, those who opposed him.

He was a leader. He made opinion, shaped it, molded it, gave it form and substance. He rallied about him men of diverse philosophy and brought them to a common cause. He did not require that all of his followers come together under a single banner; those whose support he sought came with their honor intact and with the knowledge that their own principles had not been compromised.

He asked no more of others than he was prepared to give of himself. He fell to tasks for which lesser men might not have had the stomach for no other reason than it was required of him. He understood the demands of leadership when he said of himself:

I am of the stuff which cries "Chief, hand me the red-hot poker."

Unlike too many "little statesmen" for whom foolish consistency is a hobgoblin which diverts them from the truth, DIRKSEN saw himself in the course of history and understood the need to revise his own attitudes to fit the prevailing needs of the Nation. On issues of foreign policy, civil rights, and economics he was attacked because, according to his detractors, he had changed his mind. Undoubtedly he had. But he did so, not capriciously, but after much agonizing and only after he had convinced himself that national requisites had indeed changed. He understood Victor Hugo's immortal line:

Stronger than all the armies is an idea whose time has come.

After three and one-half decades, even though EVERETT DIRKSEN'S time had come, his life stands as a monument to political leadership, a life which disavowed foolish consistency for dynamic change.

Mrs. Daniels joins me in extending deepest sympathy to Mrs. Dirksen and to Senator and Mrs. Howard Baker, Jr., on their great loss.

Mr. EDMONDSON. Mr. Speaker, the Congress has lost one of its great legislators in the death of Senator DIRKSEN.

The Senator from Illinois, who began his illustrious carrer in this body, was undoubtedly one of the Nation's best known political leaders. He was a master of the legislative processes and one of the most influential men in our Government.

Always considerate and courteous in his dealings with others, the Senator was one of the few in this Capitol whom visiting constituents always recognized and generally wanted to meet. He was invariably generous and warm in his visits with the people from any State who wished to greet him, and was willing to discuss any public issue.

I deeply appreciated his kindness to Oklahomans on the several occasions when he met with constituents from the Second District, and know that many Americans share a sense of loss in his passing.

Mr. PRICE of Texas. Mr. Speaker, the unexpected and untimely death of Senator EVERETT MCKINLEY DIRKSEN shocks and saddens us all.

He was a great man and a great political leader. His wisdom, wit, and personality will be sorely missed in the Congress of the United States, but what will be missed most is his legislative skill and statesmanship. Without the untiring efforts of Senator DIRKSEN, many of the most important legislation in recent years would not have become law.

EVERETT DIRKSEN was more than a political craftsman of the first order; he was a political personality which had no equal since the days of Daniel Webster. His colorful personality, his engaging air, and his bombastic colloquies delivered in a rich baritone, set a style in the Senate that may never be recaptured.

Mr. ROONEY of New York. Mr. Speaker, one of the voices of the Senate, or more correctly one of the voices of our time, has been stilled. The passing of the Honorable EVERETT MCKINLEY DIRKSEN, distinguished minority leader of the other body and a longtime friend, has saddened us all, for his voice was an almost irreplaceable one. I had the privilege of knowing, working with, and being a friend of EVERETT DIRKSEN for many years. He served as a fellow member of the House Committee on Appropriations and later was a member of the Senate Appropriations Committee. EVERETT DIRKSEN was known the length and breadth of the land as his mellifluous tones and flowing mane graced thousands of television programs and news pictures. But he was known the length and breadth of Congress, too, not for these caricatures but as a hard working, professional politician and warm, generous friend. He was a professional in every sense of the word and his word was professional in that it was never a thing given lightly. Mr. Speaker, the people of Illinois and the U.S. Congress will miss EVERETT DIRKSEN as will his many friends. To his dear wife and family I extend the Rooney's deepest sympathy and prayers.

Mr. MURPHY of Illinois. Mr. Speaker, I wish to join my colleagues in paying tribute to the late EVERETT M. DIRKSEN, the former senior Senator from the State of Illinois.

Senator DIRKSEN will long be remembered for his dedicated and diligent service to his party, his State and to the Nation. The public knew EVERETT DIRKSEN as a colorful personality and an eloquent orator. In Congress, however, this skilled legislator was admired for his sound grasp of the role of the legislative process in a democratic government. Senator DIRKSEN was firmly partisan when partisanship was appropriate, but could be thoroughly statesmanlike when the best interests of the Nation demanded it.

Mrs. Murphy joins me in expressing our regrets and extending our prayers to Mrs. Dirksen and to the family in their bereavement.

GENERAL LEAVE TO EXTEND

Mr. ARENDS. Mr. Speaker, I ask unanimous consent that all Members may

have 5 legislative days in which to revise and extend their remarks on the life, character, and service of the late Honorable EVERETT MCKINLEY DIRKSEN.

The SPEAKER. Is there objection to the request of the gentleman from Illinois?

There was no objection.

INVITATION TO ATTEND MEMORIAL SERVICES FOR THE LATE HONORABLE EVERETT McKINLEY DIRKSEN

The SPEAKER laid before the House the following resolution from the Senate of the United States, which was read:

S. RES. 254

Resolved, That the Secretary invite the Members of the House of Representatives to attend memorial services for the Honorable Everett McKinley Dirksen in the rotunda of the Capitol on Tuesday, September 9, 1969, at 12 o'clock noon; and be it further

Resolved, That invitations be extended to the President of the United States and the members of the Cabinet, the Chief Justice and Associate Justices of the Supreme Court of the United States, the Diplomatic Corps (through the Secretary of State), the Chief of Staff of the Army, the Chief of Naval Operations of the Navy, the Chief of Staff of the Air Force, the Major General Commandant of the Marine Corps, and the Commandant of the Coast Guard to attend the memorial services in the rotunda of the Capitol.

ACCEPTANCE OF INVITATION TO ATTEND MEMORIAL SERVICES FOR THE LATE HONORABLE EVERETT McKINLEY DIRKSEN

Mr. ALBERT. Mr. Speaker, I offer a resolution and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 531

Resolved, That the House of Representatives accepts the invitation of the Senate to attend memorial services for the Honorable Everett McKinley Dirksen in the rotunda of the Capitol on Tuesday, September 9, 1969, at 12 o'clock noon.

Resolved, That the Clerk communicate these resolutions to the Senate.

The resolution was agreed to.

A motion to reconsider was laid on the table.

HOUR OF MEETING TOMORROW

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that when the House adjourns today it adjourn to meet at 11:45 o'clock a.m. tomorrow.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

AUTHORITY FOR SPEAKER TO DECLARE A RECESS SEPTEMBER 16 FOR THE PURPOSE OF RECEIVING APOLLO 11 ASTRONAUTS, AND VACATION OF PREVIOUS AUTHORITY FOR SEPTEMBER 10

Mr. ALBERT. Mr. Speaker, I ask unanimous consent that the authority for the Speaker to declare a recess on September 10 be vacated.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

Mr. ALBERT. Mr. Speaker, I also ask unanimous consent that it may be in order for the Speaker to declare a recess at any time on September 16 for the purpose of receiving in joint meeting the Apollo 11 astronauts.

The SPEAKER. Is there objection to the request of the gentleman from Oklahoma?

There was no objection.

THE LATE HONORABLE HAROLD A. PATTEN

(Mr. UDALL asked and was given permission to address the House for 1 minute, and to revise and extend his remarks.)

Mr. UDALL. Mr. Speaker, the House has heard this morning a series of deserved tributes to a great and incomparable American, the late Honorable EVERETT DIRKSEN, and I join in those tributes.

However, I have the sad and unfortunate duty to officially inform the Members of the House of the death last Saturday of one of our former colleagues, the Honorable Harold A. "Porque" Patten of Arizona.

Mr. Patten died at the age of 61 after a long and extremely painful and difficult illness in the Veterans' Hospital in Tucson, Ariz.

"Porque" Patten, as we called him, served with distinction in the 81st, 82d, and 83d Congresses, and with particular distinction on the Committee on Armed Services. Although he was virtually assured of reelection in 1954, he declined to seek the Democratic nomination for the 84th Congress.

He was an extremely popular and congenial Member of this House. I think no one could ever meet "Porque" Patten and forget him. He had a unique zest for life which made him more friends than almost anyone I ever knew.

"Porque" was born in Husted, Colo., in 1907 and moved with his family to Tucson in 1916. He attended the Tucson public schools and graduated from Tucson High School. At the University of Arizona, where he earned a degree in 1930, he was an outstanding athlete. His first job was as a coach and teacher of physical education at Tucson High School.

I might add that the athletic programs at the University of Arizona never had a better friend than "Porque" Patten. He was constantly on the lookout for budding athletes who could add their talents to the university's athletic programs.

In 1933 Mr. Patten was named director of recreation for the city of Tucson and the Tucson public schools. In 1939 he stepped up to the position of State recreation director.

Looking back on those years, I would say that Harold A. Patten was one of the most successful and best-liked persons ever to work in the field of public recreation. Through his efforts thousands of young people from poor neighborhoods found activities that were interesting and exciting to them. Through his success in these activities he made good citizens out of an awful lot of youngsters who needed his kind of infectious leadership and guidance.

During World War II Mr. Patten gave truly outstanding service as a combat observer with the Air Corps, earning a proud list of decorations in 31 months of foreign service in the European theater.

He entered military service with the Seventh Cavalry Regiment as a first lieutenant in August 1940. He transferred to the Air Corps the following year. As a combat observer he served in Africa and Italy, earning the Air Medal, 10 battle stars, an invasion arrowhead, and the coveted Wings-Aviation Francaise d'Afrique. He was discharged as a major in 1945 and retired from the Air Force Reserve in 1960 as a lieutenant colonel.

This man of great public service and warm, friendly personality will be sorely missed by his fine family, his wife Mary and his two sons, Mike and Tom, by his host of personal friends, many of whom still serve and work in the Congress, and by the State and Nation that he served so devotedly.

Mr. Speaker, last year when Mr. Patten was first confined to the hospital and it became known he would never recover, the Arizona Daily Star published an editorial about your old colleague which brought back happy memories of his youth. Without objection I would like to conclude my brief remarks today by inserting the text of that editorial at this point in the RECORD:

A TUCSON SAGA

Occasionally one looks around and sees something so strikingly in Tucson character that it seems to deserve comment. The career of Harold A. (Porque) Patten, former First District Congressman, former Commander of the Arizona American Legion, and one-time Tucson High School and University of Arizona athlete, is a good example.

The "Porque," by the way, comes from Patten's propensity as a boy to use that word, which in Spanish means "Why?"

Porque's father was a railroad engineer and at one time a professional baseball player. Mr. and Mrs. Herbert Patten lived for some years on East Ninth Street, from where Porque and his sister, Helena (now Mrs. Harley Cox of Tucson), went to school. The parental aspirations for education of the children was fulfilled in both Porque's and Pat's (that's Helena's nickname) case.

Porque's father had hoped that Porque would be an athlete. And Porque was a good one on the football field, in high school and at the University. He remains one of the University's most loyal fans.

In the group Porque played with as a boy were a number of people who have attained prominence, though not by going to Congress, as Porque did. One of that old Ninth Street gang was Ted Bland, who likewise was a football player, and who was killed in World War II action of August, 1944.

As Tucson grows, it is good sometimes to remember some of the folks out of its past. Tucson once was a small desert town, largely dominated on east and south sides by Southern Pacific's and at one time El Paso and Southwestern Railroaders. Carl Hayden Community Hospital is in a building on the spacious and beautifully landscaped grounds of the old EP&SW.

The city has grown tremendously. Newcomers have arrived in droves. Perhaps there are only a handful still around who knew

Porque as a boy. Fortunately, the city's character has not changed, and it still possesses the warmth and opportunity that encouraged Porque to achieve football fame and a congressional seat.

Mr. ALBERT. Mr. Speaker, will the gentleman yield?

Mr. UDALL. I yield to the gentleman.

Mr. ALBERT. Mr. Speaker, I wish to associate myself with the remarks of the distinguished gentleman from Arizona. I was not aware of the death of our good friend and former colleague, Harold A. "Porque" Patten. His wife, Mary Rierdon, came from my district in Madill, Okla. Both she and "Porque" were good friends of mine while "Porque" was serving in Congress. We had neighboring offices on the fourth floor of the Cannon Building and visited frequently. He was a wonderful man, a fine Congressman, and highly respected by all of his colleagues.

Mrs. Albert and I join in extending to his family our deepest sympathy.

Mr. GERALD R. FORD. Mr. Speaker, will the gentleman yield?

Mr. UDALL. I yield to the gentleman from Michigan.

Mr. GERALD R. FORD. Mr. Speaker, it was my good fortune to come to the Congress with "Porque" Patten following the election of 1948. His wife and my wife and "Porque" and myself became very close personal friends.

Mr. Speaker, every kind word that has been said about "Porque" Patten was exactly accurate and totally true. He was a warm and friendly person. He worked at his job. People liked him on both sides of the aisle. Many of us regretted that he left the House of Representatives.

I am shocked to hear that "Porque" died. I did not think he was as old as the gentleman from Arizona has said because he never created that impression. He was a great and good friend of mine. I am saddened as my wife, Betty, will be by the news of his passing.

I extend to his wife and to his family our deepest condolences.

Mr. RHODES. Mr. Speaker, will the gentleman yield?

Mr. UDALL. I yield to the gentleman.

Mr. RHODES. Mr. Speaker, I wish to associate myself with the remarks that the gentleman from Arizona has made and to add my own expression of condolence and my sense of personal loss on the passing of my dear and good friend "Porque" Patten.

I served with "Porque" for 2 years as a Member of the House of Representatives. My district is the first district which at that time comprised only Maricopa County. There were only two Members from Arizona at that time, and the gentleman from Arizona from the second district, Mr. Patten, represented the rest of the State. He used to say laughingly that he represented the doughnut and I represented the hole, because of the fact that his district surrounded mine completely.

He was a man who had the capacity of being a friend beyond the usual definition of the term. He was generous to a fault. He was generous with his time. He was generous with his money. He was particularly pleasant and courteous to people from our State who might happen to be in Washington, D.C. In fact, Mary Patten really never knew how many people would be at the house for dinner and she never knew how many people would be there to sleep because "Porque" could not stand anybody from Arizona having a meal at a strange place in Washington or sleeping in a bed that that was not in the home of an Arizonan.

He was a man who contributed greatly to the work of the House of Representatives. His work as a Member of the House of Representatives at the time the Central Arizona project first came up was done diligently and effectively.

He was a member of the Committee on Veterans' Affairs and a member of the Committee on Armed Services. As such he was a most effective man.

He was also a very active member of the Air Force Reserve, who went on active duty every year. He was very proud of his commission and of his connection with the Air Force.

Most of all, he was a good father, a good husband, a good friend and a good American.

To our dear friend, Mary Patten, and to Mike and Tom Patten, Mrs. Rhodes and I extend our deepest sympathies and our assurance that their sense of loss in the passing of "Porque" is shared by us.

GENERAL LEAVE TO EXTEND REMARKS

Mr. UDALL. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks in connection with the life and career of our former colleague.

The SPEAKER. Without objection, it is so ordered.

There was no objection.

THE CONSTRUCTION CUT IS UNBELIEVABLE

(Mr. SIKES asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. SIKES. Mr. Speaker, the proposal to cut Federal construction by 75 percent is unbelievable. It can scarcely be held to be a curb against inflation. It does not involve sufficient funds to have an appreciable influence. If inflation is to be curbed in a realistic way, it will have to be by stronger measures. The proposal is one which leaves completely up in the air the committees of Congress which deal with all levels of construction. Authorization and funding of new construction projects presumably will simply add to the pool of projects awaiting construction. There is also the very unsatisfactory situation of Presidential veto of line item projects which administrative agencies have already justified to the Congreses as fully required for necessary training of the military forces and the proper operation of Government agencies. The question of politics will certainly be charged in connection with the manner in which decisions are reached on those projects which are to be built and those to be further delayed.

Among the paramount items in this discussion is housing for military families and for bachelor officers and enlisted men who live on base. They are among those who have greatest need for improved accommodations and they could be among those most adversely affected.

The entire question is one which requires much more careful thought than is apparent from the early communiques. It presents a distressing picture which will work serious hardship in many areas and almost certainly fail to accomplish the stated objectives. In the meantime, prices will continue to go up and if past history is repeated, an additional 5 to 10 percent per year in cost will have to be reckoned with when the projects are finally built.

The proposal is an unfortunate one which is certain to do more harm than good.

HO CHI MINH NEVER PRAISED

(Mr. ECKHARDT asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ECKHARDT. Mr. Speaker, any man may criticize another man's statement in this well in the manner in which he sees it, except that he may not properly make a scurrilous misrepresentation of another's words. I do not know how the caption preceding the remarks of the gentleman from South Carolina (Mr. WATSON), found its way into the RECORD on page 24372—certainly not by his intention, I am sure, because he is a gentleman. But it is indeed such a scurrilous misrepresentation that it should be stricken from the permanent RECORD. The caption which, to the ordinary voter, appears to be the impartial characterization of a statement previously made on the floor is, and I quote, "Response to the Praise of Ho Chi Minh." Immediately thereafter the gentleman from South Carolina identified the Member whose name he connected with such alleged praise.

No one has ever praised Ho Chi Minh on this floor, to my knowledge. Certainly that Member did not do so. The gentleman from South Carolina should, I think, ask that his remarks at this point be expunged from the permanent RECORD, but if he does not choose to do so, his own statement is at least qualified as being his understanding of the previous speaker's statement, an understanding which the RECORD shows to be egregiously incorrect.

But the caption is not so qualified. It points unequivocably to "praise" which was not made and it appears to be an editorial caption, not necessarily merely the sadly inaccurate opinion or understanding of the gentleman from South Carolina. If the gentleman from South Carolina is the author of the caption, he should ask that it be expunged from the permanent RECORD. If he is not, he should advise the gentleman from Texas that it is not, so he may ask unanimous consent that it be expunged.

SAFE RETURN OF AMBASSADOR ELBRICK

(Mr. STRATTON asked and was given permission to address the House for 1 minute.)

Mr. STRATTON. Mr. Speaker, I am sure all Members of this House received

the news with a great deal of pleasure and a sense of great relief when Ambassador Elbrick was returned safely by his captors yesterday in Rio de Janiero, after the assurance that the Brazilian Government had met the ransom demands.

Ambassador Elbrick is not only a constituent of mine but also a friend of mine. When I first heard news of his capture, I got in touch with the Secretary of State and urged that everything be done which could possibly contribute to the Ambassador's speedy and safe release.

I take this opportunity, Mr. Speaker, to extend my thanks and appreciation and praise now to Secretary of State Rogers and to the Department of State for the outstanding job which they have done in winning the release of Ambassador Elbrick.

Also I take this opportunity as one Member of this House to express my appreciation to the Brazilian Government. These certainly were very onerous and difficult ransom demands which they were obliged to meet, a little bit like having somebody kidnap your baby and then have the kidnappers ask the fellow next door to pay the ransom. However, the Brazilian Government met those terms—not without some opposition, I might—and there may be some serious repercussions in the future.

But we as Americans should be grateful that the Brazilian Government put the safety of our Ambassador above everything else, and he has now been returned to his embassy and his wife.

PERMISSION FOR SUBCOMMITTEE ON PUBLIC HEALTH AND WELFARE OF THE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE TO SIT DURING GENERAL DEBATE TODAY

Mr. ROGERS of Florida. Mr. Speaker, I ask unanimous consent that the Subcommittee on Public Health and Welfare of the Committee on Interstate and Foreign Commerce may sit this afternoon during general debate.

The SPEAKER. Is there objection to the request of the gentleman from Florida?

There was no objection.

NEIL ARMSTRONG HONORED BY WAPAKONETA, OHIO

(Mr. McCULLOCH asked and was given permission to address the House for 1 minute.)

Mr. McCULLOCH. Mr. Speaker, last Saturday, Mr. Neil Armstrong, commander of Apollo 11, the first man on the moon, was welcomed home by thousands of Wapakoneta, Auglaize County, Ohio, people, and by countless other friends and admirers, conservatively estimated to be more than 80,000 people.

A sage of old observed long, long ago:

A prophet is not without honour, save in his own country.

And Rudyard Kipling once said:

Prophets have honour all over the Earth, Except in the village where they were born.

The reception for and the homage paid to Comdr. Neil Armstrong and his family, in his own home town last Saturday, conclusively proved that neither sage, nor muse nor poet could see as far into the future as Neil Armstrong could see into space.

THE LATE HONORABLE EVERETT McKINLEY DIRKSEN

(Mr. DUNCAN asked and was given permission to address the House for 1 minute.)

Mr. DUNCAN. Mr. Speaker, there is a still sadness hanging over us today for this Nation has suffered deep sorrow in the passing of a distinguished American, the Honorable EVERETT DIRKSEN.

Though we have tried in words to express our sympathy to the widow; daughter, Mrs. Howard H. Baker, Jr.; and family members, we at best fall short of the tribute due Senator DIRKSEN. The world has shared his wisdom, his great talent of expression, his humility, his great dignity, his hard work, his efforts for the betterment of man.

He was looked up to by men in all walks of life and was a great friend to all of us, regardless of politics, race, or religion. There is not a single man around who can replace this great statesman; he was, as a newsman said this morning, a "living legend." He enjoyed life, and tried to make others happy too. He left behind many rich deeds from which we can benefit and he helped to write many pages of history through which posterity can gain inspiration, courage, and wisdom. EVERETT MCKINLEY DIRKSEN was a very wise man, a great man.

CALL OF THE HOUSE

Mr. HARVEY. Mr. Speaker, I make the point of order that a quorum is not present.

The SPEAKER pro tempore (Mr. ALBERT). Evidently a quorum is not present.

Mr. MADDEN. Mr. Speaker, I move a call of the House.

A call of the House was ordered.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 159]

Abbitt	Clausen,	Frey
Addabbo	Don H.	Gaydos
Ashbrook	Clay	Giaimo
Ashley	Cleveland	Gilbert
Beall, Md.	Colmer	Green, Oreg.
Bevill	Conyers	Green, Pa.
Biaggi	Corman	Griffiths
Biester	Coughlin	Grover
Bingham	Cowger	Gubser
Blanton	Cunningham	Halpern
Brademas	Daddario	Hansen, Wash.
Brasco	Daniels, N.J.	Hébert
Brock	Davis, Ga.	Helstoski
Brooks	Dawson	Henderson
Burke, Fla.	Dennis	Hungate
Burleson, Tex.	Dent	Johnson, Calif.
Burlison, Mo.	Diggs	Karth
Burton, Calif.	Donohue	Keith
Burton, Utah	Dorn	Kirwan
Bush	Dulski	Landgrebe
Cabell	Dwyer	Leggett
Cahill	Edwards, Calif.	Lipscomb
Carey	Esch	Long, La.
Carter	Fallon	Lukens
Casey	Fish	McEwen
Celler	Fisher	McFall
Clancy	Flowers	MacGregor
Clark	Foley	Mann
Mathias	Quie	Shriver
Mikva	Quillen	Sikes
Mollohan	Railsback	Sisk
Monagan	Reifel	Smith, Calif.
Moorhead	Reuss	Smith, Iowa
Moss	Rooney, N.Y.	Steiger, Wis.
Nichols	Rooney, Pa.	Stuckey
Nix	Rosenthal	Teague, Tex.
O'Hara	Rostenkowski	Tiernan
O'Konski	Roudebush	Watkins
Ottinger	Ruppe	Watson
Patten	St Germain	Whalley
Pepper	Sandman	Wilson,
Philbin	Scheuer	Charles H.
Powell	Sebelius	Wydler
Pucinski	Shipley	Zion

The SPEAKER pro tempore. On this rollcall 300 Members have answered to their names, a quorum.

By unanimous consent, further proceedings under the call were dispensed with.

PEACE CORPS ACT AMENDMENTS OF 1969

Mr. MADDEN. Mr. Speaker, by direction of the Committee on Rules, I call up House Resolution 527 and ask for its immediate consideration.

The Clerk read the resolution, as follows:

H. RES. 527

Resolved, That upon the adoption of this resolution it shall be in order to move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11039) to amend further the Peace Corps Act (75 Stat. 612), as amended. After general debate, which shall be confined to the bill and shall continue not to exceed one hour, to be equally divided and controlled by the chairman and ranking minority member of the Committee on Foreign Affairs, the bill shall be read for amendment under the five-minute rule. At the conclusion of the consideration of the bill for amendment, the Committee shall rise and report the bill to the House with such amendments as may have been adopted, and the previous question shall be considered as ordered on the bill and amendments thereto to final passage without intervening motion except one motion to recommit.

Mr. MADDEN. Mr. Speaker, I yield 30 minutes to the gentleman from Illinois (Mr. ANDERSON), pending which I yield myself such time as I may consume.

Mr. Speaker, House Resolution 527 provides an open rule with 1 hour of general debate for consideration of H.R. 11039 to amend further the Peace Corps Act, as amended.

H.R. 11039 authorizes $101.1 million, the amount requested by the Executive, to finance the operation of the Peace Corps during fiscal year 1970. This is $900,000 less than the fiscal year 1969 appropriation.

In addition, a minor amendment is made to the act to authorize the Comptroller General and the Peace Corps, within prescribed limits, to waive claims of not more than $500 arising out of erroneous payments to volunteers or volunteer leaders of the allowances provided under the Peace Corps Act—mainly readjustment and subsistence allowances.

The Comptroller General would be required to waive claims only when collecting them would be against equity and good conscience and not in the best interest of the United States. They cannot

be waived if there is an indication of fraud, misrepresentation, fault, or lack of good faith on the part of the employee.

The purpose is to avoid unnecessary expense involved in trying to collect from returned volunteers small sums resulting from erroneous overpayments.

It is anticipated that as of June 30, 1970, the number of volunteers overseas will be 2,525 in Africa; 1,800 in North Africa-Near East-South Asia; 2,100 in East Asia-Pacific; and 2,825 in Latin America.

The new Director of the Peace Corps intends to give greater emphasis to the selection of volunteers possessing skills which would permit them to render the most effective service in the countries where they are located. For this reason it is expected that a somewhat smaller number of better qualified volunteers will be provided in the future. The Peace Corps has made a remarkable record of building good will between our country and the nations where the Peace workers have been assigned.

Mr. Speaker, I urge the adoption of House Resolution 527 in order that H.R. 11039 may be considered by the House.

Mr. Speaker, I yield now to the gentleman from Illinois (Mr. ANDERSON).

Mr. ANDERSON of Illinois. Mr. Speaker, I yield myself such time as I may consume.

Mr. Speaker, House Resolution 527 provides an open rule with 1 hour of general debate for consideration of H.R. 11039, the Peace Corps Act Amendments of 1969.

The purpose of this bill is to amend the Peace Corps Act to extend for 1 year the authority in the act. The bill as reported authorizes $101.1 million to finance the operation of the Peace Corps during fiscal year 1970, the amount requested by the Executive. In addition, it makes a minor amendment to the Peace Corps Act to authorize the Comptroller General and the Peace Corps, within prescribed limits, to waive claims arising out of erroneous payments of allowances to volunteers or volunteer leaders.

The bill would authorize $900,000 less than the fiscal 1969 appropriation of $102 million. This reflects the desire of the Peace Corps both to abide by this year's budgetary restraints, and more importantly, as the gentleman mentioned, to put more emphasis on quality rather than quantity in fielding volunteers. Consequently, while there will be a slight reduction in the number of volunteers in the field this year, there will be an increase in the number of skilled volunteers brought into the Peace Corps.

Mr. Speaker, when the distinguished chairman of the Committee on Foreign Relations, the gentleman from Pennsylvania (Mr. MORGAN), brought this bill to the Rules Committee, he spoke in glowing terms of the new directions being charted for the Peace Corps by its new Director, Mr. Joseph Blatchford. He said he was particularly pleased with Mr. Blatchford's intentions to give greater attention to the third goal of the Peace Corps—to contribute to the trained manpower needs of other countries.

Since its inception in 1961, the Peace Corps has grown from a fledgling agency of 120 volunteers in three countries to what it is today, an agency having 12,400 volunteers in 59 countries.

When he appeared before the Committee on Foreign Affairs on July 24, the new Peace Corps Director, Mr. Blatchford, pointed out that in his recent overseas tour, host country officials expressed appreciation for what the Peace Corps was doing, but at the same time, expressed a need for more skilled volunteers to assist them in their development.

In Mr. Blatchford's words:

> The fact is we have said goodby to the days when African countries hungered for help of any kind. The euphoria of independence with its companion promise of outisde aid has given way to a "go it alone" spirit and development budgets straining to get the most out of limited natural or human resources. Requests for outside aid, particularly those bringing people instead of money, today reflect higher priorities and call for higher skills both because the problems are increasingly sophisticated and because of the almost universal yearning to be free of outside dependence.

Mr. Speaker, as the times and conditions change, so must our approaches to meeting the challenges of the changing times. The world of the seventies will not be the same as the world of the sixties. Likewise, the Peace Corps of the seventies will not be the same as the Peace Corps of the sixties. The Peace Corps has done an outstanding job for America and the world over the past decade and it will continue to render a valuable service so long as it is able to adapt to the changing times. I think the new Peace Corps Director is to be commended for recognizing this fact and for taking steps to insure that the Peace Corps is as modern as today and is making a substantial contribution to third world development.

Mr. Speaker, I urge adoption of House Resolution 527 in order that H.R. 11039 may be considered.

Mr. MADDEN. Mr. Speaker, I move the previous question on the resolution.

The previous question was ordered.

The resolution was agreed to.

A motion to reconsider was laid on the table.

Mr. MORGAN. Mr. Speaker, I move that the House resolve itself into the Committee of the Whole House on the State of the Union for the consideration of the bill (H.R. 11039) to amend further the Peace Corps Act (75 Stat. 612), as amended.

The SPEAKER. The question is on the motion offered by the gentleman from Pennsylvania.

The motion was agreed to.

IN THE COMMITTEE OF THE WHOLE

Accordingly the House resolved itself into the Committee of the Whole House on the State of the Union for the consideration of the bill, H.R. 11039, with Mr. NATCHER in the chair.

The Clerk read the title of the bill.

By unanimous consent, the first reading of the bill was dispensed with.

The CHAIRMAN. Under the rule, the gentleman from Pennsylvania (Mr. MORGAN) will be recognized for 30 minutes, and the gentleman from Indiana (Mr. ADAIR) will be recognized for 30 minutes.

The Chair at this time recognizes the gentleman from Pennsylvania (Mr. MORGAN).

Mr. MORGAN. Mr. Chairman, I yield myself 10 minutes.

Mr. Chairman, H.R. 11039 authorizes $101,100,000 to finance the operation of the Peace Corps during fiscal year 1970. This is $900,000 less than the $102 million appropriated for fiscal year 1969.

The bill also includes a minor amendment to existing law to authorize the waiver of claims not exceeding $500, arising from overpayments to Peace Corps volunteers in accordance with legislation already in effect with respect to other Government agencies.

The bill makes no other changes in existing law relating to the Peace Corps.

All of us are aware that, since its beginning in 1961, the Peace Corps has come to occupy an important place, not only in the foreign countries where the volunteers serve but also in the United States.

It is hard for us to realize that since the Peace Corps began 30,000 volunteers have returned to the United States after serving overseas.

If the necessary funds are made available, the Peace Corps plans to take on 7,500 new recruits during fiscal year 1970, and these people will come from communities all over this country.

Although the Peace Corps is a large and important operation, it is not increasing in size or in cost. The new Director of the Peace Corps has announced his intention to give greater emphasis to sending out volunteers who are technicians and somewhat less emphasis to recruiting recent college graduates. He wants to find volunteers who have had experience as carpenters, mechanics, farmers and accountants.

It will be difficult to find people with these qualifications who are willing to work for $75 a month and a very modest living allowance. The Peace Corps believes that it is better to send out fewer volunteers but those who can supply the skills which the less developed countries need the most than to send out people who are easier to locate but are not as able to render the most essential services.

This does not mean that the Peace Corps can or should be transformed overnight. At the present time, over half the volunteers in service are teachers and the school systems in many countries cannot find local people who are qualified to teach. Any drastic curtailment of Peace Corps operations in the immediate future would create serious problems for the countries that are counting on the services of volunteers in their schools and in other programs.

The authorization in this bill will finance an average overseas strength of 9,432 volunteers during fiscal year 1970. Peace Corps volunteers are now serving in 59 countries. Full details as to the number of volunteers in every country are set forth in the tables in the committee report.

There are over 500 volunteers each in the Philippines, Malaysia and India. There are over 400 volunteers in Brazil. The presence of these young people from the United States in these countries is important to them, and it is important to our people that they be able to carry

out their plans to serve in these countries.

The record of the Peace Corps overseas is remarkably good. At infrequent intervals there are press reports of incidents involving the Peace Corps. In most cases it turns out that charges against Peace Corps volunteers have been brought by leftist groups in the country who are trying to embarrass their governments by charging that the volunteers are spies or that their presence is evidence of American imperialism.

There are eight countries where Peace Corps operations have been terminated. In two of these the Peace Corps has gone back at the request of the government. In no case was such action the result of any incident or incidents involving volunteers. In some cases the governments did not want the Peace Corps to continue because they wanted to indicate their dissatisfaction with U.S. foreign policy.

The Government of the Islamic Republic of Mauritania in Africa ordered the Peace Corps out on 48 hours' notice in June 1967, when they broke off diplomatic relations with the United States following the Israel-Arab war.

Back in 1966, Guinea ordered the Peace Corps out of the country because when a Pan American airplane stopped in Ghana, the Ghana authorities seized a delegation of officials from Guinea and held them hostage. Guinea blamed the United States because Pan American was a U.S. airline, and kicked out the Peace Corps. The Peace Corps has now gone back at their request.

Although Pakistan encouraged the Peace Corps to close out operations in 1967, it did not expel the Peace Corps and explained their attitude on the grounds that the volunteers did not have the right technical qualifications. Many of us suspected that Pakistan turned against the Peace Corps because the United States did not take their side in their war with India.

The Peace Corps also closed out in Indonesia, Gabon, Tanzania, and Ceylon, but in Ceylon they have gone back after a new government took over.

There have been a number of cases where Peace Corps volunteers have been attacked because they were teachers in schools where there were riots and demonstrations. Apparently they were not attacked because they belonged to the Peace Corps, and such attacks did not reflect any underlying hostility toward Americans. Being a teacher may be a hazardous occupation in any country.

I want to say a word about the provisions of the bill relating to the settlement of claims. There is a law on the books, the citation appears in the bill, which authorizes the waiver of any claim of less than $500 for erroneous payment to any employee of an executive agency.

The bill merely extends the same authority which already applies to other Government agencies to Peace Corps volunteers.

This does not mean that all claims under $500 will be waived. The Comptroller General is required to waive claims only when collecting them would be against equity and good conscience and not in the best interest of the United States.

Claims cannot be waived if there is an indication of fraud, misrepresentation, fault, or lack of good faith on the part of the employee.

The purpose is to avoid unnecessary expense involved in trying to collect from returned volunteers small sums resulting from erroneous overpayments.

Mr. Chairman, the United States has a good thing going in the Peace Corps. The Peace Corps has a new Director who apparently is not an empire builder. He is trying to improve and adapt rather than to expand. I believe the direction he is taking deserves the support of the Congress, and I hope that this bill will be approved by a substantial majority.

Mr. ADAIR. Mr. Chairman, I yield myself such time as I may consume.

Mr. Chairman, I rise to speak in support of the Peace Corps authorization bill. Chairman MORGAN has already reviewed many of the details, but I would like to enmphasize that the bill we consider today is an authorization request of $101,100,000 which is less than the amount appropriated a year ago.

I commend the new Director of the Peace Corps for recognizing the need for fiscal restraint. I am pleased that under the leadership of Mr. Joseph H. Blatchford, the Peace Corps is taking positive steps to tighten up its administration, reduce its costs, and improve its efficiency.

It should be noted that the Peace Corps is moving toward a new emphasis on quality rather than quantity, which will enable the United States to serve more effectively the countries that are hosts to our Peace Corps volunteers. There will be greater emphasis on recruiting volunteers with practical skills in agriculture, carpentry, and the various trades—skills which are urgently needed in many of the developing countries.

As Members of the House know, while I have supported the Peace Corps in the past, I have also been a frequent critic of its administration. So, it is a particular pleasure for me today to offer my strong support for this authorization bill, confident that the Peace Corps is taking the steps necessary to assist developing countries more effectively.

For the information of Members, I include the following explanatory material relative to countries in which the Peace Corps is no longer present:

COUNTRIES FROM WHICH THE PEACE CORPS HAS WITHDRAWN AND CIRCUMSTANCES OF WITHDRAWAL

CEYLON

The Peace Corps suspended its operations in Ceylon in June, 1964, when the only group of Volunteers to serve in Ceylon completed its two years of service. The Volunteers had served as science, home economics and physical education teachers. The Government of Ceylon, under the Prime Ministership of Mrs. Bandaranaike, did not ask for replacements for these Volunteers nor for additional groups. It is noteworthy that the Government of Ceylon-Peace Corps agreement was not cancelled, allowing Ceylon to invite the Peace Corps to reopen its program at a future date without the necessity of negotiating a new agreement. In early 1967, under the Prime Ministership of Dudley Senanayake, the Government of Ceylon, under this original agreement, requested new Peace Corps Volunteers to work in food production and rural community development. These Volunteers arrived in Ceylon on December 12, 1967.

CYPRUS

When hostilities broke out in Cyprus, it proved impossible for the Peace Corps Volunteers to continue their work during those hostilities. Accordingly they were pulled out in February, 1964, a few months before their normal termination. By the time hostilities stopped, their tour was up, and therefore, they never went back.

GUINEA

On Tuesday, November 8, 1966, President Sekou Toure of Guinea ordered expulsion of the Peace Corps Volunteers by November 15, 1966. At the same time, he complimented the Peace Corps for its contribution and sacrifice. This act of expulsion was the culmination of a series of incidents which created strained relations between Ghana and Guinea and in which the United States was accused of complicity. A Pan American plane en route to Addis Ababa made a stopover in Accra. Ghanaians boarded the plane and ordered the Guinean delegation to disembark, and members of the delegation were held as hostages. Blaming the incident on the United States because Pan Am is an American company, the Embassy residence was ransacked, Pan Am World Airways personnel were expelled, and eventually, other official United States personnel and the Peace Corps were also expelled. In September of 1968 the Government of Guinea requested the re-establishment of a Peace Corps program in that country, and the Peace Corps responded affirmatively. The first program to be mounted involves Volunteer Mechanics.

INDONESIA

In May, 1965, the Peace Corps program consisting primarily of sport coaches was terminated as a result of a mutual decision by the Peace Corps and Indonesian authorities. The Peace Corps initiated the action because it had become apparent that the Volunteers were no longer able to operate effectively in the face of a calculated campaign on the part of the PKI (Indonesian Communist Party) to harass and embarrass the Peace Corps, and if possible, force its withdrawal. By April, 1965, it had become apparent that the Indonesian Government could no longer guarantee the safety of the Volunteers. In the May withdrawal, there was a mutual agreement on the part of the Peace Corps and the Government of Indonesia that we would look forward to the time when Peace Corps Volunteers could resume their service. The withdrawal of the Volunteers was carried out effectively and without incident. Relations between the Peace Corps and the Government of Indonesia continued on a friendly basis throughout the withdrawal.

MAURITANIA

The Government of the Islamic Republic of Mauritania, in order to show its solidarity with other Arab states during the war with Israel, broke diplomatic relations with the United States on June 7, 1967. The Peace Corps with other United States personnel was given 48 hours in which to leave the country.

PAKISTAN

The Peace Corps closed out its operations in Pakistan in June, 1967, when the first group of Volunteers completed its full tour of service. The first group of Volunteers arrived in Pakistan in the autumn of 1961. They and subsequent groups of Volunteers served in rural public works, agriculture and education programs. The Government of Pakistan decided not to request additional Volunteers because it determined that its needs were for technicians and specialists of

a more sophisticated level than the Peace Corps generally provides, and we were not willing to concentrate such a high percentage of those we have in just one country.

GABON

On December 21, 1967, American Embassy in Libreville, Gabon, received a note from the Government of Gabon requesting the termination of the Peace Corps program there and the withdrawal of its personnel from Gabon by January 1, 1968. Although the note expressed the appreciation of the Government of Gabon for the services rendered by the Volunteers, no reason for the program's termination was given. The American Embassy responded on December 24 with a request for more time to effectuate the termination and withdrawal. That request was denied in a second note from the Government of Gabon which was received on January 4, 1968, after the Volunteers had departed pursuant to the original request of the Government of Gabon. The second note explained that the termination was required by budgetary deficiencies which had made it impossible for the Government of Gabon to continue its contribution to the program.

TANZANIA

The last group of Volunteers—seven soil scientists—will complete its two years of work in Tanzania at the end of the year, at which time the Peace Corps shall close its office. The Government of Tanzania has never stated publicly its reasons not to request more volunteers; nor have we felt that it was our place to demand an explanation. The Tanzanian decision no doubt rests upon factors regarded as bearing on Tanzanian national interests. We may at least presume that one factor in Tanzania's decision is its oft-stated policy of encouraging self-reliance at all levels of Tanzanian society.

Mr. Chairman, I urge the adoption of this bill.

Mr. McCLORY. Mr. Chairman, will the gentleman yield?

Mr. ADAIR. I yield to the gentleman from Illinois.

Mr. McCLORY. Mr. Chairman, I thank the gentleman for yielding, and I want to express myself as being in support of this legislation, and in support of the statement made by the gentleman from Indiana.

I have been particularly interested, as the gentleman knows, in the program which originally was called the school-to-school program, and now is known as the school partnership program, which is administered by the Peace Corps employing primarily private funds contributed by American school groups and service organizations for the purposes of constructing schools in foreign countries.

It is my understanding that this program, which has been so tremendously successful and has resulted in the establishment of hundreds of schools in foreign lands, will be continued and will continue to be administered by the Peace Corps. Am I correct in that?

Mr. ADAIR. The gentleman is correct, and I would join in the gentleman's praise of this program.

It is true that most of the funding, most of the financing for the program, does come from private sources, many times nickels, dimes, and quarters which have been contributed by children in the American school system. However, there is a sum of money—although it is not identified as a separate item in the bill before us—but there is in this bill a sum of money to be used for the purpose of continuing that program. It will be used mostly as it has been in the past several years. For example, in each of the last 3 years the amount of money earmarked for the administration of this program has been less.

Speaking in round numbers, in fiscal year 1968, $171,000 was budgeted; in fiscal year 1969 the amount was $150,000, and for the next fiscal year it will be about $100,000. This, as I say, will be used generally for administrative and operating expenses.

Mr. McCLORY. I thank my colleague. If the gentleman will yield further, I would just like to comment that I had occasion to visit the pilot project of the school-to-school program, a facility in Colombia. When I was in Colombia a little over a year ago I was able to witness first hand the great benefits that flow from this program through the erection of a school and to see the opportunity for education that is being provided for these young children in Colombia, an opportunity that they would not otherwise have except for the contributions voluntarily made by American schoolchildren in this tremendous program promoting international understanding.

Mr. ADAIR. I will say to the gentleman further, it is my understanding that this program makes it possible to obtain books and other learning materials for the schools. So it is a very worthwhile program.

The CHAIRMAN. The gentleman from Indiana (Mr. ADAIR) has consumed 6 minutes.

Mr. MORGAN. Mr. Chairman, I yield 3 minutes to the gentleman from Florida (Mr. FASCELL).

Mr. FASCELL. Mr. Chairman, I rise in strong support of the pending legislation.

As the chairman of our committee has pointed out, the amount authorized for the fiscal year 1970 is below the amount appropriated for the fiscal year 1969. Since a question is always raised with respect to the funding of our programs, I would like to call the attention of my colleagues specifically to page 3 of the report which shows that there has been a careful pruning of the program since it reached its high point in 1966, and that it has continually gone downward to the level proposed for the fiscal year 1970, which is the executive request.

Mr. Chairman, with regard to any organization or any appropriation the question can always be raised—"can we not do it for less money?" Or can we not spend less money? Why should we not authorize less money?

I think the answer is inherent in the review of three factors.

One, is that we are well aware that all in all the Peace Corps has done an outstanding job.

Two, is that the program has been scaled down on a reasonable basis over a period of years.

Third, you can cut down if you want to beyond the administration request, but you do so in terms of the number of volunteers we can send overseas.

We have already made cuts in the administrative personnel overseas and for every million dollars that you cut the administration request you must reduce the program about 118 people. So you can use your own judgment and make your own program if you will. But I respectfully submit to you that the present request should be supported because there has been careful consideration by this administration; and because over a period of time under the previous administration the request and appropriation have been scaled downward; and there was a tightening in the administration; and because the program has been successful in areas and on matters that are fundamental to the kind of social, educational and health development programs that we would all like to see in developing countries.

I invite your attention to page 5 of the report showing the emphasis of our personnel in agriculture, community development, education, and health. The present reduced program has been requested by the administration in light of the administration's national priorities and overall budget view. I would also call to your attention that the effectiveness of the Peace Corps is reduced proportionally to the reduction in funds available to send volunteers overseas. For every $10 million cut approximately 1,180 volunteers will have to be dropped. Such an amendment will be offered and I oppose it as too drastic a reduction which will substantially reduce the possible accomplishments of one of our most effective international programs.

The CHAIRMAN. The time of the gentleman from Florida has expired.

Mr. ADAIR. Mr. Chairman, I yield 5 minutes to the gentleman from New Jersey (Mr. FRELINGHUYSEN).

Mr. FRELINGHUYSEN. Mr. Chairman, I, too, rise in strong support of this extension of the authorization for the Peace Corps. All of us are reasonably familiar with the programs that have been underway over a period of years now and those of us who have traveled in countries where there are Peace Corps volunteers have talked to many of these men and women. The general impression is that they have been doing a good job.

I remember very well a trip we took a few years ago to Malaysia. There was one volunteer in a leprosarium, working alone there. There were no other Americans there. More recently, a number of us last March met many volunteers working in Korea.

It goes without saying that there is an understanding and a pretty broad acceptance of the ideals and objectives of the Peace Corps. The fact is that the Peace Corps is in the interest of our country.

I rise primarily to support the plea which has just been made by the gentleman from Florida with regard to the funding level. It would be most unwise if we should accept the idea that we could get along for less than is advocated in this authorization bill.

There has already been a reduction, a voluntary reduction, in the number of volunteers planned for the program. There will be approximately 1,000 fewer volunteers in the fiscal year 1970 than there were overseas in fiscal year 1969. It would be most unwise for us to force the agency to prune more drastically,

which would be necessary if we should not provide adequate funds.

The new Director of the Peace Corps, Mr. Blatchford, testified in some detail about the aims of the Peace Corps as he sees them. He emphasized the importance of quality in the selection of volunteers. He said also that idealism is not the exclusive domain of the young, and that an additional effort would be made to get middle-aged and older people in the program. Furthermore, on an experimental basis, individuals with families may be sent overseas as volunteers.

Mr. Blatchford also said that the Peace Corps must demand what he calls a multiplier effect on all that it does. A project, he said, which does not have an end in sight, which will not be taken over by local people in a few years' time, should not be started. The Peace Corps should be mobile and flexible. It seems to me that all those principles are desirable ones, Mr. Chairman, and I do hope that we pass this authorization with provision for sufficient funds so that a reasonable job can be done.

Mr. ADAIR. Mr. Chairman, I yield 5 minutes to the gentleman from Pennsylvania (Mr. FULTON).

Mr. FULTON of Pennsylvania. Mr. Chairman, I am glad to rise in strong support of this Peace Corps authorization for the year 1970. The U.S. Peace Corps has been one of the outstanding bipartisan successes in our foreign policy.

The House Foreign Affairs Committee has studied carefully the program for the coming year, reviewed the Peace Corps history, discussed policy changes with with the new head, the Director of the Peace Corps.

It is our committee opinion who reported this Peace Corps bill favorably by 30 members to none opposed with one voting present, that this authorization should be passed. We believe this is a satisfactory and well-run program, and, therefore, the Peace Corps should be funded at this amount of authorization.

My suggestion has been that the name of the Peace Corps is not broad enough. This agency is simply not a corps for peace but also really a corps for progress. It could really be called a teach corps, because it is teaching people at a certain level of living how they can best progress in their own countries and in their own villages and at the level at which they live.

I therefore believe that the Peace Corps has been a success, and I am glad to join with the others in recommending passage promptly of this authorization for adequate funds for fiscal year 1970.

Mr. MORGAN. I yield to the gentleman from New Jersey whatever time he may consume.

Mr. GALLAGHER. Mr. Chairman, I rise, as do my colleagues, in support of the legislation. I think the great tribute to the Peace Corps is the one being made here today, where both sides, and the administrations of both parties have recognized the outstanding job the Corps has done. I think it is that tribute which calls for the passage, in full measure, of the bill.

It is without hesitation that I speak in behalf of this legislation. Nearly 10 years ago, our late President John F. Kennedy launched this Nation toward the moon. At the same time, he launched our country of an earthly journey of, at least, equal significance. While the trip to the moon would capture the imaginations of men, the earth-bound journey would capture the hearts of men by slicing through the ravages of war, poverty, ignorance, and disease. President Kennedy embarked upon this latter journey with the creation of a Peace Corps.

Mr. Chairman, today we have reached the moon; the flight, the landing, the walk on that satellite of earth provided untold drama for mankind and the drama for mankind and the chance for further interplanetary exploration. In less dramatic form, perhaps, the Peace Corps has reached millions of men in underdeveloped areas throughout the world. For those it has assisted, there is no finer ambassador from the United States than the volunteer Peace Corpsman.

I recall now that when the Peace Corps plan was originally proposed—and I had the honor to introduce the initial legislation in the House—resistance formed around the notion of entrusting the responsibility of representing America to thousands of young people. Youngsters, many contended, would probably "turn off" more people about the United States than they ever "turned on." Time has proved the folly in this contention. For everywhere a young Peace Corpsman has walked, he has made a friend for the United States. Everywhere a young Corpsman has worked, he has demonstrated the rich reality of the American dream.

I have had the opportunity to meet with many of our Peace Corps volunteers. The chance to do so has been an inspiration. These young men and women perform their tasks not because somebody else is doing it, nor because it is materially rewarding to do it, but, in the words of President Kennedy, because it is right to do it.

And if we in Congress are to do what is right, we will pass the Peace Corps bill before us, pass it without reservation, but with the knowledge that we are funding a corps for whom the pursuit of peace is a full-time job.

Thank you.

Mr. MORGAN. Mr. Chairman, I have no further requests for time.

Mr. ADAIR. Mr. Chairman, I yield 5 minutes to the gentleman from New York (Mr. PIRNIE).

Mr. PIRNIE. Mr. Chairman, I have asked for this time for the purpose of sharing with this House an experience I had in Senegal, Africa, in conversation with a Peace Corps representative working in a very small village out in the jungle of that country.

He was one white in a village of 6,000 blacks. I sat with him that evening in the dusk. He was in his little quarters, a small tent, with room just for his bed, a field desk, a box to contain his books, a chair, with the only light from oil lanterns strung on a cord above his bed.

This man was very enthused over his opportunity to work with these people. He said his period of service was nearly over and he was faced with a very important decision. He said he was engaged and wished to return to the States to be married.

However, he was disturbed about the work being carried on if he were to leave. He had begun courses of instruction for these native people in the fields of sanitation and community health, and some elementary work in reading and writing. He said:

> I do not know what is going to happen if I go at this time, unless someone comes to take my place who will work closely with these people. I feel I have gained their confidence and their enthusiastic support. I am wondering if I am doing the right thing to think of my life in terms of what I want to do when I ought to be thinking of it in terms of what I should do.

I think it is all the more remarkable when we know this young man came from Richmond, Va.

I admired this young man as he was struggling with his decision. I found him somewhat typical of the Peace Corps representatives we have in many of these countries, where they have a chance to work with those who need help in the rudiments of living. I have supported the Peace Corps and I certainly approve this extension of the authorization, because I believe it does represent an opportunity for improving mankind and understanding of people.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. PIRNIE. I yield to the gentleman from Iowa.

Mr. GROSS. Mr. Chairman, the figures show the number of warm bodies shipped into Senegal has tripled since the initiation of the so-called Peace Corps. Is there some reason why the French cannot take care of the people in their territories and former territories? Why must we take up the burden for the French?

Mr. PIRNIE. I cannot respond to the gentleman as to why the French could not do more in this area, but I can answer his question as to why there has been an expansion.

At first, this was an experiment and they were attempting to see how this effort would be received and what could be accomplished. When it was well received, and when the areas of service were more cleary explored, it was thought that under the same overhead and supervision the contact could be expanded in the interest of the program.

Mr. GROSS. If the gentleman will yield further, Mr. Chairman, does the gentleman agree with me that we have more than a few problems here in this country that need attention?

Mr. PIRNIE. I certainly would, but I also feel, in response to the gentleman from Iowa, that perhaps this is a way to promote understanding throughout the world, through people to people in a way such as is illustrated by the case I cited. Certainly there was a better feeling among those people as they followed that young man through the village. It was very impressive to see the admiration and respect which he had earned.

Mr. SNYDER. Mr. Chairman, in light of the President's recently announced proposal to cut back Federal construction, I have a few thoughts on this Peace Corps Act.

First, the President's alleged purpose in cutting back Federal construction is to improve the fiscal situation; that is, to alleviate inflation.

Second, I feel that our sense of priorities has somewhere gone awry. The President wants to curtail the production of fixed assets—the only tangible results most American taxpayers see for all the money that is hauled off to Washington.

Third, if cuts have to be made—and they do—then let us first make them in our overseas spending programs, then on our domestic social experimentation programs, and lastly in construction of fixed asset benefits for the taxpayer.

In short, Mr. Chairman, the President's priorities may be confused, but mine are not. I will not vote to authorize $101.1 million for a dubious foreign assistance program when the President deems it necessary to cut back the most important and most visible domestic Federal endeavor.

Mr. FRASER. Mr. Chairman, this authorization to finance Peace Corps activities in fiscal 1970 has wide support. This attests to what has been achieved by Peace Corps volunteers in the past and to what we expect of them in the future.

The act of volunteering for Peace Corps service represents the highest form of activism. The younger volunteers are students who choose a most constructive method to change the world for the better. As their representatives in Washington, let us recognize that these college-age volunteers are a highly motivated group and that they may not always agree with our world view. To be effective, however, these volunteers must continue to have freedom to express their own views even when they are not our views. This, after all, is the hallmark and the strength of the American system.

Mr. ADAIR. Mr. Chairman, I have no further requests for time.

The CHAIRMAN. There being no further requests for time on either side, the Clerk will read.

Mr. HAYS. Mr. Chairman, I make the point of order that a quorum is not present.

The CHAIRMAN. The Chair will count.

Forty-seven Members are present, not a quorum. The Clerk will call the roll.

The Clerk called the roll, and the following Members failed to answer to their names:

[Roll No. 160]

Addabbo	Clay	Giaimo
Ashbrook	Cleveland	Gilbert
Ashley	Colmer	Green, Oreg.
Bevill	Conyers	Green, Pa.
Biester	Corman	Griffiths
Bingham	Coughlin	Grover
Blanton	Cowger	Gubser
Brasco	Cunningham	Halpern
Brock	Daniels, N.J.	Hamilton
Brooks	Davis, Ga.	Hansen, Wash.
Burke, Fla.	Dawson	Hébert
Burleson, Tex.	Diggs	Henderson
Burton, Calif.	Donohue	Horton
Burton, Utah	Dorn	Hungate
Bush	Dulski	Johnson, Calif.
Cabell	Dwyer	Keith
Cahill	Edwards, Calif.	Kirwan
Carey	Esch	Landgrebe
Carter	Fallon	Leggett
Casey	Fish	Lipscomb
Celler	Fisher	Long, La.
Clancy	Flowers	Lukens
Clark	Foley	McEwen
Clausen, Don H.	Frey	McFall
	Gaydos	McMillan
MacGregor	Powell	Sebelius
Mann	Quillen	Shipley
Mathias	Railsback	Shriver
Michel	Reid, N.Y.	Sikes
Mikva	Reifel	Smith, Iowa
Mollohan	Reuss	Steiger, Wis.
Monagan	Riegle	Stuckey
Moss	Rooney, N.Y.	Teague, Tex.
Murphy, N.Y.	Rooney, Pa.	Tiernan
Nichols	Rosenthal	Watkins
Nix	Rostenkowski	Whalley
O'Konski	Roudebush	Widnall
Ottinger	Ruppe	Wilson, Charles H.
Patten	St Germain	
Pepper	Sandman	Zion
Philbin	Scheuer	

Accordingly the Committee rose; and the Speaker having assumed the chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill H.R. 11039, and finding itself without a quorum, he had directed the roll to be called, when 310 Members responded to their names, a quorum, and he submitted herewith the names of the absentees to be spread upon the Journal.

The Committee resumed its sitting.

The CHAIRMAN. All time having expired, the Clerk will read.

The Clerk read as follows:

H.R. 11039

Be if enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 3(b) of the Peace Corps Act, as amended, which authorizes appropriations to carry out the purposes of that Act, is amended by striking out "1969" and "$112,800,000" and substituting "1970" and "$101,100,000", respectively.

AMENDMENT OFFERED BY MR. HAYS

Mr. HAYS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. HAYS: On the first page, line 5, insert "(1)" immediately after "is amended" and, in line 7, strike out the period and insert in lieu thereof a comma and the following: "and (2) by adding at the end thereof the following new sentence: 'None of the funds authorized to carry out the purposes of this Act shall be used to carry out the Volunteers to America Program conducted under the Mutual Educational and Cultural Exchange Act of 1961, as amended (22 U.S.C. 2451 et seq.), or any similar program involving the service or training of foreign nationals in the United States.'"

Mr. HAYS. Mr. Chairman, although this amendment sounds complicated, it is very simple. What it does is bar the use of any funds in this act for the so-called reverse Peace Corps.

An amendment was offered in the committee for the authorization to have a reverse Peace Corps, and it was defeated 18 to 4. The Peace Corps people are going ahead anyway. I at one time had said I had no objection if they confined the program to teachers, but they are going ahead, as I understand it, without authorization by Congress, but with an executive permission, and promoting what they called a reverse Peace Corps.

They are proposing to bring in volunteers from the underdeveloped countries to work in our low-income areas and presumably to teach somebody there something they ought to know.

I talked with one of the very great liberals in this House who knew something about the Berkeley confrontation, and he said he was very much opposed to this reverse Peace Corps because at Berkeley some of the ringleaders of the agitation there were African nationals who were there at school. He said he had no objection to them. Certainly I do not, as I will tell in a moment. But they were the only people among the radical group one could not talk to, because there was no way to relate to them, no way to talk to them about America, about what it meant, about what it could do and about what it would do and how we were an amalgamation of many minorities. They were just radicals, period.

I am the coauthor of the Mutual Educational and Cultural Exchange Act of 1961, sometimes called the Fulbright-Hays Act. They are bringing in certain selected people to this country on cultural exchanges. They are bringing in teachers. They are bringing in all sorts of people who are selected by our embassies under the charge of the Ambassador.

I know that this administration has appointed a gentleman as Under Secretary or Assistant Secretary—I am not sure of his title—one or the other, for cultural affairs, who has a fine program laid out under the exchange program.

All my amendment would do is to keep the Peace Corps in the Peace Corps business and out of the cultural exchange business in America.

I am for the Peace Corps. I have supported it every year. I will support it this year. I do support it. But I would like to see this amendment passed.

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. HAYS. I yield to the gentleman from Pennsylvania.

Mr. MORGAN. The gentleman is aware that on July 3, 1969, the volunteers to America program, which has been carried on under the Hays-Fulbright program, was transferred to the Peace Corps from the State Department by Executive order under delegation of authority No. 105A, signed by Elliot Richardson, Under Secretary of State who was then Acting Secretary. This transferred the authority to the Peace Corps of an operation previously carried on under the Hays-Fulbright Act.

I understand there was a grapevine rumor around here indicating that the Subcommittee on Appropriations does not look with enthusiasm on this program. I fear that the gentleman from Ohio, who is the coauthor of the cultural exchange program is going to fix it so that the Volunteers to America program is without any funds in either bill.

Mr. HAYS. Let me say to the gentleman, I am not a bit worried about that, because I believe there will be plenty of funds put in over in the other body for the cultural exchange program.

I am glad the gentleman brought out about Mr. Richardson signing that Executive order, because he invited me down to the swearing in of the man in charge of the program in the State Department, another fellow by the name of Richardson, coincidentally from the same State and the same city. I believe we ought to keep the program where it is.

I am against this divided authority. I am against it furthermore because Mr. Elliot Richardson transferred it without in any way, shape, or form consulting Congress, a committee of Congress, or a subcommittee of Congress.

I can tell the gentleman that in the other body there is plenty of sentiment against this kind of transfer.

Mr. MORGAN. Mr. Chairman, will the gentleman yield further?

Mr. HAYS. I yield further.

Mr. MORGAN. I have a copy of the hearings here. On page 13 of the hearings there is a colloquy with the Director of the Peace Corps.

Mr. HAYS. In which I said I had no objection.

Mr. MORGAN. Will the gentleman permit me to finish?

There is a colloquy between the Director of the Peace Corps and the gentleman from Ohio (Mr. HAYS) where the gentleman from Ohio stated that he had no objection if only teachers were involved.

Mr. HAYS. That is correct.

Mr. MORGAN. The report issued by the committee states clearly that the program should be limited to teachers. I cannot understand why there has been such a change in the thinking of the gentleman from Ohio between the date of the hearings, and today, when he comes here with this amendment.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

(By unanimous consent, Mr. HAYS was allowed to proceed for 2 additional minutes.)

Mr. HAYS. Mr. Chairman, as a great admirer of the great Senator from Illinois, Senator DIRKSEN, I find it frequently advantageous to change my mind, and I want to say to you that I have changed my mind not because basically I am objecting to the idea of bringing in teachers, as I said in the committee, but I find that their plan is to use teachers as the first step and to expand this program without legislation and without permission to bring in anybody. They bring in anybody they want to and do anything that they want to. So I am against this foot-in-the-door kind of approach, and since I have been brought into it—and I have talked to the people in the Department of State—I want to say that I am against having two programs to bring in teachers, because the Department of State is still operating a program for the selection of teachers.

Now, the gentleman from Pennsylvania is not very enthusiastic for a reverse Peace Corps. Is that right?

Mr. MORGAN. I am not very enthusiastic about the whole cultural exchange program, I must say.

Mr. HAYS. Then what is the big argument about? You ought to be up here supporting me.

Mr. CEDERBERG. Mr. Chairman, will the gentleman yield?

Mr. HAYS. I am glad to yield to the gentleman from Michigan.

Mr. CEDERBERG. I think the position of the gentleman from Ohio is the correct one. I served on the subcommittee that the gentleman referred to, the Subcommittee on Appropriations that handles the cultual exchange program. We are not opposed to the program. If you will look at the RECORD this year, you will see that we gave them probably within $1 million of what they asked for in the budget. I do not recall exactly what the amount was in the budget, but we did give them very close to it. We have concern though, with some of the cultural presentations that go on.

Mr. HAYS. I understand that.

Mr. CEDERBERG. Some of those things are what we are concerned about and not the exchange program. We are all for that.

Mr. HAYS. And some of the language in some of the plays.

Mr. CEDERBERG. They are some of the things that concern us. You should keep this program where you can take a good look at it. I support the gentleman from Ohio 100 percent.

Mr. MORGAN. Will the gentleman yield to me?

Mr. HAYS. I yield to the gentleman.

Mr. MORGAN. I want to say to the gentleman from Michigan that the Committee on Foreign Affairs had nothing to do with putting this into the Peace Corps. This was done by Executive order under the authority of the President.

Mr. CEDERBERG. I understand that.

The CHAIRMAN. The time of the gentleman from Ohio has expired.

(Mr. HAYS asked and was given permission to proceed for 1 additional minute.)

Mr. HAYS. What the gentleman from Michigan is saying and what my good friend, the chairman of my committee, is saying is this: He knows I have the utmost regard for him not only as chairman of the committee but as a friend. He is making the good fight for something that the committee has done which has come from the administration, but his heart is really not in it. He knows that.

Mr. CEDERBERG. I am not very impressed with these Excutive orders, and I do not care whose administration they come from.

Mr. HAYS. I do not, either.

Mr. CEDERBERG. Most of the time they are just a device to get around the intentions of the Congress.

Mr. HAYS. They tried to bring them up last year in Mr. Johnson's administration, and we killed it deader than a dodo bird without having it brought to the floor and told them not to do it again. Some of the bureaucrats down there went ahead anyway and came in with it. So this just writes it into the language that they cannot do it.

Mr. ADAIR. Mr. Chairman, I rise in opposition to the amendment offered by the gentleman from Ohio.

The gentleman from Michigan who just spoke made the point that by keeping this provision under the Cultural Exchange Act it would receive much closer scrutiny. I would have to differ with the gentleman on that point. One reason advanced for putting it in the Peace Corps bill is that this legislation comes before the House each year both for authorization and appropriation and therefore it would receive a closer scrutiny than under a continuing authorization.

Mr. HAYS. Mr. Chairman, will the gentleman yield to me?

Mr. ADAIR. Yes. I yield to the gentleman.

Mr. HAYS. The gentleman is a friend of mine and I hate to find myself in disagreement with him at any time. More frequently, as he knows, we are in agreement. But the gentleman and I both know that the Peace Corps Act gets a very cursory examination in our committee. Everybody is for the Peace Corps. Nobody is against it. You are for it and I am for it. Nobody questions it very much. We have maybe 1 or 2 days of hearings at the outside, and we bring in a bill. We have a hour of debate on it and we have had it. And, I just cannot agree with you. I cannot agree with my friend from Indiana that it gets a very close scrutiny.

Mr. ADAIR. Well, I would have to say to the gentleman that I differ with him. I feel that we do give the Peace Corps careful scrutiny, not only in special hearings but in the private investigations that many of us carry on.

Mr. CEDERBERG. Mr. Chairman, will the gentleman yield further?

Mr. ADAIR. I yield further to the gentleman from Michigan.

Mr. CEDERBERG. I thought the original intent of the Peace Corps was to send people from the United States to other countries to assist in those areas. When you get involved with the exchange of persons, which was the original intent of the Fulbright-Hays Act; that comes under the cultural exchange program and that in my opinion is where it ought to stay. You can call it a "reverse" Peace Corps if you want to. I do not care what name you put on it. However, it is more difficult to scrutinize a $100 million budget. Therefore, I think it ought to stay where it is.

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. ADAIR. I yield to the chairman of the committee.

Mr. MORGAN. Of course, we are arguing here about the Volunteers for America program which is a part of the Hays-Fulbright program which went into effect in 1967 and only 103 people have been admitted under this program. So, you are not talking about any great number of people. It will be 68 for this year. So, it is not a big volume or mass of people. This is only a pilot program and has been a pilot program under the cultural exchange program. Very few people are involved. So, you are dealing here with a small program. There is no mass transfer of authority out of the Hays-Fulbright Cultural Exchange Act.

Mr. ADAIR. Mr. Chairman, let me point out again, as has previously been indicated here, that there is no additional language in the proposed act. The gentleman's amendment would simply make it very clear that no funds could be used for this purpose. The committee did decline to put language in the bill which we are bringing before you today. In the report we simply suggest that we do not object if the Director of the Peace Corps elects to use not more than $100,000 from the existing funds for the exchange Peace Corps.

This I should point out would in no way increase the authorization by $100,000. The Director would have to find the money in the existing funds or the funds

which we authorize now for fiscal year 1970. The chairman makes a very good point and that is this: If this restricting language should remain in the bill, there is a possibility that the continuation of this program might not be funded any place at all and, thus, it would die.

The gentleman from Ohio will recall that we both advocated and supported the Hays-Fulbright Act when it was before this House. The exchange Peace Corps is a program which has some merit. It needs to be approached with a great deal of caution as has been done and will continue to be done. I think we ought not to deny the Director of the Peace Corps this small bit of flexibility.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. ADAIR. I yield to the gentleman from Ohio.

Mr. HAYS. The thing I object to is the "foot-in-the-door" thing as I said earlier, and the fact that the State Department has a bureau set up, trained and operating. The Peace Corps is a totally different field altogether sending people to foreign countries. I just do not think they are competent to select and process and bring in people from those countries here to do the job that they say they want them to do. Therefore, I do not see why we should have two agencies doing the same thing.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

(By unanimous consent, Mr. ADAIR was allowed to proceed for 3 additional minutes.)

Mr. GERALD R. FORD. Mr. Chairman, will the gentleman yield?

Mr. ADAIR. I yield to the distinguished minority leader.

Mr. GERALD R. FORD. Will the gentleman from Indiana comment upon this point: As I understood the statement by the gentleman from Ohio, an Executive order has already been issued transferring the cultural exchange functions to the Peace Corps. Further, if this amendment prevails, then in effect, the House at least is eliminating that potential for either the cultural exchange program as it has been operating or this reverse Peace Corps as it is proposed; is that an accurate statement?

Mr. HAYS. Mr. Chairman, if the gentleman will yield further, I do not believe the gentleman from Michigan is correct in that part of the cultural exchange program referred to as Volunteers of America has been transferred by Executive order to the Peace Corps. I do not understand that the whole program has been.

Mr. GERALD R. FORD. Just that portion.

Mr. HAYS. The Volunteers of America.

Mr. GERALD R. FORD. The Volunteers of America.

Mr. HAYS. What happened was that the Director has since signed a delegation of authority, and my amendment says that he cannot delegate that authority; it will have to stay in the State Department.

You earlier heard the gentleman from Michigan say that they had appropriated what they asked for, or nearly what they asked for in the budget.

This is a pilot program, and I want it to stay in the cultural affairs division of the State Department, and not be put over into the Peace Corps where it can grow like Topsy, and wind up God Almighty knows what.

Mr. MORGAN. Mr. Chairman, would the gentleman yield?

Mr. ADAIR. I yield to the gentleman from Pennsylvania.

Mr. MORGAN. I would like to ask the gentleman from Michigan, who serves on the Subcommittee on Appropriations, as to whether he is speaking for the entire cultural program, or whether he is just speaking for the part involved in this amendment, the Volunteers of America?

Mr. CEDERBERG. What I am speaking about as the gentleman from Pennsylvania stated, that the subcommittee did not look with favor upon the cultural and mutual exchange programs, and that is not correct. The correct assumption is that there are some parts of it we believe that need tightening up. I happen to believe that we send far too many professors from the United States to other areas, but that we are not opposing this at all. In my opinion if the amendment offered by the gentleman from Ohio is not adopted, then 5 years from now you will come in here and you will have more money in the reverse Peace Corps than you will have in the whole cultural exchange program.

Mr. MORGAN. That will never happen as long as I am the chairman.

Mr. CEDERBERG. The gentleman may not always be the chairman. We hope he will be for many years, because he is a very distinguished chairman, but times change, so I do not want to take that risk.

The CHAIRMAN. The time of the gentleman from Indiana has again expired.

Mr. CEDERBERG. I think it is a mistake to change it.

Mr. PUCINSKI. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, it is not known whether or not the program that the Secretary has instituted, the so-called reverse Peace Corps, is any good or not. I will leave that to the judgment of the Committee on Foreign Affairs and their recommendations. It seems to me that the fundamental issue here is whether or not the legislative branch of Government is going to have something to say about these programs.

I was one of the early supporters of the Peace Corps. I remember making many, many speeches in its behalf when it was not necessarily popular. I remember when the Peace Corps was first proposed, and there were very many opposed to it, and then they saw that it did work out. But it seems to me that the question here is whether or not the executive branch of the Government is going to bypass the legislative branch. The popular parlor game seems to be maligning and criticizing the legislative branch of Government. It seems to me that the amendment has merit only in that it will compel the State Department to come before the House in an orderly manner and make their recommendations, and the House will have an opportunity to work its will. I do not believe that these people ought to be permitted to go ahead and sign an Executive order, and change the program substantially, and then come in here and expect the House to support its action.

Mr. HAYS. Mr. Chairman, if the gentleman will yield, the gentleman is exactly right. There is a question of jurisdiction involved here. In fact, there is another question involved which I have not brought up, where the Peace Corps is supposed to be sending volunteers to train underdeveloped countries to do things that they do not have the people to do themselves.

Now, the fact is that they were talking about Senegal, and I thought if Senegal needs four times as many Peace Corps people as it did formerly, how is it going to spare people to come here to teach? This is the question I asked:

What are you going to bring somebody from some African country for?

He said:

Well, maybe to teach Swahili.

There does not seem to be a burning need in this country for Swahili teachers.

Mr. PUCINSKI. As I say, I do not want to get into the merits of this. Perhaps we need these people—I do not know. But the fact of the matter is that we have seen within the last 10 years or so this constant move toward Government by guidelines. Now we are seeing Government by Executive order.

Some of our friends in these agencies should be reminded that this Government is a government made up of three co-equal branches and that this legislative branch has is responsibility.

Now these things happen and somebody comes here under this Executive order and creates some situation which creates a great deal of criticism in the press and the press does not say that this person is here by an Executive order, but that he is here by an act of Congress, and that his acts are under the delegation of power from the Members of Congress.

Mr. Chairman, I think this amendment deserves our support if for no other reason than to make clear to the executive branch of Government that if they want the changes in this program, there is a prescribed and orderly method of getting those changes.

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman.

Mr. MORGAN. Mr. Chairman, I know that the gentleman has been a friend of the Peace Corps. I remember in 1961 when the original bill was on the floor that he was a cosponsor and I remember seeing him at the White House at the signing of the bill. The gentleman has been a friend of the Peace Corps for many years. The gentleman knows that the Peace Corps started in 1960 by Executive order and everybody thought it was a good idea.

Mr. PUCINSKI. Yes, by an Executive order when it was experimental. Then the President realized the virtues of this program and came before the Congress and said, "Make this a permanent program." The President in his good judgment and to his everlasting credit did come before the legislative branch of the Government and he said:

Gentlemen, this is a good program and I recommend it and here is my proposal. Now you as the legislative branch of the government, please go ahead and vote this bill out.

And the Congress had a chance to work its will.

The question here on the Hays amendment is not relative to the merits or demerits of the proposal. The question is whether the House of Representatives is to write legislation or whether we are going to surrender and yield our responsibility to an Executive order when they cannot do it in another way. That is the issue.

Mr. ADAIR. Mr. Chairman, will the gentleman yield?

Mr. PUCINSKI. I yield to the gentleman.

Mr. ADAIR. I think that is exactly what we are trying to do. As the chairman pointed out, the whole program can be done by Executive order and later then enacted into legislation. This has been begun by Executive order and by this wording in the committee report, we are taking a small step in the direction of enacting it into legislation. So we are doing practically just what the gentleman advocates.

The CHAIRMAN. The time of the gentleman has expired.

Mr. MORGAN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I want to say that as chairman of the committee that I have no strong feelings about the amendment offered by the gentleman from Ohio, Mr. HAYS.

But I think the real facts ought to be laid before the House. This is a very small pilot program. As I have said, it started under the Hays-Fulbright Act in 1967 and, over the years, a total of 105 people have been brought in. What is proposed for this year is another 60.

This program is not a program to bring college students here to go to college. It is not to bring in the type of person who is going to be an exchange student at the University of California at Berkeley.

This is really a cultural program. The person involved may be a young man or woman of the age of 25 or so who can speak both English and Spanish, for example. This is the sort of person who could go to your local high school and help to teach languages and is paid enough to cover board and room by the local school board.

This is not the type of student who comes under the cultural exchange program. They come here to teach a language and make themselves useful. It is a very limited and small program. If you want to keep it small, let us keep it in the Peace Corps.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. MORGAN. I yield to the gentleman.

Mr. HAYS. I would just like to point out that what the chairman says about teachers is true. But they have been coming in under the cultural exchange program. That is exactly what we want to promote. Let me say this to you, the gentleman from Indiana makes the argument that we are trying to legitimize an Executive order. Now the facts of the matter are that the gentleman from Indiana tried to legitimize it with an amendment saying—Yes, you can do this—and it was defeated in committee by a vote of 18 to 4.

So really, if we try to legitimize it, it is a sort of back-door approach to legitimacy.

Mr. MORGAN. I just want to say in the few moments I have left that I have no strong feelings of opposition to the amendment. I think the House has spent about a half hour in wasted time discussing a matter of limited importance.

Mr. DERWINSKI. Mr. Chairman, I rise in support of the amendment. In order to cooperate with the chairman, since I agree we have been spending more time on this amendment than we should, I shall be brief. I merely wish to emphasize that the gentleman from Ohio is completely correct when he points out that a small pilot program in Government has a tendency to become a huge permanent program.

Do not fool yourself for one minute that the "small pilot program," as it has been described, will remain so.

May I point out to the friends or constructive critics of the Peace Corps, that there are certainly enough problems in administering the present responsibilities of the Peace Corps. We have complaints from dozens of foreign countries that we send over Americans who are not equipped to meet the peculiar needs of the country.

We have a new administration. Let them straighten out what they have inherited. Let them get their feet on the ground in the Peace Corps program itself, without launching into something new.

If for one moment anyone would think the gentleman from Ohio was not accurate when he said that our committee gives the Peace Corps merely a perfunctory review, I would like to reemphasize that we do not study the Peace Corps too thoroughly. After all, it is one of the "holy of holies" of the Government.

I would suggest the expeditious thing for the House to do, especially since the chairman has said that he does not have very strong feelings about it, and I detect the gentleman from Indiana, the senior member, does not really have strong feelings about it—his heart is not in this provision—let us accept the Hays amendment and go on to passing the bill.

Mr. DENT. Mr. Chairman, I rise in support of the amendment. When we first started talking about the Peace Corps in this House, there was a great deal of opposition to the program. At that time, if any Member would have suggested that the money we were going to appropriate for the program was going to be used in a reverse manner, or that any part of it was going to be so used, I am sure the House would never have passed the original bill.

It has been said that the language which is the subject of the amendment is only part of the program. It is merely $100,000.

Let us read what the report says. If I read correctly, the report states:

The Director of the Peace Corps announced his desire to use funds in the neighborhood of $100,000 to finance an Exchange Peace Corps.

The money that was put up by the American people was put up to help these countries, thinking that we had some skills that would be beneficial to the nations in need.

There is no restriction in the bill whatsoever about where these Exchange Peace Corps volunteers could come from. They could come from the richest nations in the world. As stated in the report, they could come "for one year with schools, voluntary agencies, or other organizations needing their services," and we will pay the freight. We would not limit the amount of money. We would not limit it by percentage. We do not say a word about how long the program is to endure. Yet they could, and in all probability we will in a few short years find that the bulk of this money will be spent to send the friends of those in our overseas embassies to the United States for a vacation.

Mr. Chairman, I have been home. I was home for a great deal of the time during the House vacation, and I have learned that many of my people are discouraged about many things. They are more discouraged than ever. I come from the kind of district that needs roadbuilding, and it needs it badly. It is part of our economy. The need for the road is not only part of our economy but also the money used for the building of roads provides jobs. Men in our district live entirely on the money received for road construction. The President has asked for a 75-percent reduction in road construction, plus home construction, plus an appeal to free enterprise to cut down to the same extent.

Melvin Laird, our former colleague in Congress, has said that no military contracts will be let until he finds how much less than the 75 percent will be cut.

If we are going to go ahead ourselves in the belief that we can sit around here and spend money in foreign countries without getting condemned by our people, we will find we are just barking up the wrong tree. People are getting a little bit tired because they do not understand—and after 30 years of believing we were right in most instances, I am coming to the same point. I have been legislating for a long while, but I never knew we could have the administration legislating this country into a depression and having the President saying it is a great thing to do.

We are going to have to fight inflation, but we are going to fight inflation by cutting down 75 percent of construction? Inflation never hurts a man who works for a living—and put that down in the book. The man who receives a wage for working usually spends his salary at that time because it takes him his salary to live on.

The recent action by the President would result in preserving the rich man's dollar at the expense of the workingman's penny. The American workingman never has anything left over. If he buys a suit for $60, he is working to get that money for the suit. I remember when my father could not pay for a suit when a suit cost only $5. Today a worker buys good suits, has a home, in most cases

has a car, TV and even takes a short vacation. Is this the inflation the President is fighting?

Fighting inflation now is in the plans of those who have other things in mind. If this Congress sits by and votes for this kind of thing, we are going to open up a new avenue of appropriation, because we will be in a position of appropriating directly rather than going through the Fulbright-Hays agency in the State Department.

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. DENT. I yield to the gentleman from Pennsylvania, the chairman of the committee.

Mr. MORGAN. Mr. Chairman, we will not be opening up a new avenue of spending. This program has been operating for a couple years under the Fulbright-Hays Act.

Mr. DENT. Mr. Chairman, I understood from the chairman's remarks that there would be a probability there would not be any funds under that appropriation, but this is opening up a new avenue, because we are appropriating for it here. I came here to vote for the Peace Corps. I did not come over here to appropriate, at the desire of the Director of the Peace Corps, to spend somewhere in the neighborhood of $100,000 for a reverse Peace Corps. My memory in this Congress is that in the neighborhood of $100,000 can be a big neighborhood all the way to a billion.

Mr. FLYNT. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, I support the amendment offered by the gentleman from Ohio (Mr. HAYS).

I was impressed with the remarks of the gentleman from Michigan. From my service on the Subcommittee for the Department of State of the Committee on Appropriations, I want to say that at least one member on the majority side of that subcommittee concurs with what the gentleman said.

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. FLYNT. I yield to the gentleman from Pennsylvania, the chairman of the Committee on Foreign Affairs.

Mr. MORGAN. Mr. Chairman, did the gentleman just give assurance to the gentleman from Pennsylvania (Mr. DENT) that this $100,000 is going to be in the State Department appropriation and is going to be spent anyway, whether it is in the Peace Corps or under the Cultural Exchange Act, and that $100,000 is going to be appropriated by the gentleman's committee? Is that correct?

Mr. FLYNT. Mr. Chairman, I wish I could say to the chairman of the Committee on Foreign Affairs that what he says is so. I wish I could give that assurance, but from what I see going on in the State Department, I cannot give the gentleman any assurance of what will be done with any of the funds.

The gentleman from Michigan (Mr. CEDERBERG) referred to some of the obscene material which was sent overseas under the cultural exchange program, but as far as I am able to determine, the State Department itself and those charged with the administration of the cultural exchange program within the State Department were not aware of what they were sending overseas until our committee found out about it and asked the Department to come before us to explain it.

Mr. Chairman, some of the most obscene and filthy pornographic material I have ever seen was sent to foreign countries under this cultural exchange program.

What is needed is to tighten up on this program rather than expand it and compound its mistakes.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. FLYNT. I yield to the gentleman from Ohio.

Mr. HAYS. Mr. Chairman, in all fairness—and everybody knows I am fairly partisan—but in all fairness to the administration, let me say this was not done under the new administration, under the administration of the new Under Secretary for Cultural Affairs. I am a supporter of the previous President and I believe in him, but I can say the two Cultural Affairs Under Secretaries, the last two we had in that administration, I do not think were picked by the President, neither one of them, but they were disastrous. I can tell the Members those two probably did not know what was going on and probably they did not care about what was going on.

I believe in fair play. I hope we will give this new gentleman a chance. He impresses me as a sincere fellow who will try to do the best he can to see this program works.

I want to keep it down there where we have some people with skill and dedication, and not turned over to somebody in the Peace Corps, to a country director out in Africa or down in Latin America, or wherever the case may be. It ought to be run carefully. These people ought to be screened. They ought to be competent. They ought to know what they are coming here for.

I believe that can best be achieved under the cultural affairs program of the Department of State.

Mr. FLYNT. I agree with the gentleman from Ohio. He is eminently correct.

If the Congress permits the executive branch of the Government to make the delegation or transfer of authority which has been undertaken in the departmental order referred to then we have no alternative but to expect that they will increase it by the same method as long as and as much as they can.

If there is any merit to this proposal—and I doubt seriously if there is any merit in it—for a reverse Peace Corps, then let the State Department come before Congress in an orderly fashion and ask the Foreign Affairs Committee to specificially authorize it with authorizing legislation.

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. FLYNT. I yield to the gentleman from Ohio.

Mr. HAYS. They did exactly that last year. It was referred to my subcommittee. I polled the subcommittee and could not find three votes for it. That is why it was not written into law under the previous administration.

Mr. FLYNT. Mr. Chairman, I certainly urge the adoption of the amendment offered by the gentleman from Ohio. I hope it will be adopted by an overwhelming vote.

Mr. GROSS. Mr. Chairman, I move to strike the necessary number of words.

Mr. Chairman, I rise in support of the amendment offered by the gentleman from Ohio (Mr. HAYS).

My good friend, the chairman of the House Committee on Foreign Affairs, Dr. MORGAN, says he has no strong feelings one way or the other on this bill. I suggest that we get to a vote on it and help him make up his mind.

Mr. MORGAN. I was not referring to the bill, Mr. GROSS, but to the amendment. I have strong feelings about the bill.

Mr. GROSS. On the amendment, I should have said.

Mr. Chairman, I yield back my remaining time.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Ohio (Mr. HAYS).

The amendment was agreed to.

AMENDMENT OFFERED BY MR. GROSS

Mr. GROSS. Mr. Chairman, I offer an amendment.

The Clerk read as follows:

Amendment offered by Mr. GROSS: On page 1, line 6, delete "$101,100,000" and substitute therefor "$90,000,000."

Mr. GROSS. Mr. Chairman, there must be economy throughout the entire Government in the matter of authorizations and appropriations in this session of Congress. The fiscal situation of this Government and country is approaching a crisis.

This is an amendment to provide that the Peace Corps take its place in the line of those who are subject to economy.

The amendment would cut $11,000,000 from the present figure of $101.1 million. It would also eliminate the $100,000 that was to have been earmarked for purposes of the exchange program. The amendment of the gentleman from Ohio has eliminated the necessity for the $100,000. So the amendment would reduce the cost of this bill from $101.1 million to $90 million, a cut of $11.1 million.

I suggest, in the light of the President's call for a cutback of 75 percent in public construction, this is not a serious cut; that it can easily be absorbed.

The spending for this purpose could well be cut more. But, being a realist, I would not have tried to cut more deeply. We have heard from the proponents that the Peace Corps has done an outstanding job. Yet no one seems to be able to point to the outstanding jobs that have been done around the world. I was here when the first appropriation was made for this organization, and I believe it was in terms of $10 million. Now it is up to $100 million plus. And where is the outstanding job? Is it in Nigeria where we sent in 200 or 300 Peace Corpsites? It was to be one of the showcases of American aid and one of the showcases of what the Peace Corps could do. What happened in Nigeria? Where are all those Peace Corps people today? They are down to 50 or less there. If they are there at all, they are witnessing genocide and the next thing to cannibalism. What about Pakistan, where we also had a large array of members of the Peace Corps? They are out and gone. They have

been asked to leave the country. And in this morning's paper it reported that the ruling political party of Malawi has told the Peace Corps to get out of their country. They said in a resolution adopted at their annual convention that there were many complaints from the Malawi people about the influence the Peace Corps volunteers have over their children, and the bad conduct, bad behavior, and slovenliness of Peace Corps members.

Mr. MORGAN. Mr. Chairman, will the gentleman yield?

Mr. GROSS. Certainly.

Mr. MORGAN. The Peace Corps was not asked to leave Pakistan. To be fair about it, Pakistan said they did not want any more educators or teachers. They said they needed technicians, mechanics, and so forth. However, let us be fair and say they were not asked to leave Pakistan.

Mr. GROSS. But we are out of there, are we not?

Mr. MORGAN. Yes. We have been out of there since 1967.

Mr. GROSS. Yes. We are out of there because they did not want us in there. They did not want our teachers in Pakistan.

Mr. MORGAN. They wanted us from 1961 to 1967.

Mr. GROSS. Yes. But they suddenly decided—or perhaps not so suddenly—that they did not want U.S. teachers in Pakistan. That is why we are out. If it was not by invitation, it is the same thing.

So it goes around the world. I believe the Chairman himself said that we have been booted out in eight or more different countries. I do not know what additional countries will tell us to get out tomorrow, but I believe this program ought to be cut down. It ought to be reduced progressively every year in the interests of fiscal sanity in this country. This is added to the foreign aid bill, which in all its ramifications is costing some $10 billion a year. The cost of foreign aid is too much for the people of this country to endure. Just as was the gentleman from Pennsylvania (Mr. DENT), I, too, was home a couple of weeks ago, and you believe me when I tell you that the people are rebelling against the taxes that are being inflicted upon them, Federal, State, and local taxes. It is time to cut down. The least we can do is cut $11.1 million off this bill.

Mr. MORGAN. Will the gentleman yield further?

Mr. GROSS. Yes.

Mr. MORGAN. In his opening statements the gentleman offered an amendment to cut $11.1 million, and I understand him to say that now that the Hays amendment was approved we would not need the $100,000 any more. Does the gentleman know that he is going to have to offer an amendment to the appropriation bill dealing with the cultural exchange program when it comes in here if he wants to save the $100,000, because it will be in there.

Mr. GROSS. I will be happy to do just that if that is what is required. I am not sure it will be, for it seems to me that it will take an authorization.

Mr. Chairman, in the interest of fiscal sanity I urge the adoption of my amendment.

At any rate, if it cannot get the $100,000, the Peace Corps will not be getting into this program. That is the point. That was the point which was made by the gentleman from Ohio (Mr. HAYS).

Mr. GALLAGHER. Mr. Chairman, I move to strike the requisite number of words.

Mr. Chairman, I rise in opposition to the amendment. I think the gentleman from Iowa was correct about the complaints and the committee has studied them and they have been studied also by various Members who have investigated such complaints on their own with reference to the activities of the Peace Corps. And, they have found complaints. However, by and large, there has been a great acceptance of the Peace Corps. There are additional countries which are requesting our volunteers and feel that they can perform a useful service and, in fact, are performing a very useful service in many of the countries where they are now stationed. And, there are additional countries which have not had Peace Corps volunteers before but which have now requested Peace Corps volunteers. So the reputation of the Peace Corps continues to grow and it continues to be held in great esteem throughout the world.

The point I think that should be made, is that a 10-percent reduction is already for all practical purposes in effect. The administration in the President's request has already reflected a 10-percent reduction in the request for the Peace Corps this year. The request this year is below last year's appropriation. What the gentleman's amendment, in effect, would do would be to reduce by approximately 1,000 the number of volunteers that could be sent abroad this year by the Peace Corps. It is true that the Peace Corps has not solved a lot of the world's problems but, certainly, it has performed a good job under difficult conditions in many places throughout the world.

I think if we are going to superimpose an additional 10-percent cut on the Peace Corps it would be unfair. It would be unfair to the new administration, unfair to the new Peace Corps Director, Mr. Blatchford, and it would be unfair to the Peace Corps especially in light of what it is accomplishing. The President has sent up a message which demonstrates confidence in the Peace Corps and that message reflects a 10-percent cut. That reduction is part of this bill. The committee in its deliberations and wisdom, felt that we should support the administration request and the Peace Corps. To superimpose another 10-percent reduction would be wielding the meat ax.

I might say further that there has been a general decrease in accord with the wishes of the gentleman from Iowa down through the years. There will be less volunteers this year than there were last year.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. GALLAGHER. I yield to the gentleman from Iowa.

Mr. GROSS. The gentleman cannot be serious when he says that my amendment would represent another 10-percent cut. The cut in the bill is only about $900,000. If you call that fiscal restraint on a $100 million bill, then I do not know the meaning of the word "restraint."

Mr. GALLAGHER. Well, I did not use that word. What I did say was that the administration and the President has already included a 10-percent reduction in the Peace Corps in his message and this committee accepted this and voted accordingly. What we are now asked to do is to reduce it another 10 percent.

Mr. ADAIR. Mr. Chairman, will the gentleman yield?

Mr. GALLAGHER. I yield to the gentleman from Indiana.

Mr. ADAIR. If the gentleman from Iowa (Mr. GROSS) and others interested would consult the table near the bottom of page 2 of the report, it will be observed that the original authorization budget request was $109.8 million. The amended budget was $101.1 million, which is the amount that we are recommending here and which in my opinion bears out the point made by the gentleman from New Jersey (Mr. GALLAGHER) as to the magnitude of the reduction from the original budget request.

Mr. WOLFF. Mr. Chairman, will the gentleman yield?

Mr. GALLAGHER. I yield to the gentleman from New York.

Mr. WOLFF. I wonder if the gentleman could answer a question as to the number of countries that have asked our Peace Corps volunteers to leave? Has it not been true that primarily those countries have been countries which have come under Communist influence where our Peace Corps volunteers have been requested to leave?

Mr. GALLAGHER. Yes, the gentleman is correct.

Mr. WOLFF. Was that not true in Tanzania, for example?

Mr. GALLAGHER. Yes, and similarly with other countries where the Communist influence has taken over but once that influence has been removed, there has been a request for the return of our Peace Corps volunteers such as in Indonesia. The gentleman from New York makes a very valid point. Obviously, they want the benefit of the expertise, teaching and technological know-how of our Peace Corps volunteers.

Mr. ADAIR. Mr. Chairman, I rise in opposition to the amendment.

It is not often that I find myself in opposition to the gentleman from Iowa, especially on matters relating to the reduction of authorizations or appropriations, but in this case I believe that the figure recommended in the revised budget is a reasonable one.

Again referring to the table at the bottom of page 2 in the Foreign Affairs Committee report, it will be observed that through the years the authorization and the appropriation for this program have diminished. For example, last year we authorized $112,800,000. There was appropriated $102 million. So it is clear that the authorization request for this year is $900,000 below the appropriation figure for last year, and is almost $12 million below what we authorized last year.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. ADAIR. I yield to the gentleman from Iowa.

Mr. GROSS. I would ask if it is not true that the gentleman from Indiana

who is now addressing the House, voted last year for a cut of approximately $15 million?

Mr. ADAIR. That is true, because I believed that there was that much excess in last year's bill, but I do not find that in this year's bill.

Mr. GROSS. If the gentleman would yield further, he does not think the fiscal condition of this Government is any better now than it was a year ago, does he?

Mr. ADAIR. I regret to say that I do not, and that is why I approved the substantially lower figure requested in the authorization bill for fiscal year 1970.

Mr. Chairman, reference has been made several times here today as to the number of countries in which the Peace Corps is operating. I do not think there is any magic in finding a large number of countries in which we operate. In fact, the Director of the Peace Corps has made it very clear that he will scrutinize each new request with the utmost care so that we will not overexpand. But I would also invite the attention of the members of the committee to the figures set forth again on page 2 of the report, where it is shown that in 1968 the Peace Corps had volunteers in 57 countries. In fiscal 1969 we were in 59 countries and for fiscal year 1970 it is estimated that we will be in 63 countries.

So, Mr. Chairman, in answer to the argument that nations generally are turning against this program I would cite these figures as evidence that, on the contrary, we are going into more nations, hopefully with more carefully selected personnel to fit the particular needs of each of the countries into which we go.

Mr. Chairman, reference also was made to Malawi, and I want to be certain that the situation in that country is understood.

As the gentleman stated, but perhaps did not emphasize quite as much as I would, there has not been a request up to this moment from the government of that country for our withdrawal. I understand that a political party has passed a resolution asking the government to make such a request, but the latest information available is that such a governmental request has not yet been made.

Finally, Mr. Chairman, on the point of the character and the dress of some of our Peace Corps volunteers, I can say to the committee that the Director is aware of such criticism, and has assured me that where he finds any evidence whatsoever of improper dress or improper behavior, those individuals will be immediately recalled home.

The CHAIRMAN. The time of the gentleman from Indiana has expired.

Mr. HAYS. Mr. Chairman, I move to strike out the last word and rise in support of the amendment.

Mr. Chairman, like my friend, the gentleman from Indiana, in reverse, he says he seldom finds himself in disagreement with the gentleman from Iowa—and I seldom find myself in agreement with him, especially not twice in 1 day—but I am today.

Normally I would not support an amendment to cut Peace Corps funds but I am supporting it today for the same reason that I intend, when the foreign aid bill comes up, to offer an amendment to each section of the foreign aid bill that authorizes money—an amendment to cut it by 75 percent.

If it is such a good thing for Americans, then it ought to be just as good for foreigners. If it is a good thing for your constituents, then it ought to be a good thing for people who are not your constituents.

They say, oh, but this 75 percent cut that the President has ordered is to fight inflation. Well, I am just as anxious to fight inflation as he is.

The gentleman from Pennsylvania, my good friend, the chairman, has made speech after speech, as have I, imploring you to vote for the foreign aid bill on the grounds that 90 percent of the money is spent in the United States. It is inflationary.

So if we are going to fight inflation and if we are seriously going to fight inflation by cutting down, then let us not just cut hospitals and highways and all other public works by 75 percent, but let us pass it on a little bit.

So I find myself compelled to support the gentleman's cut which is a modest cut of about 11 percent in the Peace Corps. I will promise you that if they trim off the frills and the travel and the other luxuries that they have in there, that they will never miss it.

Mr. GERALD R. FORD. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, since the inception of the Peace Corps, I have supported it. I believe we get a greater return for our foreign aid dollars from this program than we do from any other foreign aid program under the sponsorship of the U.S. Government.

I have traditionally supported the foreign aid program, although not on every occasion have I supported every dollar requested by the President of the United States. In this case I think because we do get a better return for the dollar invested that the committee ought to be supported in the action that it is recommending to this body today.

We have seen since 1962 a gradual buildup in the expenditures for the Peace Corps. It started with an original authorization request of $40 million and it rose to a height of $125.2 million several years ago. The trend is now downward.

This request for fiscal year 1970 by the outgoing administration was $112.8 million. It was subsequently reduced by the present administration. The trend is downward and I think it is going to be at the proper level for the authorization by the committee action today. A reduction further, as recommended by the gentleman from Iowa, in my opinion will be harmful in the overall effect.

I, therefore, urge that the amendment be defeated.

Let me point out, as the committee report does, that back in fiscal year 1968 there were 13,192 volunteers, both volunteers and trainees in the Peace Corps. This has been reduced under the present figure of the committee, to a figure of about 12,000—a downward trend in total numbers.

The number of nations to be serviced by the Peace Corps on the other hand has gone up from 57 in fiscal year 1968 to some 63 in fiscal year 1970. When you look at the number of people being reduced in the program and the number of nations that are involved, I think the program is at a proper level.

For that reason, Mr. Chairman, I hope and trust that the committee's recommendation will be approved.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. GERALD R. FORD. I am glad to yield to the gentleman from Iowa.

Mr. GROSS. This justification has been pitched on the basis of what the administration wants. The administration has come in with a request for nearly $1 billion more for foreign aid this year—not the $1,700,000,000 actually appropriated last year, but nearly $1 billion more. Where, in all conscience, and when are we going to start saving a little money? Are we going to continue to pitch it out to foreign lands? For what purpose? We have heard the claim today of "outstanding jobs" by the Peace Corps. Where are the outstanding jobs that have been accomplished by this organization? Where are they?

Mr. GERALD R. FORD. Let me point out in this case that the Peace Corps trend is downward. As the gentleman from Iowa pointed out, the administration wants more for the overall foreign aid program. The circumstances are different in the two situations. Therefore, I think we ought to support the committee and the administration where the trend is downward and pass judgment later on the dollar requirements of the overall foreign aid program.

Mr. GALLAGHER. Mr. Chairman, will the gentleman yield?

Mr. GERALD R. FORD. I am glad to yield to the gentleman from New Jersey.

Mr. GALLAGHER. I think the distinguished minority leader is absolutely correct in his analysis. I might say that as to foreign aid, we are presently marking the bill up, so the House will have an opportunity to work its will. I do not think we should so disrupt the Peace Corps because we want to cut foreign aid today. We shall have an opportunity in the committee and the House will have an opportunity to work its will on that bill in the very near future.

Mr. Chairman, this is a reasonable bill, and I believe the distinguished minority leader has well stated the case for the Peace Corps.

Mr. MORGAN. Mr. Chairman, I rise in opposition to the amendment. No one in this House has been closer to the Peace Corps and Peace Corps authorizations than I have since 1961. This year the original budget request was for $109,800,000. The amended budget request came in for $101,100,000 after the executive took a second look at the program. Last year the appropriation was $102 million. In the history of the Peace Corps this House has always stood behind the Committee on Foreign Affairs and approved the authorization recommended by the committee. I am sure if there are any corrections to be made in the actual dollar amounts, Mr. PASSMAN'S subcommittee will be taking a good hard look at the amount authorized, and there may be some reductions, as there have been in past years.

Last year we authorized $112,800,000. Only $102 million was appropriated. I urge that we stand behind the commit-

tee's request of $101,100,000. We have a new Director of the Peace Corps. He is young. He is dynamic. In a few sessions I have had with him I have noted these qualities. I have heard him speak of his plans for the future how he wants to change the emphasis of the Peace Corps. He wants to cut down on the young college graduates who are serving as teachers overseas, and to try to pick up more mechanics, carpenters, bricklayers, and other skilled people who have a missionary spirit and who are willing to devote 2 years of their lives to serving overseas in foreign countries who want and need their skills.

I think the number of volunteers who will want to serve will be substantial, and a cut of $11,100,000 in the authorization is much too deep.

Mr. GROSS. Mr. Chairman, will the gentleman yield?

Mr. MORGAN. I yield to the gentleman from Iowa.

Mr. GROSS. Is it not a sad situation that the more we spend overseas on enterprises of this kind, the more trouble and the deeper into trouble we get?

Mr. MORGAN. I would not want the gentleman to go to sleep tonight and find that tomorrow when he wakes up he would have to live in a world in which we had since 1940 never spent a dime for foreign aid. I wonder what kind of world he thinks we would be living in this September 9, 1969, if there had never been any foreign aid. Would Western Europe be under Communist domination? Would the less developed countries be ruled by Moscow or Peking? Would any of the free world still be free?

Mr. HAYS. Mr. Chairman, will the gentleman yield?

Mr. MORGAN. I yield to the gentleman from Ohio.

Mr. HAYS. I do not want to go to sleep tonight and have to wake up in the morning and tell my constituents that they cannot get a hospital bed or a hospital built because we are fighting inflation, but I voted for every dime for the Peace Corps and every dime for foreign aid.

Mr. MORGAN. I do not think that is any comparison at all. I think that a lot of the gentleman's constituents are substantial citizens who are interested in what happens in the less developed countries and are good church members, who believe in the sort of missionary work the Peace Corps is doing.

Mr. Chairman, I ask that the amendment be defeated.

The CHAIRMAN. The question is on the amendment offered by the gentleman from Iowa (Mr. GROSS).

The question was taken; and the Chairman being in doubt, the Committee divided, and there were—ayes 53, noes 51.

Mr. GALLAGHER. Mr. Chairman, I demand tellers.

Tellers were ordered, and the Chairman appointed as tellers Mr. GROSS and Mr. GALLAGHER.

The Committee again divided, and the tellers reported that there were—ayes 61, noes 63.

So the amendment was rejected.

The CHAIRMAN. The Clerk will read.

The Clerk read as follows:

SEC. 2. Section 5 of the Peace Corps Act, as amended, which relates to Peace Corps volunteers, is amended as follows:

(a) In subsection (h), immediately after "(31 U.S.C. 492a),", add "the Act of October 21, 1968 (5 U.S.C. 5584) for purposes of erroneous payments of allowances provided under the Peace Corps Act,".

The CHAIRMAN. Under the rule, the Committee rises.

Accordingly the Committee rose; and the Speaker having resumed the chair, Mr. NATCHER, Chairman of the Committee of the Whole House on the State of the Union, reported that that Committee, having had under consideration the bill (H.R. 11039) to amend further the Peace Corps Act (75 Stat. 612), as amended, pursuant to House Resolution 527, he reported the bill back to the House with an amendment adopted by the Committee of the Whole.

The SPEAKER. Under the rule, the previous question is ordered.

The question is on the amendment.

The amendment was agreed to.

The SPEAKER. The question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed and read a third time, and was read the third time.

MOTION TO RECOMMIT OFFERED BY MR. GROSS

Mr. GROSS. Mr. Speaker, I offer a motion to recommit.

The SPEAKER. Is the gentleman opposed to the bill?

Mr. GROSS. I am, Mr. Speaker, in its present form.

The SPEAKER. The Clerk will report the motion to recommit.

The Clerk read as follows:

Mr. GROSS moves to recommit the bill H.R. 11039 to the Committee on Foreign Affairs with instructions to report the same back to the House forthwith with the following amendment: On the first page, line 6, strike out "$101,100,000" and insert in lieu thereof "$90,000,000."

The SPEAKER. With objection, the previous question is ordered on the motion to recommit.

There was no objection.

The SPEAKER. The question is on the motion to recommit.

The question was taken; and the Speaker announced that the noes appeared to have it.

Mr. GROSS. Mr. Speaker, I object to the vote on the ground that a quorum is not present and make the point of order that a quorum is not present.

The SPEAKER. Evidently a quorum is not present.

The Doorkeeper will close the doors, the Sergeant at Arms will notify absent Members, and the Clerk will call the roll.

The question was taken; and there were—yeas 144, nays 186, not voting 100, as follows:

[Roll No. 161]

Mr. McFall with Mr. Ashbrook.
Mr. Carter with Mr. Fish.
Mr. Frey with Mr. Grover.
Mr. Morse with Mr. Quie.
Mr. McEwen with Mr. Quillen.

The result of the vote was announced as above recorded.

A motion to reconsider was laid on the table.

GENERAL LEAVE TO EXTEND

Mr. MORGAN. Mr. Speaker, I ask unanimous consent that all Members may have 5 legislative days in which to extend their remarks on the bill just passed.

The SPEAKER. Is there objection to the request of the gentleman from Pennsylvania?

There was no objection.

ORDER STOPPING PUBLIC WORKS CONSTRUCTION SHOULD BE CANCELED

(Mr. EVINS of Tennessee asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. EVINS of Tennessee. Mr. Speaker, the President's decision to halt construction on public works projects is indeed regrettable.

The net effect of this decision will be to increase costs, create unemployment, and to delay needed public facilities.

Construction costs are increasing at the rate of 8 to 10 percent annually in various parts of the country and any delays will simply add increased costs to each project.

Testimony before the Subcommittee on Public Works Appropriations indicates that delays on projects will result in millions of dollars in increased costs.

The Chief of Engineers in his testimony before our committee indicated that construction slowdowns, delays and stretchouts have already resulted in $130 million in increased costs. This is due to disruption of normal, regulated construction schedules and the escalating costs of construction. I am advised that further delays will cost hundreds of millions.

A study by the Bureau of Reclamation of 23 major projects already delayed indicated the increased costs of the slowdown will total $182 million in this area alone—and that another $98 million in delayed benefits will be lost.

Mr. Speaker, we are already lagging in receiving the benefits which these projects bring—flood control, power production, highways and transportation, navigation, new water supplies, and recreation, among others.

This is not the first slowdown this year. In April another Presidential order delayed work on 116 projects involving $143 million. Although the statement is made that the latest order does not affect current contracts, the order certainly applies to new contracts on going projects. In other words, many projects will be halted at all stages of completion—bleak monuments to this regrettable and shortsighted decision.

Any short-term advantages that might be gained by the curtailment of public works projects will be offset by the long range impact of this drastic slowdown of progress.

There has already been too long a delay in completion of our Interstate Highway System. Safety and the public need and interest more than justify proceeding with Corps of Engineers-Bureau of Reclamation projects, our interstate highway construction program, the Appalachian highway program, and other public construction projects without interruption.

Mr. Speaker, on Friday last I sent a telegram to the President calling for the cancellation or modification of his order on stopping public works construction.

AMERICAN PRISONERS OF WAR IN NORTH VIETNAM

(Mr. LONG of Maryland asked and was given permission to address the House for 1 minute, to revise and extend his remarks, and to include extraneous matter.)

Mr. LONG of Maryland. Mr. Speaker, 88 Representatives have joined me in signing the attached statement regarding the treatment of American prisoners of war in North Vietnam. I intend to forward copies of this statement to the Secretary of State and the Secretary of Defense urging that they bring it forcefully to the attention of the North Vietnamese negotiators in Paris.

Last month Senator CRANSTON and Senator GOODELL sponsored an identical statement, which 38 of their colleagues signed. The statement was delivered to the North Vietnamese negotiators in Paris on August 21.

We have an obligation to American prisoners of war to do everything possible to expedite their release—and to see that they are treated justly.

Mr. Speaker, I include the statement in the RECORD:

FULL TEXT OF STATEMENT

Along with Americans everywhere, we too rejoiced with the families of the three servicemen freed from North Vietnamese captivity.

These gallant men emerged from their ordeal physically weakened, but unwavering in their courage and loyalty.

Yet even as we share the joy of their release, our happiness is clouded by the knowledge that 1,365 other American families are still waiting—some for the release of a husband or son, some even for definite word whether a loved one is dead or alive.

For many of these families, the North Vietnamese could devise no subtler cruelty than their persistent refusal even to provide a list of names of the prisoners in their custody. Each of us regularly receives poignant letters from parents and wives of the more than 1,000 men who are missing and thought to be prisoners of the North Vietnamese and the more than 300 known to be in custody.

When, they ask, will our men be able to come home?

And, all too often, how can we find out if they are still alive?

It is hard for us to understand how Hanoi can maintain so callous a position. By our own standards, this kind of cruelty imposed on innocent bystanders is both repugnant and virtually unthinkable.

Yet it may be that North Vietnam hopes through such cruel pressure to influence the policy of the United States toward the Vietnam conflict.

If this is their intention, they are doomed to failure. Neither we in Congress, nor the Administration, nor the American people as a whole, nor indeed the families directly affected, will be swayed by this crude attempt.

Though we may differ in our views on the future course of American policy in Vietnam, we are firmly united in support of the position on our prisoners made clear both by the present Administration and by its predecessor.

In 1967, for example, the United States formally protested mistreatment of American prisoners and urged North Vietnam to observe the provisions of the 1949 Geneva Convention Relative to the Treatment of Prisoners of War. Equally important, our government asked Hanoi to permit impartial observers to verify its claims that our men were being treated humanely—claims contradicted by a growing body of evidence that prisoners were being subjected to emotional and physical duress.

Indeed, Hanoi had threatened a year earlier to put American prisoners on trial as "war criminals," a clear violation of the Geneva Convention. Fortunately, they were dissuaded from their plans by worldwide protests against this extreme form of inhumane treatment.

Efforts to help our servicemen held by North Vietnam have been pursued with equal vigor by the present Administration. Secretary of State Rogers, Secretary of Defense Laird, and Ambassador Lodge in Paris have all pressed North Vietnam in recent months for compliance with the provisions of the Geneva Convention. In particular, they have urged such basic steps as repatriation of sick and wounded prisoners and the furnishing of a list of men actually in North Vietnamese hands.

This latter, most basic, request was brutally rebuffed by North Vietnamese representative Xuan Thuy in Paris, who flatly refused even to identify the American prisoners held in his country so long as the United States "continued its aggressive war in Vietnam."

This obvious attempt by Hanoi to capitalize on our deep concern for these men, and to turn it to their propaganda or political advantage, is inhumane and inexcusable.

We urge Hanoi not to be misled by our divergences on policy into believing that we are not united on this issue of simple humanity. Cruelty of the kind being practiced in this instance by North Vietnam can serve only to increase our determination and, in the words of Ambassador Lodge, "cannot have a favorable effect on our negotiations."

We therefore pledge our full support to the Administration in its efforts on behalf

of the American servicemen held captive in North Vietnam.

With the Administration, we too ask Hanoi to prove the "humane and generous" policy it claims to follow in treatment of prisoners by naming the men in captivity, by immediately repatriating the sick and wounded, by permitting impartial inspection of prison facilities, by assuring proper treatment of all prisoners, by making possible a regular flow of mail, and by undertaking serious negotiations for the prompt release of all American prisoners in their custody.

And, finally, we urge the governments, the statesmen, and the ordinary men and women around the world who spoke out against "war crimes trials" in 1966 to make their voices heard once more. Then, as now, the issue was not political but humanitarian—and Hanoi responded to the force of world public opinion. If that force can again be mobilized, this too may contribute to inducing from Hanoi greater respect for human decency and for the rule of law.

LABELING OF SAUSAGE PRODUCTS AND HOT DOGS

(Mr. LANDRUM asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. LANDRUM. Mr. Speaker, a grave injustice has been imposed on a major American industry and on the consuming public by an agency of our Federal Government. The U.S. Department of Agriculture has decided to limit the amount of chicken that can be used in cooked sausage products to only 15 percent. Discriminatory labeling is required if the percentage is over this amount.

Now, what makes this doubly outrageous is that the Agriculture Department is also proposing to allow the red meat industry to stuff hot dogs with up to 33 percent fat.

As we all know, poultry meat is very low in fat content. It would, therefore, seem much more nutritious to offer the public hot dogs and other sausages with high percentages of good protein than almost flammable products.

There is not even a taste difference that can be fairly used to account for the discrimination against poultry meat in hot dogs.

As other Members know, I have always supported strongly the Wholesome Meat Act of 1967. I am pleased that by next November this act will extend to even intrastate operations. And I am proud of the fact that the broiler industry in my State has had an excellent record in producing quality products for Federal inspection.

My concern now is to get more of this good meat into franks—and to eliminate some of the fat. I believe that this is the best way to serve the American people.

An excellent background statement analyzing the history of the present situation has been issued by the National Broiler Council and I am pleased to include this with these remarks for my colleagues in the Congress to read and consider.

In 1964 a new machine came on the market which for the first time made it practical and economical to debone chickens. Thus, a new meat component for hot dogs and other sausage products became available.

Soon after this machine was introduced, the U.S. Department of Agriculture imposed labeling requirements so misleading to consumers that they served as an effective blockade against the use of the federally inspected deboned chicken meat in franks moving in interstate commerce. Official rule making procedures were ignored by those imposing these restrictions. No opportunity was granted for those adversely affected to express views at a hearing, or for that matter, file statements of protest for the public record.

On the other hand, intra-state manufacturers of hot dogs were not subject to the federal restrictions. When they learned about this new chicken product and began to use it, demand increased as its merits became more widely known. However, the intra-state market was limited, and although nationally recognized authorities in food technology said the new deboned chicken product was one of the finest meat components available for hot dogs, it became necessary for the U.S. chicken industry to look abroad to expand the market. Actions of the federal government therefore had the practical paradoxical effect of forcing the export of high quality chicken product at a time USDA was permitting hundreds of millions of pounds of low grade red meat to be imported for use in hot dogs and other sausage products.

Time after time over the past four years USDA officials acknowledged the inequity of this situation and promised corrective action. But nothing happened.

Then nearly two years ago Congress passed the Wholesome Meat Act which by next November will make it necessary for intrastate hot dog manufacturers to meet federal standards, including the discriminatory labeling standards which so effectively blockaded the use of chicken in franks moving between states. Faced with a loss of markets, many chicken deboning operations would be forced to close, unless this inequity were corrected.

In response to the chicken industry's appeal for relief from this injustice, the U.S. Department of Agriculture published a proposed regulation authorizing the use of chicken in hot dogs, which imposed certain crippling restrictions. One of these reduced the bone residue tolerance to .5 percent, a level far below the technical capability of existing deboning machines. This level was also two-thirds less than the Department had earlier claimed as being appropriate to provide maximum safeguards to public health. Its effect would not only have been to continue to deny the use of the new federally inspected chicken product in hot dogs moving across state lines, but to also force chicken out of the intra-state sausage market where the new product enjoyed excellent acceptance from consumers, retailers, and manufacturers. Again, the industry registered a strong protest. USDA responded by changing these requirements to a less unreasonable level. This change appeared in the new regulations governing the use of chicken in hot dogs and other sausage products published in the Federal Register September 3. Authorization was also given to include chicken in the regular frank with skin in natural porportion to the part. Both changes represent improvements over earlier interpretations of the proposed regulation.

Unlike earlier moves the latest action by the U.S. Department of Agriculture would not put those with chicken deboning operations out of business. But some claim it offers a decided competitive advantage to red meats.

Under such regulations they require beef hot dogs to be made of beef, pork hot dogs from pork, but USDA authorized up to 85% of other meats in chicken hot dogs! Is a federal label therefore being used to disguise the truth and to mislead the consumer. If USDA permits up to 85 percent other meats in chicken franks, can we now expect labels to be approved authorizing up to 85 percent other meats in chicken rolls, chicken pies or chicken soup?

Interestingly, the 85 percent amount can include the least desirable red meat components. These could have the effect of down

grading chicken hot dogs offered consumers because the amount of the high quality chicken would be so small.

Quite the opposite situation prevails when chicken is used in the "all meat" hot dog. By official definition the chicken used must be lean muscle meat . . . a product with less than 10 percent fat. USDA employs a far more lenient "meat" definition for the red meats, and therefore it becomes possible to blend the lean, low fat chicken product with certain low priced red meat items having as much as 70 percent fat. Consequently if USDA places a limit on the amount of fat permitted in hot dogs, the effect of the new regulation would appear to enable red meats to enjoy a competitive advantage from the use of chicken in "all meat" franks.

Many from the broiler industry have voiced concern that the new chicken in sausage regulation seems to offer strong competitive advantages to red meats. If such apprehensions are validated by actual experience, then those affected can be expected to take the steps necessary to overcome unjust discrimination.

FREE WORLD FLAG SHIP ARRIVALS IN NORTH VIETNAM

(Mr. CHAMBERLAIN asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. CHAMBERLAIN. Mr. Speaker, during August a total of six free world flag ships arrived in North Vietnam, according to Department of Defense information. This brings the total so far this year to 73 arrivals and represents a 25-percent reduction from the 98 arrivals during the same period in 1968.

This is good news and the administration is to be commended for its continuing efforts to achieve full cooperation in ending the use of such vessels by Communist interests for what can only be the aid and comfort of the Hanoi regime and its pursuit of the war in the south.

In August, this traffic consisted of four ships flying the British flag and two the flag of Cyprus. This constitutes one of the lowest monthly totals in many months, but while I am encouraged, I am not satisfied and do not believe our fighting men in South Vietnam or the great majority of Americans here at home are satisfied either. For that reason I shall continue to urge greater action to eliminate free world flags trading with the enemy.

At this point, I insert a chart covering free world shipping to North Vietnam during 1969 and the text of a letter I have received in response to my request for action by the new administration.

1969 FREE WORLD SHIP ARRIVALS IN NORTH VIETNAM

	British	Somali	Cyprus	Singapore	Japanese	Maltese	Total
January	8	2	1				11
February	6		1	2	1		10
March	6	1					7
April	7	1			1		9
May	9	1	1			1	12
June	6	2	2	1			11
July	6	1					7
August	4		2				6
Total	52	8	7	3	2	1	73

THE WHITE HOUSE,
Washington, D.C., August 5, 1969.

Hon. CHARLES E. CHAMBERLAIN,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN: This is in further response to your July 7 letter requesting a report on this Administration's current efforts to reduce the number of free world ships carrying supplies to North Vietnam.

I wish to assure you that this Administration shares your concern with this problem and is continuing its efforts to reduce this trade. Over the past several months this Administration has worked closely with some of the governments whose vessels are in this trade. In some cases these efforts have been successful and the governments either have prohibited calls of their flag vessels to North Vietnam or in other ways have taken measures to prevent such calls. For example, the Somali Republic in April banned calls at North Vietnamese, North Korean and Cuban ports. Singapore-flag vessels are no longer in the trade. The call of a Singapore-flag vessel in June, which you mentioned in your letter, is viewed as an illegal act by the Government of Singapore because that ship's registration has been cancelled.

The cooperation of the Government of Cyprus has been sought repeatedly and at all levels, but its vessels continue to call at North Vietnam. As a consequence, aid programs to Cyprus were discontinued in 1966. Requests for resumption of some aid programs in recent months have been denied. Section 620(n) of the Foreign Assistance Act was also recently applied to Malta because of that government's apparent inability to prevent voyages by its flag vessels to North Vietnam. This action was precipitated by the call of a Maltese-flag vessel to North Vietnam in May.

With regard to British-flag vessels, the Administration shares your concern over the number of these vessels that continue to carry goods to North Vietnam each month. This subject has been discussed several times with the British Government. That Government maintains that it cannot take effective action because of the implication which such action might have for Britain's position in Hong Kong. The ships in question are all owned by Hong Kong firms believed to be under the control of Communist Chinese interests.

I can assure you that this Administration will continue to give careful attention to the problem of free world shipping to North Vietnam.

Sincerely,

WILLIAM E. TIMMONS,
Deputy Assistant to the President.

NEED FOR PASSAGE OF THE PROGRAM INFORMATION ACT

(Mr. ROTH asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. ROTH. Mr. Speaker, on Thursday, the last day of legislative business, I rose to begin a short series of remarks stressing the need for passage of the Program Information Act. By including in the body of the RECORD comments from officials across the country, I hope to illustrate that the people back home, the people who must deal with the maze of Federal aid programs, believe very strongly that the Government should publish an annual catalog of all Federal aid programs, should update the catalog monthly, and should distribute the catalog widely. An information crisis now exists in States, cities, towns, and universities. Officials find that they apply for funds under a certain program only to learn that application deadlines are passed, that funds no longer exist, that they have been misled as to program requirements. They may find, in a nutshell, that all the obligations they must meet have not been carefully outlined by the Government—and they learn, in a nutshell, that they have wasted countless dollars and countless man-hours on a project that will yield no results. This is not to say that the type of catalog mandated by the Program Information Act will solve all problems and answer all questions, but it will go more than one giant step further than any other existing publication.

Listen to what some of our constituents say:

From a State college administrator in the East:

We can't afford to keep track of federal aid. Several of us devote many extra hours in a losing effort to keep abreast.

A State welfare official in Illinois:

Existing catalogs are just not specific enough to be useful. They get out of date very quickly and one never knows if funds are available.

A housing official in Texas:

One-third of all administrative costs can be accounted for by trying to find out what you are supposed to do, how you are supposed to do it, and by trying to keep track of the procedural changes which are constantly being made.

A county planner in Georgia:

We need a single source of federal program information. I now have six federal aid catalogs on my desk and dozens of offers from private agencies who sell a service of trying to locate federal assistance information.

A private consultant in Arizona:

Approximately 30 percent of our fees are expended in consultation and correspondence over the procedures and requirements of federally assisted programs versus 5 to 10 percent for private development. Two men out of an office of 32 devote almost 100 percent of their time in learning, explaining, and fulfilling application requirements of federally aided programs.

CONGRESSMAN ANNUNZIO INTRODUCES URBAN PROPERTY PROTECTION AND REINSURANCE AMENDMENTS OF 1969

(Mr. ANNUNZIO asked and was given permission to address the House for 1 minute, to revise and extend his remarks and include extraneous matter.)

Mr. ANNUNZIO. Mr. Speaker, today I have introduced legislation, the Urban Property Protection and Reinsurance Amendments of 1969, designed to make extensive changes in the national insurance development program, enacted into law last year as part of the 1968 Housing Act Amendments.

This legislation deals with the problem areas that have cropped up in connection

with last year's legislation and will enable homeowners and businessmen to obtain insurance at reasonable costs.

My bill contains most of the amendments that I offered last year in connection with the national insurance development program. Unfortunately, these amendments were not adopted because the insurance industry argued that they were not necessary. However, it has been shown that these amendments were necessary and, therefore, it is vital that the amendments now be enacted.

Last March and April, the Housing Subcommittee held hearings in Washington, D.C., and Chicago on the operation of the Federal insurance program. The record of these hearings clearly indicates that the program, as now enacted, is simply not reflecting the intent of those of us who supported it. We thought we were passing a law which would give the insurance industry some relief against the tremendously high losses which resulted from riots and civil disorders. More importantly, we felt that we were establishing a program to be run by the industry and the States which would afford all inner-city property owners essential property insurance at reasonable rates. These are the so-called FAIR plans.

Under these plans, inner-city property owners who could not get insurance through private sources would be afforded policies through a voluntary pool established by the industry under the supervision of the State commissioner. These FAIR plans were supposed to eliminate two problems.

First was a hideous insurance industry practice of red-lining or blacking-out inner-city areas. Second, making property insurance available to property owners in these areas was supposed to eliminate blight and encourage the improvement of properties, because the lack of insurance makes it virtually impossible to obtain financing for improvement and repairs.

The theory of the act, while still valid, has not worked out. For example, in Chicago, we found that many companies were still refusing to write in inner-city areas; that after the law was signed, many companies arbitrarily canceled policies and "dumped" those polices into the FAIR plans; that the FAIR plan rates were double and sometimes quadruple the normal manual rates for such policies; that inner-city property owners had no knowledge of the availability of FAIR plan insurance; that brokers and agents were reluctant to put policies in the FAIR plan because the commissions for such policies were much lower than the commissions paid by private industry and the inner-city property owners in most cases, was left to the so-called high-risk writers.

My bill meets many of these problems head on. Its dominant provision calls for the direct Federal writing of essential property insurance, including crime lines, if the rates for such insurance in the private market exceed 175 percent of the manual rate. The premium for such policies will be 175 percent of the manual rate. No policy will be written if the Secretary of Housing and Urban Development determines that the property is uninsurable, or if the State commissioner can justify the excessive rate.

The FAIR plans are continued. However, we include, in addition to fire and extended coverage, vandalism and malicious mischief, and burglary and theft in the FAIR plan. As you can imagine, these lines of insurance are most important to inner-city property owners.

Other much-needed reforms contained in the bill are:

First. Eliminates discrimination in brokers' and agents' commissions. This will encourage brokers and agents to sell the FAIR plan insurance.

Second. Provides Federal guaranties for performance bonds for small business construction contractors and subcontractors. For over a year, black contractors have complained about their inability to engage in so-called black entrepreneurship programs because they cannot get perfomance bonds.

Third. Provides for reinsurance of losses which occur during the construction or rehabilitation of habitational property. We are amazed to learn that homes and apartments being constructed or rehabilitated even under our Federal programs are uninsured during the building or remodeling period. By offering the same kind of insurance against such losses that is now provided for riot losses, these properties will be insured during the crucial construction stage.

Fourth. Eliminates State sharing in riot loss payments. Present law provides that the States must pay up to 5 percent of the total property premiums written in the State toward riot losses. Many States have been very reluctant to assume this obligation since they do not have the money. Yet, unless the State enacts legislation providing for this State share, the insurance companies in that State are ineligible for riot reinsurance. One of the purposes of this State share was to encourage the States to take measures to eliminate riots and civil disorders. Experience has taught us the expense of such endeavers far outweighs the advantage to be gained.

Fifth. Provides for an Office of Review and Compliance in HUD to be operated under the supervision of the Office of the Federal Insurance Administrator. At present, the Federal Insurance Administrator has virtually no policing powers over the operation of the program. The only way he hears about complaints or inadequacies comes through letters from Congressmen or the inner-city property owners. The Insurance Administrator should have the authority to check on the operation of these programs and take such steps as may be necesary to make them more effective.

These are the more salient substantive provisions of the bill. It does not provide for any new financing. The direct Federal insurance program will hopefully be paid for through the premiums collected. In the event losses exceed premiums, then the bill authorizes the Secretary to draw on the same funds which have already been made available for the payment of riot losses.

The Federal urban insurance program was passed last year. Based on the Chicago and Washington, D.C., hearings, and complaints received by many of us, this program has been a failure. Many of the provisions in my bill were first offered by me as amendments to the original legislation. These amendments were defeated in committee and on the floor—based on assurances by the insurance industry and the Department of Housing and Urban Development that they were unnecessary. After 1 year's experience, I have become convinced that this legislation is the only way to afford viable insurance programs for our inner-city residents and property owners.

The bill has been constructed to keep Federal incursion in the insurance industry at an absolute minimum. It also provides that where Federal assistance no longer becomes necessary, the situation is turned back to the industry.

The bill follows:

H.R. 13666

A bill to amend title XII of the National Housing Act to provide, under the urban property protection and reinsurance program, for direct Federal insurance against losses to habitational property for which insurance is not otherwise available or is available only at excessively surcharged rates, to make crime insurance mandatory under such program, to provide assistance to homeowners to aid in reducing the causes of excessive surcharges, and for other purposes

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That this Act may be cited as the "Urban Property Protection and Reinsurance Amendments of 1969".

SEC. 2. (a) Section 1102(b) of the Housing and Urban Development Act of 1968 is amended by striking out "and" immediately before "(2)", and by inserting before the period at the end thereof the following: "; and (3) provide direct insurance through the facilities of the Federal Government in the case of properties for which such statewide programs and the Federal reinsurance program do not make property insurance available or do not offer such insurance to the property owners at reasonable rates as defined herein."

(b)(1) Section 1201 of the National Housing Act is amended to read as follows:

"PROGRAM AUTHORITY

"SEC. 1201. (a) The Secretary is authorized to establish and carry out the programs provided for in parts A, B, C, and D of this title.

"(b)(1) The powers of the Secretary under this title shall terminate on April 30, 1984, except to the extent necessary—

"(A) to continue reinsurance and direct insurance in accordance with the provisions of sections 1223(b) and 1231(c) until April 30, 1987;

"(B) to process, verify, and pay claims for reinsured losses and directly insured losses and perform other necessary functions in connection therewith; and

"(C) to complete the liquidation and termination of the reinsurance and direct insurance programs.

"(2) On April 30, 1987, or as soon thereafter as possible, the Secretary shall submit to the Congress, for its approval, a plan for the liquidation and termination of the reinsurance and direct insurance programs."

(2)(A) Section 1203(a) of such Act is amended by redesignating paragraphs (1) through (13) as paragraphs (2) through (14), respectively, and by inserting immediately after and below "the term—" the following new paragraph:

"(1) 'directly insured losses' means losses on direct insurance claims and all direct expenses incurred in connection therewith including, but not limited to, expenses for

processing, verifying, and paying such losses;".

(B) Section 1203(a) of such Act (as amended by subparagraph (A) of this paragraph) is amended by redesignating paragraphs (13) and (14) as paragraphs (14) and (15), respectively, and by inserting immediately after paragraph (12) the following new paragraph:

"(13) 'manual rate' means the lowest approved or advisory rate filed by the principal rating organization for the same classification of risk and territory, excluding all surcharges and condition charges;".

(C) Section 1221(a)(2) of such Act is amended by striking out "section 1203(a)(10)" each place it appears and inserting in lieu thereof "section 1203(a)(11)".

(c)(1) Title XII of such Act (as amended by the provisions of this Act other than this subsection) is amended by redesignating part C and sections 1231 through 1241 as part D and sections 1241 and 1251, respectively, and by inserting after part B the following new part:

"PART C—DIRECT FEDERAL INSURANCE

"DIRECT INSURANCE OF LOSSES TO PROPERTY WHERE INSURANCE IS OTHERWISE UNAVAILABLE OR AVAILABLE ONLY AT EXCESSIVELY SURCHARGED RATES

"SEC. 1231. (a) If at any time the Secretary determines that any of the standard lines of property insurance enumerated under subparagraphs (A) through (E) of section 1203(a)(11) is not available (through the applicable plan under part A or otherwise) to any property, or is available to such property but only at an unreasonable rate, he shall make such standard line of property insurance available to such property directly through the facilities of the Federal Government, on such terms and conditions as he may determine to be appropriate, at a rate equal to 175 per centum of the applicable manual rate: *Provided*, that no such insurance shall be made available to a property which the Secretary determines to be uninsurable.

"(b) In carrying out his responsibilities under subsection (a), the Secretary may utilize—

"(1) insurance companies and other insurers, insurance agents and brokers, and insurance adjustment organizations, as fiscal agents of the United States,

"(2) officers and employees of the Department of Housing and Urban Development, and such other officers and employees of any executive agency (as defined in section 105 of title 5 of the United States Code) as the Secretary and the head of any such agency may from time to time agree upon, on a reimbursement or other basis, or

"(3) both the alternatives specified in paragraphs (1) and (2), or any combination thereof.

"(c) Notwithstanding the foregoing provisions of this title, direct insurance may be continued for the term of the policies written prior to the date of termination of the Secretary's direct insurance authority under this part, for as long as the insured pays the required direct insurance premiums; except that direct insurance under this part for any risk shall be terminated after notice whenever the Secretary determines that the standard lines of property insurance enumerated under subparagraphs (A) through (E) of section 1203(a)(11) have become available to such property at a reasonable rate.

"(d) For the purposes of this part, a rate within a State shall be presumed to be unreasonable if the Secretary finds that the total premium (including all surcharges and condition charges) charged to each of 50 or more properties in that State in any 12 month period exceeds 175 per centum of the applicable manual rate. The Secretary shall notify the appropriate State insurance authority within 15 days of making any such finding. The presumption of unreasonableness may thereafter be rebutted only if (1) the appropriate State insurance authority, within 30 days after the date of mailing of such notification, files with the Secretary a certification that such authority has independently determined that there is demonstrably an objective justification for the imposition of the premiums charged, stating sufficiently the basis for such justification, and (2) the Secretary concurs in such determination.

"(e) The amount of insurance provided by the Secretary with respect to any property shall not exceed such limits as he may determine to be appropriate: *Provided*, That no coverage shall be written on any single family residential structure in excess of $25,000 or on any manufacturing or commercial structure in excess of $1,000,000.

"(f) The Secretary shall include in his reports to the Congress on the program under this title full and complete information on his operations and activities under this part, together with such recommendations with respect thereto as he may deem appropriate."

SEC. 1232. The Secretary may, whenever he deems such action to be necessary or desirable and upon such terms and conditions as it may prescribe, guarantee any bid, payment, or performance bond under an agreement entered into by a small business concern which is a construction contractor or subcontractor to enable such concern to obtain such bond. Any such guarantee may be made or effected either directly or in cooperation with any qualified surety company or other qualified company through a participation agreement with such company."

(2)(A) Section 1222(a) of such Act is amended by striking out "section 1233" and inserting in lieu thereof "section 1243".

(B) Section 1234(c) of such Act is amended by striking out "section 1232" and inserting in lieu thereof "section 1242".

(d)(1)(A) Section 1231(a) of such Act is amended by inserting "or direct insurance" after "reinsurance", and by inserting "or property owners" after "insurers".

(B) Section 1231(b) of such Act is amended by inserting "or direct insurance" after "reinsurance".

(2)(A) Section 1232(a) of such Act is amended—

(i) by striking out "the reinsurance program" and inserting in lieu thereof "the reinsurance and direct insurance programs";

(ii) by inserting "or direct insurance" after "reinsurance" in paragraphs (1), (2), and (4);

(iii) by inserting "or property owner" after "any insurer" where it first appears in paragraph (4); and

(iv) by inserting "or directly insured" after "reinsured" in paragraph (4).

(3) Section 1233 of such Act is amended—

(A) by inserting "and direct insurance" after "reinsurance" in subsection (a)(1) and each place it appears in subsection (b)(1); and

(B) by striking out "part B" in subsection (b)(1) and inserting in lieu thereof "parts B and C".

(4)(A) Section 1234(a) of such Act is amended by striking out "Any insurer or poor acquiring reinsurance" and inserting in lieu thereof "Any insurer, pool, or property owner acquiring reinsurance or direct insurance".

(B) Section 1234(c) of such Act is amended by inserting "or direct insurance" after "reinsurance".

(e) Clause (2) in the first sentence of section 520(b) of such Act is amended—

(1) by inserting "and directly insured" after "reinsured" wherever it appears.

SEC. 3. Section 1203(a)(3) of the National Housing Act (as amended by section 2(b)(2) of this Act) is amended by striking out "and insurance for such types, classes, and locations of property against the perils of vandalism, malicious mischief, burglary, or theft, as the Secretary by rule shall designate" and inserting in lieu thereof "and insurance against the perils of vandalism, malicious mischief, burglary, and theft".

SEC. 4. (a) Section 1203(a)(3) of the National Housing Act (as amended by section 2(b)(2) and section 3 of this Act) is amended by striking out "Such insurance" and inserting in lieu thereof the following: "Such insurance shall include insurance against direct losses to property (as defined and limited by the Secretary) which occur during the construction or rehabilitation of such property. Such insurance".

(b) Part B of title XII of such Act is amended by adding at the end thereof the following new section:

"REINSURANCE OF LOSSES DURING CONSTRUCTION OR REHABILITATION

"SEC. 1225. The Secretary is authorized to offer to any insurer or pool reinsurance against losses to habitational property which occur during the construction or rehabilitation of such property. Except as otherwise provided by such rules and regulations as the Secretary may prescribe, all of the provisions, terms, and conditions of this title relating to reinsurance of losses from riots or civil disorders shall apply with respect to the reinsurance of losses which occur during the construction or rehabilitation of habitational property."

SEC. 5. Section 1211(b) of the National Housing Act is amended—

(1) by striking out "and" at the end of paragraph (9);

(2) by striking out the period at the end of paragraph (10) and inserting in lieu thereof "; and"; and

(3) by adding at the end thereof the following new paragraph:

"(11) commissions paid to agents, brokers, and producers for or with respect to policies written under the plan shall not be less than the prevailing rate being paid in the same territory for or with respect to other policies of the same type which are not written under the plan, as determined and certified to the Secretary by the State insurance authority."

SEC. 6. (a) Section 1214 of the National Housing Act is amended by adding at the end thereof the following new subsection:

"(c) Each report and other document submitted to the Secretary by a State insurance authority with respect to experience under the applicable plan under this part shall set forth and describe any losses sustained on habitational property separately from the losses sustained on business, commercial, and other nonhabitational property."

(b) Section 1234 of such Act is amended by adding at the end thereof the following new subsection:

"(e) Each report and other document submitted to the Secretary by an insurer or other person under this section with respect to reinsurance under this title shall set forth and describe any losses sustained on habitational property separately from the losses sustained on business, commercial, and other nonhabitational property."

SEC. 7. Section 1214 of the National Housing Act is amended by adding at the end thereof (after the new subsection added by section 6(a) of this Act) the following new subsection:

"(d) The Secretary, through an Office of Review and Compliance under the Federal Insurance Administrator, shall periodically review each plan under this part and the methods and practices by which such plan is being actually carried out in the areas and communities where it is intended to operate, in order to assure that such plan is effectively making essential property insurance readily available in such areas and communities and is otherwise carrying out the purposes of this title, and in order to identify any aspects of the operation or administration of such plan which may require revision, modification, or other action to carry out such purposes."

SEC. 8. (a) Section 1223(a) of the National Housing Act is amended by striking out par-

agraph (1), and by redesignating paragraphs (2) through (5) as paragraphs (1) through (4), respectively.

(b) Section 1240 of such Act is amended by striking out "(a)", and by striking out subsection (b).

(c) Section 1211 of the District of Columbia Insurance Placement Act is repealed.

SEC. 9. (a) Section 115(b) of the Housing Act of 1949 is amended—

(1) by striking out "(payable from any grant funds provided under section 103(b))";

(2) by inserting after "real property which has been determined to be uninsurable" the following: ", or which has been determined to be insurable only at an unreasonable rate,";

(3) by inserting before the period at the end of the second sentence the following: "or to eliminate the conditions necessitating the unreasonable rate"; and

(4) by adding at the end thereof the following new sentences: "For purposes of this subsection a rate is unreasonable if it is sufficiently high to justify direct Federal insurance of the property involved under part C of title XII of the National Housing Act. Grants under this subsection shall be payable from grant funds provided under section 103(b) of this Act; except that to the extent it is determined by the Secretary that funds made available for payments of directly insured losses under such title XII pursuant to section 520(b) of such Act are not needed for payments of such losses, such funds shall be used (before any funds provided under section 103(b) of this Act) for grants under this subsection with respect to property determined to be insurable only upon payment of an unreasonable rate."

(b)(1) Section 312(a)(1)(C) of the Housing Act of 1964 is amended—

(A) by inserting after "the property has been determined to be uninsurable" the following: ", or has been determined to be insurable only upon payment of an unreasonable rate,"; and

(B) by inserting before the semicolon at the end thereof the following: "or to eliminate the conditions necessitating the unreasonable rate".

(2) Section 312(a) of such Act is further amended by adding at the end thereof the following new sentence: "For purposes of paragraph (1)(C), a rate is unreasonable if it is sufficiently high to justify direct Federal insurance of the property involved under part C of title XII of the National Housing Act."

(3) Section 312(d) of such Act is amended by inserting "(1)" after "(d)", and by adding at the end thereof the following new paragraph:

"(2) To the extent it is determined by the Secretary that funds made available for payments of directly insured losses under title XII of the National Housing Act pursuant to section 520(b) of such Act are not needed for payments of such losses, such funds shall be placed in the revolving fund and used by the Secretary (before any funds appropriated pursuant to paragraph (1) of this subsection) for loans described in subsection (a)(1)(C) with respect to property determined to be insurable only upon payment of an unreasonable rate."

BRAZIL—A GESTURE OF FRIENDSHIP AND MATURITY

(Mr. RARICK asked and was given permission to address the House for 1 minute and to revise and extend his remarks and include a newspaper clipping.)

Mr. RARICK. Mr. Speaker, the American people are most fortunate that the leadership of Brazil values human life, and desires friendly relations with the United States. Because of this our Ambassador to Brazil, C. Burke Elbrick, is a free man this morning. His freedom was ransomed at the cost of further international humiliation to the United States and the loss of 15 Communist agents provocateur to the Brazilian Government.

The event makes one wonder what is the result we would have received similar cooperation had the decisionmaking in Brazil had been under a Communist government.

With hundreds of American captives in North Korea and in North Vietnam being treated without regard to the provisions of the Geneva Convention, may we not assume they are actually detained as political prisoners rather than military prisoners of war. This administration must obtain the early release of our "living casualties" languishing in Communist prisons. If our Government fails to secure the return of these Americans, I feel that an aroused American citizenry may soon learn a lesson from the Communists on how to force release of prisoners.

Mr. Speaker, I extend my personal thanks to the Brazilian Government for their cooperation and humanitarian consideration of our representative, and I would caution the Communist gangsters to beware of their fad of kidnaping American diplomats to be exploited as hostages for barter—reminding the Reds that there are numerous representatives of the Communist bloc countries walking the streets of the United States.

I insert a news clipping from this morning's Washington Post at this point in my remarks:

ENVOY RELEASED IN BRAZIL—ELBRICK FREED AFTER PRISONERS REACH MEXICO

(By John Goshko)

RIO DE JANEIRO, September 7.—C. Burke Elbrick, the U.S. ambassador kidnapped by leftist terrorists four days ago, was released by his captors tonight—his forehead gashed by a pistol blow but otherwise in good health and spirits.

Elbrick, 61, was picked up by a cab driver as he wandered along a street in a residential district where the kidnapers put him out of a car.

His release came 78 hours after he was taken from his car at gunpoint Thursday, and five hours after 15 Brazilian political prisoners, whose freedom had been demanded as ransom for the Ambassador's life, reached sanctuary in Mexico City.

Upon arriving at the embassy residence, Elbrick made this brief statement:

"To coin an understatement of the year, I'm glad to be back. I'm glad the kidnapers lived up to their word and let me go, and I'm very grateful to the Brazilian government for taking the action necessary to bring about my liberation."

Within moments after his return, Elbrick was on the phone talking to President Nixon at the summer White House in San Clemente, Calif. The content of their talk was not immediately made known.

The ambassador also was visited by Brazilian Foreign Minister Jose Magalhaes Pinto, who rushed to the residence immediately after being informed of Elbrick's return. During the past three days, Magalhaes Pinto has acted as spokesman for the Brazilian government in the negotiations that brought the successful exchange of the ambassador for the political prisoners.

Elbrick gave Magalhaes Pinto a letter from Secretary of State William P. Rogers thanking the Brazilian government for its actions in "putting the ambassador's life above all other considerations". The letter had been relayed from Washington for delivery to the Brazilian Government as soon as Elbrick was released. He has been ambassador since July 8.

Although Elbrick told reporters thronging around the front gates of the embassy residence that he was unable to talk fully at the moment, embassy spokesman later quoted him as giving these brief details about his captivity:

Referring to a bandage on the right side of his forehead, Elbrick said he had been struck with a pistol butt at the time of the kidnaping.

"They had no intention of harming me at any time," he said, "but I did not know this so I resisted when they told me to close my eyes as they transferred me from one car to another. I was not about to close my eyes for anyone at that moment."

The ambassador said that otherwise he was treated well by his captors, who brought him cigars and even washed his shirt. During his captivity, he was kept in a bare, 9-by-12-foot room in what appeared to be a house, although Elbrick added he had no idea of its location.

At the time of his release tonight, he said, he was put in a car wearing darkened glasses through which he was unable to see and, after some driving around, was put out on a side street in a residential area in the northern part of the city.

After dropping him off on the street today, Elbrick said, his captors told him to wait 15 minutes before moving. However, he immediately began walking in search of help.

As he reached a nearby intersection, a cab pulled up beside him, and he was recognized by the driver, who said: "You are the American ambassador—poor fellow." The driver then took him to the embassy residence.

Elbrick's return climaxed a tense cat-and-mouse game that began with his kidnaping Thursday as he was returning to his office after lunch at the residence.

A note left in his car identified his abductors as members of two groups active in a mounting campaign of urban terrorism against Brazil's military-dominated, right-wing government.

They are the National Liberation Action which is reputedly led by a former Communist deputy, Carlos Marighela, and the October Revolutionary Movement (MR–8), which takes its name from the 1967 date when Communist guerrilla Che Guevara, was killed in Bolivia.

In exchange for Elbrick, the kidnapers demanded the release and safe conduct to Mexico of 14 men and a woman, mostly leftist student leaders, imprisoned by the government for alleged subversive activities.

On Friday, the government agreed to meet the kidnapers' terms, and yesterday, after considerable confusion and delay, a Brazilian air force plane took off for Mexico with the 15 prisoners.

In their various communications to the government the kidnapers made clear that they would not release Elbrick until they were satisfied the 15 were safe in Mexico. This made today, which ironically is Brazilian independence day, a time of tense waiting.

Shortly after the plane landed, photos of the prisoners on Mexican soil were relayed to Rio by radio and immediately displayed over local television stations as proof that the Brazilian government had kept its end of the bargain.

AGENCIES REPORTED THE FOLLOWING FROM MEXICO CITY

The 15 prisoners, haggard and some still wearing blue denim prison uniforms with crude identification numbers, said in Mexico City that they did not know until airborne that they were serving as the ransom for the ambassador.

Under terms of Mexico's agreement on their political asylum, they were free to go after leaving the airport.

After an almost 20-hour flight aboard a Brazilian C–130 Hercules transport plane, the group was not allowed off the plane for 35 minutes because of diplomatic problems.

They claimed they were handcuffed and not allowed to smoke during the flight, although they were given a meal aboard.

The plane's pilot, Brazilian Maj. Edon Reinisch, told newsmen the delay came because he could not release the prisoners until they received entry clearance from the Brazilian Embassy and from Mexican officials.

One of the prisoners, Flavio Tavares, a columnist for a left-wing Rio newspaper before his jailing, had said he was confident of Elbrick's release.

"It would be madness not to release him immediately," he said.

"The process of armed revolution against the Brazilian government is now beginning to get under way," he added.

"Now I am going to stay here in Mexico and reconstruct my life," he said, adding that he did not know if his wife and three-year-old daughter would be joining him here.

Maria Augusta Carneiro, 22, a student, was one of the last prisoners off the plane. "I am going to sleep, then look for a job. I am going to stay in Mexico," she said.

The oldest of the prisoners, Gregorio Bezerra, 70, said to be dying of cancer, appeared spry but tired. An old-line Communist leader from Recife, he had been sentenced to 19 years imprisonment in 1964.

PROGRESS, PROMISE, AND PROBLEMS

The SPEAKER. Under previous order of the House, the gentleman from Florida (Mr. SIKES) is recognized for 30 minutes.

Mr. SIKES. Mr. Speaker, it has been my privilege to visit in recent weeks a number of countries, some of them well off the beaten track insofar as congressional interest generally is shown. I had noted many times that a large part of the world extending from Greece to Indonesia is not well known in congressional circles, yet it comprises an area where progress is being made, in most countries, and where conflicting ideologies are seeking to dominate. The course of history may well be affected by events which now are occurring in these emerging and developing nations of the world. I am glad to report high morale and dedication of U.S. personnel in these areas—a stimulating and encouraging thing in view of the comparative isolation which many of them must endure. The trip was a most interesting experience which I propose to touch upon briefly here and to discuss in detail later in reports to my committee and to Departments of Government.

I went at a time when U.S. prestige was at one of its highest points in years—largely as a result of the success of the man-on-the-moon program. There was no country that I visited whose people had not followed by some means the progress of the moonshot, and all of them were excited and thrilled at its outcome. Regretfully, we have not taken full advantage of the opportunities offered by the moon landing. In some areas, lack of planning or lack of publicity material has held back the showing of effective exhibits. In fact, only in Burma did U.S. representatives make what I considered full use of the opportunity. There, despite the fact that U.S. activities generally are curbed, an effective exhibit was prepared in an unoccupied building. Photographs were displayed showing various stages in the space program. There were models of a rocket and of the lunar landing craft, and a large and impressive model of the surface of the moon complete with landing craft, astronauts, and footprints. In another room, a movie was run continuously during the hours the exhibit was open. This outstanding display was fully tailored to take advantage of the opportunity, and the U.S. team is to be highly commended for its work. It is disappointing that comparable efforts have not been made elsewhere.

I am very glad to state also that in South Vietnam the picture is much brighter for allied forces. The enemy has been hurt and hurt badly, and a continuation of military pressure will in time bring realistic negotiations in Paris. This I commented on in detail in Thursday's CONGRESSIONAL RECORD. The allied military team has the combat situation well in hand, and our fighting forces are prepared to meet any new initiative the enemy may attempt. The Vietnamese have strengthened their Government and their economy and they are steadily assuming a more effective combat role. More and more hamlets are being brought under Government security. A total of 17 million people live in South Vietnam; 15 million of them live in areas of Government security. This security continues to gain ground and a strong pacification program is in progress despite a reversion by enemy forces to guerrilla-type assassination, coercion, extortion, and terrorism. The enemy has not won a single major engagement or captured an important city. Despite the cessation of the bombing, which greatly eased his supply problem, the allied forces by redoubled efforts have kept him off balance and seriously decimated his numbers. Nevertheless, the Communist is a stubborn enemy and he continues to fight. However objective our efforts may be at the Paris peace talks, we have no recourse but to maintain pressure on the enemy in Vietnam until those talks bear fruit. This also means troop withdrawals must be based on the progress of the war or the progress of the peace talks, not on wishful thinking. Thus far, realism at the peace talks has not been forthcoming because antiwar publicity in the United States and stress on troop withdrawals have convinced the enemy further concessions are forthcoming.

These generally favorable situations is offset at least in official circles in some areas by serious concern over future U.S. intentions regarding our commitments abroad. There is also the obvious fact that U.S. influence among most Mediterranean nations is largely gone and that Communists have made gains among some Southeast Asian nations. Russian missions are nearly everywhere offering credits and arms and taking in payment food or other products. One thing, however, is to be learned from the Russians. They offer hard rather than soft loans, and they give nothing free. They are better traders than we.

Talk of troop withdrawals and defense cutbacks in the United States plus uncertainty over U.S. policies thus have combined to stimulate Communist activity in other parts of the world and may result in adjustments in policy by nations directly under Communist pressure. It would not take much at this stage to encourage defections of some of our friends to the other side.

For instance, Burma's socialistic government may not now have reason to steer a more independent course. India's march toward socialism is more likely to continue. Nationalism of the banks there is a straw in the wind, and Russian influence is being exerted to obtain a naval base with which to enhance Communist activities in the Indian Ocean area. This is not a happy situation when one considers that India is the second largest nation in the world. Cambodia's slight shift away from the Communist embrace is more likely to remain an accommodation only, in preparation for the eventuality of an allied victory in Vietnam when that comes. Sihanouk does not want an unfriendly Thailand and South Vietnam on either flank. The Communists maintain constant pressure on the Government of Laos, a country where they hold as much territory as they want for a buffer zone despite a valiant fight by Government forces.

I was disappointed to note what I must interpret as a wait-and-see attitude by our representatives in Indonesia. As a result of a shift in government which occurred only because the Communists were in too big a hurry to assume control, there is now a favorable picture for Western interests in Indonesia. Many of that country's present leaders are friendly toward the United States. We should be moving actively there to encourage stronger alliances with the West. Indonesia is one of the largest nations in the world, and it has definite ambitions for leadership in its area; leadership which can have Western rather than Communist orientation.

In the complex and sometimes confusing picture of developing nations, there are some bright spots. For instance, Singapore which, although rejected for membership in the Federation of Malaysia, is the brightest star in the area. Its progressive administration has made phenomenal progress in building good homes to replace slums, in providing clean government, and in exercising and encouraging leadership in trade and industry. The Government pays cash for its needs and has a favorable credit balance. United States, take heed.

I am impressed by the courageous leap from a feudal to a modern society now being made by Iran. The stable Government of the Shah has provided land reform and backed both industrial and agricultural progress. Promising young men who receive a basic education during their army service may be sent back as teachers in their home villages while still in uniform.

Now let me comment on what I regretfully must term a lack of imagination and initiative by U.S. representatives abroad. I am puzzled to find reasons for this. I hasten to state that the United States has many able and dedicated public servants in its foreign missions and many who perform their duties in an outstanding manner. Nevertheless, I cannot escape the apprehension that State Department policies generally are not as vigorous in support of U.S. interests as they should be. I find many in our Foreign Service who agree that we give up too easily in confrontation or discussion

with representatives of foreign governments. The hard-sell aggressiveness required to further U.S. policies too often seems to be lacking. The power and prestige of the United States do not suggest a hat-in-hand approach or obeisance in our dealings abroad; nor do we need bluff and bluster. We have shown our good intentions time and again to nearly every country in the world; we should combine this background with strong implementation of U.S. policy in support of democratic ideals, and we should be sufficiently practical to limit our help abroad to those who help us.

Perhaps the cutting edge of American diplomacy is dulled by 20 years of giveaway programs and soft loans without the necessity for a quid pro quo. There is a need for a return of the present-day counterpart of the shrewd Yankee trader of other years. I must conclude that there should be more positive direction and stronger motivation from Washington.

An example of what I mean is shown in discussions now in progress on the return of Okinawa to Japanese rule. A number of years ago a commitment in principle was made to return Okinawa to Japanese jurisdiction, but no date was specified. Now, unaccountably, 1972 has become the year to accomplish this and the Japs are insisting that they spell out the terms under which the United States will continue to have base rights. Neither the date nor the conditions are justified by the facts. Nevertheless, I find some U.S. representatives in Tokyo who accept the Japanese case as irrefutable and even argue for it; this despite the fact that we have poured $3.6 billion into the rebuilding of Japan, that we provide military defense for Japan at our own expense, and that the Japs enjoy a billion-dollar-a-year trade advantage here.

It is hard to imagine Russia yielding on a question of territorial jurisdiction in this manner. They would simply say that the matter is not open for discussion at this time and that would be the end of it. Nor would the world get excited about it. We tend to lead ourselves into traps when it is not necessary.

It would be interesting to speculate also on the effect of an all-out effort by U.S. diplomatic personnel to bring about a settlement of the Kashmir dispute between India and Pakistan. After conversations with nationals of both countries, I am convinced that however bold a front is presented on the question, both countries would like to find a solution, even by partition, and to end this primary cause of dissent between them.

Now a word about U.S. Embassies and other buildings abroad. Those we have purchased or built have gone up in value and most of them continue to be satisfactorily located. In areas where we lease, we are making a mistake by failing to buy or to build. Prices are going up by leaps and bounds. The importance of the U.S. presence is not going to diminish. Our status requires facilities which are both adequate in space and impressive in appearance. It will cost money to acquire what we need but it will cost more to wait. The U.S. Embassy and the Ambassador's residence in New Delhi offer an outstanding example of what can be accomplished.

A matter of paramount interest is that of modernization of weapons for our own forces as well as for nearly all of our allies. The battle for modernization for our own forces is now being fought in the Senate. It is shocking to me that there should be any question about the requirement for modernization when it is obvious that many of our important weapons systems are now a generation behind their Russian counterparts. It has been well stated that if we are to draft men to fight we should at least give them adequate weapons with which to fight.

If the situation of weapons modernization is serious at home, it is much worse abroad. The weapons in the hands of our friends average two generations behind those in the hands of the Communists, whose countries they border. Take Turkey as an illustration. The Turks have rifles, tanks, and naval vessels, including submarines, which are World War II vintage. The Turks are well trained and effective fighting men. There is realism and confidence in their ranks. Yet it seems inexcusable to expect Turkish fighting men to effectively repel superior numbers plus superior weapons in the hands of equally well-trained and effective Russian forces at the Turkish borders or on the Bosporus. Under these circumstances Turkey can scarcely be blamed for seeking better relations with Russia.

Taiwan is perhaps an even more impressive example, for this little country, by its location and the temper of its Government and its people, exercises restraint on Communist aggression just as South Vietnam and South Korea do. Taiwan's defense forces help to discourage direct aggression from colossal Red China. Yet the Taiwanese forces, which cannot begin to match those of Red China in numbers, are not even making comparable progress in modernization. Each day their weapons are falling further behind those of Red China in effectiveness. Taiwan needs F–4's to replace aging and obsolescent F–86's. Red China is building Mig–19's and has Mig–21's in inventory. Taiwan has no submarines, yet Red China has 33, including one guided-missile submarine, and is building more.

One of the gravest omissions to me is the lack of shelters for aircraft protection in Taiwan. A loss of control of the air over Taiwan could be a prelude to disaster in the event of conflict between Taiwan and Red China. The memory of the wholesale destruction of Arab aircraft caught on the ground by Israeli planes during the 6-day war brings a chill of apprehension when one considers the overwhelming superiority in numbers of the Communist Chinese air force. To me it appears essential that the aircraft of the Republic of China be protected from similar destruction by wave after wave of Red aircraft.

Nations which need modern weapons are willing to buy to the limit of their ability if we agree to sell to them. We can well afford to provide additional stocks to stanch friends if they are needed.

I return with the strong conviction that we are not giving sufficient stress to the various personnel exchange programs. Almost without exception, foreign nationals who train in our country return to their homelands to exercise influence which is favorable to the United States. This, I believe, is true for all types of exchange programs. However, there is a particular need to encourage additional foreign military personnel to take advantage of training in military missions and in colleges in the United States. A good example is Indonesia, where the attitudes of U.S.-trained individuals who now have strong influence in government have substantially reversed the anti-U.S. policies of the previous administration.

In most of the areas I visited there is progress; much more measurable in some than in others. A few have governments which are unreceptive to Western ideas—at least at the moment. But the great majority are cooperative and some are enthusiastically so. I found no unfriendly people and this should tell us something. There is an awakening of opportunity in the world today and we can provide direction to it if we offer dramatic leadership.

MORTIMER CAPLIN DISCUSSES MINIMUM INCOME TAX AND RELATED TAX REFORMS

The SPEAKER. Under previous order of the House, the gentleman from Wisconsin (Mr. REUSS) is recognized for 10 minutes.

Mr. REUSS. Mr. Speaker, former Commissioner of Internal Revenue Mortimer M. Caplin has written an excellent article analyzing the principal minimum income tax proposals, as well as related proposals dealing with changes in the standard deduction. The article appears in volume 55, No. 5 of the Virginia Law Review. I commend the article to my colleagues and include it at this point in the RECORD:

THE MINIMUM INCOME TAX AND RELATED REFORMS

(By Mortimer M. Caplin) *

Today more than ever before, the American public is convinced of the need to reform our federal tax laws. Though Americans fulfill their tax obligations with integrity, a sense of duty and a better will than taxpayers anywhere else in the world, throughout the country there is increasing consciousness and resentment of high rates, unfairness and discrimination in the tax system. The middle-class salaried individual, whose income is fully subject to tax at ordinary rates and who has no loophole through which to crawl, is particularly concerned. The existence of the 10 percent surcharge—and the likelihood of its continuation [1]—has deepened this feeling. The volume of mail which the Congress has received on the subject of tax reform in the past months is both impressive and disturbing.[2]

What has produced this surge of interest in tax reform? The key is to be found in some facts about the operation of our income tax system. In 1967, 155 citizens with incomes of over 200,000 dollars, and 21 individuals with incomes of over 1 million dollars paid no federal income tax.[3] In 1966, four individuals, with total incomes ranging from 6 million dollars to more than 10 million dollars, were able to escape federal income tax altogether by carefully planned use of the unlimited charitable contribution deduction.[4] For the same year, a fifth taxpayer had total income of more than than 1.2 million dollars, offset by large deductions for capital gains and interest. He paid a total tax of 383 dollars—about 3/100ths of 1 percent of his income.[5] His tax bill was approximately equal to that of a single taxpayer with ordinary income of

Footnotes at end of article.

2,400 dollars. A sixth individual had total income of over 1.3 million dollars, but primarily because of very large percentage depletion deductions, paid no tax at all.[6] Another investor in mineral properties had income of more than 924,000 dollars and paid tax of 397 dollars—about 4/100ths of 1 percent of his income.[7] A real estate investor had over 860,000 dollars in real estate deductions and paid no tax on income of more than 1.4 million dollars.[8]

Data on the overall incidence of the income tax confirms the same fundamental lesson: Despite the essential objective of the income tax to match tax with the ability to pay, in significant areas of its operation the income tax system requires very little tax from those with substantial abilities to pay. In 1961, when tax rates nominally ranged up to a maximum of 91 percent, effective tax rates reached a high of 30 to 35 percent for people having annual incomes between 50,000 and 200,000 dollars and declined to about 27 percent for people whose incomes exceeded 1 million dollars a year.[9] A recent Treasury Department study, based on 1966 data, shows the same pattern. Employing the so-called "amended adjusted gross income" [10] as its measuring rod, the study indicates that average effective tax rates rose to a maximum of 32 percent, but receded to about 30 percent for those whose incomes were between 500,000 dollars and 1 million dollars, and further declined to about 28 percent for those whose incomes were over 1 million dollars.[11]

A different symptom of the same basic defect in the income tax system is the markedly disparate tax treatment accorded taxpayers whose real economic income is the same. The artist pays tax at ordinary income rates when he sells his paintings; [12] the investor receives capital gains treatment when he sells the patent on his new potato-peeler.[13] The self-employed individual or the man who earns a salary is subject to the ordinary rate schedule; his friend down the street, who has enough capital to support himself from investment income, puts his money in municipal bonds and is subject to no rate schedule at all—his interest income is entirely exempt from tax.[14] The investor in stocks pays full tax on his dividend income;[15] the investor in leased airplanes or railroad cars shelters his income from tax by means of large investment credits [16] and depreciation deductions [17] having little or no relation to the magnitude of his cash investment.[18]

THE SOURCE OF THE PROBLEM

These results flow from a variety of special provisions in our income tax system which grant favorable tax treatment to certain classes of income and allow generous deductions for certain kinds of expenditures. The complete tax freedom of municipal bond interest,[19] the low tax rates imposed on long term capital gain income,[20] the grant of full depreciation deductions on highly leveraged investments,[21] the special deductions accorded in the mineral field,[22] and other tax preferences, particularly when combined, permit some taxpayers to realize a large real income without bearing a correlative share of the tax burden, and generate major disparities in the treatment of similarly situated taxpayers.

Of particular concern to the average taxpayer is the fact that these preferential provisions are uniquely available to individuals with large resources. The family with poverty-level income cannot afford to invest in municipal bonds; its income is realized in forms which are fully taxable at the ordinary tax rates. Former Treasury Secretary Fowler reported that "[u]nder present law, 2.2 million families with incomes below the poverty level are required to pay Federal income taxes. . . . For example, a married couple with an income of the poverty limit of $2,200 would generally pay an income tax of $84." [23] Similarly, the middle-income wage or salary earner, who shoulders a sizeable share of the nation's tax burden, is generally unable to take advantage of tax-favored investments. Former Treasury Secretary Barr reported that "tens of millions of middle-class families and individuals with incomes of $7,000 to $20,000 . . . pay over half of our individual income taxes." [24] In contrast, as the examples mentioned earlier [25] indicate, individuals with large funds of capital are able to make full and effective use of special methods for securing favorable tax treatment, and are thereby able to pay much lower rates of tax—or no tax at all—under a system which, paradoxically, is designed to produce the most tax from those with the most income.

THE GOAL

If we were starting anew, the general objective of a sound income tax system would be to treat all forms of real economic income alike. The goal would be tax neutrality; the tax system would not favor the realization of income in one form rather than another.

One way of attaining that goal today would be to adopt a broadly based tax on all forms of real economic income,[26] reduced only by the expenses of producing that income, at much lower rates than those which obtain under the present system. There is widespread public sentiment in favor of such an approach. Interestingly, the desire for such reform exists even among some who derive considerable advantage from the tax preferences of the present structure. To achieve a fair tax system, bearing equally on different forms of income, and to free themselves of the record-keeping and other difficulties of complying with present law, these taxpayers would be willing to accept a major broadening of the tax base—even at some financial sacrifice to themselves.

With the accretions brought by over 50 years of history and with the genuine, pressing problems at which certain of the special provisions of our tax structure are directed, we can hardly expect to wipe the slate clean now. We can, though, work in the direction of increasing the neutrality of the tax system and diminishing the distortions. Senator Russell Long took an important step in that direction several years ago with his proposal of an "optional simplified tax method." [27] Under the Long proposal, taxpayers would be permitted the option of paying lower rates of tax by electing to forego the advantage of most of the exclusions and special deductions allowed by present law. Congressman Henry S. Reuss of Wisconsin has introduced a bill for comprehensive and fundamental reform, dealing specifically with the major preferential provisions of the existing tax law.[28] The American Bar Association Special Committee on Substantive Tax Reform has done considerable work on proposals for broadening the tax base and eliminating tax preferences.[29] The Johnson Administration's Treasury Department conducted an extensive study of defects in our present tax laws, and its reform proposals, with supporting data, were made public at the beginning of this year.[30] Recently, the present Administration has submitted a more limited set of proposals to Congress.[31]

Proceeding on a broader front than either administration, the Ways and Means Committee is currently examining, specifically and in detail, a variety of tax devices used to shelter otherwise taxable income. That action is more than proper; it is urgent in order to strengthen public confidence in the evenhanded application of our tax laws. Thorough review of these rules—and re-examination of the underlying justification for any exceptional tax treatment—are plainly in order.

THE MINIMUM TAX

As an initial reform step, all individuals with the economic capacity to contribute should be required to bear at least some minimum share of the nation's tax load. The existence of tax patterns in which individuals with large real incomes pay no significant tax is fundamentally incompatible with a balanced tax system. Without attempting to judge the merit of each of the individual provisions which permit such results, taxpayers ought not to be allowed to utilize such provisions to avoid all taxation.

The minimum tax concept found support in Treasury Department staff studies during the Johnson Administration,[32] and has recently been embraced by President Nixon.[33] Under the earlier Treasury proposal, an individual's income tax would not be allowed to fall below a minimum tax which would be computed by applying special rates, graduated from 7 to 35 percent, to an adjusted and broadened tax base.[34] The tax base under this plan would be expanded by including the full amount of capital gains,[35] including tax exempt interest,[36] adding the value of appreciation in property donated to charity,[37] and excluding percentage depletion deductions to the extent that they exceed cost.[38]

While the Treasury study offers substantial improvement, it omits two important adjustments which are necessary to effectuate the basic concept of the minimum income tax. First, the proposal fails to modify accelerated depreciation deductions and to relate these deductions to the taxpayer's equity investment in depreciable property.[39] Present tax provisions allow a real estate owner to use the double declining balance, the 150 percent declining balance or the sum-of-the-years digits methods [40] of computing depreciation. These methods result in a considerably more rapid write off of the original cost than would be possible by the straight-line depreciation method.[41] After exhausting the tax benefits obtained through accelerated depreciation, the investor can—subject only to a mild and easily avoided recapture provision [42]—sell the property at capital gain rates, even though the accelerated depreciation deductions have been used to offset income taxed at ordinary rates. Moreover, the taxpayer's basis on which depreciation is computed includes mortgages as well as equity.[43] Thus, by the use of highly leveraged investments in depreciable real property, the individual can obtain depreciation deductions many times his actual investment in the property,[44] and at the same time avail himself of mortgage interest deductions which can also be set off against ordinary income.[45]

The abuse of accelerated depreciation deductions on depreciable property other than real estate has been largely eliminated by the recapture provisions of section 1245,[46] which, generally, tax as ordinary income gains from the sale or exchange of depreciable personal property to the extent that such gains are attributable to post-1962 depreciation. The recapture provisions for depreciable real estate,[47] however, are significantly less rigorous. Gains from the sale or exchange of such property held more than one year are recaptured as ordinary income only to the extent that actual depreciation deductions have exceeded the deductions which would have been permitted under the straight-line method,[48] and for each month that the property is held beyond twenty months the percentage of the excess depreciation recaptured decreases by one percent.[49] As a consequence, the taxpayer who disposes of improved real property held for more than ten years escapes ordinary income treatment on the transaction altogether.

The second shortcoming of the original Treasury plan is its failure to modify the allowance, under present law,[50] of full current deductions for the intangible drilling and development costs of oil and gas wells.[51] By means of the special provisions for intangibles, the tax laws now permit a large part of the capital cost of a well to be written off as a deduction immediately, although a similar investment of capital in a different industry could only be recovered over the life of the property purchased.[52] At the same time,

Footnotes at end of article.

the investor in oil and gas properties is able to spread the income derived from the well over the period of its recovery, enjoying the annual benefits of percentage depletion [53]—theoretically a means of capital recovery—even though he has already recovered much or all of his investment in the form of intangible drilling and development costs deductions.

The inclusion of appropriate adjustments to limit the advantages of accelerated and highly leveraged depreciation and intangible drilling and development costs is fundamental to any sound minimum tax proposal. Indeed, if these items are omitted, we could well continue to have 155 non-taxable returns with over 200,000 dollars of income and 21 non-taxable returns with over 1 million dollars of income—even after the adoption of the Treasury proposal.

In his recent message to Congress on tax reform,[54] President Nixon recommended a minimum income tax which would deal with both of these problems.[55] The Nixon proposal would fix a ceiling of 50 percent on the amount of an individual's total income which could escape taxation through designated tax preferences. The preferential provisions included are: charitable contributions of appreciated property,[56] percentage depletion and intangible drilling and development costs,[57] accelerated depreciation on real estate,[58] and farm losses.

The Nixon proposal, however, omits two existing preferences which were specifically included in the minimum tax proposal of the Treasury staff studies. Tax-exempt interest is excluded because of "doubt whether such inclusion would be constitutional," [59] and capital gain income is also excluded.[60] The omissions are of major significance. Together they convert the Nixon plan from a minimum tax to a minimal tax; they reduce the revenue yield of the tax from 420 million dollars—which the Treasury study proposal would have produced even without including depreciation or intangibles—to 80 million dollars. More fundamentally, neither omission has any convincing justification.[61]

The solution would seem obvious: The better features of the Nixon and Treasury proposals ought to be combined.[62] The fundamental structure of the minimum tax is the same under both approaches. The Treasury study proposal would, in effect, tax total income at half the ordinary rates; the Nixon proposal would tax half of total income at the full ordinary rates. The Nixon plan, however, has the advantage of certain improvements in technical implementation. Utilizing that essential structure, a sound minimum tax system should incorporate in its base the items included in the Treasury proposal and, in addition, adjustments to deal with depreciation and intangibles.[63] So constructed, the system would provide an effective and fair solution for the problem which Congressman John Byrnes has summarized in these terms:

"When we find the extreme cases where some 155 tax returns with adjusted gross incomes above $200,000 pay no income tax, including 21 with gross income over $1 million, it cannot be said that the law imposes on all capable of doing so the responsibility of paying a reasonable proportion of the cost of government. No matter by what device, no matter how laudable the nature of the deduction or exclusion that produces this result, the fact remains that there is no justification for these individuals being non-taxpayers." [64]

MAXIMUM INCOME TAX

A maximum limit on the individual income tax is a natural companion of the minimum tax. The recently released Treasury data reveals that among high income individuals there is, in addition to the group having strikingly low effective tax rates, a very highly taxed group.[65] The effective tax rates of taxpayers in the latter class rise well above 50 percent. For some, effective tax rates are from 60 to 65 percent.[66]

Upon this category of taxpayers, the upper range of the income tax rate schedule operates too harshly. There is much to be said in favor of the proposition that no taxpayer should be compelled to pay more than half his total income in federal income tax. To that end, serious consideration should be given to the adoption of a 50 percent maximum limitation upon the effective tax rate applicable to any individual taxpayer.[67] In determining a taxpayer's total income for purposes of applying this 50 percent limitation, the broadened base outlined in connection with the minimum tax should be utilized.[68]

LIBERALIZATION OF THE MINIMUM STANDARD DEDUCTION

At the other end of the tax spectrum, a different problem exists. Among that segment of the population whose incomes are below the level which the Department of Health, Education, and Welfare has designated as the poverty line, about 4.3 million individuals and 2.2 million families are now required to pay federal income tax.[69]

The imposition of tax upon those who have no real ability to pay is inconsistent with the fundamental principle of an income tax, and should be eliminated as quickly as possible. One method of accomplishing that result would be through liberalization of the minimum standard deduction. Present law allows individuals a minimum standard deduction of 200 dollars plus 100 dollars for each personal exemption.[70] The Treasury staff studies recommend raising the level of this deduction to 600 dollars, plus 100 dollars for each exemption, subject to an overall ceiling of 1,000 dollars.[71] The degree of liberalization possible depends partly upon the amount of revenue which can be allocated to freeing property-level incomes from tax. The Treasury proposal would have an annual revenue cost of somewhat over 1.1 billion dollars.[72] It would, however, still leave almost a million poverty-level families subject to tax.[73] Though the cost is substantial, the priority of the matter could hardly be higher. Hence, careful attention should be given to the possibility of raising the minimum standard deduction above the level proposed by the Treasury.[74]

A different approach which has been suggested to alleviate this problem would raise the level of the personal exemption—currently 600 dollars per person.[75] Such a step, however, would represent a considerably less efficient technique than increasing the minimum standard deduction. The personal exemption is used by high income and low income taxpayers alike, and for both it saves tax at the top applicable rate. Hence, broadening the exemption would channel large portions of the resulting revenue loss to persons which the legislation is not intended to assist. On the other hand, because the minimum standard deduction is of utility largely to the very low income segment of the population, liberalization of that deduction would focus the revenue loss on the group which most requires assistance.

SIMPLIFICATION BY REVISION OF THE STANDARD DEDUCTION

Another aspect of the standard deduction also has important bearing upon the operation of our tax system. It is of vital importance, both to taxpayers and to the Internal Revenue Service, to simplify and ease the burdens of compliance with our tax laws.[76] Simplification of compliance and administration is significantly advanced by reducing the itemization of personal deductions. Indeed, the adoption of the standard deduction represents the single greatest tax simplification which Congress has yet achieved. Since the original enactment of the standard deduction, however, the growth in personal income levels has made that deduction—with limits of 10 percent of adjusted gross income or 1,000 dollars, whichever is lower [77]—of rapidly decreasing usefulness to taxpayers.

Consequently, an increase in the upper limits of the standard deduction would seem appropriate.[78] The Treasury staff studies proposed an increase of the percentage limit from 10 to 14 percent, and an increase of the dollar limit from 1,000 to 1,800 dollars.[79] Congressman Byrnes has suggested increasing the percentage limit to between 18 and 20 percent and doubling the dollar limit with, perhaps, graduated reductions in the upper ranges.[80] Here again, the extent of the revision will have to be balanced against its revenue cost. If the Congress enacts fundamental structural reforms which produce revenue, it will have greater freedom to liberalize the standard deduction. To the extent that the revenue reduction can be tolerated, some liberalization is in order.

CONCLUSION

The clamor for comprehensive reform of our tax system continues to mount. Some 10 years ago, Chairman Wilbur D. Mills, of the Ways and Means Committee, expressed a viewpoint that is of growing prominence throughout the land today:

"Tax preferences and differentials, which have the effect of departing from neutrality in the case of particular types of income and in the case of particular groups, have resulted in the narrowing of the dollar base of our revenue system to the point where it can be said with justification that the rate schedules supplied in the Internal Revenue Code are no longer meaningful. The benefits conferred by existing tax preferences and tax differentials breed demands for further erosion of the tax base." [81]

Adoption of the minimum tax and an enlarged minimum standard deduction will not solve all the problems of the present tax system. They offer no easy cure-all for the defects which have developed over many years. Nonetheless—short of direct comprehensive reform—their enactment would be an important first step forward; for they focus on the more flagrant distortions of the income tax system, which permit some persons with the largest capacity to bear taxes to pay none at all, and compel others with no tax-paying capacity whatever to bear a substantial tax burden.

Though deserving a lower level of priority, adoption of the maximum tax and elevation of the upper limits on the standard deduction would also contribute significantly to betterment of the income tax structure. The former would provide a larger measure of horizontal equity, while the latter would strengthen a mechanism which greatly simplifies tax compliance.

Together these four correctives offer an important and respectable, though only partial, answer to the increasingly insistent outcries of our citizens. If taken, however, this first step toward reform must not be permitted to become the last. It has been wisely said that the tax system "delves deeply with a sieve", and it is imperative for the Congress to look closely—with a hard and discerning eye—at each of the holes in that sieve. Indeed, an aroused Congress, prodded by an outraged constituency, may find that the time is at hand in 1969 for a sustained effort to achieve direct and broad-scale tax revision. Such a head-on approach may be the higher price demanded by the public if the Nixon Administration is to gain support for continuing the 10 percent income tax surcharge.[82]

[26] General definitions of such a base have been provided by Haig and Simons, among others. Haig equated personal income with "the money value of the net accretion to one's economic power between two points of time." Simons formulated the definition as follows: "Personal income may be defined as the algebraic sum of (1) the market value of rights exercised in consumption and (2) the change in the value of the store of property rights between the beginning and end of the period in question." Haig, *The Concept of Income—Economic and Legal Aspects*, in READINGS IN THE ECONOMICS OF TAXATION 59 (R. Musgrave & C. Shoup eds. 1959) (emphasis omitted); H. SIMONS, PERSONAL INCOME TAXATION 50, 206 (1938). For criticism of the goal stated in the text, see Bittker, *"A Comprehensive Tax Base" as a Goal of Income Tax Reform*, 80 HARV L. REV. 925, 935 (1967).

[34] TAX REFORM STUDIES, pt. 1, at 14; pt. 2, at 133.

[35] The proposal would, however, retain the present 25% alternative capital gain rate with respect to "capital gain income representing appreciation of property held by the taxpayer at his death or given away during his lifetime. This gain would be included in the regular tax base under another proposal in the program. The special rule for this income recognizes that capital gain income on death or at the time of a large gift may be abnormally large (and, thus, result in a minimum tax) in relation to what the taxpayer might have realized in any one year had he disposed of his investments over a period of years rather than in a single year." *Id.* at 134.

[36] Included in this proposal is "interest (including original issue discount) on State and municipal bonds," *id.* at 137, and "any tax-exempt interest that is currently being paid on U.S. bonds or on obligations of certain corporations organized under act of Congress . . . to the extent that, to do so, would not interfere with a contractual obligation guaranteed by the Constitution." *Id.* at 137 n. 1.

[37] Under the present tax system, an individual is permitted to deduct the actual market value of appreciated property donated to charity subject to the normal limitations of INT. REV. CODE of 1954, § 170. However, that part of the actual market value in excess of the taxpayer's basis in such property is considered unrealized, and is therefore not taxed even though the taxpayer obtains a tax benefit from the deduction. Given appropriate circumstances, it is possible for an individual to make a profit by such contributions to charity. *See, e.g.*, Rudick & Gray, *Bounty Twice Blessed: Tax Consequences of Gifts of Property to or in Trust for Charity*, 16 TAX L. REV. 273, 308–09 (1961).

The proposed provision would add to gross income the appreciation in the value of property donated to charity to the extent that the appreciation was allowed as a deduction under the limitations of INT. REV. CODE of 1954, § 170. TAX REFORM STUDIES, pt. 2, at 137–38.

[38] The INT. REV. CODE of 1954, § 613(a) provides that "[i]n the case of mines, wells and other natural deposits," depletion shall be computed on the basis of a "percentage . . . of the gross income from the property . . . Such allowance shall not exceed 50 percent of the taxpayer's taxable income from the property (computed without allowance for depletion." However, § 613 does not limit the allowable percentage depletion to the cost of the property.

Under the minimum tax proposal, "[n]o deduction would be allowed for . . . any percentage depletion once the cost of the applicable property has been recouped through prior depletion deductions." TAX REFORM STUDIES, pt. 2, at 139.

[39] For a detailed discussion of this problem. *See generally* TAX REFORMS STUDIES, pt. 3, at 438–58.

[40] INT. REV. CODE of 1954, §§ 167(b)(2), (3), (c) For a description of the operation of these methods of depreciation, see Treas. Reg. §§ 1.167(b)(2), (3) (1969).

[41] INT. REV. CODE of 1954, § 167(b)(1). For a description of the straight line method of depreciation, see Treas. Reg. § 1.167(b)(1) (1968).

[42] See text at notes 47–49 *infra*.

[43] This rule stems from the Supreme Court decision in Crane v. Commissioner, 331 U.S. 1 (1947), which held that Mrs. Crane's basis for computation of gain on property devised to her by her husband included the value of an unassumed mortgage encumbering the property. The Court went on to state that the basis for computation of depreciation also included the mortgage, though the latter issue was neither properly before the Court nor given separate consideration. See text at note 44 *infra*.

[44] *See, e.g.*, Mayerson v. Commissioner, 47 T.C. 340 (1966), where the taxpayer was permitted to compute depreciations on a basis of $200,000 although his actual investment was $10,000. The property's basis for depreciation included a purchase money mortgage on which no payment was due until the end of 99 years.

[52] TAX REFORM STUDIES, pt. 3, at 414.

[53] INT. REV. CODE of 1954, § 613(b)(1) allows a deduction of 27½ percent of gross income on oil and gas wells.

[54] 115 CONG. REC. S3959 (daily ed. April 22, 1969).

[55] U.S. TREASURY DEP'T, TAX REFORM PROPOSALS 93, 95 (reprinted by House Ways and Means Committee 1969). This is the proposal of the Nixon Administration's Treasury Department before the House Ways and Means Committee concerning the "Limit on Tax Preferences" [hereinafter cited as LTP].

[56] The treatment of charitable contributions of appreciated property under the Nixon proposal, LTP at 94, is essentially the same as that of the Treasury study. *See* note 37 *supra*.

[57] The percentage depletion proposals of both the Nixon and Treasury studies' minimum tax plans employ somewhat different techniques. Under the Nixon plan, the excess of percentage depletion claimed during the taxable year over allowable cost depletion becomes a part of gross income for minimum tax purposes in the taxable year claimed. LTP at 95. The Treasury proposal would not include any part of claimed percentage depletion in gross income for minimum tax purposes until cost had been recouped through prior depletion deductions, and then would include all of it. See note 38 *supra*. The Nixon plan calls for including in total income for minimum tax purposes the excess of intangible drilling expenses claimed under INT. REV. CODE of 1954, § 263(c), over the allowable amount of straight line depreciation that would have been claimed had the expenses been capitalized. LTP at 93.

[58] Although for minimum tax purposes, the Nixon proposal satisfactorily resolves the problem of accelerated depreciation on real estate, it, like the Treasury study proposal, does not limit depreciation to the equity in the property. See notes 43–45 *supra* and accompanying text.

[59] LTP at 22.

[60] *Id.*

[61] The deletion of municipal bond interest on constitutional grounds reflects a "doubt" which the Treasury Department, the Justice Department and most students of the field considered finally resolved more than 25 years ago. See opinions and discussion by Treasury and Justice Departments in 1942, in S. SURREY & W. WARREN, FEDERAL INCOME TAXATION CASES AND MATERIALS 185–98 (1960).

The Administration defends its exclusion of capital gains on the grounds that, (1) by the nature of the minimum tax structure, application of that tax to capital gains would affect only individuals who use the alternative tax, and (2) the economic consequences

of any variation of the alternative tax require further study. Neither argument seems persuasive. Those who use the alternative (25%) tax are precisely those who derive the most extreme advantage from the capital gains preference provided by existing law (one elects the alternative tax only when its tax benefit is greater than that of the 50 percent capital gains deduction), and application of the tax to them makes good sense—whether or not the tax also reaches those whose benefits from the preference are less substantial. Further, it seems exceedingly unlikely that full inclusion of capital gains in the minimum tax base would have significant consequences for the economy. One must remember that the proposal would affect only a small fraction of the total capital gains universe (only those capital gains realized by individuals whose total excluded income, for regular tax purposes, exceeds their total included income), and even within that area it would produce only a very modest tax increase. In view of these facts, it is hardly surprising that the Johnson Treasury Department was untroubled by this problem.

[62] Senator Fred R. Harris recently introduced a minimum income tax reform bill, S. 1827, 91st Cong., 1st Sess. (1969), *reprinted in* 115 CONG. REC. S3764 (daily ed. April 15, 1969). The Harris plan closely resembles President Nixon's proposed 50% ceiling on income enjoying tax-preferred status, but there are differences both in the tax preferences which would be subject to the 50% limit and the treatment of preferences which would be included in a minimum tax base. Senator Harris would include in the minimum tax base interest from state and municipal bonds and long-term capital gains, but would exclude farm losses. In addition, the Harris plan would include in the tax base the difference between the fair market value of stock received pursuant to a qualified stock option and the price paid for the stock. Another significant difference is that the full amount of deductions taken for intangible drilling and development costs are included in the Harris bill rather than the excess of the deductions taken over the deductions that would have been allowable as depreciation, if such costs have been capitalized rather than expensed.

[63] While the Nixon minimum tax plan also includes a limitation on farm losses, the set of abuses at which it is aimed can and should be eliminated specifically, directly and entirely, rather than obliquely and partially through the mechanism of the minimum tax.

[64] 115 CONG REC. E659 (daily ed. Jan. 30, 1969).

[65] Statement of former Secretary of the Treasury Henry H. Fowler, Tax Reform Studies, pt. 1, at 3.

[66] *Id.* pt. 1, at 80, table 4; pt. 2, at 172.

[67] *See* Caplin, *Federal Tax Policy—The Need for Reform*, 56 Geo. L.J. 880 (1968). The Johnson Treasury recommended such a limitation in conjunction with its proposal to tax appreciation at death or on gift: "The appropriateness of the maximum tax proposal is directly related to the proposal to include in the income tax base the appreciation in assets transferred at death or by gift. The adoption of a maximum tax provision without this other important reform would result in tax reductions for individuals who in reality have substantial exempt income represented by the untaxed appreciation in their investment and other assets." Tax Reform Studies, pt. 2, at 172.

[68] See text at note 63 *supra*.

[69] Tax Reform Studies, pt. 1, at 74, table 1; pt. 2, at 128.

[70] Int. Rev. Code of 1954, § 141(c).

[71] TAX REFORM STUDIES, pt. 1, at 13, 74. "The effect of this proposal would be to make an additional 2.4 million returns nontaxable. . . . Of the 2.2 million poverty families paying tax under present law, 1.2 million would become nontaxable. An additional 1 million families in poverty would have their tax reduced, although not completely eliminated." *Id.* at 75.

[72] TAX REFORM STUDIES, pt. 1, at 35.

[73] See note 71 *supra*.

[74] The tax reform program of the present Administration suggests a new—and perhaps even more efficient—method of providing tax relief for poverty level taxpayers. LTP at 71, 101–04. Under the proposal, the optional tax tables would be adjusted to provide a "low income allowance," which would be based upon the income levels designated by the Department of Health, Education and Welfare as the poverty levels for families and individuals. When combined with the personal exemption and the present minimum standard deduction, the allowance would be sufficient to make all families and individuals below those levels non-taxable. For income above the poverty level, the allowance would be reduced by 50 cents for each dollar of adjusted gross income, so that individuals and families having adjusted gross incomes equal to the poverty level plus twice the maximum allowance would receive no allowance. The Treasury explanation states that this phase-out of the allowance permits relief for those in poverty at the lowest possible revenue cost.

[76] *See* TAX REFORM STUDIES, pt. 1, at 18.

[77] INT. REV. CODE of 1954, § 141(a).

[78] At the suggestion of Chairman Mills, the Ways and Means Committee and the Treasury Department are currently exploring a considerably more far-reaching approach to simplification. This approach would establish a 10% floor on all personal deductions other than the deduction for charitable contributions. A taxpayer's total of such personal deductions would be allowable only to the extent that they exceed 10% of his adjusted gross income. The revenue produced by disallowance of deductions below the floor would be used for substantial, across-the-board rate reduction. Chairman Mills has suggested, for example, that the measure might permit a rate structure ranging from a bottom bracket of 5% to a top bracket of 50%. The Treasury Department has been asked to use its computer models to determine the actual effect of the proposal on different classes of taxpayers under various alternative rate structures. If its technical details can be worked out, the proposal could produce major simplification of the tax system.

CIVIL SERVICE WAGE BOARD REFORM

The SPEAKER. Under previous order of the House, the gentleman from California (Mr. TUNNEY) is recognized for 15 minutes.

Mr. TUNNEY. Mr. Speaker, I have in the past sponsored legislation dealing with the problems of Federal employees and designed to correct the inequities in their employment system. In this session I have introduced bills to make the pay of Federal employees comparable to that of employees in the private sector; to modernize our employees' health benefits programs; and to improve our Government retirement system. I was pleased when my colleagues in late July approved the retirement legislation which is so vital to the security of our Nation's civil service retirees. The future also looks bright for the passage of the Federal Employees Pay Comparability Act during this session.

With these recent successes fresh in our mind, Mr. Speaker, I am today introducing additional legislation designed to benefit our civil servants. I urge the other Members to support this bill and by so doing continue their support of the men and women whose day-to-day efforts enable our Government to function.

This legislation, when adopted, will allow more employees to share the benefits extended to some in previous legislation. This bill, when it becomes law, will be the Prevailing Wage Rate Determination Act of 1969.

The hourly wage system originated 107 years ago when a statute in 1862 authorized the Secretary of the Navy to establish wage rates for blue-collar employees "of each naval activity—to conform, as nearly as is consistent with the public interest, with the rates of private establishments in the immediate vicinity."

Today the situation has changed considerably from anything ever envisioned in 1862. Civil Service Commission Chairman, John W. Macy, Jr., in early 1968 reported:

> Today there are approximately 800,000 wage employees of more than 50 agencies in well over 300 separately identified localities. They have been paid under a veritable hodgepodge of widely differing agency policies which have resulted in baffling differences in pay for people doing identical work within the same wage area.

These varying policies result in situations where, for instance, a warehouse laborer working for one Government agency in a city was being paid $3.60 an hour—and his counterpart, working for another agency in the same city, was getting $2.81. What is most disconcerting is that these situations are not that uncommon.

Even the attempts made by the Civil Service Commission's introduction of the Coordinated Federal Wage System in 1967 did not do enough. Since, under the system, pay is generally fixed on the basis of area surveys, "thousands of wage board employees are invariably getting—for a variety of reasons—the lowest common denominator of pay, and their pay bears little relationship to a true prevailing rate concept," according to Nathan Wolkomir, the president of the National Federation of Federal Employees.

What is being urged in the legislation I am now introducing, Mr. Speaker, is briefly as follows: The act will establish by law an equitable and uniform pay system for Government employees in recognized trades and crafts, or other skilled mechanical crafts, or in skilled, semiskilled, or unskilled manual labor occupations.

We will accomplish the enviable aim of providing like pay for like work. We will establish relative differences in pay only where there are substantial or recognizable differences in duties, responsibilities, or qualifications among positions. Within a wage area comparable work will be rewarded by comparable levels of pay. There will be equality of pay for similar jobs performed in different agencies.

Very importantly, I feel, is that in the wage surveys which will be made—wherever possible at least 50 percent of private industry organizations surveyed shall be those where rates are fixed by collective-bargaining agreements.

The bill establishes within the Civil Service Commission a standing committee known as the National Wage Policy Committee. It will provide for a continuing program of review designed to keep the application of this act fully abreast of changing conditions, practices, and techniques—both in and out of Government.

The Policy Committee will be composed of 11 members. The chairman will be from outside the Federal service and is not to hold any office in the Federal service. He will be appointed by the President. Five members will be from Federal employee unions and five will be Government employer representatives.

There will be established wage committees within each Federal agency and there will also be local wage survey committees. These committees will maximize the involvement of Federal employees in the planning and scheduling of wage surveys and the establishment of wage rates schedules.

I wish to emphasize one of the key features of the bill. The chairman of the Wage Policy Committee will be from outside Government service. This will alleviate the situation which has, in the past, occasioned complaints about his lack of impartiality, because he previously was the Chairman of the Civil Service Commission and consistently voted with management.

These and other more detailed changes should serve to at last advance the wage board portion of our employment system to a par with the modernized and presently more equitable system enjoyed by clerical and administrative workers. I hope that my colleagues will direct their own efforts to helping obtain for Federal employees the basic right of "like pay for like work."

IN DEFENSE OF THE PRESIDENT'S EAST ROOM SUNDAY SERVICES

(Mr. WAGGONNER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WAGGONNER. Mr. Speaker, I am apparently not the only person who has been offended by the recent statements of the so-called theologian, Dr. Rheinhold Niebuhr, criticizing the President for holding religious services in the White House. Columnist Virginia Payette, writing in the Dallas Morning News on August 20, expressed my sentiments exactly and I would like to make her article available for everyone to read.

Niebuhr has descended from Mount Olympus and delivered himself of a titmouse when he accuses the President of displaying "a curious combination of innocence and guile" in holding these Sunday services. The truth is, rather, that Niebuhr displays a curious vacuousness of intellect and Christianity, particularly so for a theologian, when he directs such undeserved criticism at the President. A true man of God would find some more deserving area for his concern. I hope the President continues, even expands, this practice.

The column in question follows:

THOSE SERVICES IN EAST ROOM

(By Virginia Payette)

Well, for God's sake (and ours), let's leave off jumping on President Nixon because he prays at home on Sunday!

Or maybe it's because the preachers he invites in to lead the prayers are theological conservatives. On the other hand, maybe it's just coincidental that the people who object to oldtime religion in the White House have more liberal (or do I mean high church vs. low church?) leanings.

When you get down to it, it's really kind of hard to figure out just WHY the clerical critics are rushing in where even Democrats fear to tread. The Lord knows the poor man has plenty to pray about. In that job he needs all the help he can get, and let's not quibble over how he goes about it.

But the zaps are coming in. From—of all people—a couple of certified, blue-ribbon theologians.

The first nip came a few months ago when the Rev. Harvey Cox of Harvard had a few unkind words to say about the President's plea that youngsters turn to religion for some of the answers they seem to be seeking.

MR. COX KICKS

The Reverend Mr. Cox said frankly that he and his fellow preachers were having enough trouble getting the kids interested in religion "without having Nixon support it." (And he wasn't struck down by lightning, or anything.)

Now, along comes Dr. Reinhold Niebuhr, a 77-year-old theologian who's known mostwheres as our most respected Protestant thinker. Well, he's been thinking, and he protests that President Nixon is bending the First Amendment "by a curious combination of innocence and guile" when he holds those prayer meetings in the East Room of a Sunday morning.

Never mind how informal they are. Or that they're almost so nonsectarian they could pass for chapel in a prep school. Dr. Niebuhr thinks they are establishing a "conforming religion."

He's afraid President Nixon is latching on to Scripture to line up help for his own political ends—and this is just the kind of thing that put the fear of God into our Founding Fathers, he says, and made 'em stick that First Amendment in there in the first place.

Apparently Dr. Niebuhr feels the church's deep thinkers would do better to spend their time shooting moral criticism at the White House, instead of wasting their time praying there.

DISLIKES LIST

And he's not the least bit happy that the guest-preacher list has included not only evangelist Billy Graham and positive thinker Norman Vincent Peale, but also a Catholic, a Jew and a Quaker. (Would he prefer, maybe, Madalyn Murray O'Hair, who doesn't like prayer even a quarter of a million miles out in space?)

Dr. Niebuhr seems to be afraid that none of these men will ever come out against any Nixon program now, no matter what.

"It is wonderful," he says, "what a simple White House invitation will do to dull the critical faculties," and it just shows that those Founding Fathers were right all along.

He also wonders whether the late Dr. Martin Luther King, whose civil rights program sometimes differed from Mr. Nixon's, would have been invited to mount the temporary pulpit.

Well, that we'll never know. Dr. King died before Mr. Nixon's religious practices became such a public concern. But chances are he'd have accepted the President's invitation, prayed over him on Sunday, hoped he'd saved a sinner, and said what he thought on Monday.

And so, no doubt, will all these other guest preachers.

THE CIVIL RIGHTS DIVISION LAWYERS' REVOLT

(Mr. WAGGONNER asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. WAGGONNER. Mr. Speaker, the Washington Evening Star hit the nail on the head in an editorial in their Wednesday, September 3 issue when, in reference to the so-called revolt of lawyers in the Civil Rights Division of the Department of Justice, the writer said:

We do not suppose that the Attorney General or the President will permit lawyers in the Department of Justice to dictate administration policy.

The fact that this malcontent group wants to charge ahead with forced integration of schools in spite of HEW Secretary Finch's plea that to do so would produce "chaos, confusion, and a catastrophic educational setback,'" shows their mentality, their morality, and their consciences or, rather, the lack of the three.

There is every evidence that the Department of Justice is headed for the first time in decades by a man of integrity, honor, and compassion, who does not believe in harassing the private sector with bureaucratic niggling for the sole sake of forcing on them an ideology, politically conceived, which will bring about a catastrophic educational setback.

Thank God for men of his caliber. They are a long time in coming.

If the malcontent group of lawyers cannot serve under a man like Attorney General Mitchell, they should submit their resignations and be on their way.

The Star editorial follows:

"REVOLT OF THE LAWYERS

The reports that many, perhaps half, of the lawyers in the Civil Rights Division of the Department of Justice are considering a mass resignation do not make a great deal of sense.

Their principal grievance, if the reports are accurate, flows from the administration's decision to obtain from the Fifth Circuit Court a three-month delay in enforcing a school integration order in 30 Mississippi school districts. The lawyers are supposed to believe this represents a retreat by the administration, and they are said to want a statement from Attorney General Mitchell affirming a department policy of strict civil rights law enforcement.

They are not likely to get it. For one thing, if such a demand were actually to be made, it would be presumptuous, to say the least. We do not suppose that the attorney general or the President will permit lawyers in the Department of Justice to dictate administration policy.

Furthermore, as we see it, the action in the Mississippi case does not amount to a retreat on civil rights. More probably, it reflects the use of at least a little common sense in trying to solve a most difficult problem.

The real request for the delay came, not from the attorney general, but from HEW Secretary Robert H. Finch. He told the appellate court that an attempt to implement the desegregation plan by the begin-

ning of this school year would produce "chaos, confusion and a catastrophic educational setback." The additional time is needed, he said, for further study and the preparation of additional plans to smooth the way.

If the critics do not believe Finch, they should at least take note of the language used by the court in granting the requested delay. "It is a condition of this extension of time," said the judges, "that the plan as submitted and the plan as finally approved shall require significant action toward disestablishment of the dual school system during the school year September 1969-June 1970." That is plain language. Clearly, the administration did not request and the court did not grant an indefinite delay in this matter. There must be "significant action" toward desegregation in this school year.

In our view, this is a judicial attitude that is both hard-nosed and unwise. It could very well still result in the "catastrophic educational setback" to which Finch alluded. For experience elsewhere, including the experience in this city, rather clearly indicates that parents cannot be forced in the name of integration to send their children to schools which they do not want them to attend. And in Mississippi the drift away from public schools to private schools is already under way. If it continues, the quality of public education will be the principal victim.

However this may be, it is clear that the administration has requested and the court has granted a delay of three months—nothing more. The discontented lawyers and the other critics should take time to examine the record before jumping to the conclusion that civil rights are going down the drain in this administration.

TINDERBOX IN LATIN AMERICA

(Mr. FASCELL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. FASCELL. Mr. Speaker, the August 16, 1969, issue of the Saturday Review features a most thought-provoking article, entitled "Tinderbox in Latin America."

Written by Ambassador Sol M. Linowitz, former Ambassador to the Organization of American States, the article calls attention to facts which cannot be ignored by anyone concerned with our hemisphere's future.

Ambassador Linowitz's many years of experience in the business and diplomatic worlds and his knowledge of Latin America have provided him with tremendous insight into the problems which beset our hemisphere and the directions we ought to pursue in seeking solutions to them.

Accordingly, I am sure my colleagues are interested in what Ambassador Linowitz has to say:

TINDERBOX IN LATIN AMERICA

(By Sol M. Linowitz)

For some time now it has become a tired Washington cliché to issue periodic pronouncements to the effect that United States relations with Latin America are in a state of crisis and we must, finally, do something about it. It would be difficult to find anyone, no matter how sparse his knowledge of the hemisphere, who would argue about the crisis half of the cliché. It is the latter part—"do something about it"—that causes all the trouble.

James Reston once observed that the American people will do anything for Latin America except read about it. The apathy is so widespread and endemic, however, that the usually reliable Mr. Reston may have overstated the case with regard to the American people's willingness to do anything for their hemispheric neighbors.

There is a paradox about the situation that contributes to making it one of the most perplexing among the many foreign policy problems that periodically plague Washington administrations, no matter what their political gender. Beginning with Franklin Roosevelt and his Good Neighbor Policy through John Kennedy and the Alliance for Progress, Lyndon Johnson and the summit meeting of American presidents, and now Richard Nixon and the Rockefeller Latin American study mission, no President, Democratic or Republican, in nearly two generations has denied the importance of Latin America, or has claimed it can be neglected or ignored.

Yet despite all the programs and official avowals of concern, who can find any sense of excitement about Latin America among the people of the United States? That does not mean we do not get worked up over a Castro, a Cuban missile crisis, a Dominican Republic crisis, an oil company expropriation, a fishing boat seizure. Or that we are not shocked when the visit of a Governor Rockefeller, who is rightly regarded as a friend of Latin America, touches off nasty demonstrations.

That is the heart of the paradox, for the emotions are genuine and the concern is real. Yet when the crisis of the moment is over, emotion subsides and concern is shrugged off, and once again we turn our attention to another part of the world—until some new Latin explosion, such as the El Salvador-Honduran clash, reluctantly drags it back again to our own hemisphere.

To suggest that this lack of public interest is directly responsible for the state of affairs in Latin America would be less than accurate. Surely it is not responsible for the nagging economic underdevelopment that grips the continent and its 240 million people—240 million who will be 600 million before the century is out, and, if circumstances continue as they are, many times poorer.

The other side of the coin, however, is that our public disinterest sharply points up the inescapable fact that there is no real Latin American constituency in the United States—a political nuance that the Congress has not failed to notice.

Last year, for example, we disappointed the people of Latin America with cuts in our appropriation for the Alliance for Progress—cuts that made it the lowest since that vital program was launched in 1961: $336-million against some $500-million in 1966 and $460-million the following year. This year President Nixon has proposed an appropriation of $603-million, and already we are beginning to hear the sound of chopping on Capitol Hill.

Obviously, it is far from the intent of Congress to do anything that would slow the rhythm of development in Latin America, for that could only weaken the constructive forces of peaceful change and give impetus to those who believe in violence as the way to alter the status quo. But cutting our share of the alliance appropriation has this precise effect, whether that is the intent or not, and the United States cannot evade responsibility.

What it all boils down to is that we cannot help Latin America solve its economic problems with bargain-basement tactics. We cannot do it on the cheap. Rhetoric is fine in its place, and the ringing words of our regard for Latin America make for fine speeches. But without the financial commitment to back up the words we are in trouble in this hemisphere, and we had better make no mistake about it.

Too often in our relations with Latin America over the years we in the United States have not done as we said, nor have we always said clearly just what it is we would do. Our promises, moreover, have not always withstood the test of time or pressure. The people of Latin America have good reason to be confused about how seriously we regard them and their problems and, based on past experience, even better reason to have skepticism with regard to the credibility and continuity of the commitments we make to them.

There should be no doubt that this uncertainty in Latin America is a contributory factor in the repeated demonstrations of anti-U.S. sentiments that crop up with disturbing frequency, or that it is a potent weapon in the hands of those who relish the nation of a fragmented Western Hemisphere, with the South being played off against the North. Nor can there be any question that the time is long past for Washington to undertake a credible commitment to the republics of Latin America that will resolve the doubts that now give rise to such uncertainty and even to fear.

President Johnson, following the summit meeting of American presidents at Punta del Este in 1967, went a long way toward extending such a commitment when he said, "We will persevere. There is no time limit on our commitment." But realistically speaking, the words he spoke did not have the force of law or of a treaty—a fact Congress made all the more evident when it cut the alliance funds last year. And with a change of Administration, accompanied by all the uncertainty that such a change brings with it, the Latins are still wondering how far we will go, and to what extent we will persevere.

It was not, I am sure, President Nixon's intent to add to this uncertainty when, a few months after taking office, he addressed the Organization of American States and strongly criticized the alliance for all that it had left undone. Even the dispatch of Governor Rockefeller on his fact-finding mission, rather than help assuage fears that Washington was contemplating a major change in its Latin American policy, only intensified the uncomfortable feeling that, once again, things were up in the air.

Inevitably, there will be much of value in what Governor Rockefeller will be reporting to the President, but the point cannot be overstressed that we need, above all, patience, perspective, and the determination to see the job through. Latin America should not be an issue for domestic party politics. Quite the contrary, it offers what is perhaps the most inviting area for constructive and imaginative bipartisan foreign policy cooperation.

It is the kind of cooperation that must look beyond the immediate horizon and focus on another far off, one still shrouded in clouds of uncertainty. For no matter what we do, no matter how firm our commitment, no matter what funds we appropriate to help the people of Latin America to build and to develop their continent, no matter what our trade policies, we cannot guarantee the future; we cannot say that if we do this Latin America will be an unwavering ally and firm friend of the United States, that it will offer us a vast commercial market for our goods. No one—politician, economist, or seer—can offer any such guarantee. And even if he could, it would be a poor motivation for the kind of effort that must be undertaken for the remainder of this century.

Latin America is not for sale to the highest bidder, and if we gear our programs with the idea that it is, we are in for a sad awakening—an awakening that, as recent events demonstrate, has already begun. What we must understand is that change in Latin

America is inevitable. The only question remaining is whether it is to be a violent change or a relatively peaceful one, and obviously, therefore, our own best interests would dictate that we aid those forces seeking to build and to strengthen economic and political democracy in Latin America.

If they should fail, the change that is bound to follow can only be one of violence. All the explosive ingredients are present. For in Latin America, even as in the United States, we cannot expect people denied hope and dignity to sit patiently while life and the world pass them by.

The point has been made that if Latin American governments do not pass badly needed economic and social reforms they deserve to fall. And it has been argued too that perhaps some violence may be necessary to convince the oligarchies and military governments that desperate conditions beget desperate actions. To some extent it is difficult to answer these arguments. It is all too true that in too many cases Latin governments are not doing all they should and all they could to cope with the underlying causes of economic and social underdevelopment, nor are they doing enough of what must be done to promote the growth of representative government responsive to the will of the people. These facts are all too glaring to be swept under the rug, and we should recognize them for what they are—part of the reality of Latin America today.

What all this points up is the truism evident wherever people are struggling to be free—economically, socially, and politically: Time is not on the side of those who would shelter the status quo. Those who would see democracy and freedom fulfill their destiny have the responsibility of seeing to it that the vicious circle of poverty, sickness, and illiteracy is broken once and for all. People within its orbit live outside the mainstream of society and really play no part in shaping their nation's policies; because they are not part of the democratic process, they have little stake in it.

Clearly we must do all we can to encourage the growth of orderly, democratic procedures sensitive to the needs of the people they are designed to serve. But we can not and must not elbow our way into another country's system, telling it how it should manage its affairs, as if we had all the answers. We haven't, as the problems before us of putting our own house in order aptly testify.

What we can do, however—and what we have not done with any real consistency—is to make clear our firm commitment to representative government and to the growth of political democracy in this hemisphere. Such a policy will enable us to develop special friendships with Latin America's men of vision, with the men who know that peaceful social progress is endangered by any entrenchment of the privileged few.

Today the despair that exists in much of Latin America provides the climate in which a Batista or a Castro flourishes best, or in which a despotism of the right can provide the foundation for a dictatorship of the left. Or vice versa. It is a situation that only underscores the urgency of continuing the partnership launched eight years ago this month when President Kennedy, following a Latin-inspired initiative known as "Operation Pan-America," pledged the support of the United States to the Alliance for Progress.

The alliance was a magnificent concept, with goals and aspirations to match its grandeur. If it can be faulted in hindsight, it would be for assuming that the job could be done in ten years. That, and setting an annual growth-rate goal without recognizing that the birth rate was shooting up at a pace that far exceeded Latin America's growth-rate capabilities.

But who can argue that any program of the scope and reach of the alliance—a program designed to bring about the upheaval of the Latin American continent and build a healthy, vibrant, economically secure, and politically sound inter-American community—must not set its sights high, and that it must not keep them there? Surely not the people who live without amenities of civilization, or without hope of a better tomorrow. For they can attain that tomorrow only if there is no compromise in the fight to attain the goals the alliance so eloquently set forth—goals for better housing, education, health, tax and land reforms, a revitalized and modernized industry and agriculture, and an integrated continent-wide economy.

Yet the yearly per capita growth rate still is well behind the Punta del Este goal of 2.5 per cent. The birth rate soars. Fifty per cent of the people are illiterate. The cities are clogged with workless *campesinos*. Tight protective tariffs protect inefficient monopolies. Feudalism persists in the countryside, and the people there go hungry or move away.

If it was a mistake then to hope that this could be changed in ten years, it would be catastrophic now to turn our backs on what has been done. True, economic sufficiency remains a distant goal, but for the first time a way has been charted out of the Latin American jungle of underdevelopment.

The statistics add up to an impressive total, particularly in an area of the world that has never experienced such concentrated doses of progress. But no statistic can possibly convey the meaning of a new road that slices through an Amazon jungle and links up a hitherto isolated village with the heartland of its country. Nor can it convey the significance of a new classroom opened for children in the plateaus of the Andes or in the *barrios* of the cities; of a *campesino* who now works his own farm; of water supplies made potable; of infant mortality rates reduced; of a family able to quit the sordid life of the slums for a new start in a new apartment.

And with all the statistics totaled up, it is clear that the alliance has devoted more of its resources to investments in the social areas, particularly education and health services, than in any other sector.

The actual rate of Latin American development, therefore, is higher than the economic growth charts indicate simply because social investment is not reflected in Latin America's gross product. But the direct effort to speed up the processes of education and social welfare is the surest guarantee that an obsolete social order will be peacefully transformed, as in Japan or Britain, rather than explosively altered via the violent, revolutionary routes of eighteenth-century France or twentieth-century Russia.

What must be understood above all about the alliance—and perhaps the most misunderstood feature, even among a number of our own key government officials—is that it is not a bilateral American aid program, but rather a cooperative self-help program, to be carried out primarily by the people of Latin America. The United States is one partner in this program, of which 90 per cent is financed by the countries of Latin America. The alliance is not ours to manipulate, and the amount we appropriate, therefore, is no handout, but a hand of help extended in friendship. Congress must not forget this when considering how much we can afford to appropriate for our share of the effort.

When all is said and done, and with all that remains undone, there is no escape from the conclusion that eight years ago the alliance launched a truly creative, regenerative development program. But it was, and is, only the first step in a long journey. In our inter-American relations, we need most of all a sense of propriety, a sense of time, a sense of scale, and a sense of destiny.

As for propriety, Americans may find wry amusement in cartoons that depict the stereotyped Latin American—the sleepy, guitar-playing, sombrero-wearing, not too ambitious but pleasant fellow. But the stereotyped North American—the Yankee with the dollar sign for a heart—is hardly the object for smiles in Latin America. The truth, of course, is that neither stereotype is valid today, if it ever was.

The people of Latin America are a combination of some of the wealthiest cultures our civilization has known. Its young people, with their passion for country and their zeal for the future, are restless and prone to impatience. They are skeptical of our aims and so are more willing to blame us for their problems than to understand the difficulties in solving them. Yet these are the people with the mystique and the vision of grandeur who can spark the enthusiasm and loyalties of their countrymen. They are the people who are so anxiously searching for a revolution of social justice—the very people we must convince that we want to work with them because our continued partnership is essential to the future of freedom. In so doing, anti-Communism as such will not get us very far. It is not a powerful argument for the average citizen who is steeped in a personal struggle to keep his head above water.

A student at the University of Chile once summed it up when he told me: "The United States is constantly talking about the value of political democracy. We agree that it is essential, but we also feel you would accomplish far more if you said less about political democracy and put more of your weight behind the concept of economic democracy."

What he was saying is that city slum dwellers denied hope and illiterate rural Indians denied even a glimpse of the twentieth century neither comprehend the meaning of political democracy nor offer any foundation to sustain or to nurture it. They will either remain mute or give their sullen support to the demagogue or "leader" who elbows his way through the masses offering them protection and food. These are the staple commodities they want and need, and no promise of a better life made possible by democracy can vie with them. As former Senator Paul Douglas once said, "When you offer a starving man a choice between the Four Freedoms and four sandwiches, he always chooses the four sandwiches."

When, however, attention is given to questions of basic order, when roads and streets are made safe, when food, clothing, and shelter are made available, when attention is given to living conditions, when the masses discover they can rear, educate, and marry off their children and leave them an opportunity for a better life, political democracy becomes not only possible, but imperative. For as living standards rise, democracy becomes the only political system through which that better life can be sustained and advanced. And this is to the mutual benefit of all the Americas.

As for time, no nation has fully modernized itself in less than sixty years. The United States took much longer. In eight years Latin America, despite false starts and frustrated hopes, has made more progress than we had any right to expect. Realistically, however, it would be unwise to think in terms of less than thirty years for full-scale modernization of the continent. After eight years the alliance must, therefore, be regarded as in its infancy. Any other view does injustice to Latin America.

And this leads to the need for a sense of scale in our relations with Latin Americans, including a sense of proportion in both the United States and Latin America. We must look at our hemisphere with a new eye of understanding, one that recognizes its importance to the future peace of the world. We cannot take Latin America for granted, believing it will be there when we need it. We need it now no less—and perhaps more—

than it needs us, for what happens there in the closing years of this century may well shape the coming years of the next century.

As for Latin Americans, it is time for them to recognize that the United States is not the wielder of the big stick of the 1900s, that we mean what we say about wanting to work with them, that our commitment is to an inter-American community of equal states. In short, they must turn away from memories of the past and turn instead to our mutual hopes for the future.

We talk of destiny, of partnership, of shared hopes and efforts toward hemispheric unity. But what does that destiny look like if our hemisphere ends up half suburb and half slum? Is this the limit we set to the creative, working partnership the American presidents established at Punta del Este to meet the increasing needs of today's "revolution of rising expectations"?

Surely our destiny is more in keeping with the brave new world we have always sought to build. Surely it is more in keeping with our faith that the dream of Simón Bolívar will flourish at last, like the dreams of our own founding fathers—that this hemisphere will grow in prosperity and confidence into a model of new states, with all their diversity of cultures and differences of gifts, can work together to improve and enrich and ennoble their common life.

We shall not do this with cold, lifeless graphs and charts. We shall not do this with Congressional cuts. We shall not do this between today and tomorrow. But with time and with resources, and with the republics of the Americas all working together, it can be done.

CRISIS IN WORLD STRATEGY: THE SOUTH WEST AFRICA STORY

(Mr. RARICK asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. RARICK. Mr. Speaker, in previous statements in Congress, I have described the vast area known as southern Africa as one of the key strategic spots of the world.

Its significance in the defense of Western civilization—as recognized by competent students of world strategy—was dramatized by the closure in 1967 of the Suez Canal, which forced shipping between the Mediterranean and the Indian Ocean to sail around the Cape of Good Hope.

One of the regions in southern Africa about which there has been much uninformed and pernicious discussion in the press of the world is South West Africa, which is an extensive territory under the jurisdiction of the Republic of South Africa.

Because it is important for the people of the United States, Members of Congress, and officials of the executive branch of their Government to have actual facts as well as harmful propaganda, the American Security Council, in a recent Washington Report, summarized the story of South West Africa in a brilliant article by John F. Lewis, coordinating editor of that publication.

For those who may wish additional authentic information about southern Africa, attention is invited to three notable books. Two are by Dr. Eschel Rhoodie: "South West—The Last Frontier," and "The Third Africa," both published in 1967 by Twin Circle Publishing Co., 86 Riverside Drive, New York, N.Y. The third is by Dr. Robert Gayre, "Ethnological Elements of Africa," published in 1966 by the Armorial Ltd., Darnaway St., Edinburgh, Scotland.

As an example of hostile agitation in the United States against the proudly pro-Western civilized Government of the Republic of South Africa, I would again warn the Congress and responsible officials of the executive department of our Government concerning the book, "Apartheid and the Limited Nations Collective Measurer," edited by Amelia C. Leise, and published in 1965 under the auspices of the once great organization, the Carnegie Endowment for International Peace, United Nations Plaza at 46th Street, New York, N.Y.

This volume by the Carnegie Endowment for Peace is a general staff type of war plan—prepared with the assistance of the West Point faculty—for an amphibious assault on South Africa. It estimates that the casualties would be between 19,000 and 38,000 killed and wounded, which no doubt are intended to be primarily from the youth of the United States.

Mr. Speaker, I would emphasize that the Republic of South Africa is by far the strongest and most stable on the entire Continent of Africa, which serves as a bastion of Western civilization.

An armed assault on South Africa would be far more disastrous than anything the world has witnessed since World War II.

I believe that I reflect the voices of our more thoughtful citizens when I say they do not wish any more Korean or Vietnam wars—on the deserts of the Sinai Peninsula, South West Africa, or anywhere else.

The previously mentioned article by John F. Lewis follows:

THE SOUTH WEST AFRICA STORY

(By John F. Lewis)

If a majority of the member nations in the UN had their way the world would be at war this year over one of the least known and most misunderstood areas of the globe—South West Africa.

Led by propaganda and political pressure from the communist bloc states and fed by a combination of misconceptions and demagoguery from the so-called Afro-Asian bloc of nations, the United Nations has very nearly committed itself to launch a military campaign to oust the white man—specifically the Republic of South Africa—from administration of the territory.

For 50 years, South Africa has run South West Africa under terms of a League of Nations mandate to administer the one-time German colony that was the Kaiser's pride before World War I.

What is more, even the most critical observers of South Africa's administration concede South West Africa has been run well and has prospered far beyond reasonable expectations.

Despite drought, limited communications through sparsely settled country, and the great diversity of its people, South West Africa's post-World War I bankruptcy has been converted under South African supervision to a point which allows the country today to export capital. During the days when the British ruled South Africa and, consequently, South West Africa, the level of real output (1920–1945) doubled. Since South Africa became a republic and cut loose their ties to the British crown the growth rate has been even more remarkable. For example, during the period 1961–1965, when the population of South West Africa was rising at a rate of about 2.4 percent per annum, gross domestic output in the territory increased on an average of 12.6 percent per annum. This has been reflected in a per capita income growth rate to the non-white population of the area an estimated five to ten times that of most of the non-white administered states of the African continent.

Its tribal peoples have known a peace, stability and progress which they never enjoyed for periods of more than a decade prior to the end of World War I.

Only because the West, and particularly Britain, France and the United States, have no intention of waging war against the South Africans; only because the Soviet Union is unwilling to commit its own military might to such an adventure, and only because the Afro-Asian countries are unable to do so, has aggression against one of the most peaceful portions of this violence-plagued earth been averted in 1969.

Because it may not be averted in the future, it is important that the facts of South West Africa's story be known so the myths may be exposed before it is too late.

GEOGRAPHY AND PEOPLE

Facing on the Atlantic side of southern Africa, South West Africa shares a northern border with Portuguese Angola, an eastern border with Botswana and the Republic of South Africa and a southern border with South Africa. It has limited frontier contact with Zambia in its extreme northeast.

The territory is slightly larger than Texas and Louisiana combined, consisting of some 318,000 square miles. Fifteen percent of its total area is virtually useless except for one currently very important consideration—defense. This region is the Namid, a desert of dunes between the pounding waves of the Atlantic and the country's central plateau that varies in width from 50 to 80 miles along its entire west coast.

The Namid is formidably hot, utterly arid and a frightening obstacle for any would-be invaders from the sea. It is perhaps the earth's most desolate piece of real estate.

An inland escarpment which is known as the Central Plateau, covers more than half of the territory and also stretches from South West Africa's northern border to its southern border. It ranges in altitude from 3,200 to 6,500 feet above sea level.

The plateau offers a diversified landscape of rugged mountains, rocky outcrops, sand-filled valleys and gently rolling plains, has minimal amounts of rainfall and is sparsely inhabited.

The remainder of the area is known as the Kalahar, covering the eastern, northern and north-eastern parts of South West Africa. It includes what is called the Caprivi Strip—a thin corridor penetrating the southern heart of Africa between Botswana on the south and Angola/Zambia on the north (the Caprivi Strip was carved out of British Colonial holdings in 1908 to grant German South West Africa access to the Zambezi River. It was named in honor of the then German Chancellor, Count von Caprivi.)

Though most of the Kalahari is also deficient in rainfall, parts of it such as the Caprivi Strip are well watered and well developed agriculturally.

The entire country is inhabited by less than 630,000 people and about one-sixth of that number are white. Most of the whites are of German and South African (Afrikaner) or English origin.

The largest non-white group is the Ovambo tribe, living in a virtually autonomous region of the north, Ovamboland, adjacent to Angola. They number well over 270,000. Then come the Damara people (50,000), Herero (40,000), Nama (40,000), Okavango (32,000), East Caprivians (18,000), Basters (14,000), Bushmen (13,000), Tswana and much

smaller other tribes (20,000). The so-called "coloreds," Asians or products of white-non-white inter-marriage, are a group unto themselves and number some 15,000.

TRIBAL DISTINCTIONS

The biggest misconception much of the world has about all of Africa is that all non-white populations are as one in terms of ethnic origins, color of skin and level of social, political and intellectual advancement. On top of this, of course, comes the second biggest misconception—namely that since the white man runs the governments of southern Africa in Portuguese Angola and Mozambique, in Rhodesia and in South and South West Africa, the non-white populations are being oppressed.

That is a convenient theory to espouse wherever ignorance is deemed blissful but it is hopelessly out of line with the facts in southern Africa.

If one considers the white man as a tribal grouping in South Africa, for instance, the fact is the white tribe arrived in that area about the same time many of the Bantu (black) tribes arrived from east and central Africa following great migrations brought on by the pressures of war, famine and the Arab slave trade persecutions.

The settlement of southern Africa—in terms of today's major population groups—occurred in the sixteenth to nineteenth centuries. The white man arrived in 1652 to form the first settlement at the Cape of Good Hope. However, European explorers and adventurers from Portugal, England and Spain had made landings and become familiar with some of the terrain of South and South West Africa since Portuguese Captain Diego Cao landed in 1485 just north of what is today, South West Africa's principal port, Walvis Bay. Two years later the only other modern South West African port—Luderitz—was a beachhead landing for explorer-geographer Bartholomew Diaz. Diaz then proceeded around the tip of the continent to discover the Cape, in 1488.

Only the Hottentots—now extinct as a race or tribe—and possibly the Bushmen, were indigenous to this part of Africa. Such a famous tribe as the Zulus migrated into the eastern portion of South Africa and became important only in the 18th and 19th centuries.

Though the United Nations and many of the most vocal of those countries now seeking the white man's scalp in southern Africa make the black man's experience in southern Africa sound like that of the Indian in America, there just are no parallels to be found.

Thanks to the white man's success (by the end of the nineteenth century) in putting an end to the non-white wars of tribal genocide, the non-white population of South and South West Africa today is four to six times greater than that of the white man.

In South West Africa, there are very wide differences to be noted among the tribal groupings. The Bushman is a Stone Age man—hopelessly outclassed physically and mentally by the sophisticated Ovambos, and Okavangos who similarly have little in common with the warlike Hereros and Namas.

In terms of language, customs, family and community relationships and tribal organization—each group in South West Africa, including the "coloreds," differs widely.

The United Nations has also insisted that South Africa's continued administration of the League mandate in South West Africa amounts to an "illegal occupation."

The World Court reviewed this entire issue as recently as 1965 and concluded—in effect—that the UN had no jurisdiction in the matter, that there was no evidence that South Africa had violated the League mandate and that the subject was not germane. The case was initiated at International Court of Justice by Ethiopia and Liberia yet the highest tribunal in international law found that neither country had been hurt by South Africa's administration of South West Africa and neither country even shared a common boundary with the area in question.

Yet, the UN Security Council—earlier this year—was asked by the General Assembly of the United Nations to consider the use of armed intervention to make South Africa release its administrative hold on South West Africa. The fact that there was no demand from the people of South West Africa to do this and the fact that the UN was acting in direct conflict with the World Court opinion led South African Minister of Foreign Affairs, Dr. Hilgard Muller, to comment: "We are occupying nobody and nothing. The people of South West Africa possess and occupy their own territories and they live in prosperity under our protection.

"We have been in South West Africa for fifty years already and I want to state clearly that we intend to remain in South West Africa legally because the inhabitants want us there and also because it is our intention to prevent any aggression from outside against the territory or any of its population groups . . ."

Most importantly, the major non-white tribal groups in South West Africa today live on the very homelands they originally occupied when they migrated south from other parts of the continent. They have not been dispossessed of their real estate holdings. They continue their tribal life in an unbroken pattern.

They choose their own chiefs in the way their people have chosen them for centuries. They run their own affairs. The white man interferes just enough to bring them schools, hospitals, agricultural know-how and, as indicated earlier peace.

Yet the real irony of the South West Africa story is that an independent and objective survey made among the nonwhite groups of South West Africa suggests that any attempt by the outside world to enforce the United Nations or Communist and Afro-Asian claims against South Africa's administration of the country would be as stoutly resisted by the allegedly exploited natives as by their so-called white masters.

Despite the heavy dosages of Communist-directed and financed propaganda that seeks to infect black Africa with revolutionary fervor and despite the Afro-Asian bloc sensitivity to the real and imagined affronts to their brethren in South West Africa, any attempt to use force to impose the UN's will would be the height of folly.

Furthermore, it would be a reprehensible exhibition of double standards on the part of both the non-Communist world and the UN, so long as they seemingly tolerate the truly illegal occupation of Czechoslovakia, the real persecution of Hungarians and the demonstrated fifty-year oppression of millions throughout the Communist world.

VIETNAM—WHAT NEXT?

(Mr. BROWN of California asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. BROWN of California. Mr. Speaker, we cannot allow the tragic nightmare that is Vietnam to linger. Beyond all else, the failure of our Government to end our costly adventurism in Southeast Asia still ranks as the most pressing problem facing this Nation.

Of course, I do not doubt that today we are nearer to some sort of settlement than we were a year ago. But, what good is it when the progress is measured only by inches when instead it should have been in miles. I become incensed whenever I hear the pap that any progress necessarily must be slow; that is nothing more than rhetorical nonsense, empty phrases employed to cover up our real lack of true resolve.

Certainly, it is apparent that there now is more active strife off the battlefronts than on them, that the real struggle is going on between the Thieu-Ky government, combined with its friends in the American military heirarchy, and those policymakers who are pushing for acceleration of U.S. withdrawals and easing of our stands at the Paris peace talks.

Yet, because of this searing internal struggle, we face the terrible enigma of our current situation in Vietnam:

President Nixon encourages talk of phased troop withdrawals, but total troop strength has changed very little;

The emphasis is on increased "Vietnamization" of the war, but the period most generally mentioned for an effective transition to South Vietnamese control is 2 to 3 years;

Mr. Nixon goes on about the need for political settlement, but the government formed last week is even less broadly based and supported than before.

And some things never change.

The American military ethic continues to call for a victory in Vietnam, whatever that means and at whatever the cost. The Thieu-Ky government desperately hangs onto—and promotes—meager hopes of victory because it cannot tolerate settlement as long as the ruling junta represents nothing more than an extension of American policy in Asia.

After months of administration procrastination and hesitation—ostensibly because public and political pressures were lessened to avoid harming the chances for advance at the Paris peace talks—now we must realize that the situation is dismal, to say the least.

Indeed, what sort of progress should we expect when the South Vietnam Government rejects the proposed 3-day truce, and when the State Department then announces it will follow the lead of the Thieu-Ky regime. Must we interpret this ploy as meaning that we are turning over key political decisionmaking to the Vietnamese generals? I hope not.

Right now—today—we have reached a crucial point in the course of our Vietnam dilemma. Even before the death of Ho, there were encouraging signs from both Hanoi and Paris; most heartening of them was the report by Jonathan C. Randal of the Washington Post that Hanoi's chief negotiator had hinted that rapid and massive troop withdrawals could get the talks going again, and that North Vietnam would no longer insist—that the Saigon regime be replaced by a provisional coalition government.

The time is right for decisive American action primed to bring about peace in Vietnam. I suggest two immediate steps to President Nixon. The President should:

First, accept the 3-day cease-fire, and take initiative to make it into a permanent, lasting truce;

Second, speed up troop withdrawals at a pace six or seven times as fast as we now are going, and make sure that troop withdrawals are counted against total troop strength, instead of making it all a futile numbers game.

Over 2 years ago, in a speech given at the Los Angeles town hall, I outlined a four-point approach which I felt contained all the necessary elements to achieve an immediate end to the war, along with bringing a political settlement acceptable to both sides. I believe those four suggestions still are valid—still must be done—and I now reiterate them.

I call upon the President to take the following steps:

First, order our half million troops, our massive air and naval fleets, to cease fire and stand fast. Announce to the enemy and to the world that our soldiers will fire only if fired upon, but if fired upon will take all steps necessary for their own defense.

Second, asks the Geneva powers to reconvene, under call of the cochairman, to a neutral site in Asia, with the National Liberation Front participating as a belligerent.

Third, participate in good faith negotiations as long as necessary to reach a settlement, making clear that he will be guided by the basic principle that the future of South Vietnam shall be determined by the freely expressed decisions of its own people.

Fourth, insist that the final agreement be guaranteed by the great powers, and adequate enforcement machinery provided.

That town hall speech was entitled "Vietnam—What Next?" The title remains true. Yes, over the 25 months since that speech, there has been progress. But the killing, the destruction, the resource losses, the alienation which splits the entire world community, all those existed 2 years ago, and they all continue.

Surely we must agree that if the conventional wisdom cannot provide the solution, then we must be prepared to try new and different—even radical—methods of bringing about the objectives of peace and security for all peoples.

The traditionalists have blundered time after time by staying only within the bounds—and binds—of orthodox diplomacy and brinkmanship. And, in one way, we do owe them thanks, for, if anything, the traditionalists have succeeded in convincing the great majority of Americans that the war must be settled quickly—and, strangely enough, even if it means that we do not win the conventional military victory we have been promised so often—and so erroneously—in the past.

Thus we find a significant change in attitude by the American public, but that change is not reflected by either our position on a political settlement for South Vietnam or on the military strategy of the generals who run the war.

Earlier I recommended two immediate steps that must be taken now to insure a quick settlement; the town hall speech brought up even broader guidelines. Even so, those suggestions are just initial policies, but they are most important ones.

I urge my colleagues—as I urge all Americans—to stress the necessity for these proposals. As for myself, I see no greater task for any man than to give his entire energy to achieve peace in the world at this time, and I am willing to do that. I will understake any effort which might lead to peace, including travel to both North and South Vietnam to consult with their leaders if such action might lead to a new spirit of compromise and a a realistic political settlement.

Mr. Speaker, no one in this Chamber is happy about the state of affairs in Vietnam. Congress has allowed this tragic war to escalate beyond all comprehension. Now let us act to bring a just and quick peace, for we all know that it can be done.

In the past two days, I have come across a number of important news stories relating to the situation in Southeast Asia, and I insert them in the RECORD at this point:

[From the Washington Post, Sept. 7, 1969]

NIXON'S SECOND CHANCE: DEATH OF HO PROVIDES OPPORTUNITY TO MAKE FRESH BEGINNING ON PEACE IN VIETNAM

(By Joseph Kraft)

President Nixon missed the opportunity to make a fresh beginning on peace in Vietnam when he took office last January. But the death of Ho Chi Minh—with its incalculable impact on North Vietnam, the insurgency in the South and relations with Russia and China—gives him a second chance.

The serious question at this time, accordingly, is not what happens next in Hanoi. It is what happens next here in Washington. For to make the most of his second chance, the President will have to institute changes in his policy of troop withdrawal, in his attitude toward the Saigon regime and in his negotiating stance.

Troop withdrawal has been moving at a pace that would give snails itchy pants. The total American troop level in Vietnam is now only about 2,500 below what it was when Mr. Nixon took office. At that rate, a couple of hundred years would elapse before American soldiers finally got out of Vietnam.

The practical effect of that slow pace is to enshrine the principle of "see it through with Nguyen Van Thieu." Gen. Thieu is under no pressure to put together a broad-based regime capable of standing on its own feet and slugging it out with the other side. On the contrary, he has just put together a regime remarkable for its narrow base and lack of popular appeal.

Neither is Gen. Thieu under pressure to come forward with proposals that engage the other side. On the contrary, he is free to pursue a phony peace offensive—a series of spurious proposals that serve only to put the other side off.

Moreover, the American military is under little pressure to change its tactics. Episodes involving frontal assaults on strongly entrenched enemy positions for dubious gains—as in the cases of Hamburger Hill and Company A—keep cropping up. Casualties continue to run over 150 a week.

Heavy fighting combines with reliance on the Thieu regime to impair the Nixon negotiating stance at the Paris peace talks. That stance, according to the White House cliche artists, mixes the stick with the carrot. But the stick is an iron rod of planes, tanks and destroyers that flails away night and day. The carrot is a mangy root of uncertain dimensions.

The South Vietnamese insurgents, or Provisional Revolutionary Government, are offered the chance to participate in national elections for a new government of South Vietnam. These elections would be supervised by the present Saigon government, subject only to some vague international control.

But all experience teaches that those who organize elections in South Vietnam win elections in South Vietnam. Thus the other side is never going to be tempted by elections organized by their foes in Saigon.

To break the stalemate requires a reversal on all fronts. As a first change, there is the need for a much more accelerated program of troop withdrawal. To avoid the entrenched opposition that caused the President to postpone the cuts due to have been announced last month, Mr. Nixon needs to set down in advance a firm schedule of future withdrawals that should lead to a complete pull-out of American troops within a stipulated length of time.

A first dividend would be new tactics by American commanders. With their forces ebbing away, the military would finally be constrained—in ways far more efficient than mere presidential orders—to develop a defensive strategy aimed at reducing casualties.

A second consequence would be the impact of troop withdrawal on Gen. Thieu. Maybe he would bustle about and start to build a broadly based government able to fight the enemy or beat them in a political contest. Far more likely, he would begin to search for ways to do a deal with the other side.

Either way, divorce from Thieu would make room for a change in the American stance at the Paris negotiations. There would be no obligation to sustain the principle of future elections managed by the Thieu regime. On the contrary, the administration could come up with explicit assurance that the elections would be managed by some intermediate or temporary government acceptable to both nationalists and Communists in Vietnam.

Neither would the United States be glued to the principle that all negotiations with the Provisional Government have to be done through the present Saigon regime. Washington could explore the repeated hints by officials of the Provisional Government that they were prepared to negotiate on the matter of a mutual winding down of military activity.

To be sure, changing positions is never easy in public life. But the basic fact is that Mr. Nixon has tried the easy way to get out of Vietnam and failed. His second chance is to take the hard way.

[From the Washington Post, Sept. 6, 1969]

EXTENDED VIET TRUCE SUGGESTED

(By Arthur Dommen)

SAIGON, Sept. 5—A former member of the State Department's Policy Planning Council said today that South Vietnam should take advantage of North Vietnamese President Ho Chi Minh's death to propose a long-term cease-fire at the Paris peace conference.

Professor Zbigniew Brzezinski, a leading authority on Communist affairs, indicated to reporters that there was a slight chance of a cease-fire being agreed upon in the near future.

But Brzezinski, who directs Columbia University's Research Institute on Communist Affairs, said the incipient power struggle in Hanoi would give the proposal a greater chance of consideration than it would have had.

"The death of a dominant political leader in a Communist country creates an external facade of unity behind which there is intense political conflict," Brzezinski said. "This creates the opportunity to focus the attention of Communist leaders on initiatives from abroad."

The Vietcong has set a three-day cease-fire to start Monday as part of the mourning for the North Vietnamese president.

Brzezinski, concluding a week's fact-finding mission in Saigon on behalf of the National Committee for a Political Settlement in Vietnam, described the cease-fire proposal as a "wedge" to obtain negotiations. The New York-based committee includes the former deputy chief negotiator in Paris, Cyrus Vance.

The professor said he had received a wide

variety of reactions from the different people he had discussed the proposal with during his visit, including President Nguyen Van Thieu and American Ambassador Ellsworth Bunker.

He agreed that a cease-fire proposal might be officially rejected by Hanoi. "But in the context of a power struggle no 'no' is definitive," he added.

Concentrating on the negotiation of a cease-fire in Paris might lead to the negotiation of a settlement more easily than first trying to sort out the political future of South Vietnam, he suggested.

"A cease-fire proposal is not a simple device," he said. "It would have to be negotiated. It would make it possible for both sides to talk about some of the things neither is willing to talk about in the context of a settlement. It would make discussion more palatable."

The fact that the proposal was made would "create pressures for negotiations," he believes, and "focus on the real issues."

Brzezinski believes both the Soviets and the Chinese will be "heavily involved" in the struggle for power among the second-level Communist leaders in Hanoi following Ho Chi Minh's death this week.

Brzezinski, while agreeing with the administration in its decision to intervene with American troops in Vietnam in 1965, said "most of the conditions justifying our original intervention have now been changed."

HANOI HINTS RAPID PULLOUT MAY AID TALKS

(By Jonathan C. Randal)

PARIS.—North Vietnam hinted Tuesday that rapid and massive withdrawal of American troops from South Vietnam might get the stalled peace talks off dead center.

Xuan Thuy, Hanoi's chief negotiator, said: "If President Nixon continues to withdraw troops rapidly and in considerable numbers we will examine this factor and take it into account."

His remarks constituted the first indication that Hanoi would consider anything less than the total and unconditional withdrawal of the half-million U.S. troops in South Vietnam.

By the same token, he hinted that North Vietnam would no longer insist on its other previously intransigent demand that the present Saigon regime be replaced by a provisional coalition government.

Left unanswered was whether his remarks to reporters at a North Vietnamese reception represented the long-hoped-for breakthrough at the deadlocked peace talks or rather a popaganda ploy designed to increase pressure on Washington.

NIXON DECISION DEFERRED

Speaking at a reception commemorating the 24th anniversary of North Vietnamese independence, Thuy was asked whether the withdrawal of 100,000 American troops would constitute sufficient proof of Washington's intentions.

In a running exchange with reporters, he denounced the first American troop disengagement as "withdrawals by dribbles" and reiterated that an unconditional evacuation of U.S. forces was "the legitimate demand of the Vietnamese people."

As if to underline that Hanoi would only consider a massive withdrawal as meaningful, he said, "It is evident that if they (the United States) continue at the present pace we cannot judge the situation."

North Vietnamese departure from its previous demand, tantamount to overthrowing the Saigon government, was contained in his answer to another question.

Asked if both previous North Vietnam's demands for a coalition government and total, unconditional troop withdrawal were still linked, he said: "These two questions are linked but if they (the United States) withdraw their troops rapidly, we will take this factor into account."

[From the New York Times, Aug. 27, 1969]

A WHIFF OF MUTINY IN VIETNAM

(By James Reston)

In every American war there have been isolated incidents of mutiny among the troops. It is the tragic human pattern. There is a breaking point where discipline, duty and even loyalty to the men at your side are overwhelmed by fear and death and a paralyzing feeling of the senselessness of the whole bloody operation. And we are now getting a glimpse of it in Vietnam.

Horst Faas and Peter Arnett of The Associated Press, two of the most courageous reporters of the Vietnam war, have now reported such an incident by men of Company A of the 196th Light Infantry Brigade's battle-weary Third Battalion in the Songchang Valley, and the surprising thing is that there has not been more of this sort of thing under the present circumstances of the war.

CONSIDER COMPANY A

Consider the position of the men of Company A. Most of them were nineteen- and twenty-year-olds, drafted into the Army. For five days they had obeyed orders to move down a jungled glen against an enemy concealed in underground bunkers. Most of their squad and platoon leaders had been killed or wounded. In the repeated attacks on the bunkers, Company A was down to sixty men, half its assigned combat strength, some of them in the last days of their year's tour of duty in Vietnam.

This is not, of course, a typical situation. Yet it must give President Nixon something to think about as he plans his Vietnam policy.

THE PRESIDENT'S WORRIES

He has been worried about the revolt of the voters against the war, and even about a revolt of the generals if he humiliates them by pulling out too fast, but now he also has to consider the possibility of a revolt of the men if he risks their lives in a war he has decided to bring to a close.

This is a devilish problem for everybody concerned, but particularly for men who find themselves in the position of Company A. The President is no longer saying that military victory in Vietnam is "vital" to the national interest. He is not claiming that a compromise or even a defeat in Vietnam would result in the "loss" of Southeast Asia. In fact, he is not only withdrawing troops from Saigon but opening talks for the withdrawal of American troops from Thailand.

Accordingly, battles for bunkers in the Songchang Valley are tactical moves in the President's strategy of retreat. He is asking Company A to fight for time to negotiate a settlement wih Hanoi that will save his face but may very well lose their lives. He is also carrying on the battle in the belief, or pretense, that the South Vietnamese will really be able to defend their country and our democratic objectives when we withdraw, and even his own generals don't believe the South Vietnamese will do it. It is a typical political strategy and the really surprising thing is that there have been so few men, like the tattered remnants of Company A, who have refused to die for it.

At some point, the President is going to have to recognize that there is a fundamental difference between his policy of withdrawing gracefully from the war, and ending the war. The difference between what is graceful and what is decisive in ending the war is a great many lives of young men like the men in Company A, and while this may not produce a revolt among the young Americans in the Army in Vietnam, it will almost certainly produce a revolt among their contemporaries in the universities at home.

The President is now said to be delaying the withdrawal of another 25,000 or 50,000 men from Vietnam because the enemy is pressing the battle, and not negotiating seriously in Paris. The suggestion is that unless Hanoi cuts the fighting and starts making concessions at the peace table, he will keep all the Americans there and may even increase the level of the fighting.

But nobody should be fooled by this. He is delaying his announcement about withdrawing more troops from Vietnam, according to our information, not to influence the enemy, but to influence the American university students just before the start of the new school year. And the irony of this is that it won't work—or at least won't work for long.

PROPAGANDA AT HOME

For the more the President says he's for peace, the more troops he withdraws from Vietnam and Thailand, the more he concedes that Southeast Asia is not really vital to the security of the United States, the harder it is to ask for the lives of the men of Company A.

They may not be typical, but they are a symbol of his coming dilemma. He wants out on the installment plan, but the weekly installments are the lives of one or two hundred American soldiers, and he cannot get away from the insistent question: Why? To what purpose? The breaking point comes in politics as it came to Company A and it is not far off. What will now be gained by this incessant killing? And how will the President or anybody else explain or excuse it?

[From the Baltimore (Md.) Sun., Aug. 29, 1969]

HONEYMOON OVER, BUSINESSMEN SAY: NILES GROUP VISITS WHITE HOUSE, PRESSES VIET PEACE

(By John S. Carroll)

WASHINGTON, Aug. 28.—The Business Executives for Vietnam Peace stopped by the White House today to notify the Nixon administration that the honeymoon is over.

Henry E. Niles, the Baltimore insurance executive who is head of the group, said he and two others spent an hour talking with John Holdridge, a senior staff member of the National Security Council.

"NOW IT'S NIXON'S"

"We came out feeling, "Well, it used to be L.B.J.'s war, but now it's Nixon's" Mr. Niles explained, adding:

"We are unhappy that, seven months after the start of the new administration, there seems to be no real progress towards peace—plenty of words, but little action."

The anti-war group, which claims 2,500 business executives and owners as members in 49 states, left a memorandum at the White House addressed to Henry A. Kissinger, the President's assistant for national security affairs.

"The honeymoon period is ended," the letter said, "and the President must make good his promise to end the war or his ability to govern will be impaired."

Forecasting an end to the relative calm in the anti-war movement, the letter said students are planning protests in the fall, while there is growing unrest among soldiers.

"It is questionable whether the government can continue to have the loyalty to the people if it continues to go against what the majority wish and what was promised . . . namely, an end to the war."

In an interview after his White House visit Mr. Niles acknowledged that pulling out American troops "could very well mean supplanting the Thieu-Ky government by a coalition."

He was accompanied to the White House by J. Sinclair Armstrong, a banker who has served as assistant secretary of the Navy and as chairman of the Securities and Exchange

Commission, and Wallace T. Collett, a corporation vice president from Cincinnati.

[From the Washington Post, Sept. 8, 1969]

HO'S DEATH: "SO IT GOES"

(By Nicholas von Hoffman)

When during a war the leader of one side dies, it's customary for the other side to cheer. With the passing of Uncle Ho our cheering has been ragged and hesitating.

Here in the homeland of Uncle Ho's most powerful and dedicated enemies, even here his obituaries have been tinctured with praise and admiration. You get the feeling that the people who hated him because he was a Communist would have traded Uncle Ho for Thieu, Ky, Diem and several boatloads of the more important corruptionists, dope smugglers, double agents, deserters and liberty lovers allied with us.

Uncle Ho alone appears to have come out of the war with his reputation. In death he seems the one outstanding man the war has produced. This curiously popular head of an enemy country has even had his communism explained away. "He turned to communism as a means—not an end—to achieve his lifelong goal of freedom and unity for his homeland," said the lead editorial in The New York Times.

The pro Uncle Ho sentiment has been so strong that the other night on NBC Chet Huntley had to remind us not to be carried away. The old man had killed a lot of innocent people, he said, but the same has been said of the American Presidents involved in Vietnam.

Our reaction to these massacres is like Kurt Vonnegut's in his novel, *Slaughterhouse-Five*. "So it goes," he says, because if you meditate on all the death and dying you'll go crazy, the facts'll burn out the eyes of your mind. Uncle Ho killed a lot of people. So it goes. A boy driven mad by the war blows his brains out on the Capitol steps. So it goes.

It was said against Uncle Ho that he was a professional revolutionary. The United States has its professional revolutionaries too. Men like Allen Dulles and Richard Helms, the CIA bosses who differ from Uncle Ho in that he wanted to commit a revolution in his own country while they want to do it in other people's. Uncle Ho was involved in politics so he did what people in that line of work do; what made him different from our bunch were his reasons, or thus it seems, because really we don't know much about him.

We're not even sure what his real name was or if he ever got married. We have some black and white newsreeel footage, some snapshots, a couple of old police dossiers; we know he was a good cook and a heavy cigarette smoker who made it to 79. Salems were his brand . . . Oh, you can get the Americans out of the war, but you can't get the war out of the Americans. But Ho was probably too busy to think up new words to old advertising jingles.

Maybe if we'd known Uncle Ho better we might not have regarded him with as much respect. The little glimpses made him so attractive. Imagine, a bandy-legged wog, renting a Sunday suit to go out to Versailles to present Wilson and Clemenceau with a petition asking that his distant, little colony be granted self-determination . . . and years later Uncle Ho still living like a poor man, wearing sandals cut from old automobile tires. There may have been a mean side to him but we never heard about that. We're left with these brief pictures to match up against our leading men.

Ellsworth Bunker, Ambassador to Vietnam and possessor of a good tailor, back in Washington for consultations as they say, his old eyelids sagging down to make drooping, mysterious triangles of his eyes, murmuring he didn't think he wanted to comment on the repercussions of Uncle Ho's death.

Presidents on airport runways in front of microphones, silvery Air Force One in the background so behind them you can read the United States of America, and you can hear the words, Presidential words, susceptible of many interpretations by American watchers and White House-ologists from the other side of the iron curtain, peace, commitments, honor, face, freedom, treaties, solemnly pledged, bombing, war.

Or the generals, Westmoreland, handsome nonwinner, all jaw and gold braid, Chapman ordering the black and white Marines to stop killing each other and get back to killing the Vietnamese (so it goes), and Hershey, doughty 75-year-old conqueror of ten thousand squeamish liberals, givin' it to the kids and telling them what an honor it is.

The kids went for Uncle Ho. "Ho! Ho! Ho Chi Minh!" they'd chant at the big rallies to end the war against him. Recently they haven't been chanting so much. General Hershey's been coming down on them heavy and they've had to spend their energy escaping. All over the country, a million bull sessions about that. Don't get busted for pot in Illinois because they've changed the law so it's only a misdemeanor now and a misdemeanor won't keep you out.

It's gotta be a felony. Steal a car, that's good if it's grand theft auto, but joy riding won't keep you out of anything. Be a teacher or a cop or a fag. Get a sympathetic draft board. Cut off a toe. There's lots of nine-toed guys who don't have any trouble hitting on chicks. You can wear shoes. What chick's going to count your toes? I know but I can't do it. Once I put my foot on the kitchen table and I had the cleaver in my hand, but, man, it was my toe, my toe, man. So get married. Have a dependent. Adopt a baby or a sick, old mother.

The kids never blamed Uncle Ho for causing General Hershey to draft so many of them. That was strange but people never were able to work up a good hate against him. Wall Street didn't blame him for the market's not cracking 1,000 on the Dow-Jones. Remember this was the year it was going to happen? The old people didn't blame him for the inflation. Strange. Strange too, thinking about a truce in a war to mourn the other side's leader. The Americans didn't do that for Hitler. The Germans didn't do that for Roosevelt.

Uncle Ho did that to this war, drained our side of righteousness, left us nothing but the fine print and the technicalities. He had a monopoly on the big phrases, the words you put on banners, so we fought for some sentences written by lawyers and printed in agate type and cheered ourselves on with the thought we have a fine professional army doing the job it was sent out there to do.

Now maybe we'll get a few of the slogans back and a little of the old enthusiasm. Ho had it, but they can't keep it in Hanoi because he's gone, dead, dead like so many others over there are dead. So it goes.

CONGRESSMAN HANSEN OF IDAHO INTRODUCES LEGISLATION TO GIVE NATIONAL GUARDSMEN AND RESERVISTS EQUAL GI BILL EDUCATIONAL BENEFITS

(Mr. HANSEN of Idaho asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. HANSEN of Idaho. Mr. Speaker, today I am introducing H.R. 13650, H.R. 13651, and H.R. 13652, identical bills with a total of 55 sponsors. This legislation will correct an inequity in the so-called GI bill. Under the present law, members of the National Guard and Reserve units called into active Federal service during the war in Vietnam do not qualify for the same educational benefits as do members of the regular Armed Forces with the same total active service.

During the past 2 years 98 Reserve and Guard units from 37 States, as well as many individual reservists, have been called to active duty. From my own State of Idaho, the 116th Engineer Battalion of the Idaho National Guard was activated on May 13, 1968. It was my privilege to be present in Idaho a few days ago to join in a welcome home observance on the occasion of the return of the guardsmen following a year's service in Vietnam.

The guardsmen and reservists responded to the call of duty and served in many cases at great personal sacrifice. In many instances they interrupted their education and left their jobs and families on short notice. Many have served under the most difficult combat conditions suffering wounds and the loss of life.

Members of these National Guard and Reserve units are now returning home following many months of active duty. Many plan to continue their education. Others that were not financially able to pursue their education will take advantage of educational benefits available under the GI bill.

It appears, however, that members of the National Guard and Reserve units do not qualify under the GI bill for the same educational benefits as members of the Regular Armed Forces. For Regulars, all time including the time spent in basic training is counted for purposes of determining the length of time for which they qualify for educational benefits. For reservists and guardsmen, however, the period of active duty for training prior to the activation of a unit does not count.

Fairness requires that all who serve our country in the Armed Forces be treated equally under the applicable laws. The purpose of the legislation we have introduced today is to correct the inequity of the present law and to achieve equal treatment for all.

The legislation provides that reservists and guardsmen who are called to active duty and who serve at least 6 months during the period of the war in Vietnam may include their prior active duty for training up to a maximum of 6 months in determining eligibility for educational benefits under the GI bill.

In addition to the 55 sponsors of these three bills, other Members have indicated their intention to introduce separate bills. Others have indicated their intention to join as cosponsors of identical bills to be introduced in the future.

Mr. Speaker, I include as part of my remarks the full text of H.R. 13650, together with the names of the sponsors of this and identical bills and a list of all National Guard and Reserve units that have been activated during the war in Vietnam.

H.R. 13650

A bill to amend title 38 of the United States Code to permit certain active duty for training to be counted as active duty for purposes of entitlement to educational benefits under chapter 34 of such title

Be it enacted by the Senate and House of Representatives of the United States of

America in Congress assembled, That subsection (a)(3) of section 1652 of title 38, United States Code, is amended by striking out "and section 1661(a)" and inserting in lieu thereof "of this subsection and subsection (a) of section 1661 (except as provided in the last sentence thereof)".

SEC. 2. Subsection (a) of section 1661 of title 38, United States Code, is amended by adding at the end thereof the following new sentence: "For the purposes of this chapter and subject to the limitation in subsection (c), if a veteran serves for a period of active duty pursuant to a call or order thereto issued to him after August 4, 1964, as a Reserve or a member of the National Guard or Air National Guard of any State, and is an eligible veteran as a result of such duty, any period of not more than 6 consecutive months of full-time duty performed by him after January 31, 1955, for the purpose of obtaining initial military training pursuant to His Reserve, National Guard, or Air National Guard obligation shall be deemed to be active duty."

A LIST OF SPONSORS OF H.R. 13650, H.R. 13651, AND H.R. 13652

Mr. Hansen of Idaho, Mr. Dulski, Mr. Helstoski, Mr. Pucinski, Mr. Halpern, Mr. Zwach, Mr. Denney, Mr. McClure, Mr. Anderson of California, Mr. Biester, Mr. Boland, Mr. Buchanan, Mr. Burton of California, Mr. Chappell, Mr. Cleveland, Mr. Coughlin, Mr. Cowger, Mr. Cramer, Mr. Dellenback, Mr. Devine.

Mr. Erlenborn, Mr. Esch, Mr. Farbstein, Mr. Feighan, Mr. Friedel, Mr. Gallagher, Mr. Griffin, Mr. Hastings, Mr. Hathaway, Mr. Hosmer, Mr. Ichord, Mr. Jacobs, Mr. Keith, Mr. King, Mr. Kluczynski, Mr. Kyl, Mr. McClory, Mr. McCloskey, Mr. McKneally.

Mr. Mikva, Mr. Minish, Mrs. Mink, Mr. Mize, Mr. Morse, Mr. Pepper, Mr. Pollock, Mr. Rees, Mrs. Reid of Illinois, Mr. Robison, Mr. Rooney of Pennsylvania, Mr. Sandman, Mr. Sebelius, Mr. Shriver, Mr. Tiernan, Mr. Vanik, Mr. Waggonner.

NATIONAL GUARD AND RESERVE UNITS ACTIVATED DURING THE VIETNAM WAR

(Unit and home station)

Alabama: 650th Medical Detachment, Birmingham.

Arizona: 277th Military Intelligence Detachment, Phoenix.

Arkansas: 978th Army Postal Unit, Fort Smith; 336th Ordnance Battalion, Little Rock; 189th Tactical Recon Group, Little Rock.

California: 1st Squadron, 18th Armored Cavalry, Burbank; 40th Aviation Company, Long Beach; 82d Aerial Port Squadron, Travis Air Force Base, 776th Attack Squadron, Los Alamitos; 873d Attack Squadron, Alameda.

Colorado: 140th Tactical Fighter Wing, Burkley ANG Base.

Florida: 35th Surgical Hospital, North Miami; 231st Transportation Company, St. Petersburg.

Georgia: 319th Transportation Company, Augusta; 413th Finance Disbursing Section, Atlanta; 445th Military Airlift Wing, Dobbins AFB.

Hawaii: 29th Infantry Brigade, Honolulu; 2d Battalion, 299th Infantry, Hilo; 100th Battalion, 442d Infantry, Fort DeRussey.

Idaho: 116th Engineer Battalion, Idaho Falls.

Illinois: 126th Supply and Service Company, Quincy; 482d Medical Detachment, Aurora; 724th Transportation Company, Forest Park; 52d Medical Services Squadron, Scott AFB.

Indiana: Company D, 151st Infantry, Greenfield; 890th Transportation Company, Fort Wayne; 930th Tactical Airlift Group, Bakalar AFB.

Iowa: 2d Battalion, 133d Infantry, Sioux City; 185th Tactical Fighter Group, Sioux City.

Kansas: 69th Infantry Brigade, Topeka; 169th Aviation Company, Kansas City; Troop E. 114th Cavalry, McPherson; 169th Engineer Company, Emporia; 169th Support Battalion, Kansas City; 2d Battalion, 130th Artillery, Hiawatha; 1st Battalion, 137th Infantry, Wichita; 2d Battalion, 137th Infantry, Kansas City; 995th Maintenance Company, Hays; 1011th Supply and Service Company, Independence; 842d Quartermaster Company, Kansas City; 184th Tactical Fighter Group, McConnell AFB.

Kentucky: 2d Battalion, 138th Artillery, Louisville; 950th Army Postal Unit, Lexington; 123d Tactical Recon Wing, Staudiford.

Maryland: 472d Medical Detachment, Rockville; 113th Tactical Fighter Wing, Andrews AFB; 175th Tactical Fighter Group, Martin Airport; 661st Fighter Squadron, Andrews AFB.

Massachusetts: 1st Battalion, 211th Artillery, New Bedford; 513th Maintenance Battalion, Boston; 241st Military Intelligence Detachment, Boston; 12th Reserve Mobile Construction Battalion, Boston.

Michigan: 424th Personnel Service Company, Livonia; 305th Aerospace Rescue and Recovery Squadron, Selfridge AFB.

Minnesota: 452d General Supply Company, Worthington.

Mississippi: 173d Quartermaster Company, Greenwood.

Missouri: 208th Engineer Company, Festus.

Nebraska: 172d Transportation Company, Omaha; 295th Ordnance Company, Hastings.

Nevada: 152d Tactical Recon Group, Reno Municipal Airport.

New Hampshire: 3d Battalion, 197th Artillery, Portsmouth.

New Jersey: 141st Transportation Company, Orange; 177th Tactical Fighter Group, Atlantic City Airport.

New Mexico: 150th Tactical Fighter Group, Kirtland AFB.

New York: 1018th Supply and Service Company, Schenectady; 448th Army Postal unit, Garden City; 237th Maintenance Company, Fort Hamilton; 316th Medical Detachment, New York City; 74th Field Hospital, New York City; 203d Transportation Company, Garden City; 174th Tactical Fighter Group, Hancock Field; 107th Tactical Fighter Group, Niagara Falls Municipal Airport; 904th Military Airlift Group, Stewart AFB; 831st Attack Squadron.

North Carolina: 312th Evacuation Hospital, Winston Salem.

Ohio: 1002d Supply and Service Company, Cleveland; 311th Field Hospital, Sharonville; 121st Tactical Fighter Group, Lockbourne AFB.

Pennsylvania: 630th Transportation Company, Washington; 357th Transportation Company, Greencastle; 305th Medical Detachment, Philadelphia; 931st Fighter Squadron, Willow Grove.

Rhode Island: 107th Signal Company, East Greenwich; 115th Military Police Company, Pawtucket.

Tennessee: 378th Medical Detachment, Memphis.

Texas: 113th Light Maintenance Company, Gatesville; 238th Maintenance Company, San Antonio; 921st Military Airlift Group, Kelly AFB; 34th Aeromedical Evacuation Squadron, Kelly AFB; 703d Fighter Squadron, Dallas; 22d Reserve Mobile Construction Battalion.

Utah: 259th Quartermaster Battalion, Pleasant Grove.

Vermont: 131st Engineer Company, Burlington.

Virginia: 304th Medical Detachment, Richmond; 313th Medical Detachment, Richmond; 889th Medical Detachment, Richmond.

Washington: 737th Transportation Company, Yakima; 941st Military Airlift Group, McChord AFB.

Wisconsin: 377th Maintenance Company, Manitowoc; 826th Ordnance Company, Madison.

THE RECREATION EXPLOSION AND THE NATIONAL PARK SERVICE

(Mr. SCHWENGEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHWENGEL. Mr. Speaker, it shall be my purpose in this dissertation to bring to the attention of all Americans the excellent efforts of the National Park Service in meeting the multiplying desires of the American public for outdoor recreation during the 14 years it has been my honor to be a Member of the Congress.

It is with great pleasure to note that I am a Member of this august body that almost 100 years ago gave life to the national park concept with the authorization of Yellowstone National Park. Every one of my colleagues should share in this pride.

The national park concept is an American contribution to the world culture that is widely accepted and acclaimed around the globe. More than 90 other nations have adopted the idea. In this they received the sincerest accolade of appreciation.

It also is a pleasure to note, especially since American history is my hobby, that the area of responsibility of the National Park Service includes historical preservation and historical interpretation.

One of the choice examples of that historical preservation is located within the long morning shadow of the Capitol dome, the magnificent authentically restored Ford's Theater, the living memorial to President Lincoln. It exemplifies the dedication of the National Park Service to its assignment to restore, preserve, and interpret historical areas which are closely associated with our national heritage.

The Park Service counted 434,000 visitors to the Ford's Theatre last year—all of the inhabitants of the District of Columbia in 1920 numbered only 3,000 more. And servicewide, the Park Service counted almost 151 million visits to our national shrines, parks, and recreation areas last year. In 1950 that would have meant that a park visit could have been made by every man, woman, and child counted in the U.S. census.

The reasons for this recreation explosion are plain. Improved technology has brought more and more leisure time and quicker and more convenient travel. Our population grows and becomes more and more urban. The combination of more leisure, better travel, and more city dwellers means travel America. And the visitor load in the national park-managed areas exceeds all forecasts.

It was the National Park Service forecast of increased visitor loads which helped to bring about the Park Service's Mission 66. The objective of that mission was to refurbish the park system after it had languished during World War II.

I remember that it was my freshman year in the House when the Mission 66 program was presented. President Eisen-

hower gave the program a green light and Congress speeded it along.

Now President Nixon, who then was the President of the Senate, has increased the budget estimate for the National Park Service for the 1970 fiscal year by $11,700,000, the largest annual increase in operating funds in the history of the Park Service, so that it can meet the demands of the burgeoning visitor load.

And the Director of the National Park Service, George B. Hartzog, Jr., has emphasized to his fellow workers:

> Such dramatic and constructive support of our (National Park Service) program by the Administration challenges us to respond with ingenuity and redoubled efforts in providing quality work experiences for our increasing visitation and improved management of the resources of the System.

We hear much about the population explosion—and a serious problem it is. The recreation explosion, however, is twice the scale of the population boom. The population in the year 2000 is forecast to be double the 179 million counted in the 1960 census. But the recreation explosion is forecast to increase not twofold but fourfold.

Right now the better known, more popular recreation areas on occasion are jammed to overflow. The avalanche of visitors now bearing down on parks, seashores, recreation areas, and historic sites merits our concern even though the National Park Service has met similar crises in the past and is in control of the situation today.

The biggest of those crises of the past resulted in Mission 66. Personnel, equipment, roads, and other manmade structures had deteriorated during World War II. And then postwar recreation seekers surged into a park system held together principally by the dedication and determination of a sadly understaffed and underfunded organization. The harder the Park Service worked the further behind it fell.

Both visitor accommodations and roads were poor to nonexistent. Uncomfortable people queued up to use lavatories. Some historic and scenic sites were damaged by vandalism and the constant pounding of human feet.

The plan to counter the bad conditions and to meet future needs was the program named Mission 66 because it was to end in the 50th anniversary year of the national park system—1966.

As I noted, Mr. Speaker, it was my privilege to support this comprehensive program, designed to provide national park areas capable of accommodating a predicted 89 million visitor load by 1966.

The Mission 66 expenditure of $725,478,740 has proved to be one of the soundest and most rewarding investments ever approved by Congress. This is impressively evident by the 150 million visitors which the national park system attracted in 1968. Meanwhile the value of the national park system properties increases every year. Dr. Ernst Swanson, the widely known economist from North Carolina State University, recently estimated the capitalized value of the national park system at $142.7 billion.

Mission 66 gave new life, vigor, and structure to the national park system. The impressive construction list which I shall read shortly, however, is not the only, or even the principal criterion for evaluating the achievements of Mission 66. Under Director Conrad Wirth and his successor in 1964, George B. Hartzog, Jr., Mission 66 concentrated on preserving the essential values of the national park system. The Park Service selected building sites that would not demean or diminish the area's scenic natural or historic values. The master plan for each park sought to preserve key areas "unimpaired," in accordance with the National Park Service Act of 1916.

Mission 66 took into consideration the special recreation and intellectual interests of both youth and senior citizens so far as could be done without lessening park values. Facilities for the handicapped and older citizens required attention as to accessibility and convenience. Back-country hiking trails and campsites appeal to many of the younger visitors.

Most of the roads installed by Mission 66 were those essential to newly established areas or campgrounds and picnic grounds. Some 80 or 90 percent of the road funds went for reconstruction and realinement of existing routes, none of them designed to encourage speed, but with increased safety and pleasure objectives. Mission 66 also supplemented the road network with hiking and horseback riding trails.

It was Mission 66 also that modernized the radio communication network of the National Capital Park Police here in Washington, providing tie-ins with the Washington Metropolitan Police and law enforcement agencies in Maryland and Virginia. In the parks, communication systems for fire detection, park administration and protection of visitors and park resources were extended and improved.

By the 50th anniversary year of the National Park Service in 1966, the mission called 66 had brought improvement to the park system—indelibly in many areas. It brought 2,767 miles of new roads, 1,570 miles of reconstructed roads; 936 miles of trails and 359 miles of reconstructed trails. It brought also: 1,502 new parking areas capable of accommodating 47,071 additional cars; 330 reconstructed parking areas adding space for 5,682 more vehicles; 45 miles of new road, and 19 miles of reconstructed road to serve concession facilities; 575 campgrounds, with 17,782 campsites; 472 picnic areas; 29,432 new campfire circle and amphitheater seats, plus 2,300 reconstructed seats.

It brought 426 water projects and 301 additions, 432 sewer projects, and 223 additions; and for concession facilities—10 water projects; 89 sewer projects, 57 power projects; 214 power projects and 126 additions; 218 utility buildings; 221 administrative and service buildings, plus 36 reconstructed; 100 visitor centers, a new type of open design structure providing exhibits, information and interpretive facilities; and often rest areas, souvenir sales, food services, audiovisual equipment and auditoriums; 458 historic buildings reconstructed or rehabilitated at a cost of $15 million; 1,239 housing units for employees; 584 comfort stations; 17 reconstructed; 1,116 roadside exhibits installed or rehabilitated; 50 boating marinas; 93 boat docks; nine fire lookout towers; 39 entrance stations; 37 trailer disposal systems; and nearly $1 million for two park ranger training centers.

During Mission 66, park concessionaires invested more than $33 million in new and improved cabins, lodges, motels, stores, service stations, marinas, and other installations. The Park Service provided more than $14 million worth of roads, powerlines, water mains, sewers, and other utilities to complement the concession improvements.

Mission 66 increased the number of full-time permanent employees from 3,364 to 5,498, and seasonal employees from 4,700 to 7,800. This increased strength allowed the Park Service to devote attention to planned management of its resources and the correction of ecological imbalances.

The net effect of Mission 66 was expansion and improved performance in park system services and activities across the board. The National Park Service produced exhibits for all of the 100 new visitor centers, 40 rehabilitated museums, 26 shelters, and 13 wayside projects, until it was operating 215 museums with nearly 3 million specimens. Mission 66 provided at least 115 parks with audiovisual installations, and modern projection and sound equipment for 45 park campfire circles and amphitheaters.

A Division of International Affairs, established during Mission 66, assisted more than 90 nations which contain national parks or equivalent reserves. The National Park Service participated in trainee exchange programs with foreign countries and cooperated with the University of Michigan in conducting short courses on national park administrations. Fifty park leaders from 32 countries took part in this program in 1965–66.

Mission 66 added 142 miles to the Blue Ridge Parkway and 262 miles to the Natchez Trace Parkway. This year the Travel Writers of America voted the Blue Ridge Parkway—with Skyline Drive in Shenandoah National Park—the No. 1 scenic automobile trip in the United States. The Blue Ridge Parkway attracted 11 million visitors in 1968, easily the highest attendance of any area in the national park system. The Natchez Trace Parkway was close behind with 8.9 million.

Now the National Park Service is trying to cope with one of the great socio-economic phenomena of the century—this astounding large movement of our people to outdoor recreation areas.

As the units of the National Park Service have grown to the number of 270, the Service has learned that each unit must be judged and operated for its own unique features and the master plan for each unit must be constantly kept up to date to meet ever-increasing pressures upon it. Such problems can be exemplified in the supply and drainage waters of the Everglades; the provision of accommodations in the Yosemite Valley and the Chisos Basin of Big Bend; and the pressures brought on by those smooth

tongues of penetration—improved roads. Combined with the roads is the ever-present knowledge that provision of access to an area can result in destruction of the attraction that brought need of the access.

Recently, the National Park Service articulated its people-serving mission with a pledge of public service that has been distributed in wallet-card form to each employee. The pledge follows:

To protect man's right to exult in the presence of superlative wilderness and scenic grandeur;

To communicate to all an understanding of the people and events that shaped these United States;

To provide in the recreational areas, opportunities for varied outdoor recreation of a quality in keeping with exceptional natural and historical values;

To make the beauty and the history of our Nation's urban parklands a richer and more meaningful part of the life of all Americans;

To manage the National Park System so that all Americans, now and in the future, may be assured of the privilege—

Of experiencing the serenity of quiet forests and the renewing strength of nature unimpaired,

Of letting their spirits return—through the touch of hammered iron, roughhewn wall, and treasured relic—to the presence of the men and women who built America,

Of knowing the exhilaration of a rushing river, the feel of sun-warmed beaches and pounding surf, and the high adventure of the great outdoors;

To seek out and foster the protection of the finest of what now remains unprotected of the Nation's natural and cultural inheritance and its outdoor recreational opportunities;

To join with all people of this and other nations in conserving and renewing the total environment to keep this world a delight to live in.

In line with this pledge, the National Park Service, although already the operator of more significant parklands in urban areas than any other governmental agency on any level, established an Office of Urban Affairs in 1967.

Last year, "Summer in the Parks," conducted by the National Park Service, was a major factor in providing residents and visitors to Washington, D.C. with a more rewarding and enjoyable summer than the city had experienced for many years.

The Park Service also is conducting, nationwide, an environmental awareness program designed to acquaint young people with knowledge of their environment and the dangers threatening it through pollution, pesticides and despoliation of the countryside and natural resources. The Park Service has designated 100 environmental study areas on park system lands and conducts a National Environmental Education Development—NEED—program in conjunction with local schools. In 44 of the environmental study areas, children are already being enlightened on the environmental crisis. The Park Service believes this program could be one of the most important it has ever adopted, since it involves the very survival of the human species.

From 1960 to 1968 the Nation's population increased 9.4 percent. But the number of visits to the national park system increased 90 percent. The most conservative estimates predict a continuation of this trend. In the past 10 years the visitation figure increased 82 million, as compared to an increase of 125 million expected in the next 10 years. An attendance of 162 million is expected this year. Some time in 1973 this figure will pass the 200 million mark, and in 1980 the 300 million mark. The most conservative estimates foresee Americans making several hundred millions visits to the national park system annually, well before the year 2000. The National Park Service must plan for this onrush if it is to keep faith with future generations.

Other Members of this House have cited the economic study of national park system travel by Dr. Swanson, to whom I have referred. His study is a matter of record but I wish to mention it briefly. He found that travel to the park system in 1967 resulted in an expenditure of $6.35 billion, resulting in $4.76 billion in personal income to our people, $5.71 million added to the gross national product and $952 million in Federal taxes. Asked if we can "afford mass attendance threatening the very existence of our parks," Dr. Swanson said:

The National Park System is such a powerful generator of a sizeable amount of the national income, that there is no convincing reason why Congress should not provide whatever funds are necessary to guard against such a threat and to maintain, operate and perpetuate these valuable lands and waters.

Dr. Swanson is well aware, of course, that the real value of the National Park System's irreplaceable resources cannot be expressed in monetary terms. He said:

Dollar signs cannot be attached to them, but the economic value alone justifies our continued care of these assets.

I have observed the National Park Service closely during the administrations of Presidents Eisenhower, Kennedy, Johnson and now President Nixon—ever since the Congress approved Mission 66 funds during my first year in this House.

The vision and enterprise of this splendid organization in meeting its increasingly heavy load of responsibilities are commendable indeed. It is completely devoted to the national interest and public service on a nonpartisan basis.

This House has given the National Park Service generous support in the past. But to meet the tremendous recreation demands of the present and future, this agency will need help on an increased scale. I urge the House to consider these facts and to provide the National Park Service with the funds and assistance it deserves if it is to cope with the recreation explosion.

TRIBUTE TO AND SPEECH BY GEORGE HARTZOG

(Mr. SCHWENGEL asked and was given permission to extend his remarks at this point in the RECORD and to include extraneous matter.)

Mr. SCHWENGEL. Mr. Speaker, we are fortunate to have had the long record of effective, intelligent, and dedicated leadership in the National Park Service. George Hartzog, the present Director, is continuing and adding to that tradition. Mr. Hartzog has a distinguished record of service in the National Park Service. Since joining the Park Service in 1946 he has served in several important positions, becoming the Director on January 6, 1964.

He is the recipient of several awards: the Meritorious Award certificate from William A. Jump Memorial Foundation, Washington, D.C., June 1956, "for exemplary achievement in public administration"; Special Service Award of Greater St. Louis Federal Business Association, July 1962; Distinguished Service Award of the Department of the Interior, December 1962; Alumni Recognition Award, the American University, Washington, D.C., May 1966; and Cornelius Amory Pugsley Gold Medal Award for 1967, January 1968.

Recently, Mr. Hartzog addressed an alumni gathering of the graduates of the Federal Executive Institute. In this splendid address he eloquently expressed his concept of the role and responsibility of the National Park Service and its employees. His speech should be well read.

One statement in particular caught my attention. He said, "Uniformity is not what I seek in management, rather I seek creativity and personal growth." This is a superb ideal.

Mr. Hartzog's address follows:

ADDRESS BY MR. HARTZOG

It is a great privilege and pleasure to participate in this reunion of the graduates of the first and second sessions of the Federal Executive Institute. For the high honor you have bestowed on me to present this first Distinguished Alumni address, I am deeply grateful.

I remember my attendance here as one of the highlights of my career. I shared many hours of good fellowship; made new friends among my colleagues in the Federal service; and gained new insights into our mutual problems and aspirations.

It is my firm belief that this Institute has the highest potential existing today for significant improvement in the quality of management within the Federal career service. I congratulate the Civil Service Commission, Dr. Sherwood, the faculty and the staff of the Institute for creative leadership in Executive Education. This pioneering effort has been difficult. You have accepted the challenge with vigor and imagination. You have achieved results and I predict even greater success in the years ahead.

Dr. Sherwood, in extending the invitation on behalf of the Alumni, suggested that I discuss with you the management of the National Park Service, with particular emphasis on policy leadership, the relationship of management to the political processes, and the special management needs of the National Park Service. Since you are all "old pros" of management in the Federal Government, I shall not presume on your time and your patience to treat literally all of the ramifications of the broad subject he has suggested.

By numerous legislative enactments, the Congress has granted the National Park Service a broad charter:

a. To manage and develop the National Park System for public use and benefit by such means and in such manner as to leave

its resources and values unimpaired for future generations.

b. To cooperate with Federal, State, and local Governments and the private sector in programs to preserve the natural and cultural inheritance of our Nation.

To establish a frame of reference for this discussion of the management of the National Park Service, I wish to mention, briefly, three basic factors, as follows:

First, the National Park Service is not an independent agency of the Executive Department. The National Park Service was established as—and remains—a Bureau of the Department of the Interior. The positions of Director and Deputy Director are in excepted Schedule C. My Deputy Director and I serve, therefore, during the pleasure of the Secretary, in supportive policy making roles with him in the management of the National Park Service. Within the Department of the Interior, the Director of the National Park Service reports to the Assistant Secretary for Fish and Wildlife, Parks, and Marine Resources.

There have been seven Directors of the Service since it was established in 1916. Five of the seven Directors have been appointed to this position from the ranks of the National Park Service after many years of service in the Federal career system. Moreover, no Director has ever been changed with a change in Administration. This record is one in which all employees of the National Park Service take justifiable pride for it bespeaks of the high professional integrity of our work. It bespeaks, likewise, I suggest, of the responsiveness of each Director to the principal policy making officers in the Department and to the goals of the Administration.

Second, the areas of the National Park System are public lands of the United States. Under our constitution, the Congress is charged with the responsibility of establishing the public land policies of the United States. These policies, for the most part, are broad guidelines leaving large areas of discretionary authority in the President and in the Secretary. For example, the Antiquities Act of 1906 authorizes the President of the United States by Proclamation to set aside, from lands owned or controlled by the United States, national monuments having scientific significance or containing artifacts of antiquity.

Moreover, the Historic Sites Act of 1935 authorizes the Secretary of the Interior to determine the national significance of historic sites and in his discretion to designate them as National Historic Sites either in private ownership or as a part of the National Park System, with fee simple title vested in the United States. In connection with the exercise of this latter authority, President Franklin D. Roosevelt directed that the authority should be exercised with respect to placing areas in the National Park System only after clearance by the Bureau of the Budget.

In the decade of the 1960's, through negotiations with the Interior and Insular Affairs Committee of the House of Representatives, an agreement was reached by President Kennedy and Secretary Udall—and adhered to by succeeding Administrations—that the authorities of the 1906 and the 1935 Acts would be exercised only after consultation with the legislative committees of the Congress.

Third, the resources of the National Park System represent values far beyond their significance as public lands of the United States. They are, in fact, the strands of the natural and cultural inheritance of a great Nation and a proud people. This Nation perhaps more than any other, was richly endowed with a superlative natural environment. Its creative, ingenious, hard-working people have laid on this land the foundations of our American way of life.

Thus, the natural, historical, and recreational resources of your National Park System have a tremendous tug at the heartstrings of America. The manifestation of this reality is that thousands of citizens through numerous ogranizations—with funds to employ full-time professional staff—intimately involve themselves not only in day-to-day management decisions but also in policy decisions of both the Administration and the Congress.

The National Park Service—like all of your organizations—is a public agency. Policy making—and even more significantly the implementation of policy—in public agencies is, in actuality, a function of all its members. Policy, to be creative in its making and constructive in its implementation, must be validated by the members of the organization. Thus, while the employees of the National Park Service are, on the one hand, members of the management body they are also, on the other hand, a very special and important public.

In light of these "facts of life" I have, quite naturally, formed certain fundamental beliefs that undergird my approach to management of the National Park Service. In stating these beliefs and reporting our management program as it has been shaped by these beliefs, I do not presume to suggest that the way we have approached our responsibilities is either the only way or, indeed, even the best way to manage—although, certainly, the latter is the ideal and the objective we seek.

My first belief is this:

A public agency, such as the National Park Service, cannot operate successfully in a vacuum;

Its programs are executed in a political environment—not a partisan environment; that is to say, its programs are scrutinized, evaluated, validated or rejected in the arena of public discussion among the Congress, the administration and the taxpayers and within the context of national priorities.

It is, therefore, the function of management to open lines of communication—and keep them open constantly—with our Departmental policy making leadership, the Congress, and the public to facilitate this evaluation process.

An essential keystone for building channels of communication, in my judgment, is a concise—easily understood—statement of management philosophy. As a public agency responsive to the policy making authority of the Congress and the Administration, our statement of management philosophy must necessarily embody the mandates of these policies. Thus, our statement of management philosophy—summarized in the National Park Service Pledge of Public Service—is a synthesis of the numerous public land policies enunciated in a series of legislative enactments concerning the National Park System.

Stripped of all technicalities generally associated with legislative enactments, it distills the essence of the philosophies expressed in these statutes. To make it even more useful for communication—especially with our employees—we have duplicated the statement of management philosophy on wallet-sized cards for each employee—whether permanent or seasonal—of the National Park Service.

Of equal importance to a statement of management philosophy in communication, is the development of long-range objectives. Our long-range objectives—confirmed by the Honorable Walter J. Hickel, Secretary of the Interior on June 18, 1969, are as follows:

1. To provide for the highest quality of use and enjoyment of the National Park System by increased millions of visitors in years to come.

2. To conserve and manage for their highest purpose the natural, historical and recreational resources of the National Park System.

3. To develop the National Park System through inclusion of additional areas of scenic, scientific, historical, and recreational value to the Nation.

4. To participate actively with organizations of this and other nations in conserving, improving, and renewing the total environment.

5. To communicate the cultural, inspirational, and recreational significance of the American heritage as represented in the National Park System.

6. To increase the effectiveness of the National Park Service as a "people-serving" organization dedicated to park conservation, historical preservation, and outdoor recreation.

In his management directive of June 18, Secretary Hickel also established policy guidelines for the management of the National Park System. Briefly summarized, they are as follows: The National Park Service shall:

1. Operate compgrounds rather than lease them to concessionaires;

2. Initiate study of opportunities which may exist, as well as financing proposals, for an expanded program of Federal acquisition and federally-assisted acquisition of park and recreation lands in large urban centers in order to bring parks to people;

3. Innovate programs, especially in the Nation's urban parklands, to make parks more meaningful to people;

4. Make parks and park facilities more available for neighboring school districts;

5. Initiate mass transportation services, such as shuttle buses, tramways, etc., to lessen the impact of private automobile congestion now threatening the quality of several of our most popular National Parks;

6. Explore possibilities for increasing the participation of private citizens, the business community, and organizations in nature and historic preservation;

7. Speed up wilderness studies to get this program on schedule;

8. Identify gaps in the National Park System that should be filled by establishing new parks to preserve the heritage of our history and our natural environment;

9. Work with colleges and universities to develop joint training opportunities for young people seeking careers in park and recreation programs;

10. Plan appropriate activities to commemorate the Centennial of National Parks in 1972;

11. Work in cooperation with the Bureau of Indian Affairs and the Bureau of Outdoor Recreation to plan programs for developing the recreational and cultural resources of the Indian people, thus enhancing the economy of our Indian Reservations.

Long range objectives and policy guidelines serve several useful purposes in the communications process:

First, they establish a clear understanding between the Secretary—the policy making official appointed by the President to oversee the management of the National Park System—and the Director of the National Park Service appointed by the Secretary to manage the National Park System.

Second, through objectives and policy guidelines we communicate to the Congress—which has constitutional responsibility for public land policy—the direction we are heading in implementing their policies and the programs to be emphasized in the execution of our missions.

Third, they are useful in communicating with the several publics interested in the management and the policies of the National Park Service.

And, lastly, they set the broad parameters for our work program and serve as guidelines for day-to-day management.

Of course, our agency, like yours, appears annually before the Subcommittees of the House and Senate Appropriations Committees to support the President's budget for its programs. During these hearings we have an opportunity to communicate to the members of our Subcommittees significant accomplishments of the Service and also trends which we see developing that may affect future management and funding needs of the agency. A copy of my statement to the House and Senate Subcommittees on Appropriations for the Interior Department and Related Agencies is available as reference material.

Additionally, with the cooperation of the House Committee on Interior and Insular Affairs, I have been provided the opportunity each year that I have served as Director of the National Park Service to report to the Subcommittee on Parks and Recreation on my stewardship. Occasionally, the Senate Committee on Interior and Insular Affairs has also scheduled such oversight briefings.

These have been extremely useful sessions since they afford the members of the legislative committees a formal opportunity to address themselves to programs initiated in implementation of their broad policy mandates. Occasionally, the committee members have challenged the merit of our management decisions. For instance, in 1968, as a result of personnel ceilings and budgetary restrictions, we adopted an administrative policy to lease campgrounds to concessioners for operation. Historically, campgrounds had been operated by National Park Service personnel. A great many complaints were received from the public concerning this decision to switch to concessioner-operated campgrounds. In the meantime, Secretary Hickel advised the House Committee that he had this particular administrative policy under review. At the briefing session, the House Subcommittee on Parks and Recreation expressed itself very strongly in opposition to the administrative policy.

After reviewing the basis for our initial decision, the public complaints, and evaluating the views of the Subcommittee, the Secretary reversed this administrative policy and directed that in the future the National Park Service operate its campgrounds and not lease them to concessioners.

In another instance, the House Subcommittee took an unusual and tremendously supportive action. It passed a resolution requesting the Chairman and Ranking Minority Member of the Subcommittee on Parks and Recreation and of the full Committee on Interior and Insular Affairs to direct a letter to the Chairman of the House Subcommittee on Appropriations for the Interior Department and Related Agencies urging approval of the entire budget for the National Park Service as recommended by the President.

These briefing reports, of course, are only a part of the communication process with the Congress.

Throughout the course of a year there are dozens of individual meetings with members of the Congress to discuss matters of concern to them—to us—and to their constituents. There are, moreover, thousands of letters from the Congress referring for attention subjects of concern to their constituents with respect to the management of the National Park System. These Congressional referrals are an extremely important part of the communication process with the Congress.

As a result, one of the first actions I took upon becoming Director of the National Park Service was to consolidate all congressional mail in one office. This has enabled us to acknowledge every congressional inquiry within 48 hours. We cannot provide the answer in the great majority of instances within this time frame, but, importantly, we have said to the member of the Congress, and he, in turn, can say to his constituent, "the matter is receiving attention." A follow-up system has been established for these communications to insure that the final answer is supplied as quickly as possible.

Of course, there are many other forms of communication with the Congress associated with legislative hearings, special inquiries, etc.

With respect to communications with our several publics, I shall touch briefly on only two matters. First, the citizen conservation organizations. To maintain channels of communication with them, I have tried to meet their professional staff representatives each three to four months during the period of my Directorship. This is an unstructured meeting, usually, two to three hours, at which they can present any subject of interest to them and at which I report to them on significant management and policy matters in which I believe they may have a particular interest.

Second, the National Park Service employees are our unique and all-important public. To meet a part of the communication need with them, we initiated a Newsletter—published biweekly—which contains important matters of Service-wide interest to all employees. The Newsletter also includes a special column for the ladies of the National Park Service.

The cardinal principle in communications in a public agency, I believe, is complete candor. If you don't know the answer to a question—say so. It is much better for people to conclude you are ignorant than for them to find out later that you are a liar! Your personal integrity in fulfilling your commitments is an absolute irreducible minimum in maintaining communications with your policy making officers of the Department, the Congress, and the public concerned with your management.

My second belief about management of a public agency is this:

People do not work for money alone:

Efficiency is a byproduct of personal interest and achievement; and

People do wish to achieve and to grow.

It is, therefore, a function of management to create an environment in which people may grow and achieve to the limit of their potential.

One of the long-range objectives established by the Secretary to guide our management is "to increase the effectiveness of the National Park Service as a 'people-serving' organization dedicated to park conservation, historical preservation, and outdoor recreation." This objective recognizes that our management in its essence is of human beings and not of theories and charts. We shall achieve this objective only as the employees of the National Park Service grow in their capabilities and in their commitment to the agency and its programs.

To assist us in meeting this challenge, we have established objectives for personnel management, as follows:

1. Encourage highly motivated people of talent and high potential to seek employment with the National Park Service.

2. Provide equal opportunities to all employees for individual growth.

3. Encourage an attitude of constructive inquiry, a receptivity to change, and a determination to find better ways of doing our job.

4. Encourage, recognize, and reward individual initiative.

5. Require consistent and demonstrated productivity and achievement as the essential requirement for advancement.

6. Provide opportunities for transfers, details, and other assignments of employees that contribute to the good of the Service and the career development of the employee. Foster the development of a climate that recognizes and accepts the benefits of such interchanges.

7. Make fullest utilization of modern management methods and technology.

The National Park Service had 56 volumes of administrative manuals and handbooks. Some of these were absolutely essential. They contained the accounting, procurement, and personnel requirements and procedures established pursuant to law. But, the vast majority of these handbooks and administrative manuals dealt with the subject of "how to do the job."

Some time ago, I appointed a committee to evaluate our handbooks and manuals and make recommendations on the subject. The committee concluded, in part, that these volumes—many of which they acknowledged were out of date and not current—should be maintained in order "to insure uniformity in management." My experience in Government leads me to believe that, generally, "uniformity" is a synonym for "mediocrity."

Uniformity is not what I seek in management! Rather, I seek creativity and personal growth.

Accordingly, I issued a memorandum abolishing all handbooks and administrative manuals as of July 1, 1969, except those essential to guide our field personnel in adhering to legal requirements of personnel, property, and money.

In lieu of administrative manuals, we have provided different management tools.

First, we have promulgated administrative policies to guide day-to-day management in the field. Each of these policies is accompanied by an explanation of "why this is the policy." These policies do not provide answers to specific problems. They do, however, establish boundary lines within which a decision can be made consistent with the policy of the organization and in light of the circumstances that exist in the particular case at hand.

These administrative policies recognize the three different categories of areas making up the National Park System, i.e., the natural, historical, and recreational. Each category of area was established by the Congress to serve a different purpose and these different purposes are reflected in the administrative policies.

Secondly, we have established program standards for the execution of each major field function—administrative management, maintenance, protection and visitor services, resources management, and interpretation. These program standards define three appropriate levels for the operation of these programs depending upon season of the year, public use and similar demands on the local operations. For example, the maintenance program standards recognize that all facilities do not require the same degree of maintenance care. Thus, a back-country administrative road does not have to be maintained at the same level as does a major park road having high density visitor use. Importantly, therefore, the standard of maintenance established for each facility is designed to achieve the best balance between meeting the public needs and preserving the public investment at reasonable cost.

Third, we have initiated personal performance standards for each employee of the National Park Service. These standards describe the conditions which will obtain when the job has been done satisfactorily. We initiated this as a four-year project. In the first year, we have developed personal performance standards for Regional Directors, Superintendents, and District Rangers. In the second year, it is our goal to develop performance standards for Assistant Directors and for each member of the Regional offices. Our third year program will involve the development of personal performance standards for each member of the park organization; and

our final year's program will involve the development of personal performance standards for each member of the Washington Office and the Service Centers.

These performance standards establish a channel of communication between the employee and his supervisor for objective dialogue concerning job performance. They represent an agreement in advance between the employee and his supervisor as to the job to be done and the results that will be obtained when the job is done adequately. In my mind, at least, their greatest value is to enable the employee to know in his own mind that he is, indeed, doing an adequate job, or he is not doing an adequate job, even before his supervisor knows it.

My third belief about management in a public agency is this:

The support of one's partner—either husband or wife—is essential to top performance in the job;

Retirement—like recruitment—is simply a change in occupational status.

It is, therefore, the function of management to provide the avenues by which an employee's family (as well as former employees and their families) may relate to the organization and its programs in meaningful ways.

The "team" is generally the basic work unit in day-to-day park management, such as, mountain climbing, rescue, fire fighting, underwater swimming, wildlife management, and a wide variety of other responsibilities.

One of the most effective applications of the "team" principle in the National Park Service is the family. We have conscientiously and systematically tried to encourage this family team effort. For example, as I mentioned earlier, one section of our employees' Newsletter is devoted to the activities of our park wives. We have encouraged them in maintaining a national park wives organization. They do much significant work without which our programs would simply founder. They are the hostesses in the parks, many of which are isolated; they are a vital link between the official organization and the community; in an emergency they serve as the unpaid—yet indispensable—communication link between a rescue team and home base; they advise constructively and creatively on many of our management programs such as employee housing, park communications, etc. The stories that I could share with you—based on my personal experience in the field—as to the invaluable contributions of our park wives would require a second alumni presentation. As a matter of fact I am so thoroughly convinced of the value of the wife's commitment and contribution to her husband's career and the agency's mission that I suggest it would be well worth the money for the Institute to provide a training opportunity for Government wives. I suggest that the taxpayers would get the biggest dividend for their money ever offered by a sovereign!

In many ways the National Park Service is a young agency; and, yet, we are older than we sometimes realize. For example, we now have third generation employees in the Service. The result is that we have a growing body of alumni. These are talented men and women who have devoted decades of their lives to the management of this Nation's natural and cultural inheritance, and to providing opportunities of inspiration, relaxation, and recreation for millions of citizens in God's great out-of-doors.

To encourage their continued interest in the programs of the Service and to provide meaningful ways in which they can continue to relate to the agency, we initiated several years ago a "reemployed annuitant program." In this program, we employ those retirees who are interested in pursuing part-time active work. The pay for this part-time work is the difference between the annuitant's retirement and the salary of the position he occupies. It is a small amount, indeed. Generally, we can reemploy a GS–15 annuitant for an amount roughly equivalent to the salary of a GS–5 and where can you improve on that bargain today? We have also adopted a "trial retirement" program.

Several years ago our employees and our alumni organized an Employee and Alumni Association which publishes a monthly paper, "The National Park Courier." Through this paper we are able to communicate with our retirees on important aspects of park programs and thereby continue their link with the Service.

There are many other things that we have done to improve the management of the National Park Service. For example, we have consolidated our professional disciplines, i.e., planners, architects, engineers, landscape architects, etc., in Service Centers; grouped parks in the immediate vicinity of each other undercentralized management, providing common administrative services, such as, accounting, purchasing, etc.; expanded our training and manpower development programs; restructured our Washington Office to recognize the growing dimension of our urban parklands; initiated ecological master planning and joint regional planning; improved resource management based on scientific data; designed an environmental education program integrated with the secondary school curriculum; started studies to determine the "carrying capacity" of parks—to mention just a few things.

So much for management of the National Park Service—more importantly, what are we managing for?

I believe a National Park is more than a physical resource. I believe a National Park is an idea which in the fullness of its meaning is a link between the generations of men in their continuing search to be "at home" in their world.

National Parks and historic landmarks help give us all a "sense of place" in a mobile America. They contribute to our sense of both the beautiful and the familiar. Love of locality is one of the roots of social cohesion, according to Charles E. Merrian, who was one of our greatest political scientists. But in a new country like the United States, and in a society where one family in five moves each year, and where we have over 80 million automobiles, we have a hard time developing local roots of the kind familiar to Englishmen in Sussex, Frenchmen in Brittany, or Irishmen in County Cork. Our National Parks like Yosemite and Grand Canyon, and our historic places like Independence Hall and the Washington Monument take the place of local roots for tens of millions of mobile Americans. They give us the assurance of a "sense of place" expressive of our country that we can tie to permanently, wherever we move or live.

I believe many people go to the National Parks and historic landmarks not simply to satisfy a need to get back to nature from crowded cities or for outdoor recreation. Many people go to the National Parks and landmarks to strengthen their identity with their country. "Seeing is believing," and touching the Liberty Bell or setting foot in Yosemite Valley is worth a long trip to experience a sense of identity with America where it is unchanging. It isn't subtle. It's the deep human need to know "I was there" at Independence Hall or Yosemite Valley; and, as a result am a little more an American. This experience is especially needed in these times of war, turmoil, and technological change.

When the bill to create a National Park Service was under consideration in Congress in 1916, J. Horace McFarland testified before the House Committee on Public Lands. His words echo today's needs of our urban society:

". . . the word 'park' in the minds of most of us suggests a place in which there are a number of flower beds, and probably stone dogs, and iron fountains, and things of that kind, and a road over which an automobile may travel. We forget that the park has passed out of that category in the United States. *The park now serves the people; the park decreases the demand on the forces for keeping order; the park is the direct competitor, in the United States, of the courts, of the jail, of the cemetery, and a very efficient competitor with all of them.*" (Italic supplied).

The beauty of the parks in the National Capital was just coming to fruition in 1916 when Congress was talking about a National Park Service. The McMillan Commission had made its great report on the plan for Washington in 1902, the Mall was rescued shortly afterward, the Lincoln Memorial was authorized in 1911, and the Arlington Memorial Bridge followed along. In his testimony, McFarland linked this to the idea of establishing a National Park Service:

"I had the great pleasure one day to bring here a sort of wild man from Iowa, who had never seen the East at all; who had never seen any great buildings, and, while a man of tremendous business ability, he had no conception of the value of beauty. We reached Washington about nine o'clock one night and he was so eager to see what this town looked like that we went on top of one of the buildings just back of the Capitol, and he had his first glimpse of the whole scene by moonlight. He was fairly crazy about it. *He said he had never been a good American citizen before. There was made that very instant a good, strong, fighting unit out of a man who was merely a business man before—in it for what he could get out of it. There was born in his bosom at that instant a devotion to the country because of the beauty of the city which has been created by the hand of man.*

"Now, gentleman, if that can happen in Washington—and it happens constantly . . . it will happen to a much greater extent in connection with these great national wonders that are comprised in the national parks."

The National Park System has a deep stake in the urban park idea, and it goes back to the founding of the Service in 1916; and, to a realization that the National Capital and the National Parks are both symbols of the Nation.

Beyond our need to identify with the nation is the urgent need to understand our place in the world environment and to join hands in doing our part to rescue it from impending ecological disaster. As Freeman Tilden put it, we need "to understand our place in nature and among men." We will reach this objective more quickly and we will heal our environment more rapidly if we develop social cohesion "at home" by learning we are one people with a common heritage well expressed in your National Park System. As we achieve social harmony we will do better in joining together to recover our natural heritage and that of the world around us.

With innovative programs, such as Living History demonstrations and Summer-in-the-Parks we are striving to make parks more meaningful to people in their search to be "at home" in their world. In assessing the impact of Summer-in-the-Parks on his work, one park policeman, recently, observed, "we now play with the youngsters in the parks, rather than chase them on the streets."

"Through program innovation in response to the changing needs of our society and by sensitive management," Secretary Hickel has said, "the National Park System can contribute enormously to our national goals of enhancing the life of every American and supporting the effort to articulate an envi-
